
Only the salaried person pays the tax at the rate prescribed in the tax tables—65.9

percent. The others pay in accordance with congressionally sanctioned exceptions to that table.

The holder of State and municipal bonds pays nothing, because Congress has exempted from taxation the interest received on those bonds. The stock-market investor pays at the rate of 25 percent on his profit, because Congress has established that capital gains shall be taxed at that rate, and no more. The holder of oil royalties pays under a law that first permits him to pocket 27.5 percent of his royalties before figuring his tax. His $100,000 of oil royalties thus becomes $72,500 for tax purposes. If his royalties are from uranium, he may subtract 23 percent of those royalties, and if from a host of other minerals, 15 percent. Oil-property investors may also deduct about 80 percent of the cost of drilling a new well—even though the well may be an income-producing success.

These preferments are quite different from personal and family exemptions which make tax laws easier to administer and which recognize the subsistence needs of the lowest income groups.

There was a time when the practice of granting special tax favors was confined largely to the upper income-tax groups. But now Congress has begun to play favorites among the lower income groups. For instance:

Persons over 65 are allowed two exemptions of $600 each, instead of the one to which we are all entitled.

Retired persons over 65, in addition to $1,200 of exemptions, need not pay tax on a second $1,200 of their income.

Congress may well have been acting from its heart when it granted these tax shelters for elderly persons. But many retired persons also have dividend income from stock investments, and dividends are themselves partially sheltered.

The total effect is to permit some retired couples over 65 to be free of taxes up to $6,100 yearly.

What of the young married couple with a salary income of $6,100 a year? Their $6,100 buys no more than that of the elderly couple. Yet the young couple must give $864 of their $6,100 to the Government.

So lenient has Congress become in granting favors to special groups that it has adopted preferences which are sometimes hard to fathom.

An author's royalties are taxed as ordinary income, just like salaries. If the royalties are sizable, so is the tax. But an inventor never pays more than 25 percent on his royalties, no matter what their size, because they are classified by Congress as capital gains. Both forms of royalties are the result of creative talent and personal effort, yet when it comes to taxes they are judged unequally by Congress.

Another distinction by Congress is in the field of rewards for top executives. This distinction has made a method known as the executive stock option, an extremely fashionable one in recent years. It works like this: The company tells the executive that at any time in the next 5 years he may purchase a certain amount of its stock at a fixed price. Let us say that the stock is now selling at $100 a share. The company gives the executive an option to buy 2,000 shares at $95 a share. If the executive buys right away, he makes $10,000. But assuming he waits and the stock improves to 145 and he then buys, the executive makes $100,000.

Why doesn't the company simply reward its executive with an outright $100,000 bonus? The tax distinction explains why. The outright bonus would be taxed along with salary at the regular high rates of tax, and the executive would pay anywhere from 70 to 90 percent of it in taxes. But if the $100,000 comes from a stock option, the tax rate is only 25 percent, and the executive saves anywhere from $45,000 to $65,000.

By comparison, this 25-percent tax paid by the executive on his $100,000 stock-option profits is 1 percent less than the 26-percent rate an unmarried clerk making $5,100 a year pays on a bonus of $100.

And corporations also seek to soften the impact of high rates on their executives by sending them on vacations at company expense—calling it business. Or by maintaining yachts, airplanes, and vacation lodges which the corporations write off to business and which their executives use for pleasure.

Many believe that the success of our economic system is linked to the rewards it can offer the men who work or risk their money. The smaller the reward—a reward shriveled by taxes, for example—the less the urge to work and invest. Thus, when there are high taxes, many feel that a special lower tax for income from oil wells is necessary to induce investors to allocate their money for oil exploration. Likewise, it is felt, a tax consession on dividend income and a low capital-gains tax is needed to stimulate investment. Stock options—with their benefits taxed at special low rates—are urged as a desirable method of providing executives with a more direct interest in the success of their corporation.

Knowing as little as we do about the long-run effects of high tax rates, we must recognize that high tax rates might have an adverse effect on work and investment. We must remember that while our present remarkable level of prosperity was achieved under such high rates, it was also achieved under a tax system in which investors, by holding their stocks 6 months, paid only a 25-percent tax on their gains.

And yet, no one can say flatly what the privileged taxpayer would have done if he had been required to pay the same taxes as everyone else; and as a result, we don't really know whether the tax concessions are really as vital as claimed. Further, what yardstick can one use in choosing among enterprises and industries to determine which is more valuable for the country and should therefore be given a preferential tax break?

Arguments for special privilege based on the belief that incentive will be harmed are inconclusive and difficult to weigh. Many a group pressing for a tax break is simply dressing up in high-flown economic terms the dislike for high taxes that we all share. And the need for fairness—for treating equal incomes equally—is so vital under our tax system that if a particular industry is really in need of governmental aid, a direct grant or subsidy, wholly apart from the income tax, is the more appropriate method of furnishing that aid.

Other tax privileges are defended as necessary for relief against hardship, as in the case of the aged. But here also an income-tax concession is not the fair way to relieve hardship. The greatest benefits to such deductions go to people with the most taxable income. But if the hardship is suffered by those whose income is low, the special deduction offers insufficient aid.

The strongest objection to special exemptions, however, is that when Congress grants one favor it is encouraged to grant another and still another until the basic fabric of our tax system begins to unravel.

The extent to which taxpayer cynicism has developed as a consequence of special congressional legislation was illustrated not long ago in a Federal courtroom. A woman was being cross-examined in connection with a partnership set up by her husband to include not only herself but their small children as well. Under the law, a partnership group pays a lower overall tax than a sole proprietorship.

"Now," the prosecutor asked the wife, "do you participate in the management of the business?"

"Well, no," the wife replied. She had been too busy recently to participate.

"Too busy doing what?" the prosecutor demanded.

"Producing partners," the wife said.

Congress should call a halt to this income-tax schizophrenia. If it really thinks that very high tax rates are needed in the upper brackets, then it should apply the rates to all in that class. But if, as it appears, Congress really believes that those high rates impair incentives to work and invest, then it should lower those rates for all—equally. This reform should be accomplished directly in the tax tables and not through the addition of still more escape routes for favored groups.

Let Congress then lower the top rates of tax from 91 percent to 60 or 65 percent. But at the same time it lowers the rates let it wipe out the existing tax shelters. And then let it stick to the new rates and resist all further requests for special tax relief, no matter how strong the pressures.

The results would be quite startling.

Rather than losing money, the Government would be money ahead. If the top rates were reduced to 60 percent, the revenue loss, according to Treasury Department figures, would be $461 million; if top rates were reduced to 65 percent, the loss would be $314 million. Revenues now lost because of tax shelters erected by Congress against high rates easily exceed either figure.

If the Government then overhauled the whole tax-shelter system, it would find itself in possession of so much new revenue that it could cut all present tax rates by a considerable margin.

To put the case in its extreme form: If Congress were to eliminate all present departures from the basic rate table, all of the various exemptions of special items and all of the deductions for personal, nonbusiness expenses, then the income-tax revenues from individuals would rise from $32 billion to at least $46 billion. Since the Government now needs only $32 billion from individual income taxes, it could therefore cut all existing income-tax rates by about one-third.

While it may be too difficult after all these years to change all of these special treatment provisions today, the decrease in rates if only a few were changed would still be quite startling.

Suppose that Congress were to eliminate the exemption on State and municipal bond interest, much of the preferential treatment of capital gains, the special treatment of oil investors, the dividend and retirement credits, the deduction for interest on personal debts, State and local sales taxes and for real-estate taxes on nonbusiness property. The total tax yield would increase by $3 billion; therefore Congress, in addition to lowering top rates, could lower all rates sufficiently to save every taxpayer at least $50 a year.

Can this be done? Would it be political suicide for any Congressman to take the first step and vote to lower directly the rates of taxes on our wealthiest citizens?

Certainly there are political overtones in the history of income-tax rates in the United States. In 1913, when the 16th amendment authorized the Federal Government to levy taxes on incomes, the rate on the highest incomes was placed at 6 percent. As recently as 1932 the top rate was only 25 percent. Then, in the 1930's, the rate skyrocketed to 79 percent, first because there was a great need for revenues, and second because the extremes of wealth and poverty created by the depression and accentuated by the general atmosphere of the New Deal generated pressures that could permit no other action. But the income tax was still a tax on the privileged classes—it affected only 4 million taxpayers in 1939. When World War II came, the income tax spread from the country-club district down to the railroad tracks, and then to the other side. By 1945, it covered 43 million taxpayers, and its rates started at 23 percent and rose to 94 percent.

The Korean war and defense expenditures have kept the tax at high levels ever since.

Apparently Congress has felt that the only way it could justify the high rate for the mass of voters affected by the tax was to preserve at the same time the fantastically high rates in the top brackets. But out of sympathy for people paying those fantastic top-bracket rates, Congress has time and again granted exceptions.

Thus the Congressman can be friends with everyone. He can prove to labor that he favors high rates of tax on the wealthy by pointing to the tax tables he has supported with their awesome ceilings of 91 percent. At the same time, he can respond to special pressures by voting for the complex technical jargon that the people don't read but which transforms the 91-percent bracket to 25 percent for this select group or that particular taxpayer.

Compromise is the life of politics, and a Congressman must live that life. And compromise he will, so long as he believes that any open, direct reduction of the top income-tax rates would result in political reprisals.

But would labor protest strongly against tax reduction for the privileged, thereby making the needed reform impossible? Or would labor realize that these high rates are steadily bringing the entire income tax into disrepute through legislative cynicism, administrative inability to enforce those rates and increasing taxpayer tendency to cut corners? Would not labor understand that the alternative to a hopelessly weakened income-tax system is a Federal sales tax on consumer goods that would hurt its own members more than it hurts the wealthy?

In its simplest form, whether labor would agree or not, the argument against the present top rates comes down to this: Tax rates are too high if Congress believes they are too high and will not enforce them. And if Congress, instead of enforcing these rates, permits them to be tunneled through, the entire system is menaced. If Congress stops granting privileges, we all someday may be able to enjoy appreciably lower tax rates. If Congress does not, that day may never come.

Only when we have lower tax rates will we be rid of the special privileges and tax dodging that high rates create.

Only when we have lower tax rates will management and investors be free to make decisions on the basis of business factors and not of tax lures.

The cost of government must be met by taxes, and we must pay those taxes. As long as the load is distributed fairly, we will. But when the load shifts to one side, look out.

The overriding consideration is that our tax system must be kept fair. Let us give Congress the strength to resist political pressures for favoritism by supporting a tax law that permits no favorites. Only in this way will our taxes be kept sensible.

President Eisenhower and Agricultural Legislation

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. HESELTON. Mr. Speaker, the American people need no assurance from anyone of the complete honesty, integrity, and devotion to the public interest of President Eisenhower.

He has demonstrated again those qualities in his courageous and unanswerable message accompanying his veto of H. R. 12.

During recent days, he has been confronted with a tremendously difficult problem. Neither he nor anyone else doubted the complete sincerity of many who supported H. R. 12. The fact that most of those Members of Congress have not joined in the specious and shallow criticism today of his action is convincing proof that they recognize his candid approach to this important problem, just as he recognizes their conscientiousness in reaching their decisions.

Any fair-minded person who will read the veto message must concede not only the President's grasp of this perplexing problem but his determination to act, so far as he can, in the best interests of those engaged in agriculture and of this Nation as a whole.

One paragraph states concisely the basic defect of H. R. 12, which was recognized by Republicans and Democrats alike when the conference report on it was before this House last Wednesday. Before quoting this paragraph from the message, I commend to all those interested a reading of portions of the RECORD of April 11, from page 5475 to page 5507, and, particularly, the short, excellent statement of the gentleman from Rhode Island [Mr. FOGARTY] at page 5493. Certainly he expressed concisely and forcibly the overwhelming opinion of the farmers and consumers of New England and of the entire Northeast when he said: "Farmers do not want this bill; consumers can only be against it." There is every reason to believe that an increasing number of farmers elsewhere and the great body of American consumers will share emphatically that point of view as the President's veto message becomes more widely read and understood.

The paragraph to which I have referred is as follows:

H. R. 12 would not correct this situation. It would encourage more surpluses. It would do harm to every agricultural region of the country and also to the interests of consumers. Thus it fails to meet the test of being good news for farmers and fair to all our people.

It is depressing and regrettable that a few, who should know better, have indulged in personalities and have resorted to shabby tactics in commenting upon the President's message this afternoon.

But quite apart from these trival, self-seeking, and defensive comments by certain persons who were primarily responsible for the monstrosity which was presented to Congress and the President, the challenge is now quite specific and inescapable. In the hope that a reading of the RECORD will assist in spreading actual information as to the President's message, I want to quote the three concluding paragraphs, which were as follows:

I now request Congress to pass a straight soil bank bill as promptly as possible. It should be in operation before fall seeding for next year's crops. It is vital that we get the soil bank authorized in this session of the Congress. There is general agreement on it. I am ready to sign a sound soil bank act as soon as Congress sends it to me. That can be accomplished in a very few days if the leadership in Congress will undertake the task.

This combined program of administrative action and legislation enactment will begin now to improve the income and welfare of all our farm families.

Here is a challenge for both the legislative and executive branches of the Federal Government.

The President demonstrated that the executive branch of the Federal Government recognizes both the problem and the challenge confronting it. There is an equal responsibility now resting upon the Congress, and both the farmers and the consumers have every right to insist upon the prompt legislative action recommended by the President.

The Alaska Mental Health Bill

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mrs. GREEN of Oregon. Mr. Speaker, under unanimous consent, I insert in the Appendix of the RECORD excerpts from a letter addressed to me by an old Alaskan pioneer which, I believe, speaks for itself. In view of some of the misrepresentations about the Alaska mental health bill that are being deliberately fostered in certain dank quarters, it seems to me time to have on the record a few real facts. One of them is that this bill means a great deal to the Territory and has tremendous support in Alaska. I submit this letter as evidence of that fact.

EDITH GREEN: I'm a pioneer sourdough of Alaska and the Olden Golden Klondike. I went there in 1896, when I was only 17 years of age. I lived in the northland 36 years.

THE ALASKA MENTAL HEALTH BILL

If I still lived in Alaska, and became mentally ill I would like to be where my friends and family could see me and see that I had proper care and treatment. A half million Alaskans agree with that. Why should anyone be sent thousands of miles from home, Alaska, and family? Alaskans are. Why? Because the Government and the people of the United States have refused to let us have the facilities to care for them in Alaska.

At the present time, the Territory of Alaska has no facilities whatever to care for their mentally ill. If one has the misfortune to become mentally ill in Alaska he is taken to court, charged with the crime of being insane, and if found guilty he is then lodged in jail until such time as someone who has been deputized can take him to Morningside in Portland, Oreg. Morningside has had contract to care for the Alaska mentally ill for years.

Is it so unpatriotic to want to care for our Alaska mentally ill properly instead of treating them like criminals? Alaskans are after all American citizens who pay Federal taxes, whose sons are drafted into the Armed Forces, who eat, dress, and talk like Americans. In fact, most of us come from the United States. That is why it is so difficult for us to understand why we are treated as though we are subversial aliens whenever it is necessary for us to make a trip to the States.

It is time that people realized that Alaska is a land with a great potential, populated by half a million American citizens who stand between you and Russia. We Alaskans have poured millions in the Treasury of the United States, but we have to fight bitterly for every mile of road, every piece of land, and even for a mental hospital. We are not allowed to control our fishing industry, nor are we allowed to vote.

Before people in the States get wild ideas about Alaska and what she needs, they would do well to get their information straight and do away with such abysmal ignorance. There may be "no taxation without representation" and "government of the people, by the people, and for the people," but not in Alaska.

Sincerely yours,

JAMES RAYMOND LITTLE.

Mr. Speaker, I also include in the Appendix the following resolution concerning the Alaska mental health bill H. R. 6376, adopted unanimously by members of the Alaska Territorial Medical Association at its meeting, February 20–22, 1956, held in Anchorage, Alaska:

Whereas Alaska's mentally ill are now held in jails while awaiting treatment, to the detriment of their health and condition; and

Whereas the organic act governing Alaska's mentally ill is barbaric, antiquated, and inhumane; and

Whereas the organic act prohibits any improvement in the existing conditions, without special act of Congress; and

Whereas many thousands of dollars could be saved by using modern mental health practices in the Territory; and

Whereas much heartbreak and unhappiness could be spared the people of the Territory with more humane laws allowing prompt, modern treatment for their loved ones; and

Whereas the Alaska Mental Health bill contains provisions to remedy these existing conditions: Now, therefore, be it

Resolved, That the Alaska Territorial Medical Association strongly recommends and urges the Senate of the United States that the Alaska mental health bill H. R. 6376, which is now before that body, be passed.

Red Ink Cancellation

EXTENSION OF REMARKS

OF

HON. CHARLES M. TEAGUE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. TEAGUE of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Lompoc (Calif.) Record of March 22, 1956:

RED INK CANCELLATION

For far too many years, Government officials have complained about the deficit in the United States Post Office Department. Year after year, the taxpayers have been called upon to dig up money out of their pockets to meet these deficits. The laments have been loud and long, but nothing of real consequence has been done about it.

Arthur E. Summerfield, Postmaster General, has proposed a change. He doesn't believe it necessary that the Post Office Department lose $1,000 per minute, an amount which would build 1,000 new $10,000 homes every week of the year. He blames these losses on the fact that the Post Office is charging 1932 rates but is paying 1956 costs. And he proposes that rates be boosted to a level which would make the Department self-supporting.

In the past, there has been a reluctance to boost the cost of first-class mail from 3 to 4 cents because of the possible political reverberations. The fact is, however, that John Q. Public would scarcely know that an increase has been invoked because he is not a very big user of the mails. Seventy-five percent of all letter mail originates with business. For the average family, the increase from 3 to 4 cents would amount to only 10 to 12 cents per month.

The fact is that under the present setup, the ordinary taxpayer is subsidizing business by paying most of the cost of business mail. Mr. Summerfield, a man of business himself, believes there is something a bit impractical in this situation and he has not been afraid to propose a change.

This Is My Story

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John Maragon, entitled "This Is My Story," which appeared in the April 5, 1956 edition of Roll Call:

On Friday afternoon I received my first week's pay for my duties in the House folding room. I clutched the green slip of paper with only two figures on it as though it were a thousand dollar bank note. It was the first money I had earned since 1949.

This was the realization of my hopes and prayers of 19 months and 18 days in a Federal penal institution. I had been convicted of perjury on two counts. Though I considered myself innocent (and I will, in this story, present my side for the first time), I held no bitterness. I was resigned to my fate. I was determined that when I was released I would try to take my place in the working world like everyone else.

HARD WORK

I was put to work in the mangling room of the laundry. I figured if I could do this hard work under such conditions, I could earn my living on the outside in some other manual work. As a boy I was a waterboy for the Union Pacific Railroad. I worked as a laborer. I had a tough struggle for many years, and I could do it again.

But it wasn't easy. After my release I made every effort to get a job in private industry. My friends who had benefited from me in previous days, were not so cordial now.

I was an ex-convict.

I was never convicted on the charges brought against me (influence peddling). I was convicted on two charges of perjury, resulting from my confusion before a closed session of the Senate committee.

FIRST COUNT

Three weeks prior to the hearings of Senator Hoey's subcommittee, in executive session, I appeared in room 101 for interrogation for the first time. Chief Counsel William Rogers (now Assistant Attorney General) and Mr. Flanagan, his assistant, asked me to submit copies of my income tax returns for 1946 the following morning. I did. They showed income of $6,000 from the Albert Verley Co., and $1,809.19 from the State Department. I also brought my withholding statement from the State Department, and in looking it over now, I see I actually reported more than I earned, since the withholding statement shows I was paid only $1,507.66.

Rogers and his staff asked me what I did for the State Department.

I replied that on a special mission to Greece I acted as interpreter. They asked if I purchased anything for the Verley Co. while in Europe with the State Department. I said "Yes," and told them I had purchased some essential oils and other things.

Three weeks later, at the executive session of the committee, after being questioned for several days, and being before nine Senators, I was asked if I had worked for anyone else other than Verley Co. I said, "No." I had no chance to correct the record. For this I was indicted and convicted, although I disclosed this information 3 weeks earlier to the committee staff. At no time was I ever represented by an attorney on all interrogation meetings and executive sessions, now to my regret.

SECOND COUNT

At an executive session of the Hoey committee I was seated directly in front of Mr. Hoey's desk. Mr. Rogers was on the right, about 5 feet away with Assistant Chief Counsel Flannagan and a secretary.

I was asked at what bank I had an account. I replied, "Liberty National Bank." After my testimony, Senator Hoey shook my hand and thanked me. As I prepared to leave, Mr. Rogers motioned to me.

Within hearing of Mr. Flannagan, Mr. Rogers said, "John you are getting yourself in trouble. You did not tell us about the account you had in a San Antonio bank."

I said, "Mr. Roberts, I am sorry, that account was used while with the B. & O. Railroad (for which I was employed) to accommodate tours to Mexico." This bank account was inactive for 3 years.

Mr. Rogers directed me to return to his office at 9 a. m. the next morning with any records I had of that bank.

When I got home that night my wife and I went up to the attic. We searched for hours through papers and records. I found some canceled checks and statements.

At 8:30, a half hour early, I appeared in room 101 and surrendered these documents. Again I had no attorney with me. I was questioned for 2 or 3 days. I disclosed everything.

To my shock and surprise they submitted to the grand jury my earlier testimony to the executive sessions and I was indicted and convicted without a chance to change my testimony.

DIDN'T TAKE STAND

None of these facts were brought out to the court and jury by my attorney during my trial who was no choice of mine. He advised against my taking the stand.

Shortly after I was found guilty, and while my appeal was pending, my attorney was appointed Special Attorney General, and was sent 3,000 miles from Washington. My prosecutor, an assistant district attorney, was promoted to Assistant Attorney General in charge of the Criminal Division.

M'CARRAN WRITES

An idea of the justness of these decisions might be gotten out of a letter written to Justice Jennings Bailey, United States district court, on December 8, 1950, after my indictment and conviction.

"I fully realize that Mr. Maragon erred but I do believe that he knows he erred and is sincerely aware of the extent to which he did so. He has been punished a great deal already, and his whole demeanor reveals the sincerity of his intention to straighten himself and return to a decent way of life.

"Another thought I have about this case is that John Maragon stands alone when there are some others who might easily be standing in his shoes right now, but are not, and who have received not one iota of punishment."

This letter, asking for consideration of probation was signed by Senator Pat McCarran, of Nevada, then chairman of the Senate Judiciary Committee.

Well, that's the story, and to bring it right up to date here are the final details.

Last week I approached my friend Representative HERMAN EBERHARTER, of Pennsylvania, and asked him for help in getting some kind of work. He was more than happy to help me. He gave me a letter to Representative FRANCIS WALTER, of Pennsylvania, asking for consideration. I was given a job in the folding room.

Less than 3 hours after going to work, I was accosted by three prominent members of the press demanding an explanation for my employment.

I told them I was working like anyone else, and that no explanations were necessary.

ONE DESIRE

The story appeared in the papers. The following morning I was severely attacked by a Member of Congress, challenging my right to work and casting doubts as to my trust and loyalty to my Government.

I wish at this time to deny unequivocally these charges.

I was never convicted as a "5-percenter," as accused.

Official records show that the charge that I replaced another employee is untrue.

Identifying me with Alger Hiss is a charge too ridiculous to dignify. However, my loyalty and love for my Government would never be questioned even by my worst enemies.

I only hope that I will be free from further publicity and further accusations. My only desire is to join the ranks of American workingmen to earn an honest wage, so that I may fulfill my obligations to my country and to my family.

Appraising Soviet Troubles

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. UDALL. Mr. Speaker, we need calm perspective and experienced guidance today in charting a course to meet the most recent policies of the Soviet Union. Our planning requires accurate answers to such questions as:

What is the meaning of the current political upheaval in Russia?

What are the paramount objectives of the new Soviet policies?

And what is the logical focus of the ambitions of the new clique of rulers.

Some careful answers to these questions were offered in an editorial written by Publisher William R. Mathews, which appeared last week in the Arizona Daily Star of Tucson, Ariz. Mr. Mathews has long been a student of foreign affairs and his views deserve wide readership.

The editorial follows:

APPRAISING SOVIET TROUBLES

The outstanding fact made clear by the new domestic political troubles in the Soviet Union is that the revolution is over as far as the Soviet Union is concerned.

1. The Russian people, as a whole, accept the Communist society as an intimate part of their life. It is the only kind of society they know how to make work, because there are so few Russian people alive today who were adults when the revolution began.

There may be more changes in the palace guard; a new dictator may emerge, all of which would be a normal Russian development. There is little if any danger of any further revolutionary changes. Henceforth, they will be organic ones, such as modification of political and economic policies and practices now going on.

2. The present turn of events, the destruction of the Stalin-is-God legend, the emphasis on collective leadership, the glorification of Russian history, expresses a growing Russian nationalism which the Red army finds strengthening its hand. Since the death of Stalin the Soviet leaders have been tapping a vigorous native patriotism and determination of the Russian people to take care of themselves—the Soviet Union—ahead of everything else. As such, it represents a natural growth which, despite temporary confusion, will strengthen rather than weaken the Soviet Union.

3. The unconcern of the Soviet leaders and the people about the effect of this new development on foreign Communist Parties confirms that. These parties are left with uncertain direction as to doctrine; they are seriously discredited; their influence is weakened. As a result, they will have to put the soft pedal on the revolutionary program, and attempt to hold their own as participants in coalition or popular-front governments.

4. Of course, the Russian leaders and people will be confused for awhile. Political textbooks and histories will have to be rewritten; party personnel reindoctrinated; museums, like the Museum of the Revolution in Moscow, that were devoted to the glorification of Stalin, will have to be done over. What happens to the remains of Stalin, at present the Red Square mausoleum, may give a clue to the future line. However ridiculous the contradictions of the official explanations may appear to Americans, they will not only make sense to most Russians, but come as a gleam of new hope.

5. There will be no fundamental change in Soviet international policy. Moscow will continue to make itself appear as the dove of peace. That is good domestic as well as good international policy. The Red Army can be counted upon to see that future Moscow governments will keep close control over the satellites. Any Moscow government will have to support the historic policy of insulating Russia from the West.

6. Moscow will never cease looking after its interests, and quietly making trouble when it is to its interest to do so. It will shrink from getting involved in any war other than one clearly of self-defense. The Red Army will see to it that Soviet military strength will be maintained, but that should not be taken to mean that the Red Army will make a surprise attack on us or our allies.

7. In appraising Soviet intentions we should, at all times, bear in mind that the Russian people have suffered as no other people have suffered. They have memories not only of the invasions of 1914 and 1941 but of the civil war of 1917–21, of which the older ones speak with horror. Moreover, families of Russian political leaders shared the awful sufferings of World War II. Consequently, not until time effaces these nightmarish memories, does any Moscow government dare to risk war. To the contrary, it will go to great lengths to keep its country at peace because that is the best way it can win the support of the people. The people will never rise up to overthrow a government that maintains peace. That is the main reason why there will be no civil war at this time.

8. Behind these factors is another grassroot development. Within the Soviet Union economic conditions have improved rapidly, and are far ahead of what they were in 1937 and 1939. The gigantic experiment in socialism is beginning to tick. As conditions improve, the hopes of the people and of the leaders will grow. The leaders see the prospect of giving their country a successful economy with many new benefits to themselves, as well as the people. War would ruin most of this progress, and the prospects of being the builders of a successful socialistic society. Hence, this common objective will cause the people and the leaders to watch their step for some years to come.

Conclusion: The Soviet Union is destined to grow stronger economically, and its people to enjoy a constantly improving standard of living and a freer society. Its armament tempo will attempt to keep pace with ours, and will be stimulated by bellicose statements by our military and political leaders.

We must distinguish between Soviet intentions and ability to launch a war of aggression and its abilities and intentions to defend itself. Soviet leaders and Soviet people do respect American industrial technique and they fear our military strength. Their own self-interest will keep them for many years—possibly 10—from doing anything that would involve them in war with us. Such is the one great benefit of our action in Korea.

Behind all of this attitude, however, is the fact that the revolution within the Soviet Union is over, and that today the Soviet Union emerges as the new Russian empire which, as it grows stronger, can be counted upon to develop the traditional Russian ambitions, particularly in the Balkans and the Middle East.

Paradoxical as it may be, the growing economic strength and prosperity within the Soviet Union will compel any Russian government to look for more fuel. That nearly one-half of the oil reserves of the world lie within the Persian Gulf area fits in with the traditional Russian interest in the Middle East, and forecasts clearly what we must be prepared to meet in the future.

Overnight Accommodations in the Everglades National Park

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. FASCELL. Mr. Speaker, I would like to call to the attention of the Members the following editorial which points out the inconsistent position of the National Park Service of the United States Department of the Interior with respect to providing overnight accommodations in the Everglades National Park.

The position taken seems particularly strange in view of the recent release of mission 66 and the recommended improvement for facilities throughout the rest of our national park system.

The comments expressed by John Pennekamp in the editorial of the Miami Herald of April 13, 1956, which follows,

are not to be taken lightly. For many years he has been interested in conservation and park development and this the National Park Service has recognized on several occasions; he has served in public positions dealing with those subjects and has acquired in his years of study and service, an extensive knowledge and understanding of the park problem. He perhaps more than any other person was responsible for the establishment of the Everglades National Park. I am confident that he understands and interprets correctly the needs of our area and that park.

BEHIND THE FRONT PAGE

(By John Pennekamp)

Why did Conrad L. Wirth, Director of the National Park Service, suddenly turn thumbs down on overnight housing facilities in Everglades National Park?

The question remains unanswered, and becomes more puzzling with each news release of the United States Department of the Interior.

Many of them tell of the installation of such facilities in other parks, or of the expansion of existing facilities.

One release says that present facilities in the parks care for 26,000 persons and they are to be increased immediately to accommodate 54,000.

"To help alleviate critical shortages of public accommodations and interpretative facilities," said a recent release, "the Service moved ahead on a $5 million building program in 8 park areas."

Wirth did his about face just about a year ago. Previously, he had prepared plans for concessioner bidding, which included housing facilities.

His decision came about a month after a meeting of American Automobile Association executives in Miami Beach. The AAA always has been influential with the National Park Service.

Following the Miami Beach meeting a representative of the AAA forecast Wirth's change of mind.

But, the AAA administrators insist they had no part in Wirth's turnabout. They exhibit a resolution passed at their meeting which does not suggest the course he took. The Florida chapter of the AAA this year sent Wirth a resolution urging the installation of accommodations.

Wirth, himself, firmly asserts that the decision is his own and that he was not influenced.

He has remained adamant in the face of requests for reconsideration from Senators Spessard L. Holland, George Smathers, Representative Dante Fascell, Gov. LeRoy Collins, and many others.

They have pointed out, among other things, that Wirth's reversal runs against the State's reasons for contributing $2 million for the purchase of inholdings in the park, and 900,000 acres of land and water.

He was assistant park director when the State's gift was made and took part in the negotiations.

Only last week the Department of the Interior put out a release calling for bidding by concessioners in Mount McKinley National Park in Alaska.

"A real opportunity for a potentially good business operation awaits some enterprising individual or company to provide visitor accommodations in Mount McKinley National Park in Alaska," the release begins.

Another release tells of a contract to provide concession facilities, "accommodations, and services at Mesa Verde National Park, Colo., for 5 years, adding, "Last year the company provided overnight accommodations for 30,000 visitors."

A release about Yellowstone said:

"Wirth explained that the proposed contract would require the Yellowstone Park Co. to spend not less than $3.5 million prior to 1961 on the new facilities.

"Of this, approximately $2 million, he said, would be used to construct a lodge, cabin units, and other facilities," And:

"The $1.5 million balance of the $3.5 million expenditure required of the company prior to 1961 would be used for motel and other concession facilities at lake and elsewhere in the park."

In Mount Rainier National Park, Wash., says another release, a 1-year concession contract will provide visitor accommodations.

There are several others, all leading to the conclusion that for some unexplained reason, the national park director has decided to treat our park as something apart.

Seattle Port Modernization Pays Off

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. PELLY. Mr. Speaker, the following news item will be of special interest to Members of Congress who represent legislative districts in which are located seaports with shipping facilities. The article is taken from the Seattle Daily Journal of Commerce, of April 3, 1956, and one has only to follow its description of the program of the port of Seattle, which is a municipal corporation, to envisage progress and development on the local level which is most encouraging to those of us who are trying to prevent the scuttling of the American merchant marine.

A port development program on the local level is only a part of the picture. To have ships to use modern facilities it is necessary to have cargoes. That is where the Cargo Preference Act comes in, which provides for at least half of Government owned or financed cargoes being transported in American ships.

Another factor is the eliminaion of whipsawing in labor negotiations as between the Atlantic and Pacific coasts. The common termination date of labor-management contracts, I feel, will help restore confidence in shipping and thus in due course our shipping industry may be able to survive and serve the Nation and its people in stimulating general prosperity.

The article follows:

SEATTLE PORT MODERNIZATION PAYS OFF

(By Edward P. Tastrom)

The port of Seattle is in the midst of a long-range modernization and expansion program that is beginning to pay off in rising foreign commerce and improved port earnings.

The allocation of approximately $5 million of a $9 million budget for 1956 for port improvement work comes on top of outlays aggregating $8,875,000 over the past 3 years for property acquisitions and capital investment in port facilities.

Port officials say these extensive outlays are beginning to pay off. On a tonnage basis, Seattle's foreign shipping last year was the greatest since 1927. Total volume of 1,249,382 tons was some 42 percent higher than the preceding year. The 1955 import tonnage was the heaviest since 1920 and exports the biggest since 1952.

These tonnage gains are reflected in net income earned by the Port of Seattle. In 1953 the port agency had a net loss of $35,000. But in 1954 the port's net income was in the black to the tune of $88,000. This improved further last year to $95,000.

PLANNED PROJECTS

Of the capital outlays scheduled for this year, the largest sum—$1,500,000—will be used at the Seattle-Tacoma International Airport to develop facilities to meet the area's rapidly growing air traffic and the coming jet age.

The remainder of the appropriation will be used for waterfront improvement. This includes an outlay of $962,000 to complete the $3 million East Waterway Terminal modernization; $300,000 for possible development of a rail freight car ferry terminal on Harbor Island; $900,000 for improvement and reconstruction of three waterfront piers and $300,000 for improvements to the Fishermen's Terminal.

During the past 3 years all of the port's facilities have come in for their share of modernization and improvement.

The biggest job was the Hanford Street grain elevator where $2,600,000 was spent on expansion and improvements. Work was started in the spring of 1954 and is now virtually completed. The addition of five new steel storage bins, each of 700,000 bushels capacity, has lifted the terminal's storage from 2,300,000 to 5,800,000 bushels.

Grain handling has been speeded up considerably through linking the new storage space with the present loading elevator; by construction of a new car dump; and by construction of a truck and trailer dump. The new dumps require considerably less manpower, while speeding up unloading time considerably.

The modernized elevator, leased to Cargill, Inc., is designed to offset the competitive advantage previously held by Columbia River elevators.

PROFITABLE ACQUISITION

An important addition made last year was the Ames Terminal which was purchased for $850,000 and brought the port's owned terminals to 23. The 24-acre area, together with 2 adjoining tracts which are to be acquired shortly, is being viewed for eventual use as a sea-train facility.

Ames terminal, used mainly for shipment of cargo to the Arctic for construction of the Air Force radar network, was the most profitable of the port's facilities last year, turning in a profit of $132,000 from March 1, 1955, when it was acquired through the end of the year.

Considerable progress also has been made on the East Waterway Terminal on Harbor Island. This program was started in 1953 with reconstruction of 56,000 square feet of wharf space at a cost of $392,000.

The following year an L shaped transit shed was built at a cost of $174,000, and last year the central portion of the wharf was constructed at an outlay of $500,000. A contract for $400,000 awarded recently will complete the work and provide East Waterway with a terminal having a 75-foot wide apron for handling all types of cargo at three 570-foot berthing spaces.

TANK FARM IN OPERATION

Also constructed last year at East Waterway was a $300,000 tank farm for non-petroleum oils such as fish, tung and linseed. Placed in operation last August, it is meeting the increasing needs of bulk-liquid industries in the Northwest. An unusual feature is the heating of tanks radiantly by hot water

coils below the container instead of the usual method of coils placed in the tanks.

Five tanks, originally at this location, have been retained for storage of molasses. Their capacity of 2.1 million gallons brings total storage at East Waterway to 4,553,600 gallons.

An additional 81 acres acquired north of the Seattle-Tacoma airport will permit lengthening runways to 10,400 feet to provide adequate landing and take-off room for jet airliners. Part of the extension was made last year and the job will be completed by 1957.

In order to facilitate handling of the steadily rising volume of air freight the port in 1954 completed the first unit of an air cargo terminal costing $350,000.

Total air freight and air express handled last year was 32,500,000 pounds, a gain of 14 percent over the preceding year.

A new project just recently undertaken is a multimillion dollar long-range program for development of the Duwamish Green River Valley into industrial sites.

The proposed undertaking would result in changing highway and railway rights-of-way, straightening out the winding Duwamish River channel, dredging it to permit barge navigation and ultimately transforming land now mainly used for agriculture into attractive industrial acerage. It is expected that approximately 36,000 acres can be developed for this purpose.

It is estimated that the program will cost $15 million and be financed through a special bond issue.

The operation and development of the port is under the government of a three-man commission. The commissioners, appointed for 6-year terms, are Clarence H. Carlander, president; E. H. Savage, vice president, and M. J. Weber, secretary. Howard M. Burke is port general manager.

Shortsighted Industrialist

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Reading (Pennsylvania) New Era:

SHORTSIGHTED INDUSTRIALIST

Another big industrialist has teed off against labor. He is Cola G. Parker, president of the National Association of Manufacturers, who let go recently against what he called "union bosses." He also interpreted the AFL-CIO merger as being dangerous.

This kind of thinking is most unfortunate at a time when industry and labor should be moving closer together as partners in a free economy that is threatened by a dictatorial communism in which neither labor nor industry are free.

Parker objected to the fact that labor leaders are getting more and more politically active. He's wrong. It's not the leaders who are getting more active—it's workers themselves who, in many instances, must prod the leadership into action.

We often wonder why big business makes so much noise opposing labor's legislative programs. Would they repeal social security, minimum wages, bank deposit insurance, farm price props, subsidies for industry, Federal spending for atomic power, and all the other measures backed by labor?

If they wouldn't, then why all the howls about labor's political activity? Anyone studying economic facts of the last 2 decades knows that our present prosperity is based upon a widespread distribution of our wealth. And this came about largely as a result of liberal, labor-backed legislation.

Obviously, workers, and labor leaders who represent workers, are concerned about saving these gains and moving forward to greater prosperity. And Mr. Parker takes a shortsighted view when he objects to such use of democratic institutions as the ballot to achieve a better life for everyone.

It should be obvious by this time that when the masses are prosperous, industry automatically makes money.

Maybe one of these days someone in big business will be honest enough to admit it.

Pay for 6-Month Trainees

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, I would like to briefly explain the purpose of my bill, H. R. 8107, to amend the Armed Forces Reserve Act of 1952, as amended.

The Reserve Forces Act of 1955 authorized new special enlistment programs in the Reserve. One of these programs, made available to persons under the age of 18½, authorized enlistments in the Reserve for a period of 8 years. These persons are obligated to perform an initial period of active duty for training of 6 months and thereafter must serve in the Reserve for 7½ years. Section 262 (d) of the Armed Forces Reserve Act of 1952, as amended, limits the pay of these reservists to $50 per month. In contrast, other persons performing active duty for training, including members of the National Guard, receive the pay authorized for their individual grades, in any case, not less than $78 per month. The bill would equalize the pay received by persons undergoing the 6 months' training in the armed services so that all such persons would receive pay at the rate of $78 per month.

The bill also provides that persons who are disabled or die as a result of disease incurred while in training will be qualified for all of the benefits of Public Law 108, 81st Congress, which law extends the reservists and national guardsmen, who qualify thereunder, the same pension, compensation, death gratuity, retirement pay, hospital benefits, and pay and allowances as are authorized by law or regulation for members of the Regular components. Under this same law all persons will also be covered for disability and death as a result of injury received while in training for the 6 months' program.

The bill also is made retroactive to August 9, 1955, which is the effective date of the Reserve Forces Act of 1955, except that no additional basic pay shall be paid to any member of the Reserve for any period prior to the first date of the calendar month in which the bill is approved.

The reason these provisions of the bill are necessary is that the Comptroller General has held that because of the restrictive language appearing after clause 3 of subsection 262 (d) reservists undergoing 6 months of active duty for training cannot count this time in determining eligibility for retirement and for retired pay purposes of title III, Public Law 810, 80th Congress. The opinion implies that neither would this time be counted for longevity pay purposes. This produces an incongruous result since these reservists who enlist for a period of 8 years can count the remaining 7½ years, which they spend in the Reserve components, for longevity pay and retirement purposes. By virtue of the language of the bill all persons who have entered the program since its inception and all enlistees in the future will be entitled to compute the 6 months of active duty for training for longevity pay and retirement purposes.

Mr. Speaker, I fel that enactment of H. R. 8107 will give impetus to the 6 months' training program. Undoubtedly, the disparity in pay between reservists, national guardsmen, and others performing initial active training has retarded Reserve enlistments. Even so, I am happy to report that as of April 6, and since October 1, 1955, when the program was first implemented, 17,185 persons have enlisted in the Army Reserve in order to participate in this new training program. For instance, in the period of March 9 to April 6, 5,165 enlisted in the Army Reserve. In the past 2 weeks more than 1,000 trainees throughout the country have been graduated and have returned to their homes to take up training with their home units. The Army intends to graduate trainees in 2-week cycles, and I think we can look forward to young men completing this program and returning to their home units in ever increasing numbers.

They Are Our Responsibility

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. FASCELL. Mr. Speaker, under leave to extend my remarks, I would like to call to the attention of the Members an editorial which notes the 66th anniversary of Pan-American Day.

The solidarity of the Western Hemisphere is one of the great bulwarks of the free world and particularly for support of the United States. This unity should be expressed by us socially, culturally, politically, and, even more important, economically.

It is indeed tragic to view what is almost an indifferent attitude in economic matters which the United States exhibits toward the Latin American Republics. This apathy is alarming not only because it has a tendency to strain the links of friendship between us, in view of our expenditures and assistance

in other parts of the world, but because it points up our shortsightedness in not appreciating that the greatest potential consumer-market in the world outside the United States lies with the Latin American people. Our expanding economy, both agricultural and industrial, demands new markets. New markets for our products are essential for our own economic well-being. It seems only logical from the standpoint of good business and friendship to deal first with our closest friends and supporters.

Miami, Fla., is the largest gateway to South America, and the great Knight newspapers expressed very pointedly the feelings of the North Americans in south Florida who enjoy a spiritual as well as geographical closeness to their friends and neighbors in South America. The editorial follows:

[From the Miami Herald of April 14, 1956]

THEY ARE OUR RESPONSIBILITY

Today is the 66th anniversary of Pan American Day.

In these times when the possibility of another world war could easily be sparked by the critical Israeli-Arab tensions in the Middle East, Pan Americanism has tremendous significance for the people of this hemisphere. And that includes us in particular.

The American Republics united in April 1890 to form the association which is known today as the Organization of American States. It is the oldest international association in the world.

It has accomplished much as a peacemaker, especially in recent years when it prevented flare-ups in certain countries to the south from developing into full-scale war.

It has been the guiding spirit behind numerous treaties and agreements and agencies which have aided OAS in one of its principal objectives—safeguarding the peace and freedom of the Western Hemisphere.

OAS has had a hard road to travel in making its second objective fully effective—achieving just and decent living conditions for the peoples of America.

As the wealthiest Nation in the world, we have loaned and given away billions upon billions of dollars to all sorts and conditions of people in all sections of God's green footstool.

Our neighbors to the south, our friends and the suppliers of essential raw material—whether for peace or war—have gotten a niggardly sum by any comparison.

It is time that the United States woke up. Senator GEORGE A. SMATHERS warned the Senate in a Pan-American Day speech this week that:

1. Latin Americans have awakened from apathy and resignation.

2. They are seething with discontent and no longer accept gnawing hunger and disease as their portions.

3. Every Latin nation is under constant, insidious attack from the Communists. We must be fluid to meet every new challenge.

This is not a partisan election-year speech. Senator SMATHERS has been telling both parties these facts in season and out.

Latin America has received only 2.5 percent of our foreign aid since World War II.

No sane-thinking North American will quarrel with the Senator's conclusion that "we cannot escape our responsibility. Those people are entitled to a better share."

Or have we forgotten the beachhead that the Soviets had established just a little while ago in Guatemala?

Or are we so stupid to think that the Communists gave up in Latin America when Castello Armas ran them out of Guatemala?

Containment Is Obsolete

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. UDALL. Mr. Speaker, in recent years few Americans have shown keener insight into the problems of Asia and the frame of mind of its peoples than Justice William O. Douglas.

A few weeks ago Justice Douglas delivered an address in Chicago in which he stated his belief that only strong political measures of an affirmative character can avert a serious debacle for American policies in Asia.

I know his provocative comments will interest those who are concerned about the future of Asia, I present herewith a summary of this address:

[From the St. Louis Post-Dispatch]

CONTAINMENT IS OBSOLETE

It is almost trite to say these days that the world is in revolution. Yet the implications of that revolution are still not truly appreciated at the high levels of Government and have hardly percolated to the mass of the people.

We have oversimplified the problem by thinking of it in terms of communism and Communists. We have leveled our big guns of propaganda, public opinion, and law against communism and the Communists. We shaped our policy in negative terms—in anti-Communist measures, in anti-Communist strategy, in anti-Communist alliance.

We have saturated the public mind with anti-Communist attitudes and with loyalty oaths. We have put on one of the greatest hunts in history, looking for the subversive. And we have implemented this attitude with a foreign policy that is largely military in conception.

I do not belittle the Communist threat to the world. I think it is much more serious even than we have imagined. Its seriousness, however, is increased by our negative response to it. I go further, and maintain that with this negative approach which we have taken to date, we stand to lose the battle for the political balance in the world. Only strong political measures of an affirmative character can present a serious debacle.

GAME OF POWER POLITICS

While we thought that Russia and communism were safely contained, the Soviets changed their tactics. Under Stalin, the Soviets were darkly conspiratorial, not participating in the game of power politics. Today they are operating along broad political fronts on every continent, playing the ancient game of power politics with skill and suavity.

That single change in tactics has made the whole theory of containment obsolete and outdated.

A smiling, friendly Russia has now appeared behind all our ramparts. She now asks for peace, offering help to subjugated and impoverished people, and tendering her friendship without military pacts or alliances to all who will collaborate.

The balance of political power in the world lies, I think, in Asia. It has the bulk of the people of the world, and the bulk of the riches as well. Asia is the center of the great revolutions that were loosened on the heels of World War II.

Four main influences in Asian psychology indicate why the Soviets have been able to grow in influence and prestige in Asia.

ASIANS LONG FOR EQUALITY

The Asians' desire to be rid of feudalism, the desire for independence, the longing for equality, the dream of the socialist state—these have all been made powerful rallying calls by the Communists.

First, as to feudalism. The Russians have inveighed against the landlords, the oligarchy that controls a nation, the combination of ecclesiastical and propertied interests that own the wealth and run a country. The Russians are more clearly identified with this issue in Asia than we are, though we have done some good things in this regard.

Second, as to the independence movement in Asia. We actually have a splendid record on this issue, for we took the lead by granting the Philippines their independence at the end of World War II. But somehow or other, we never received much credit for it in Asian circles. And we opposed Indonesian independence so long that today in Jakarta we are often identified with the forces that tried to keep that nation under colonial rule.

Third, as to the equality of people. This is a firm article of the American faith; and we have done much at home and in the Philippines to extol it. But generally speaking, that has not been reflected in our Asian policy. Our attitudes have been conditioned by our outlook. Our outlook has been primarily military. Those who refuse us military alliances become suspect. And those suspicions are telegraphed to the sensitive Asian mind as arrogance stemming from a superiority complex.

Fourth, as to socialism. Russia, the Socialist state, makes great capital out of the fact that she already has the Socialist regime which the other Asian nations have only in blueprint stage. Russia poses as the model—as the inspiration for the new Socialist states that are emerging from feudalism.

MAN HUNT RESULTS IN TIMIDITY

We are protagonists of capitalism, not socialism. Moreover, we tend to be suspicious of Socialists. We condemn socialism at home. And the man hunt we have been under these long years since World War II has made us timid.

Those years have, I fear, made us wary of ideas. They have taught us that orthodoxy is the safest course. The reign of intolerance, which we have experienced, has narrowed our horizons and made us less daring and imaginative in our thinking. The result in official and public attitudes toward Asia has been near tragic.

I have mentioned mostly minuses. There are of course, pluses. We have had emissaries in Asia who have made us friends. We have had training programs and technical missions of talent, notably the Ford Foundation project in India and Pakistan, that have given impetus to democratic leanings and have helped the Asians master their own affairs. But by and large, American prestige in Asia has waned.

We enter the last half of the 20th century having lost most of the advantages we once enjoyed over Soviet Russia. But we still have one that is imperishable, one that can be decisive in the battle for the minds and hearts of the uncommitted people of the world.

THE CONCEPTS OF FREEMEN

That advantage is in the concepts of liberty, freedom, equality, and due process, which are deeply ingrained in our way of life.

These ideas of liberty mean freedom of expression, freedom of thought, and freedom of conscience that have no counterpart in Russia.

These ideas of liberty leave room for political, literary, and artistic idiosyncracies which Russia does not tolerate.

These ideas of liberty tolerate the unorthodox as well as the orthodox.

These ideas recognize true political equality of people of all races and creeds.

These ideas reject the Marxist philosophy of one master plan to which all men must bow.

These ideas constitute the one true advantage we have over the totalitarian world. They can bring us victory if we will only make them vital forces in our domestic affairs and translate them into affirmative foreign policy.

Progress to Chaos in Farm Program

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an editorial that appeared in the Monroe Evening Times on the subject of the farm bill. This is a timely editorial and has provoked considerable discussion in Green County which is within my congressional district. The editorial follows:

PROGRESS TO CHAOS

Day by day, step by step, the Democrats and the rigid price prop bloc in Congress are maneuvering agriculture closer to a position of no farm legislation which can bring relief this year.

In fact, the whacking and carving achieved by the Senate-House conference committee on the omnibous farm bill give every appearance of deliberately contrived moves to insure a veto of the final form of the bill when it reaches the White House.

It was interesting to note that on every case where pressure has been applied by special interest Members of Congress, the conferees caved in. Their excuse was that they had to yield to get any form of bill at all.

That certainly sounds like anything but wise and sincere attempts at writing proper legislation.

It also was interesting to hear our friend, Senator ELLENDER, a cotton State Democrat, declare offhandedly: "I think the President will sign this bill. He's getting about everything he asked for, including the big thing, the soil bank. Of course, there are a couple of little gadgets he doesn't want."

We are not sure what ELLENDER mean by "gadgets." If he was referring to the retreat from flexible to high rigid price supports, he was insulting the intelligence of the American farmers, the President, those who have worked for a genuine solution to crop surpluses, and those Senators who voted for flexible support.

The administration's farm program was presented as a studied proposal for trying to make supports realistic, for moving agriculture toward the goal of every farmer—100 percent parity in the market place. It was not whimsical, nor was it political in the sense of a bill to woo votes.

Had it been the latter, you can be certain there would have been plenty of "pie in the sky" promises and extra subsides.

It could be that the opposition strategists are being just a little too cute this time. By kicking the farm bill around in the hope that its battered final version would put Mr. Eisenhower in a vulnerable political spot, they have just about made certain there will be no farm legislation at this session.

We think the farmers deserve something better than that at the hands of Congress. We think Mr. Eisenhower would have been willing to sign any legislation which seemed to promise help for the farmers this year, even if the administration was obliged to accept various compromise plans and differences of opinion.

But when the main purposes of the legislation is killed, when the principal structure is destroyed in favor of a return to the very measures which put the farming industry in its present position, it scarcely seems possible that Mr. Eisenhower can avoid a veto. To approve such legislation without a fight would be a betrayal to the farmers.

Bulganin Assailed for Treachery in World War II—Polish Patriots Refused Aid

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. BOLAND. Mr. Speaker, I want to direct the attention of the Members of the House to a very significant article that appeared in this morning's Washington Post and Times Herald. It is an attack upon Premier Nikolai Bulganin for his utter disregard of a plea to help 50,000 Polish patriots during the 63-day Warsaw uprising against the Nazis in August 1944. Because these charges are leveled by one who was in a position to know, they cannot be passed off as irresponsible or false.

The reason behind Bulganin's refusal to help these courageous Polish patriots is not difficult to fathom. There is no doubt, and subsequent events bare this out, that the Kremlin was intent on carving up for itself the Polish nation. Bulganin and company did not want the uprising to succeed. The obstacles and difficulties they placed in the path of success doomed the uprising.

Mr. Speaker, this is the same Bulganin that today prates about peaceful intentions of his government. He is the same man, in company with his boss Khrushchev, who is now knocking on the doors of nations all around the globe holding out the hand of friendship. It is well to remind those who would clasp it that history records this same hand as one of cold-blooded, black treachery.

Mr. Speaker, under unanimous consent, I include in the RECORD the following statement of Sir John Slessor, wartime air marshal of England:

BRITISH LEADER ASSAILS BULGANIN ON WAR II ACT

KOENIGSWINTER, WEST GERMANY, April 15.—Marshal of the Air Force Sir John Slessor, one of Britain's wartime air chiefs, today lashed out at Soviet Premier Nikolai Bulganin for having "a leading responsibility for the coldest blooded, blackest hearted bit of treachery" of World War II.

"This was Russia's refusal to help 50,000 Polish patriots during the 63-day Warsaw uprisings against the Nazis in August 1944," he said.

Slessor, who retains his rank by courtesy although he has retired from the Air Force, was addressing the German-English Society here while Bulganin and Russian Communist Party Chief Nikita Khrushchev were on their way to Britain for a visit.

He recalled that in 1944 he was responsible for supplying the Polish resistance army led by Gen. Tadeusz Bor-Komorowski. This had to be done from Italy, 800 miles away, over enemy territory "when the other so-called ally was in the suburbs of Warsaw," Slessor said.

(At one time the Soviet Government, whose troops were outside the city, objected to British and American planes landing on Soviet soil after dropping supplies to the insurgeants because it said it did not want to associate itself in any way with what is called "the adventure in Warsaw.")

"The man who had a leading responsibility at that time in what in my view is the coldest-blooded, blackest-hearted bit of treachery in the whole history of war is a man called Bulganin," Slessor said.

(At that time Bulganin was Soviet representative on the Moscow-sponsored Polish Committee of Liberation which, unlike the exile government in London, condemned the uprising as premature.)

Discussing Russia's recent disarmament proposal in London, which he attributed to Bulganin, Slessor said: "There is only one thing we should carry in the foreground of our minds—never trust a Russian Communist further than you can kick him."

Pan-American Day

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. ROONEY. Mr. Speaker, Pan-American Day, the day before yesterday, should have reminded us of the reasons that bring together the various American Republics and cause them on this historic day to celebrate their solidarity and the common interests that bind them together.

One hundred and thirty years ago, Simon Bolivar gave impetus to the idea of pan-Americanism at the Congress of Panama. It was chiefly through his efforts, at this Congress, that the blueprint for inter-American cooperation was drawn.

Bolivar's dream became a reality at the first Inter-American Conference, held in Washington, in 1890; for it was at this assemblage of American States that the cornerstone of pan-Americanism was laid with the establishment of the Pan American Union.

Later Inter-American Conferences provided a firm foundation for the growth and expansion of hemispheric cooperation, and at Bogota in 1948, the Ninth Inter-American Conference gave permanent structure and authority to the already proven system of pan-Americanism by establishing the Organization of American States.

Each successive conference contributed positive achievements to the structure. As the system grew the American Republics have shown their ability to work together to promote peace and security; they have agreed that international law and good faith should govern their future relations; and they have provided for cooperative action for economic, social and cultural development.

It was appropriate that on the 66th anniversary of the establishment of the Pan American Union that the American Republics should express their confidence that this inter-American system, which is based on the equality of all American States and has promoted fellowship and mutual cooperation amongst its members for so many years, shall continue to progress and to contribute to hemispheric welfare and security in the future.

The Problem of Security in Great Britain

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. REUSS. Mr. Speaker, Mr. Edwin F. Schleifer of Milwaukee, Wis., has called my attention to a recent article by George E. Sokolsky entitled "British Take More Realistic View of Red Infiltration." Under leave to extend my remarks, I include the article, as follows:

I am now reading the speeches that were delivered at the 20th congress of the Communist Party of the Soviet Union, which started all the hub-bub of making a bum out of Stalin. The speeches are long and tiresome. Khrushchev's speech runs 116 pages which is a lot of talk under any circumstance.

It is a labor to little real purpose, perhaps more valuable for a Ph. D. than a journalist, because no matter what was said, it brought important changes not only within Russia but in nearly all countries. These speeches are being used as an excuse for more intensive neutralism and have become an embarassment to such a government as the present one in Great Britain which, in effect, is being invaded by the topmost Russian officials in one of the most brilliantly planned publicity stunts designed to shape world public opinion.

Another document before me is the "Statement on the Findings of the Conference of Privy Councillors on Security." It is not the report that was made to the British Government but a summary of it issued to the public as a white paper.

The conference "pointed out that, whereas once the main risk to be guarded against was espionage by foreign powers carried out by professional agents, today the chief risks are presented by Communists and by other persons who for one reason or another are subject to Communist influence. The Communist faith overrides a man's normal loyalties to his country and induces the belief that it is justifiable to hand over secret information to the Communist Party or to the Communist foreign power. This risks from Communists is not, however, confined to party members, either open or underground, but extends to sympathizers with communism."

This has been the attitude of American Congressional committees since Martin Dies and is called by the Communists, McCarthyism. In the last sentence of the quotation it is assumed that the fellow-traveler is as wicked as the member of the party and the only way to establish a fellow-traveler according to nearly 20 years of investigation, has been by association.

While guilt by association always leads to great injustices, it is only right that a government should resolve some doubts in its own favor, what it amounts to is a decision that when in doubt, there should be no employment.

This report was prepared by members of both parties, including Earl Jowitt who wrote a book in defense of Alger Hiss; nevertheless its 15th paragraph contains a statement of the rights of the government over the rights of the individual which almost amounts to a constitutinal change in Great Britain:

"The conference is of the opinion that in deciding these difficult and often borderline cases, it is right to continue the practice of tilting the balance in favor of offering greater protection to the security of the state rather than in the direction of safeguarding the rights of the individual. They recommend that an individual who is living with a wife or husband who is a Communist or a Communist sympathizer may, for that reason alone, have to be moved from secret work, and that the same principle should be applied in other cases of a like nature."

The Russians sure have changed our world even against our wishes. No such statement would have appeared in an official British report two generations ago.

Address of Hon. Clair Engle at Annual Convention of National Wildlife Federation

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. METCALF. Mr. Speaker, one of the biggest meetings in the conservation field is the annual convention of the National Wildlife Federation State affiliates. It is attended by delegates representing 3 million sportsmen and lay conservationists throughout the Nation.

This year's convention was held last month in New Orleans, just prior to the North American Wildlife Conference.

The keynote speaker at the 20th annual convention was our colleague, the chairman of the House Committee on Interior and Insular Affairs.

A distinguished conservationist, the Honorable CLAIR ENGLE, of California, advised members of one of the largest conservation groups to get behind an affirmative program of conservation legislation instead of concentrating on winning negative victories.

An audience of 250 heard his speech. Among them were delegates from State wildlife federations and sportsmen's leagues, together with the leaders of practically all the national conservation organizations—the Izaak Walton League of America; Wildlife Management Institute; International Association of Game, Fish, and Conservation Commissioners; the Wilderness Society; National Parks Association; National Audubon Society; the Wildlife Society; American Fisheries Association; Sport Fishing Institute; Nature Conservancy; American Forestry Association; American Nature Association; Sierra Club, and others.

I am sure my colleagues will be interested in this important and timely address, which follows:

Hon. CLAIR ENGLE. Thank you very much, Mr. Woodward, for that very complimentary introduction. I am not only flattered by that fine introduction but I am also proud and happy to be here.

I am not quite sure whether or not you are prepared for a serious discussion tonight but I am convinced that within the confines of this room there is a deeper concentration of real conservationists than you could get into a room of comparable size anywhere else in the country.

Of course, I hope that you ladies here do not mind listening to legislation for I have been informed by the toastmaster that the ladies are the real conservationisis—they not only believe in it but they have to put up with their husbands who believe in it and go out hunting and fishing and leave them as widows.

I am going to talk to you tonight as a legislator who deals in conservation. Eventually, in all of these problems, we have to get down to the point where somebody writes a bill. I always say to people who talk to me about legislation that I can aways give them the first line, "Be it enacted by the Senate and House of Representatives," and that is where I stop and say that they can take it from there.

Many of the things you want to achieve as conservationists can only be achieved through legislation. It is important therefore that conservation-minded people be informed on legislation affecting their interests and skilled in the use of the legislative process.

I would like to start with the last session of this Congress and comment briefly on three major pieces of legislation which I know were of great importance to you. One was the mining bill. Another was the defeat of the Echo Park Dam and the third had to do with the Pittman-Robertson funds. I would like to mention each of those, not in detail, because I am sure that most of you are familiar with them, but because they teach a lesson about the problems of legislation.

With reference to the mining legislation, there are two things that I would like to say to you about that. The first is that in that legislation, for the first time, we took a step toward getting ahead of this mining-claim problem so we will not be constantly lagging behind as in the past. Over the last 5 or 6 years, the mining claims filed upon the public-land areas of this country in the national forests and on the public domain have increased from some 4,000 to over 166,000 claims. Quite obviously, if we did not do something about setting up procedures for knocking off the old and stale claims, we were going to fall constantly behind. We got started toward holding even.

The second thing that I want to mention about that legislation—and it is significant—is the kind of support that it had. I would like to read to you what the committee report said about the organizations supporting the legislation:

"The language of the bill, as reported, has been developed with the support and cooperation of both the Departments of Agriculture and Interior.

"Included in a long list of national, State, and local groups and individuals supporting this legislation are the following:

"American Mining Congress, American Federation of Labor, Independent Timber Farmers of America, American Forestry Association, Western Lumber Manufacturers, National Wildlife Federation, Sports Afield, National Lumber Manufacturers Association, National Farmers Union, Wildlife Management Institute, the Izaak Walton League of America, the National Grange, Northwest Mining Association, Northern Rocky Mountain Sportsmen's Association, Western Forest Industries Association, Western Forestry and Conservation Association, United Sattes

Chamber of Commerce, Society of American Foresters, and the American Nature Association."

This seems to me to set an example and a pattern for action for other and further successful legislation that should be followed in the future. When I get down to the next phase of this discussion, the problem still before us, I will further comment with respect to that.

I think this was the finest example of cooperative action among those interested in public land problems in the United States that I have seen in the 13 years that I have been in the Congress. This organization and all of the others that took part have a right not only to be proud of what they accomplished in getting it passed but they also can be proud of the unusual cooperation among the various users of the great public land area that they secured in getting it done.

I refer next to the defeat of the Echo Park Dam by deletion from the upper Colorado River project. This, of course, was a major victory for conservation; it did not occur because you convinced any of the sponsors of the bill that they ought to take it out of there on its merits. It occurred because they were convinced that they could not pass the legislation through the House of Representatives unless it were deleted. That bill passed the Senate Interior Committee by a vote of 11 to 1 with Echo Park in it. Then it passed the United States Senate by a vote of 58 to 23, better than 2 to 1, with Echo Park in it. But then what happened?

This is an interesting commentary as to how things are done legislatively. I walked up to one of my friends from Ohio one day and said, "Are you going to vote for the upper Colorado Basin project?" He said, "No; I cannot do it." I said, "Why can't you do it?" He said, "Because I have a stack of letters from the various conservation groups in my district and I cannot spend all of this next summer explaining to them why I voted for that bill."

It simply boiled down to this: He had no particular interest in the legislation—the project was not in his district—he was not going to gain anything by it for his district or his people; but if he voted for it he suffered a very definite detrimental effect in his area by having to go out and explain to all of the conservation groups why he did it. There were just enough people like that in the House of Representatives so that they could not pass the legislation with Echo Park in it and so it was taken out.

It is to the lasting credit, in my opinion, of those represented here and of the other conservation groups throughout the country, that after Echo Park Dam was taken out and language protecting the national parks was inserted, that these organizations withdrew their opposition.

That was clearly stated on the floor of the House the other day.

Why is it that conservation groups can show such significant power in one instance and then seem to completely spin their wheels in getting action in other instances?

The matter of the Pittman-Robertson funds is simply a lesson that we should not leave money lying around in Washington. We are lucky indeed that we got it in time and that somebody did not lay hands on it and make a distribution of it in other directions. We will not let so many years go by again, I hope, in letting that money pile up.

Now, I think that the conservation groups learned something about their strength in the preceding session of Congress. They have some solid accomplishments to talk about and in which they can certainly take real pride. This session that strength should be consolidated and put into affirmative action.

What do we have coming up in this session? We have legislation relating to funds for recreation in the national forests. Let me give you the history of that legislation going back for 6 years.

We had a Congressman from Arkansas who first introduced that legislation. That was in the 81st Congress, 6 years ago. It was called the Tackett bill and didn't pass. Then it was called the Baker bill and that bill died. Now we have a number of similar bills pending by METCALF and others. We realize the need for that legislation with 45 million recreational visits to the national forests in this land, an acceleration of 2 and 3 times since the end of the last war. We know that the budget for the Forest Service has been inadequate for recreational purposes even though it has been increased in the past several years from $611,000 to $1.6 million in the budget of 1956.

We have a mission 66 for the Park Service and I am sure that you people are familiar with that, too, if not with all of the details, at least with the general concept and objectives of that legislation.

Why is it that conservation organizations that can defeat the Echo Park Dam legislation and cause amendment to the 1872 mining law cannot move a simple bill calling for earmarking of a percentage of funds, not to exceed $5½ million for forest revenues for recreation?

I think that it is because we have failed to realize what the legislative difficulties are.

For instance, the Appropriations Committee sits there and says, "We don't like this business of earmarking funds for we then do not have any control over them." The members on the Agricultural Committee have also said that they are opposed to doing it. In addition, recreation is hard to sell in Washington. When we were running a thirty-five and forty million-dollar military budget, people thought that they had better get some of this money into the Treasury rather than putting it in recreation. Recreation is a hard program to sell. It is hard to sell to some of these hard-fisted Congressmen who are worrying about the budget and about taxes.

We need some self-help provisions (as I call them) in this legislation. I think that we have got to do two things—first, we have to get around the opposition of the Appropriations Committee and, second, then we have to put in some self-help insofar as the national forest users are concerned. If we get those two things put in the bill, then we might begin to move forward. My bill in this respect says that the money shall be earmarked but shall be appropriated each year by the Appropriations Committee. That is not quite as good as just slicing it off in a direct appropriation but it is going a half step. Our experience has been—and this legislation is drafted on the basis of similar legislation for the improving of grazing for I almost took the language right out of the statute and applied it to this situation—that if we ever get an earmarking of funds we are well on the way to getting them.

The history has been that money comes along because the earmarking acts as a mandate to the Appropriations Committee.

I think that we are going to have great difficulty in the self-help field with those provisions which would require a general license for the use of recreational areas in the national forests by all the users. That is something that is hard to administer in the first place and it is also going to get tremendous opposition, I think, from some of the sportsmen's groups.

I had a gimmick out in my area that the Forest Service will not go for but which is a good one. They issue the campfire permits and I said, "Why not charge a dollar for those?" The Forest Service said that they do not issue the permits in all of the States. I said, "So what? Forty percent of the visitations in the national forests occur in the three Western States and if we get that money in and earmark it for recreational activities, at least it will help." Those are just suggestions and there may be other ways of doing it, but in any case provision must be written which will require some user participation in the costs of recreation; that is what I call self-help.

With the Water Pollution Control Act expiring this year, we are going to have to get something done on that. The time is coming very soon when we won't have any game fish in the major streams in this country unless we stop the pollution of those streams. Mr. BLATNIK has that legislation. It is good legislation, and I feel sure that it will get through in some form before the present law expires. I am not so sure that he will get his hundred million annually for construction grants, but he will get something fairly close to it.

Now, in hurrying along I want to talk to you about another subject that will be before you and on which legislation has not as yet been drafted—that is the matter of military reservations on public lands. We have found out that military establishments are stepping out, especially in the Western States, and blocking out huge portions of our country for military uses and in some instances as special hunting preserves.

The Defense Department agencies have withdrawn lands which in total area exceed the States of Massachusetts, Maryland, New Hampshire, and Delaware combined. If the withdrawals of the Corps of Engineers are added, then the total acreage of the State of Connecticut could be added to that. If the present applications of defense agencies are approved, there will be added to the list of lands permanently withdrawn from multiple use and development an area totaling in size the States of New Jersey, Rhode Island, plus 50 Districts of Columbia. Therefore, if they keep what they now have and what they have applied for, they would have an area equivalent to a strip of land 14 miles wide from New York to San Francisco. I told them that if they couldn't hit that kind of a strip with their bombers, then I don't know how we were going to win any war.

We undertook to find out what kind of an operation we were up against with reference to these military withdrawals and here is what we learned:

We found out that a defense agency, by writing an application, simply by the stroke of the pen, can reserve various areas of lands in the western part of the United States out of the public domain area and that there is no other agency in the Government that has the power or the ability to pass upon the necessity for that military use. The Interior Department appeared before our committee and said they were in no position to weigh the question of military necesity. They said that they simply had to take the word of the Army, Navy, or Air Force for it.

In the hearings we pressed the defense agencies on multiple uses of the withdrawn areas. The Navy in particular began to concede concession after concession. In the beginning they claimed they needed the land forever and no one else could use it.

Now, what they have conceded to date is that withdrawal will not be necessary for longer than 10 years and that the reservations sought are really just for the use of airspace above the land and that grazing could continue on a 12-month basis. They would let the cattle in. If a cow gets killed they can pay for her. They will also allow special periods for spring and fall roundups, when the stockmen themselves can go in. They agree that established seasons for hunting and fishing can be observed under State laws; that game counts and related measures for game conservation can be carried out by responsible State officials in the area; that substantial mining operations can be continued; and that the area can be opened for recreation and prospecting puropses during the weekends.

The result of all this is that by this kind of investigation we have established the basis for multiple use of these defense areas even when they are taken over for defense purposes.

However, in my mind, that does not go to the real root of the problem and we are going to have to do something further. For that reason I am having legislation drafted which will do three things, and when it is drafted I am going to submit it to many of the leaders who are here at this meeting tonight.

The first thing that this legislation will provide is that when public land is taken over by an executive agency under a withdrawal and then thereafter becomes surplus, the lands will be returned to the department from which it was taken so that it can again become a part of the public domain. Most people do not know that after they take over these areas and then declare them surplus, the property then goes to the General Services Administration and is put up for sale. I say that this is a fine way to break up the public land areas of this country and it can also be the basis for some high and mighty finagling with reference to taking over valuable pieces of the public land areas of our country. We are going to stop that.

Secondly, the measure will provide that no land can be withdrawn from public domain status by any department or executive agency without approval of the Congress unless the area involved is 5,000 acres or less. The purpose of that provision will be to return and restore control of the public lands to the Congress of the United States.

As a third item, this legislation will require that whenever public land areas are taken over for these special purposes, such as the Navy, Army or for Air Force use, that publication in the Federal Register will be required to set for the other multiple uses that can be made of it, such as grazing, mining, lumbering, sports activities, recreation, and at what times and under what condition. The purpose of this provision is to require of the executive agencies, where they show a clear need in the public interest for a part of the public domain, that there be a sharing in use when such can occur consistently with the limited use for which the property is taken.

When we draft and pass that legislation I think that we will be a long way toward the settlement of some of these problems.

We are also doing something in connection with the protection of wildlife refuges. No sale or disposition of such lands should be made without the consent of Congress. We want to earmark a portion of the duck stamp funds in order to be sure that that money is used for the acquisition of additional refuges as was intended when the duck hunters supported the duck stamp tax.

Legislation has been drafted for a national wilderness preservation system. I have had an opportunity to examine the legislation in draft form and it will be introduced in one form or another. I am impressed with the importance of that because of a trip I made into the high Sierras this last fall. Even upon the very top of the Sierras there were jeep tracks. The jeep is opening up all of the areas of the public lands, national forests and otherwise, and unless some action is taken we are not going to have for very long a true wilderness area left in this country.

All of this legislation which I mentioned will operate in the same direction. The objective is the limiting of executive control over the public land areas of the Nation and placing the control of those areas more directly in the Congress of the United States. If we say that an area cannot be reserved for military purposes without the consent of Congress, or you say a refuge cannot be sold without consent of Congress, or that wilderness areas once established cannot be changed, abolished or reduced without the consent of Congress, then to that extent we have limied the authority and action of the executive agencies, and placed that discretion in the Congress.

Now, the problem is how far can we go in returning the control and restoring the control of the public lands to the Congress of the United States without destroying or improperly limiting executive freedom of action with reference to the administration of those lands in the public interest. We need a proper balance and in order to determine what that is we are going to have to, in the next few years, reevaluate the whole question of public land use. I am in hopes that some day we can write another piece of legislation which has been in my mind for a good long time which will set up the procedures for establishing the priorities of use of these public land areas for water conservation, recreation, lumbering, grazing, mining and whatever other uses may be made.

I have often said to my conservation friends that in my opinion they spend too much of their time in winning negative victories. I believe it is much more important to have an affirmative program that encompasses all of these things they seek to protect in negative victories. I would like to go one step further and say that I would like to see the conservationists tackle a real affirmative program such as set forth in the bills I have discussed and use your new found strength and unity in putting that affirmative program through Congress.

I would like to say to you, in connection with the 5 or 6 pieces of legislation that I have mentioned, that I hope that this great organization will undertake to follow through and help us in implementing these programs; that you will undertake to study the problems, to aid in drafting, introducing and supporting legislation which is designed to carry out those programs, and that you will continue to maintain an active and vigorous liaison with the other interested groups of all kinds. I hope that you will develop closer and more friendly relationships with the larger mining organizations, the livestock organizations, lumber organizations and water utilization groups with whom such excellent cooperation occurred last year on the multiple use mining bill.

I would like to take this occasion to again thank you for the opportunity of being here and to say to you that I am sure that we are in a position to move forward more constructively, more actively and more aggressively than we have ever done before in the field of consideration with the kind of leadership represented here and with the growing unity, strength and legislative know-how of this and other conservation organizations.

Greek Independence

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein my own remarks, in part, delivered at the 135th anniversary celebration of Greek Independence Day at Fitchburg, Mass., on March 25, 1956.

This memorable event was arranged and very ably conducted by the Greek Orthodox Community at Fitchburg and was attended by the distinguished mayor of the city, Hon. Hedley Bray; the prominent and capable Greek-American leader and businessman, Mr. Charles Kotsilibas Davis; the beloved paster of the church, Rev. John Michalides, who gave the invocation; and a large number of representative citizens of the community and city.

I was most graciously introduced on the inspiring occasion by the able radio announcer and commentator, Chris M. Nikitas, of station WEIM, which carried my address on its facilities:

REMARKS IN PART OF HON. PHILIP J. PHILBIN, OF MASSACHUSETTS, AT 135TH ANNIVERSARY CELEBRATION OF GREEK INDEPENDENCE AT FITCHBURG, MARCH 25, 1956

"The forcible removal, exile, and imprisonment of Archbishop Makarios, a great spiritual leader and prelate, who exemplifies the political ideals as well as the profound religious beliefs of millions of honest, law-abiding, democratic-minded people, is shocking to the conscience of the free world," said Congressman PHILBIN at the 135th anniversary celebration of Greek Independence held at Fitchburg last night.

"This outrage parallels the cases of Cardinal Mindzenty and Archbishop Stepinac, who were so shamefully persecuted by Red Communists. It is almost beyond belief that such ruthless persecution could occur in the free world," he said.

"It is most deplorable that our Government should have been linked to this disgraceful incident in any way, but recent events demonstrate that in the minds of many people overseas," he asserted, "we are sharing the blame with the perpetrators of this dastardly act, and other abuses of colonialism."

"The charge that communism is responsible for Cyprus is ridiculous. The Greeks have fought communism with great vigor and success. Cyprus is the product of a brave people's aspirations for self-government," said PHILBIN.

"It is not enough for our Government to express sympathetic concern. If we would promote peace and collective security in the Middle East, we should move vigorously to secure the release of Archbishop Makarios, and to urge that the Cyprus question be considered on a basis of decency and fairness, and that no further violence and brutality be visited upon religious leaders and others who are seeking by legitimate means to secure the historic right of self-determination for which many nations have struggled and sacrificed.

"I have urged the State Department not only to use its good offices, but to do everything in its power, to bring about the release of Archbishop Makarios and a peaceful solution to the Cyprus problem and also to strive for collective security so urgently needed in the Middle East," PHILBIN declared.

PHILBIN hailed the Greek people in this country for their "loyal citizenship and their eagerness to serve the Nation in war and peace." "You may well be proud of your fine contributions," he said.

"Greek Independence Day brings vividly to mind," PHILBIN continued, "the tireless and unselfish devotion of the Greek people to the cause of liberty and recalls the great debt which democracy and civilization owe to Greece for its imperishable benefits to every field of our way of life throughout the ages."

Tracing world history, the Clinton congressman said: "Take the Greeks out of history and there would be no civilization. Classic Greek culture developed and gave to the world the philosophy, the ethics, the science, the art and literature, the medicine, the astronomy, the mathematics, the principles of government and politics, and spir-

itual values that form an indispensable foundation stone of our modern society. You must ever be proud of this heritage of grandeur. The American people will ever be grateful for it."

Understanding the School Decision

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. KEATING. Mr. Speaker, Prof. Paul A. Freund, a distinguished member of the faculty of the Harvard University Law School, recently wrote two outstanding articles concerning the Supreme Court segregation decisions. In these articles, Professor Freund, who is one of the Nation's leading experts on constitutional law, presented in a dignified, scholarly manner the background of the Court's decision. I think he has hit the nail squarely on the head.

Professor Freund points out that every contention now advanced against the segregation opinion was presented to the Court in lengthy briefs and oral arguments, and that the Court repeatedly postponed its final decision in order to give all interested parties an opportunity to present their views.

I found especially gratifying his defense of the Supreme Court itself as an institution of our free government when he wrote:

> The Court interprets to us our own ideals implanted in the constitutional document as they have flowered in our national life.

The members of the Court should not be mere grammarians, who work out of the dictionary. Rather, they should be interpreters of principles of fact and value as they apply to problems of the moment.

Viewed in this perspective, one can see that the decision of the Supreme Court was entirely in keeping with the best traditions of that institution. The segregation opinion, as Professor Freund suggests, simply followed in the "line of growth" of interpretation of the Constitution.

Under leave to extend my remarks, I include the two articles, entitled "Understanding the School Decision," which appeared in the Christian Science Monitor of March 26 and 27. I hope all Members of this body will read and ponder this fine analysis of the situation.

The articles follow:

[From the Christian Science Monitor of March 26, 1956]

UNDERSTANDING THE SCHOOL DECISION—I

(By Paul A. Freund, Charles Stebbins Fairchild professor of law, Harvard Law School, Harvard University)

Unanimous decisions of the Supreme Court are uncommon enough in ordinary cases, and especially rare in extraordinary ones. When, therefore, the unanimous decision in the school segregation cases provokes attacks on the Court for "judicial usurpation" and "naked judicial power," the lines of communication between the Court and the people have been badly tangled. The phrases just quoted are taken from the Declaration of Constitutional Principles issued by 19 Senators and 81 Representatives in the United States Congress.

This declaration (popularly known as the "Southern Manifesto") is only the latest and most dramatic item of evidence that we may be facing not only a crisis in race relations but—what could in the long run be even more shattering—a crisis in the role of the Supreme Court as the authoritative voice of our highest law. The latter threat, no less than the former, calls for the fullest possible measure of understanding.

One thing can surely be said of the segregation cases: they were not hastily or thoughtlessly decided. Every contention now advanced against the decision was presented to the Court in briefs, running to hundreds of pages, and in oral argument. The Court was exceptionally deliberate in its treatment of this litigation. The cases were originally set for argument in October 1952. Argument was postponed by the Court until December. In June 1953, the Court ordered the cases reargued at the following term, specifying certain questions, including historical inquiries, to be canvassed by counsel.

In December 1953, the reargument took place. The Court was assisted not only by the unusually thorough briefs of the complainants and the defendant States but by a full-scale brief submitted by Attorney General Brownell, in support of the complainants' position. On May 17, 1954, the decision was finally handed down; but even then the Court avoided precipitate action. Still another argument was ordered on the question of the form of relief.

The attorneys general of all States requiring or permitting racial discrimination in public education were invited to present their views and the representatives of six States—Florida, North Carolina, Arkansas, Oklahoma, Maryland, and Texas—were in fact heard, in addition to the States directly involved in the cases—Kansas, South Carolina, Virginia, Delaware, and the District of Columbia.

The judgment of the Court was announced on May 31, 1955, more than 3 years after the cases had been docketed there, and after every forewarning that a momentous decision might be forthcoming, but still with forbearance in the order for enforcement. The NAACP had asked for decrees effective not later than the opening of the next school year. The Attorney General's brief had suggested decrees requiring plans to be submitted by the States within 90 days, "for ending, as soon as possible, racial segregation of pupils in public schools."

The Court took the more moderate course of directing the lower courts to enter "such orders and decrees consistent with this opinion as are necessary and proper to admit to public schools on a racially nondiscriminatory basis with all deliberate speed the parties to these cases." The phrase "deliberate speed" is a term of legal art deriving from 18th century chancery practice, and not, as certain litterateurs surmised, from the haunting refrain in Francis Thompson's religious poem The Hound of Heaven: "Deliberate speed, majestic instancy."

The literary reference does, however, serve by contrast to underscore the judicious restraint shown by the Court. Majestic instancy would have been too heroic a demand for mortal men faced with genuine problems of school districting, allotment of facilities, transfer of teachers, grading of pupils, and similar administrative burdens. Nevertheless the opinion made it plain that delay for reasons of community nonacceptance would not be legitimate. "But it should go without saying," the opinion of Chief Justice Warren declared, "that the vitality of these constitutional principles cannot be allowed to yield simply because of disagreement with them."

Those who disagree with the decision on constitutional grounds argue that it is not justified by either the language or the history of the 14th amendment. The Congressmen's declaration, for example, states: "The original Constitution does not mention education. Neither does the 14th amendment nor any other amendment."

This, of course, is true. The 14th amendment provides that "No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person the equal protection of the laws."

But the argument from the silence of the Constitution about education proves much too much. It is the very essence of the Constitution that it speaks in generalities like "equal protection of the laws," and it is the very essence of the judicial process that it must apply the generalities to the concrete facts of experience. Nowhere does the Constitution mention agriculture; are there then literalists who would conclude that Congress is out of bounds in debating Federal price supports for agricultural commodities?

Note, too, that the argument from the silence of the Constitution would rule out any Federal standard whatever for public education, the separate-but-equal standard no less than desegregation. In this respect the declaration is not free from ambiguity, for it quotes with apparent approval the separate-but-equal doctrine as an "established legal principle almost a century old." It is not clear, that is, whether the "usurpation" by the Court is throught to begin when any facilities at all are required for the public education of Negroes, or equal facilities in separate schools, or admission without regard to race.

The argument from the historical background, rather than the text, of the 14th amendment, is subtler, and it leads to some basic questions about the nature of constitutional interpretation. To quote once more the declaration of the Members of Congress: "The debates preceding the submission of the 14th amendment clearly show that there was no intent that it should affect the systems of education maintained by the States."

Here there is a further ambiguity. If the meaning is that there was no specific, calculated purpose to deal with education, the statement is undoubtedly true. If the meaning is that there was a specific, calculated purpose to exclude education, the debates are plainer to the signers of the declaration than they were to the Court or to the Attorney General. The word used by Chief Justice Warren to describe the debates is "inconclusive." This is hardly surprising, in view of the relatively minor role of public education at the time, and the correspondingly fragmentary attention it received in the spacious discussions in Congress over privileges and immunities of citizens and equal protection of the laws.

Most schooling in the South was private in 1868; for Negroes it was virtually nonexistent there; and throughout the country the public-school system and compulsory education as we know it were in a rudimentary stage. The Congress which approved the 14th amendment did not foresee the development in education which has taken place and did not foreclose the participation by Negroes in that development on a plane of equality, for equal protection of the laws was adopted as a standard without exceptions or exemptions.

Even if the legislative history had shown more evidence than it did of an intention not to cover public education, the interpretation of the 14th amendment would not necessarily be circumscribed by that sentiment. The Founding Fathers in the convention of 1787 voted down a proposal to authorize Congress to grant charters of incor-

poration. This negative vote did not later prevent such charters from being granted and upheld, under general language which the framers approved.

Very often, and very properly, the real intention of constitutional assemblies is to establish principles and to leave the hard questions of their applications to be worked out in the unknown future. Thereby trouble is not borrowed for the present, and the unfolding life of the future is not straitjacketed.

The process is misunderstood if it is thought to be peculiar to the 14th amendment. The sixth amendment, for example, provides that "the accused shall enjoy the right * * * to have the assistance of counsel for his defense." When this was formulated in 1789, the right of an accused person even to employ counsel to assist at his trial was denied in England for many types of crimes; not until 1836 was that right fully granted in England.

With us, however, the guaranty has come to mean more than the right to have the assistance of counsel who is employed. It has come to mean, as interpreted by the Supreme Court, the right of an indigent defendant to have counsel appointed for him by the trial court. This is simply an illustration of Chief Justice Hughes' pronouncement in the famous mortgage moratorium case in 1934:

"It is no answer to say that this public need was not apprehended a century ago, or to insist that what the provision of the Constitution meant to the vision of that day it must mean to the vision of our time. If by the statement that what the Constitution meant at the time of its adoption it means today, it is intended to say that the great clauses of the Constitution must be confined to the interpretation which the framers, with the conditions and outlook of their time, would have placed upon them, the statement carries its own refutation."

[From the Christian Science Monitor of March 27, 1956]

UNDERSTANDING THE SCHOOL DECISION—II

(By Paul A. Freund, Charles Stebbins Fairchild, professor of law, Harvard Law School, Harvard University)

Is there, then, no criterion of meaning for the general guaranties of the Constitution? Must the Justices do what they are accused of doing in the Congressmen's declaration, substituting "personal, political, and social ideas for the established law of the land"?

The answer is that as the function of a Justice is necessarily something more than to be a grammarian, it is decidedly less than to be a zealot. The Court interprets to us our own ideals implanted in the constitutional document, as they have flowered in our national life. Justice Holmes put a complex idea concisely, in speaking of the provisions of the Constitution: "Their significance is not formal; it is to be gathered not simply by taking the words and a dictionary, but by considering their origin and the line of their growth."

"The line of their growth" is a key to the understanding of the segregation cases. Whatever the purposes the 14th amendment may serve—and it has come to serve a good many collateral ones, such as the rule of "one thing, one tax" in State taxation—its basic aim concerned equality of rights for Negroes. The development of that concept is a story of successive applications of the principle to a widening variety of practices.

In 1880 the right to be included on juries was established. In 1917 racial restrictions in zoning laws were held invalid, despite the argument of the municipality that property values and public order required the discrimination.

In 1927 the all-white primary election was ruled invalid, despite the argument of the State that primaries are a private political affair. In a passage resembling some current protests, the brief of the State of Texas declared: "It must be remembered that nominating primaries were unknown at the time of the adoption of the Constitution of the United States and of the Constitution of Texas in 1876 * * *. The question of parties and their regulation is a political one rather than legal."

Although the 15th amendment deals with the right of suffrage, Justice Holmes said, for the Court: "We find it unnecessary to consider the 15th amendment, because it seems to us hard to imagine a more direct and obvious infringement of the 14th."

Then in 1938 a Negro applicant was ordered admitted to the law school of the University of Missouri, despite the State's offer to pay his tuition at a nondiscriminating law school in a neighboring State. Since Missouri had no separate (and equal) law school for Negroes, the color line had to be broken in the State university. Mr. Justice McReynolds, who dissented from the opinion delivered by Chief Justice Hughes, saw clearly enough the "line of growth" in education, and he did not like it. He said:

"For a long time Missouri has acted upon the view that the best interest of her people demands separation of whites and Negroes in schools. Under the opinion just announced, I presume she may abandon her law school and thereby disadvantage her white citizens without impairing petitioner's opportunities for legal instruction; or she may break down the settled practice concerning separate schools and thereby, as indicated by experience, damnify both races."

All of these cases had their sequels, in which the Court turned back attempts to circumvent the decisions or to blunt their effect by differentiating them from cases coming before the courts. Much of the progress was made before World War II. Since then, in Korea and in military posts around the globe, as well as at home, we have extended the principle of desegregation. The question before the Court in the school cases was whether the vital growth had come to an end in the educational sphere with the separate-but-equal doctrine or whether it carried through to desegregation.

The Court could have answered in any of three ways. It could have answered as it did, finding that the principle of equality was not exhausted by separate but equal facilities; that as a Nation we had moved beyond that stage in profession and to a substantial degree in practice; and that the real and painful difficulties of adjustment in certain areas would be given proper respect by allowing time for administrative changeovers.

The second possible choice for the Court would have been to leave the matter to Congress under the power to enforce the provisions of the 14th amendment. That course would have been the easiest for the Court to take, but it would not have been the most straightforward.

The advances already made in applying the principle of equality had been achieved through resort to the Court, not to Congress: zoning, primaries, university education. Congress was not in the habit of taking responsibility in this field, or indeed in any of the other ramifications of the 14th amendment as limits on the powers of the States. To have dropped the issue in the lap of Congress would have been extraordinary. Congress, on its part, could have been expected to regard the issue as a judicial one and to play an Alphonse-Gaston game.

The third possibility was to decide that education is not included in the guaranty of equal protection of the laws, or that the guaranty is satisfied by separate public schooling. This would have been a pronouncement that as people we do not recognize fellowship in the educational process to be a minimum standard for governments to observe in our common life, that the vital growth of the principle of equality has not carried to this point.

Would we have been satisfied with this reflection of our own better nature as a people? For it is just that better nature which we mean the Court to hold up to us in interpreting the Bill of Rights. A philosopher, Alexander Meiklejohn, once described the Court's function in this way:

"That Court is commissioned to interpret to us our own purposes, our own meanings. * * * And its teaching has peculiar importance because it interprets principles of fact and of value, not merely in the abstract, but also in their bearing upon the concrete, immediate problems which are, at any given moment, puzzling and dividing us."

If the Court was wrong in the school cases it is because the Court misjudged our present-day ideal of equality in law. To judge the decision, therefore, is to judge ourselves, all of us, for the Constitution sets a common, not a sectional, standard for the country. That is why it is supremely important that we understand the meaning of the decision and the role of the Court in reaching it. That is why it is important, too, that those who believe the Court judged rightly, as well as the critics, should let their voices be heard.

MacArthur and Truman

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. BOLLING. Mr. Speaker, the following article by Richard H. Rovere appeared in the Spectator of February 17, 1956:

MACARTHUR AND TRUMAN

General of the Army Douglas MacArthur has for many years been addicted to the conspiracy theory of history. MacArthur is a true believer—not a rank-and-file one, but a commander, egocentric, messianic, a true believer in himself. Like others of the breed, he finds it necessary to ascribe his disappointments, which have been numerous, to base intrigue by the powers of darkness. This tendency is strikingly displayed in a recent ex cathedra bock on MacArthur by Maj. Gen. Courtney Whitney, of whom the great man says, in an endorsement of the work, "I know of no one better qualified than he intelligently to discuss * * * my role in the stirring events which have encompassed the Far East since the start of World War II." The book is called MacArthur: His Rendezvous With History, and it is illuminated by the view that not only the Far East but the world in general since 1940 has been a stage for a titanic conflict between Douglas MacArthur and Satan in manifold disguises. One page 5 we are advised that Frank Murphy, who in 1941 was High Commissioner of the Philippines and who later was one of the true ornaments of the United States Supreme Court, "betrayed his jealousy of MacArthur's stature in the islands by initiating a personal campaign of pressure on President Roosevelt to cause the general's removal." The consequences of this removal were enormous—American unpreparedness, Pearl Harbor, the loss of the Philippines, all the bloodletting from the Banda Sea to the Osumi Straits. Worse yet, life from 1941 on was just one betrayal of jealousy after another. Down they all go—all the large figures of the epoch: Roosevelt, Marshall, Bradley, Truman, Eisenhower, to name only the American traducers. And with them fall innumerable smaller figures.

lieutenants of the jealous ones, devil's disciples, chore boys in such institutional conspiracies as the United States Navy, "the anti-MacArthur coterie in the State Department," and the Communist Party, which, we learn, was plotting a public hanging of MacArthur on the Capitol steps as long ago as 1932. In the end, the entire United States is made to seem an instrument for the humiliation of General MacArthur.

There is tragedy here as well as high comedy, for the truth of the matter is that there are elements of greatness in Douglas MacArthur. He has served his country as a valorous and resourceful captain and as a gifted proconsul. He has at times borne himself with splendor and has shown himself capable of commanding intense loyalties. There has always been about him something of the "heaven-born" general, to use Pitt's phrase for Clive, whom MacArthur resembles in more ways than one. Yet the man insists on making himself ridiculous. Now, he has come up with a superplot involving Guy Burgess and Donald Maclean. In a statement prompted by the publication of Harry Truman's reminiscences of the Korean war, MacArthur has charged to the Burgess-Maclean account both the Chinese intervention of December 1950, and what Whitney calls the foul and shocking blow dealt by Mr. Truman in April 1951. MacArthur says he only recently became aware of the crucial part played by Burgess and Maclean in these towering events. For years, he writes in a commentary published simultaneosuly in Life and the New York Times, he "searched in vain for some logical explanation for my abrupt relief from command in the Far East." He could not, of course, be satisfied with such an explanation as that Truman was doing what he misguidedly believed to be right. Truman is not formidable enough to be the source of General MacArthur's mighty anguish. True, MacArthur detects, in addition to the conspiracy involving Burgess and Maclean, a subconspiracy involving Mr. Truman, Generals Marshall and Bradley, Averell Harriman, and Dean Acheson, all of whom, he says, had reason to persecute him. (Marshall and Bradley were "personally hostile to me" out of professional envy. Harriman developed "prejudice" in the course of an interview in Tokyo early in the Korean war. Acheson was against him, because he rejected "certain socialistic concepts" favored by the State Department.) But knowledge of this conspiracy did not put an end to MacArthur's search, which has only now ended, for a deeper one. "It was not until the recent exposure of the British spies, Burgess and Maclean, that the true facts began to unfold," he writes.

What facts? MacArthur's plot, which is shortly to be investigated by the Senate's Internal Security Subcommittee, is not a very tidy one, at least in his telling of it in his statement of last week. To credit it at all, one must share with MacArthur the assumption that the Peiping government in 1950 was being made privy to the discussions of American policy in the National Security Council and to the decisions emerging from these discussions. MacArthur has no difficulty in making this assumption, for he is persuaded that the Chinese would never have been foolish enough to engage him in combat if they had not "had definite advance information that my hands would be tied." "Only," MacArthur writes, "if he were certain that we would continue to protect his bases and supply lines would a commander have dared to throw the full weight of the Chinese Army into Korea." This much being taken for granted, it is necessary only to uncover the "links in the chain to our enemy in Korea through Peiping by way of Moscow."

Now to get Burgess and Maclean into the act: MacArthur make a broad leap from the enemy's knowledge of what was happening in Washington to his knowledge of what was going to happen in Korea. "General Walker complained constantly to me that the enemy was receiving prior information of his movements. We could find no leaks in Korea or Japan. Then suddenly one of my dispatches concerning the order of battle was published in a Washington paper within a few hours of its receipt." MacArthur is now convinced that Burgess and Maclean, "with access to the secret files," were responsible for this leak, and he takes this to prove that they must also have been responsible for the earlier decision of Peiping, and the later decision by President Truman.

In his own statement, MacArthur does not identify the published dispatch or the Washington newspaper responsible for the breach of security. But Courtney Whitney's book partially unlocks this mystery: "On December 30, 1950, at possibly the most crucial phase of the war against Red China in Korea, one of MacArthur's top-secret dispatches to Washington giving intelligence on the order of battle was in part published verbatim in the Washington Post under the byline of a prominent columnist." A check of the Washington Post of December 30, 1950, reveals that the columnist was Drew Pearson, whose work appears in hundreds of other newspapers; Pearson that day published part of what purported to be a report from MacArthur's intelligence section dated December 6, 1950. MacArthur's "few hours" turned out to be approximately 576, and it was not exactly one of his "dispatches concerning the order of battle," but this is quibbling—there was a leak to Drew Pearson, and somebody was responsible. Who? Burgess and Maclean, clearly. "If they did not report to their Kremlin masters fully upon our secrets in the conduct of the war against the Communists in Korea, what then could have been their treasonable purpose?" But was Drew Pearson one of their Kremlin masters? The question is not dealt with.

The Pearson incident is the central one. It proves, retroactively, that Burgess and Maclean told the Chinese they would have a romp if they entered the war. (It has also been alleged by MacArthur and others that the North Koreans started the war because they knew of our policy decision to abandon Korea. MacArthur does not speculate on why, having seen us throw one policy decision to the winds, they placed such confidence in another.) And it reveals, finally, the reason for MacArthur's removal. MacArthur says that when he could find "no leaks in Korea or Japan," he promptly recommended that "a treason trial be initiated to break up [the] spy ring responsible for the purloining of my top-secret reports to Washington." And he goes on: "I believe that my demand that this situation be exposed, coming after the Alger Hiss and Harry Dexter White scandals, caused the deepest resentment * * * the case was never processed, and I was shortly relieved of my command."

Of such improbable stuff is MacArthur's plot made. It is not receiving any very serious consideration here.

Reds Seek To Force Integration

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1956

Mr. DAVIS of Georgia. Mr. Speaker, it is much more than a coincidence that the plan and program of the Communist Party and the plan and program of the National Association of the Advancement for Colored People regarding the question of segregation are so similar.

It has already been pointed out on numerous occasions that the president, the chairman of the board, the honorary chairman, 11 of 28 vice presidents, the treasurer, 28 of 47 directors, the chairman of the national legal committee, the executive secretary, the special counsel, the assistant special counsel, the southeast national secretary, the west coast secretary, the director of the Washington bureau, and director of public relations and 2 field secretaries, of the National Association for the Avancement of Colored People are listed in the files of the House Committee on Un-American Activities as being connected with organizations designated by the Attorney General as being subversive.

The connection of this great number of officers and directors of the radical NAACP with subversive organizations has heretofore been indisputably established. Now comes still further evidence of the influence of the Communist Party in stirring up racial strife and hatred through attacks upon the segregated system under which whites and blacks have maintained peaceful and harmonious relations throughout the entire history of this country.

Now comes the Attorney General of the State of Ohio and gives us the information that his office has intercepted secret directives from a Communist Party agency, seeking to enlist the young people of Ohio to join in the Communist Party's effort to promote racial strife in the United States.

I read with much interest an editorial in the March 28 issue of the Metropolitan Herald, Atlanta, Ga., calling attention to this effort on the part of the Communist Party to enlist American youth in the Communist Party program, and commending the Attorney General of Ohio for publicizing his discovery.

I include this editorial from the Metropolitan Herald herewith as a part of these remarks:

REDS SEEKS TO FORCE INTEGRATION

Newspapers, magazines, and leaders in other sections of the Nation have derided statements by Southern leaders and some Southern newspapers that Communists and radicals were responsible for much of the fanatical effort to force integration of the races in the South and for its resultant strife.

The warnings of our thoughtful leaders have been ignored. They have been held up to scorn and ridicule. They have been called racists, bigots, and un-American.

However, last Saturday, the Attorney General of the State of Ohio dropped a damaging time bomb into the laps of those who have been so outspoken in their condemnation of the South.

The Ohio Attorney General announced that his office had intercepted secret directives of the Communist Party's Labor Youth League for a drive called Operation Constitutional Rights, which seeks to enlist Ohio youths in a nationwide campaign to force Federal intervention against Southern States in the segregation issue.

The directive called on its youth leaders to mobilize every single member, together with their friends, neighbors, and fellow workers to flood President Eisenhower with

telegrams and letters demanding Federal action against the "Dixiecrat terror in the South * * * to uphold the Constitution * * * and to bring law and order to the South."

The official publication of the Labor Youth League is the New Challenge. Records of the Ohio un-American Activities Commission show that copies of the paper were first passed out to Cleveland's High School of this Communist organization to recruit high school pupils.

The Ohio Attorney General is to be commended for having the courage and patriotism to make this information public. It took great courage on his part for Ohio is one of the States where the NAACP wields great influence at the polls and usually is the balance of power between the two major parties.

In making public this information, the Ohio Attorney General has given the lie to those integration apologists who have vigorously denied that the Communists have taken a leading part in the effort to destroy the peaceful relationship between the races in the South and to force a mixing of the races.

When Georgia's Attorney General Eugene Cook presented documented evidence of Communist activitists in the integration fight, even some of Georgia's daily newspapers scorned his charges. We await their reaction to the evidence uncovered by the Ohio Attorney General's office.

Truth will out, despite the well-financed propaganda machines of the NAACP and other antisouthern, antiwhite outfits.

Can the New Look of Moscow Tolerate the Truth of 1,000 Years of Christianity in Ukraine?

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, the current propaganda line of Moscow and its collective leadership ascribes to the permanently silent Stalin the tragedies of mass murders, purges, and genocide. We know, of course, that the members of the present leadership, particularly Mr. Khrushchev, have engaged in like deeds. However, to counteract in a positive manner the obvious objectives of this line requires that we press with certain practical tests of the sincerity and supposed reasonableness of these men. There is one such test in connection with the largest non-Russian nation in the Soviet Union, namely, Ukraine.

It was under the Stalin regime that the Ukrainian Orthodox and Uniate Greek Catholic Churches were destroyed, thousands of the clergy murdered and the faithful deported. If this is what the present leaders in Moscow are deploring, then we can test the sincerity of their condemnation by casting the spotlight of world opinion on these tragic facts and urging the resurrection of these religious bodies in Ukraine.

The recent celebrations in this country of 1,000 years of Christianity in Ukraine provide both the tenor and spirit for such action. Senate Resolution 189 and a similar one now being prepared in the House are expressive of such positive action and deserve favorable consideration on the part of Congress. Action along these lines is also being taken by groups in this country in the United Nations. The basis and scope of such action are incorporated in a statement issued by Dr. Lev E. Dobriansky, who is a professor at Georgetown University and chairman of the Ukrainian Congress Committee of America. This statement introduces some illustrative material that causes one to ask, "Can the new look of Moscow tolerate the truth of 1,000 years of Christianity in Ukraine?"

In the hope that Members of Congress will carefully ponder this question, I request that this statement and the accompanying data be printed in the RECORD:

INTRODUCTORY STATEMENT

(By Dr. Lev. E. Dobriansky)

The impressive messages that were received on the occassion of the solemn observance of 1,000 years of Christianity in Ukraine furnish eloquent testimony to the superlative thoughts of the eminent Catholic scholar and philosopher of history, Father Don Luigi Sturzo. In his classic work on "Nationalism and Internationalism," this world-renowned scholar conclusively observes that the three great ideas which have shaped the history of mankind are religion, national independence and liberty (p. 13). These three majestic ideas constitute a veritable trinity of thought predicating moral and political action that necessarily must encompass the manifestation of all three in the harmonious existence of societies, nations, and peoples. To contemplate and act upon one embraces correlative contemplation and action upon the others—in the natural spirit of Amor Dei et Patriae.

In Ukraine, which today in its state of captivity is the largest non-Russian nation not only in the primary empire constituted by the Soviet Union but also behind the European Iron Curtain, these fundamental ideas and natural drives have cast the very foundations of the sovereign existence of this nation. In their fixed interrelationship they have formed the essential source of strength and hope to the liberation movements of this freedom-loving people in different periods of enslavement under some imperialist foreign yoke. The contemporary struggle of the Ukrainian nation against the colonial and imperialist domination of Russian communism—highlighted by the gallant military defense of its independent state following World War I, the brave opposition of its intellectuals to the strangling centralization of colonial control by Moscow in the 1920's, the stern resistance of its hardy peasantry to the politico-economic collectivist measures of the foreign oppressor in the 1930's, the heriоc battles of the famous patriotic and nationalistic forces of the Ukrainian Insurgent Army against both Nazi German and Russian Communist totalitarianism in the 1940's, and the underground operations in political warfare against alien Moscow by all sections of its populace in this decade—draws its chief inspiration from the undying faith that Deo adjuvante, non timendum.

In the light of all this, it is little wonder that the religious institutions and clergies of Ukraine were the first and prime objects of attack and liquidation by Russian Communist totalitarianism. This sordid story of our times is partly described in summary form in the following petition addressed to the Secretary General of the United Nations. The several messages following this, received from the highest authorities in the Catholic church, were written in the intimate knowledge of this background on current Russian Communist policy of religious persecution and genocide.

The Ukrainian Catholic Church survives in the underground of Ukraine today. Its existence and free emergence are dependent on the reality of the three great ideas of history—religion, national independence and liberty. Priest and patriot are but one. In this country, hope and encouragement for the eventual liberation and freedom of church, nation and people in Ukraine are steadfastly sustained by the prayers and work of the Ukrainian Catholic Exarchate of the United States of America. Under the great spiritual leadership and guidance of the Most Reverend Archbishop Constantine Bohachevsky and the Most Reverend Ambrose Senyshyn, O. S. B. M., the faithful pursue this work in the certitude of its value to the basic national interests of our own country, the United States of America, and in the certain knowledge that for all nations, including Ukraine, Beata gens cujus est Dominus Deus eorum.

YOUR EXCELLENCY:

Whereas man, as an individual and as a member of society, is endowed by his Creator with certain, natural and inalienable rights that form the substance of natural moral law, and among which are the right to life and bodily integrity except in just punishment for crime; the right to serve and worship God in private and public; the right to religious formation through education and association; the right to personal liberty under just law; the right to equal protection of just law regardless of sex, nationality, color or creed; the right to choose and freely to maintain a state of life, married or single, lay or religious; the right to education suitable for the maintenance and development of his dignity as a human person; the right of association and peaceable assembly; and the right to assistance from society in distress of person or family; and

Whereas the United Nations are determined "to reaffirm faith in fundamental human rights, in the dignity and worth of the human person," and "to achieve international cooperation * * * in promoting and encouraging respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language, or religion" (Charter of the United Nations, arts. 1, 3); and

Whereas "the General Assembly shall initiate studies and make recommendations for the purpose of * * * assisting in the realization of human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion" (art. 13, b); and

Whereas the Economic and Social Council "may make recommendations for the purpose of promoting respect for, and observance of, human rights and fundamental freedoms for all" (art. 62, 3); and

Whereas the Secretary General may bring to the attention of the Security Council any matter which in his opinion may threaten the maintenance of international peace and security (art. 99); and

Whereas in brazen disregard for articles V, X, and XI of the Declaration of Human Rights, the Government of the Union of Soviet Socialist Republics has for years violated, and continues to violate, with impunity the aforesaid basic human rights and freedom, by cruel and inhuman treatment of its victims, by denying them the necessary guaranties for their defense, by torture and mock trials on fabricated charges; and

Whereas in Ukraine alone, the Soviet Government has throughout the years of its misrule by brutal force, liquidated five Ukrainian Catholic dioceses; has unjustly imprisoned, condemned, or murdered 10 Ukrainian Catholic bishops; has imprisoned, executed, or

dispersed 2,950 of the diocesan, and 520 of the regular clergy; has in barbaric fashion dispersed and mistreated 1,090 women religious; has persecuted, and continues to persecute, nearly 5 million faithful of that church because of their religious and political convictions; has liquidated, or by force turned over to the state puppet church, 3,040 Ukrainian Catholic parishes; has suppressed, confiscated, or occupied for its own vile purposes, all Ukrainian Catholic properties, schools, associations, and publications (First Victims of Communism, White Book on Religious Persecution in Ukraine, Rome 1953, p. 64); and

Whereas in other Communist-dominated countries, in Europe and in Asia, the criminal violation of fundamental human rights and the persecution of religion continue unabated, to wit, within the last year:

In China, bishops with hundreds of native sisters, religious and priests, as well as thousands of laymen, have been unjustly arrested and mistreated without any regard for justice and dignity of the human person;

Hundreds of thousands of Catholics are being held against their will by the North Vietnamese to endure persecution and other evils of Communist tyranny;

In North Korea, not a single priest remains to minister to the spiritual needs of the country's 40,000 Catholics;

In the Baltic countries, the church is believed to have been almost wholly destroyed. The same is true for Albania, Rumania, and Bulgaria;

In Czechoslovakia, nuns are made to work in factories and mines; night raids are staged on parish rectories and homes of leading Catholic laymen;

In Hungary, Cardinal Mindszenty still does not enjoy full freedom, priests are held as hostages to compel farmers to labor for their Communist masters;

In East Germany, boys and girls are penalized for refusing to take part in pagan youth initiation rites (National Catholic Welfare Conference News Service, December 19, 1955),

Now, therefore, in the clear light of the enumerated commitments and provisions of the Charter of the United Nations and the Declaration of Human Rights, the Providence Association of Ukrainian Catholics, having the moral support of the Slav Byzantine Exarchate in the United States of America plus the sympathy of Catholics the world over and of all civilized peoples everywhere, asks Your Excellency, the Secretary General who is rallying the nations of the earth to the principles of peace and freedom, to use the mighty authority of your office and to earnestly urge upon the United Nations the immediate necessity:

Of terminating at once the continuing, premeditated, criminal outrages against the dignity of the human person and the vicious violations of basic human rights and fundamental freedoms that are being perpetrated daily, in flagrant defiance of all law, human and divine, and before your very eyes, by the infamous, international enemy of world peace, the Government of the Soviet Union;

Of abolishing the infernal Soviet concentration camps and setting free the millions of innocent slave laborers, who are being tortured to death at the hands of a fiendish, inhuman regime;

Of liberating and restoring to rightful sovereignty the captive peoples of the Soviet colonial empire, that they may live their own democratic lives, free from the dictatorial whims and coercive action of a hated, foreign, tyrannical rule;

Of adopting and carrying out conscientiously prompt, certain, and effective sanctions against the said perpetrators of these heinous crimes, namely, the Government of the Soviet Union, the mastermind of a world conspiracy against enduring peace, democracy, and humanity itself, for the world cannot long live in peace, half slave and half free.

THE CHANCERY, DIOCESE OF BUFFALO,
Buffalo, N. Y., August 19, 1955.

The Most Reverend AMBROSE SENYSHYN, O. S. B. M.,
Stamford, Conn.

DEAR BISHOP SENYSHYN: May I join with you in rejoicing in the completion of a thousand years of Catholicity among the great Ukrainian people. A thousand years is a long time and the thought of this long period must arouse every Ukrainian heart to pride in the long years of faithfulness and loyalty to the Catholic Church. Not all of the years have been happy ones, but it was in her hours of suffering and sorrow that the Ukraine was closest to the Catholic Church, and her children closest to our Divine Saviour. The present hour is one of suffering and glory which will rank some day with the Ukraine's greatest hours of the past. May we who enjoy the liberty of this blessed land of America pray that our Catholic brethren in the old country will remain steadfast and loyal to our blessed Saviour and His blessed mother.

With every good wish, I am,

Sincerely yours in Christ,
JOSEPH A. BURKE,
Bishop of Buffalo.

ARCHBISHOP'S HOUSE,
Philadelphia, Pa., August 29, 1955.

The Most Reverend AMBROSE SENYSHYN, O. S. B. M.,
Stamford, Conn.

YOUR EXCELLENCY: Please permit me to join in spirit with Archbishop Bohachevsky and Your Excellency, with the priests, the religious, and the faithful of the Ukrainian Catholic exarchate of the United States in the prayers of thanksgiving that will mark your commemoration of 10 centuries of Catholic life in the Ukraine.

In the providence of God, the conversion of St. Olga and the conversion of her subjects through her apostolic zeal, exercised a profound influence on eastern Europe.

In these days when we recall the glories of those thousand years, we are painfully aware that the way of Christ is the way of the Cross. We thank God for the encouragement He gives us in the hour of triumph, but we pray for the grace to follow Him ever in His painful ascent of Calvary and in his crucifixion.

So, with my congratulations to Your Excellencies and your good people, I extend at the same time my assurance of prayers that God will sustain the persecuted in their bitter trials and will deign to shorten the time of their visitation. May Christ reign in the hearts of the sufferers and may He hasten the hour of their deliverance.

With sentiments of respect and esteem, I am, Your Excellency,

Sincerely yours in Dnc.,
JOHN F. O'HARA, C. S. C.
Archbishop of Philadelphia.

BISHOP'S RESIDENCE,
Scranton, Pa., August 17, 1955.

His Excellency the Most Reverend AMBROSE SENYSHYN, O. S. B. M.,
Stamford, Conn.

YOUR EXCELLENCY: I am honored in rejoicing with the Catholics of Ukrainian nationality on the occasion of the 16th centenary of the acceptance by St. Olga of the cross of Jesus Christ. The fervor of her faith has radiated throughout the intervening centuries into the innermost being of her people whose admirable achievements in behalf of the Kingdom of God place the whole of Christendom in their debt.

I shall be with you in spirit on the day on which you honor this great saint whose influence and intercession have so inspired her people throughout their history. I shall pray that she may give them solace and fortitude wherever they may be, so that their courageous sufferings may be offered to the Christ whose sorrowful way they traverse and become the seed of spiritual triumph both in this world and the next.

Sincerely yours in Christ,
JEROME D. HANNAN,
Bishop of Scranton.

THE ARCHDIOCESE OF ST. LOUIS,
OFFICE OF THE ARCHBISHOP,
St. Louis, Mo., August 22, 1955.

His Excellency the Most Reverend AMBROSE SENYSHYN, *O. S. B. M., Auxiliary Bishop, Vicar General, Ukrainian Catholic Exarchate, U. S. A., Stamford, Conn.*

YOUR EXCELLENCY: I am most happy to send greetings to the hierarchy, the clergy, and the faithful of the Ukrainian Catholic exarchate of the United States on the memorable occasion of the 1,000th anniversary of the conversion of St. Olga to the cross of our Lord.

The clergy and the faithful of the archdiocese of St. Louis rejoice with their fellow Americans of Ukrainian nationality or descent in the celebration of their rich heritage.

With sentiments of esteem and best wishes, I am,

Sincerely yours in Christ,
Most Rev. JOSEPH E. RITTER,
Archbishop of St. Louis.

A. J. Hodges Gardens

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 10, 1956

Mr. BROOKS of Louisiana. Mr Speaker, the opening of the A. J. Hodges Gardens in western Louisiana recently was an outstanding occasion for all of those who love beauty in the outdoors and in its natural state. The A. J. Hodges Gardens, located near Many, La., on Highway 171, 90 miles south of my home city of Shreveport, affords an opportunity to the people now for the first time of enjoying the pristine beauty of the pine-clad, clay hills of northern and western Louisiana. A huge lake, several islands, rose and azalea gardens, wildlife pastures and other attractions are most interesting to those who perchance pass in this general area on business or on pleasure.

Mr. A. J. Hodges, the owner of the Hodges Gardens, is a Shreveport, La., man. For years he has been accumulating forest areas in western Louisiana and several years ago he conceived the idea of developing a lovely park area nestled in an especially selected part of what has commonly been referred to as the cut-over pine area of Louisiana.

The gardens are not yet in a full state of completion but they, even at this hour, offer much to the visitor. One more full year's work will be required on the gardens. In the area of the garden park is a 225-acre lake and the forest areas have been stocked with deer, which were once native to that section, and with elk and wild turkey. The entire park area is composed of 4,300 acres and contains beautiful gardens exhibiting native and nonnative types of flowers.

Of great interest also is the area of the park devoted to the important pine tree experiments and an air-conditioned laboratory, kept at 70 degrees temperature the year round. All types of tests on pine trees are conducted in this air-conditioned laboratory. An arboretum containing 38 different species of pine trees, some from faraway Japan and Australia, is located near the center of the gardens and provides natural allurement to those interested in beautiful trees.

I am not a fortune teller nor am I a soothsayer. Louisiana is a lovely State but I will predict in the years to come one of the outstanding places for sheer beauty and loveliness—when nature does its best to outstrip even itself—the A. J. Hodges Gardens, with experimental areas, with game and wildlife refuge, will be known from far and wide as a natural utopia with its cloistered enchantment and its verdant beauty.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Public Warning by Food and Drug Administration of United States Department of Health, Education, and Welfare Against Hoxsey Cancer Treatment

EXTENSION OF REMARKS
OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. HESELTON. Mr. Speaker, the Federal Food, Drug, and Cosmetic Act authorizes the dissemination of information regarding drugs in situations involving imminent danger to health or gross deception of the consumer.

Congress intended that this authority should be exercised intelligently and courageously in the administration of this important law. The American public has had good reason to appreciate the manner in which the law has been administered, but I know of no clearer instance of intelligent and courageous action in the interest of the public than the release issued by the Administration on the afternoon of Wednesday, April 4, 1956. Commissioner George P. Larrick and those associated with him demonstrated forcibly the great value of the service they are rendering constantly to the public.

This statement should be read and the advice and warning given should be followed. Therefore, I am including the full text of the statement in this copy of the CONGRESSIONAL RECORD, as follows:

PUBLIC WARNING AGAINST HOXSEY CANCER TREATMENT

Sufferers from cancer, their families, physicians, and all concerned with the care of cancer patients are hereby advised and warned that the so-called Hoxsey treatment for internal cancer has been found by the United States Court of Appeals for the Fifth Circuit, on the basis of evidence presented by the Food and Drug Administration, to be a worthless treatment.[1]

The Federal Food, Drug, and Cosmetic Act authorizes dissemination of information regarding drugs in situations involving imminent danger to health or gross deception of the consumer.[2]

The Hoxsey treatment for internal cancer involves such drugs. Its sale represents a gross deception to the consumer. It is imminently dangerous to rely upon it in neglect of competent and rational treatment.

The Hoxsey treatment costs the patient $400 plus $60 in additional fees; expenditures which will yield nothing of any value in the care of cancer. It begins with a superficial and inadequate examination of the patient at the Hoxsey Cancer Clinic, Dallas, Tex., or Portage, Pa. The patient at Dallas is then supplied with one of the following "cancer medicines": Black pills, red pills, a brownish-black liquid, or a light red liquid. The black pills and the brownish-black liquid contain: Potassium iodide, licorice, red clover blossoms, burdock root, Stillingia root, berberis root, poke root, cascara sagrada, prickly ash bark, and buckthorn powder. The red pills contain potassium iodide, red clover, Stillingia root, poke root, buckthorn, and pepsin. At Portage the patient is given the same "cancer medication", although the colors of the pills are different. The light red liquid medicine is potassium iodide in elixir of lactated pepsin. There is evidence that potassum iodide accelerates the growth of some cancers.

The Food and Drug Administration has conducted a thorough and long-continuing investigation of Hoxsey's treatment. His claimed cures have been extensively studied and the Food and Drug Administration has not found a single verified cure of internal cancer effected by the Hoxsey treatment. In addition, the National Cancer Institute of the United States Public Health Service has reviewed case histories submitted by Hoxsey and advised him that the cases provided no scientific evidence that the Hoxsey treatment has any value in the treatment of internal cancer.

On October 26, 1953, Harry M. Hoxsey, the clinic, and all persons in active concert with him were enjoined by the United States District Court at Dallas, Tex., from shipping their worthless cancer medicines in interstate commerce with labeling representing, suggesting, or implying that the products are effective in the treatment of any type of internal cancer. While the Government intends to prosecute violations of the injunction, this warning is necessary for the immediate protection of cancer victims who may be planning to take the Hoxsey treatment.

Those afflicted with cancer are warned not to be misled by the false promise that the Hoxsey cancer treatment will cure or alleviate their condition. Cancer can be cured only through surgery or radiation. Death from cancer is inevitable when cancer patients fail to obtain proper medical treatment because of the lure of a painless cure "without the use of surgery, X-ray, or radium" as claimed by Hoxsey.

GEORGE P. LARRICK,
Commissioner of Food and Drugs.

I am also including a further statement issued by the Food and Drug Administration, which covers many facts of the greatest importance to all those unfortunate people who are suffering from cancer and who quite naturally look for any possible cure.

This supplementary statement follows:

FACTS REGARDING THE HOXSEY CANCER TREATMENT

The Hoxsey Cancer Clinic is disseminating, through articles in nationally distributed periodicals, radio addresses, speeches, and books, the claim that Hoxsey's medicines taken by mouth cure internal cancer without the need of surgery, X-ray, or radium. This claim has tremendous appeal to cancer patients, many thousands of whom are under treatment of competent physicians. The lure of a "painless" cure for cancer which may be taken by the individual in his home is almost irresistible. The claim is false.

The only known effective method of curing internal cancer are through surgery, X-ray, radium, and certain other radioactive materials. The prompt treatment of cancer by one of these methods is a principal factor in their effectiveness. Delaying competent treatment of cancer frequently is fatal to the patient. Great effort and large sums of money are being spent by the United States Department of Health, Education, and Welfare, American Cancer Society, Damon Runyon Fund, the American Medical Association, and scores of other scientific societies and institutions to emphasize the importance of early diagnosis and treatment. This effort is wasted for those patients who are diverted from competent treatment to a reliance upon false remedies.

WHAT THE HOXSEY TREATMENT IS

The Hoxsey treatment is started with a superficial and inadequate examination of the patient, which includes a few perfunctory diagnostic X-rays, blood and urine tests. Prior to November 1954 the treatment consisted essentially of the administration of a black or brownish liquid to be taken by the teaspoonful four times a day. If this was not tolerated, a pink liquid medicine was substituted. The black medicine consisted of sugar, water extracts of red clover blossoms, buckthorn, cascara, pricly ash bark, poke root, berberis root, Stillingia root, burdock, licorice, and potassium iodide. The pink medicine was merely elixir of lactated pepsin with a quantity of potassium iodide.

In November 1954 the use of a tablet was substituted for the black and pink liquids. In announcing the tablet as "the greatest development" in medicine in recent years, Hoxsey stated it was composed of the same ingredients as his black liquid medicine.

All the ingredients, both in the pink and black medicines, and their tableted counterparts, are well known to medical science. They are of no value whatever in the treatment of cancer of any type. There is evidence adduced by research that potassium iodide should not be used in the presence of some types of cancer, since it may accelerate their growth.

The Hoxsey Cancer Clinic operating at Dallas, Tex., is staffed with six osteopathic physicians, Drs. Benjamin A. Harry, Douglas C. Logan, Alfred H. Staffa, Donald Watt, Charles P. Barbaree, and William E. Stokes, and one medical doctor, Dr. Walter F. Pickett. At Portage, Pa., where a second clinic was opened in March 1955, the clinic is staffed with two osteopathic physicians, Dr. Newton C. Allen and Dr. Harold Galbraith.

Hoxsey claims to have inherited "the secret" of the cancer cure from his father, John C. Hoxsey, who in turn got it from Henry Hoxsey's grandfather, who learned of it, allegedly, when his horse grazed on certain herbs in a field and was thereby cured of cancer of the leg. Potassium iodide, the principle ingredient of the Hoxsey medicine, is not, of course, an herb.

HARRY M. HOXSEY'S BACKGROUND AND PREVIOUS CONVICTIONS

Harry M. Hoxsey has been selling his cancer medicine for at least 30 years. He has been convicted of practicing medicine with-

[1] The court decisions can be found in vol. 198, Federal Reporter, second series, p. 273, and vol. 207, Federal Reporter, second series, p. 567.

[2] 21 U. S. C. 375 (b). This authority has been delegated to the Commissioner of Food and Drugs by the Secretary of Health, Education, and Welfare, 20 Federal Register 1998.

out a license on several occasions. He was associated with Norman Baker in a cancer institution in Muscatine, Iowa, but broke up with him in a dispute over the profits from the insitution. In the lawsuit that followed, Hoxsey lost because he had no license to treat patients and thus no right to collect money for treating them. Baker was convicted January 23, 1940, of mail fraud, fined $4,000 and sentenced to 4 years in Federal prison.

Hoxsey's convictions are as follows:

State of Illinois: (a) December 5, 1930, Fulton County, Ill., pleaded guilty and fined $100 and costs. Complaint No. 6818. Unlawfully treated human ailments. (b) November 29, 1927, Montgomery County, Ill. Complaint No. 6407. Unlawfully treated human ailments. Fined $100 and costs on a guilty plea. (c) March 17, 1930, Marion County, Ill. Information charging Hoxsey for holding himself up to the public as being engaged in making diagnoses and treating human ailments although he held no valid license to do so, to which charges he pleaded guilty on March 17, 1930, and was sentenced to pay $100 fine and costs.

Moreover, the State of Iowa obtained a perpetual injunction on October 15, 1930, issued by Judge C. L. Ely, which, enjoined Hoxsey from practicing medicine without a license.

Hoxsey set up his cancer clinic in Dallas, Tex., in 1936 and the growth of this clinic has been steady since that time.

HOXSEY ENJOINED BY FEDERAL COURT ORDER

Action under the Federal Food, Drug, and Cosmetic Act did not appear to be possible until court interpretation of the term "accompanying" in the definition of labeling under the act. Such interpretation was made by the Supreme Court in the case *United States* v. *Lelord Kordel* (335 U. S. 345 (1948)).

Action under the Federal Food, Drug, and Cosmetic Act was taken in November 1950 when the Government sought an injunction to restrain Hoxsey, his clinic, and his staff from shipping his internal cancer medicines with labeling representations that they were effective in the treatment of cancer. In December 1950 the district court refused to issue the decree of injunction.

An appeal was taken by the Government to the United States Court of Appeals for the Fifth Circuit at New Orleans, La., on the grounds that the judge's decision was contrary to the overwhelming weight of the credible evidence and thus clearly erroneous. After a review of the evidence, the court of appeals in July 1952 reversed the district court and ordered the injunction. The court of appeals held unanimously that the medicines are worthless for the treatment of internal cancer. The Supreme Court refused to hear an appeal. After further litigation, the district court on October 26, 1953, on mandate from the court of appeals signed the decree enjoining Hoxsey or his agents from shipping the liquid medicines or similar drugs in interstate commerce with any labeling suggesting or representing that they were effective in the treatment of cancer. This decree was again appealed by Hoxsey to the court of appeals and in May 1954 the court of appeals dismissed the appeal.

Since the effective date of the injunctive decree, Hoxsey has announced publicly that he is ignoring it and has greatly increased the promotion of his treatment by widespread publicity.

PROSECUTION WILL REQUIRE SEVERAL YEARS TO COMPLETE

The Food and Drug Administration is currently developing a contempt of court proceeding for violations of the injunctive decree which Hoxsey and his staff have already committed. This proceeding will of necessity be slow of adjudication. If conviction is secured, long legal delays and appeals are anticipated. In view of Hoxsey's determination to continue to market his treatment to cancer victims, action by the Food and Drug Administration may not result in a cessation of his activities for some time to come.

Among persons who have sponsored the Hoxsey treatment are Gerald B. Winrod, Allen Barnard, and State Senator John J. Haluska, of Pennsylvania.

Gerald B. Winrod is the publisher of the Defender magazine, Wichita, Kans. In addition to publishing monthly testimonial reports on Hoxsey's success in curing cancer, he also broadcasts over radio stations praising the Hoxsey treatment.

Allen Barnard is a writer for Man's magazine which has national distribution. He has written several articles which appeared in that publication lauding the Hoxsey treatment.

John J. Haluska is a State Senator of upper Pennsylvania who has been promoting the Hoxsey treatment. He is the former administrator of the Miners' Hospital at Spangler, Pa. Senator Haluska was discharged as administrator of the hospital after its entire medical staff demanded that he be ousted and that all plans for establishment of a Hoxsey clinic in the hospital be dropped. Senator Haluska then actively campaigned for the establishment of a Hoxsey clinic elsewhere in Cambria County, Pa. Such a clinic was opened on March 7, 1955, at Portage, Pa., with Senator Haluska as its administrator.

SEIZURE OF THE PILLS AT PORTAGE CLINIC

In March 1955 about 500,000 cancer pills and about 1,100 copies of the Defender Magazine and other booklets constituting the labeling were seized at the Hoxsey Cancer Clinic in Portage, Pa. The clinic and its medical director, Dr. Newton C. Allen, have filed an answer denying the allegations of misbranding and the action is now pending in the United States District Court at Pittsburgh, where the Government has pending a motion for summary judgment ordering destruction of the pills.

DEATHS CAUSED BY RELIANCE ON HOXSEY TREATMENT

The Food and Drug Administration has received reports of deaths which occurred after surgery was forsaken in favor of the Hoxsey treatment while the cancer was still operable and where surgery promised excellent prospects of cure.

MANY PEOPLE IN IGNORANCE OF THE FACTS

Many people are in ignorance of the facts about the Hoxsey cancer treatment. This is abundantly evident from a steady flow of letters of inquiry to the Food and Drug Administration. Unfortunately, many do not know where to inquire and many others inquire after they have gone to Hoxsey.

Reliance upon the Hoxsey treatment for internal cancer is imminently dangerous to those who suffer from cancer, and Hoxsey's continued representation that the treatment is of value for cancer constitutes a gross deception of cancer victims and their families.

COST OF TREATMENT

The standard charge is $400 for the Hoxsey treatment, plus about $60 in X-ray and examination fees. Since the patient gets a medicine that is worthless for the cure of cancer, the $460 expense is a total loss.

Date: April 4, 1956.

No Retreat

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 17, 1956

Mr. MARTIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of Tuesday, April 17, 1956:

NO RETREAT

President Eisenhower has accepted the challenge of those cynically minded leaders in Congress who had handed him what can only be described as a travesty on farm legislation, relying with serene confidence on the impudent assumption that no President in an election year would dare to withhold his signature from any bill that bore the label farm relief, even though the label was counterfeit and the contents of the package a spurious and dangerous imitation of what they purported to be.

Yesterday Mr. Eisenhower brought the mounting speculation of the politicians and the public to an end by vetoing H. R. 12, designated as the Agricultural Act of 1956. But this veto was neither a hasty action, an arbitrary one nor a negative one. Few persons, we think, will question the fact that, as the President declared in a compact, but devastatingly clear, message to Congress, justifying his action, that he was acting "only after thorough consideration" and "after searching my mind and conscience." Nowhere does Mr. Eisenhower's message reflect any tendency to minimize the economic difficulties of the farm population or to question the need of an accelerated and generous program of constructive aid. On the contrary, the President notes: "It is with intense disappointment and regret that I take this action. Our farm families are suffering reduced incomes. They had a right to expect workable and beneficial legislation to help solve their problems." And he leaves no doubt where responsibility lies for failure up to now to provide such legislation.

The heart of the farm problem, the President points out (as he has done time and again over the last 3 years), is price-depressing surpluses. Any forward-looking sound program to meet the needs of the farm people "must remove the burden of these accumulations." But, he notes, H. R. 12 would not correct this situation. On the contrary, "it would encourage more surpluses. It would do harm to every agricultural region of the country and also to the interests of consumers. Thus it fails to meet the test of being good for farmers and fair to all our people."

The President's objections to H. R. 12 are best summarized in his observation that "to sign it would be to retreat, rather than advance toward a brighter future for the farm families."

But what is likely to impress most people reading the President's message is the fact that it isn't merely an exercise in dialectics, nor is it simply an effort to put the onus on Congress for not providing the aid to which the farmer is entitled. That, after all, would be of little comfort to the farmer.

The President is convinced that despite the long and unnecessary delay in framing this measure, and despite the fact that it is completely unacceptable as it stands, there is still much that can be done if Congress

is prepared to cooperate with the administration. He proposes that, acting under authority that it possesses under the legislation of 1954, the administration undertake a three-part program for temporarily alleviating the farmers' plight by voluntary increases in the support levels for crops and dairy products. He calls upon Congress, for its part, to "pass a straight soil bank bill as quickly as possible." He concludes:

"It is vital that we get the soil bank authorized in this session of Congress. There is general agreement on it. I am ready to sign a sound soil bank act as soon as Congress sends it to me. That can be accomplished in a very few days if the leadership in Congress will undertake the task. The combined program of administrative action and legislative enactment will begin now to improve the income and welfare of all our farm families. Here is a challenge for both the legislative and executive branches of the Federal Government."

Addresses by Vice Adm. James L. Holloway, Jr., United States Navy, Chief of Naval Personnel

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1956

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith two addresses by Vice Adm. James L. Holloway, Jr., United States Navy, Chief of Naval Personnel. One is a statement before the Armed Services Committee of the House of Representatives on H. R. 6583, a bill to amend the Uniform Code of Military Justice, and the other an address made by Admiral Holloway before the Pilot International Club of South Carolina in Charleston, S. C., on Saturday, April 14, 1956.

Mr. Speaker, Admiral Holloway is one of the most distinguished naval officers of our time. He has been commended and decorated with almost every honor within the gift of the Department of the Navy. As a fighting admiral he has no superior. As an administrator of the tedious responsibilities of the Office of Chief of Naval Personnel, he has held this latter position longer than any other man in the history of the Navy. His well rounded and varied experiences in defense of his beloved country have eminently qualified him to speak for enlisted men and officers alike in our Navy of worldwide commitments. Admiral Holloway has a personal interest in all of the men and women ashore and afloat. His fatherly approach to all the problems of these men and women make him without a superior in the position he now occupies. I have a personal interest in Admiral Holloway. He married a Charleston girl from one of South Carolina's most distinguished families. She is a daughter of the late and distinguished Gen. John Hagood. Because of this and many other things, I have followed his career with a keen interest and I call it to the attention of the Congress with great pride and satisfaction.

The addresses follow:

STATEMENT OF VICE ADMIRAL J. L. HOLLOWAY, JR., UNITED STATES NAVY, CHIEF OF NAVAL PERSONNEL, BEFORE THE HOUSE ARMED SERVICES COMMITTEE ON H. R. 6583, A BILL TO AMEND THE UNIFORM CODE OF MILITARY JUSTICE

Mr. Chairman and members of the Armed Services Committee, it is always a pleasure to appear before this distinguished group which has been responsible for so much wise and constructive legislation in the past. I particularly appreciate the opportunity to be heard on the important legislative proposal which you are considering today because, as Chief of Naval Personnel, I am directly responsible to the Secretary of the Navy for the technical administration of discipline throughout the naval service.

For centuries, nations have recognized that a practical and efficient code of conduct is the backbone of any effective military force. Thomas Jefferson and John Adams were, in 1776, appointed a committee of the Continental Congress to hear Colonel Tudor, General Washington's Judge Advocate General, as to the insufficiency of the then current Articles of War existing in the Continental Army, and to request a revision of them. The following is an identical excerpt from the Journals of the Continental Congress, volume V, 1776, and from the Works of John Adams, Second President of the United States.

"There was existant one system of articles of war which had carried two empires to the head of mankind, the Roman and the British; for the British articles of war were only a literal translation of the Roman * * *. The British articles of war were, accordingly, reported, and defended in Congress by me assisted by some others, and finally carried. They laid the foundation of a discipline which, in time, brought our troops to a capacity of contending with British veterans, and a rivalry with the best troops of France * * *."

The Articles for the Government of the Navy, as they existed prior to 1951, stem primarily from the Articles of War referred to above, and set forth concepts of engendered discipline, tenacity, and devotion to duty carried to the ultimate development. Many of their provisions came down to us virtually unchanged from 1776.

I mention the historic articles and their origin, as that code contained certain virtues in vouchsafing commanding officers authority for nonjudicial punishment, which we believe was effective over the years. The amendments hereinafter dealt with will incorporate similar authority in the present Uniform Code of Military Justice.

Discipline has been called the soul of the fleet (Douglas Southal Freeman, 1950). Discipline is far more than punishment. In the words of Webster, it is training which corrects, molds, strengthens or perfects.

Military discipline encompasses both instinctive obedience to commands on the one hand, and, on the other, the exercise of initiative, judgment and tenacity in the execution of orders. The key to discipline, to valor in battle, and to effectiveness and tenacity in campaign, lies in a code which inspires the full development of these qualities in joinder.

In speaking with you today on H. R. 6583, I consider that we are dealing with more than a proposed change in legal procedures. We are considering matters that vitally affect the youth of our Nation. There are over 800,000 young men in the Armed Forces under 21 years of age, with a large turnover every year. This means that a major part of the youths of our country will perform some military service. How they fare during their military service will determine, in large measure, how they fare thereafter and what kind of citizens they become.

A naval commanding officer is much more than a ship handler and seaman afloat or a dignified figurehead ashore. He must embody all the symbols of authority and moral guidance represented in civilian life by the father, the school principal, and the pastor. His stature and authority are important factors in the growth and development of the many lads in his command who are no longer boys but not yet fully matured. A commanding officer's strength lies for the most part in his character, the prestige of his office, and in his training and experience in handling men. An important element of a commanding officer's strength is his authority which we earnestly believe must be increased.

The bill you are considering helps to accomplish that purpose by expanding the present powers of the commanding officer in regard to nonjudicial punishment. As you know, nonjudicial punishment is that relatively minor punitive measure which the commanding officer can inflict directly at captain's mast. The important point here is that nonjudicial punishment, as the term implies, is not a result of judicial procedure, such as a court-martial, does not result in any form of discharge from the service, and is not recorded as a previous conviction in a man's record. Thus, a man sentenced at mast to confinement or extra duty does not suffer the stigma of having been convicted at a court-martial which makes him, legally, a man with a Federal criminal record. This is the heart of the matter—the proposed amendment will serve the interests of the youths of our country just as significantly as it will serve the broadest interests of the Armed Forces. We in the Navy have few criminals; we have, of course, our share of irresponsible juvenile offenders. We need the proposed amendment to handle our wayward lads in their teens with firmness and dispatch, yet with humanitarian understanding, and to help as many of them as possible to avoid the permanent stigma of a court-martial conviction. It is well recognized that corrective punitive action, particularly in regard to the training of youth, is of paramount importance in establishing clean habits and sound morals. Many educational authorities today recognize that some of our problems in juvenile delinquency stem from a modern, so-called progressive departure from the time-honored principle of "spare the rod and spoil the child."

Under the present code, a commanding officer may punish an enlisted man in one of several ways without resorting to a court-martial. He may restrict the man or give him extra duties for 2 weeks or he may reduce him in grade. These are the only punishments which the commanding officer may impose unless the man is attached to or embarked in a ship, in which case the man may be confined for 1 week. Our experience over the past few years has indicated that these measures have often proved of insufficient severity, either as a deterrent against the commission of minor offenses or as punishment for the offenses already committed. They provide very well for the handling of the first and the extremely minor offender; but when the man repeats or when the offense is a little higher on the scale of seriousness, then the command is put to the hard choice between measures which are ineffective and ordering a court-martial which is too rigorous. A commanding officer of a taut ship or station knows that quick and effective punishment is indispensable to discipline. Timeliness is often more important than rigor.

Not the least among the benefits to be derived is the salutary effect on the ship's company as a whole, particularly on the petty officers who require, and whose responsibili-

ties and loyalty merit, direct support in their important duties in regard to discipline. We must have the moral courage to be promptly firm with the one who is in flagrante delicto, in order to deter 10 other youths from spoiling good records.

I believe that the proposed bill moves toward a restoration of an optimum body of military law. It provides the commanding officer with somewhat greater authority by permitting him to confine any enlisted man up to 7 days or to fine him half a month's pay. This amendment will make it possible for a commanding officer to achieve the necessary correction and deterrence in handling his in between petty offenders rather than subjecting them to a court-martial as is too often now the case.

It should be emphasized here that military punishment, while necessary on a small scale to enforce discipline, is not conceived as just a punitive procedure, an eye for an eye process. Rather it is corrective in its application, with the primary objective of leading the minor offender back to a normal, productive, cooperative mode of behavior.

Those of us with sons or daughters have probably found that among our best disciplinary measures are the curtailing of spending money and limiting their activities outside the home. In essence, the bill under consideration gives commanding officers these same powers over his men that parents have over their children. Parents have always had without question the authority to discharge their responsibilities imposed by society; military commanders have the same need for authority to help them discharge the responsibilities imposed by law and custom.

Another aspect of H. R. 6583 that impresses me as being of major importance is that dealing with the reduction of paperwork and useless, time-consuming administrative procedure. This, in itself, will add to the effectiveness of our disciplinary system.

The code has been in operation now for nearly 5 years. It has not been completely effective because it has not only hamstrung the commanding officer with administrative minutia, but it has weakened his historic role at mast; that of a wise, just, fatherly mentor, quick to punish the sinners and equally quick to help a man redeem himself and start afresh.

The legal procedures of the UCMJ have been carried out, it is true, but with excessive delay and at a great unnecessary cost in man-hours. As a type commander in the Atlantic Fleet for 2½ years I was most impressed, by first hand experience, with the administrative expense of certian legal processes which are essentially routine matters of form and not of substance. In these times of grave personnel economies in the Armed Forces we must bear in mind that the Armed Forces are in being solely to provide an adequate national defense. They are not essentially judicial agencies, law enforcement agencies, or social security agencies. Each minute, each dollar, each man that we must devote to some function other than preparedness to fight leaves 1 minute, $1, 1 man less to devote to preparedness. Court-martial and legal proceedings are worth that price only when the primary end to be achieved, discipline, is improved. When the procedures of courts-martial and other related legal matters become so cumbersome that officers must neglect such primary duties as personal leadership, maintenance or training, then it is time that we take action to change the system. That is the purpose at which many of the sections of this bill are aimed, without reducing in the smallest amount the features of the UCMJ that protect the rights of the individual.

I shall not go into further detail on the bill under consideration since a number of witnesses will appear before you equipped to discuss at length the technicalities and effect of each provision. Before closing, however, I want to address myself in general terms to your overall consideration of H. R. 6583.

This committee may hear witnesses testifying on a number of bills relating to the armed services, bills involving new weapons, and bills throwing a new light on the technology of warfare. What sets H. R. 6583 apart from the rest?

This bill is set apart because it deals with the bone, the muscle, the sinew of the armed services; it deals with the man. Regardless of what technical advances we make and what weapons we develop, all of that progress is ineffectual if we do nto have behind it the superbly disciplined fighting man. When I think back to the seemingly unending months of World War II, I recall the quartermaster, the bosun's mate, the gunner's mate, the machinist's mate—the legion of fighting men, disciplined for peace and war. The weapons with which we fought have faded to a degree from my mind's eye, but not so with the men. Those men and the men who follow them give us real strength, the strength that makes our armed services great. And it is these men that are affected by the provisions of H. R. 6583. We feel that those provisions are equitable, that they aid the national defense, and that, above all, they assist our young men who, in assuming their military obligations, must recognize that they temporarily subordinate certain individual liberties, in order to cherish that much greater freedom—that of our way of life in this Republic.

REMARKS BY VICE ADM. JAMES L. HOLLOWAY, JR., UNITED STATES NAVY, CHIEF OF NAVAL PERSONNEL, BEFORE THE PILOT INTERNATIONAL CLUB OF SOUTH CAROLINA, CHARLESTON, S. C., APRIL 14, 1956

It is with extreme pleasure that I am here tonight, and I thank you for the kind invitation to address a few remarks to you. It is an honor and a privilege, all the more appreciated because I so rarely appear before women's organizations. As a matter of fact, the last time I made a similar appearance was in January of 1955, more than a year ago, when I spoke to the Women's Forum on National Security in Washington, D. C. Perhaps some of you were also present on that occation. At any rate, as Chief of Naval Personnel, it is usually true that I am fairly well surrounded by the officers and men and women who make up today's Navy. And while they are without question the world's finest, it is most pleasant to have a change of pace, and to meet with such a distinguished organization as the Pilot Club of South Carolina.

Alexander Poe, who lived a great many years ago, made a wise observation when he stated:

"Men, some to quiet; some to public strife
But every lady would be queen for life."

There are those who feel that a naval officer's life is to a large degree one of strife, as he endeavors to meet the manifold commitments imposed upon him in this uncertain world. But certainly there is no question but that each lady present tonight is indeed a queen, a title you have indubitably earned through the splendid work you are doing. Not only South Carolina but surely every area in which your activities are known has benefited and will continue to benefit from your magnanimity and your generous contributions to the betterment of our world.

It is said that magnanimity is truest wisdom. It is also said that there's wisdom in women, and who among us would disagree? It is upon this premise then, women's magnanimity and wisdom, that I should like to comment briefly, and then attempt to show what I believe is a close analogy between the things you stand for and work for and the things which we in the United States Navy seek to accomplish.

First of all, yours is an organization dedicated to service, civic and social—local, national, and international. Because your philosophy is already known to each of you, it requires no detailed accounting, but it does seem appropriate to observe that, in addition to a desire to be of service, one other quality is essential, and that is wisdom—wisdom to ascertain just where, and when, and in what amount a service should be rendered. Thus both motivation and intelligence are necessary for you to accomplish your objectives—or stated another way, magnanimity and wisdom are essential to your success.

Now, let us consider for a moment the United States Navy. Ours, too, is an organization dedicated to service, national and international. And like you, the Navy must give careful consideration to when and where its services are necessary.

To state it simply, the United States Navy is the guardian of our country. The Navy is responsible for maintaining control of the sea and is a ready force on watch at home and overseas, capable of strong action to preserve the peace or of instant offensive action to win in war. It is upon the maintenance of this control that our country's glorious future depends; the United States Navy exists to make it so.

But never before have we felt it necessary to exercise greater precaution, both to determine that we are capable of the proper control and to use this control in the right and most effective way. To do this requires real wisdom, for in today's world so much depends upon this vital force.

As is usually the case, where there are many and weighty responsibilities, there are also numerous opportunities. This is particularly true of today's Navy, which offers practically unlimited opportunities for education, travel, and adventure. And, perhaps greatest of all, is the privilege of performing an important job, and the knowledge that we are contributing a worthwhile service which will enhance the welfare of our country.

Subscribing to the theory that wisdom is derived, at least in part, from experience and education, the Navy endeavors to see that its personnel have a liberal amount of each. As a matter of fact, education for all of our personnel is a continuing thing throughout their careers, beginning with the day they begin service, and not even ending upon retirement. We believe we offer our personnel the finest and best education attainable, and we support this belief by having instituted an unprecedented program for training of personnel, both officer and enlisted.

For our enlisted personnel, there is education and training for over 60 ratings from the time-honored bo'suns mate to the new and adventurous guided-missile man. Each of these ratings offers the young men and women of today a challenging career with almost unlimited promotion opportunities. Many qualify for officer rank.

Some of the paths leading to a commission are, first of all, the United States Naval Academy, with which you are familiar. Then we have the Naval Reserve Officer Training Corps, with units located in 52 colleges and universities throughout the country. One of these units is located at the University of South Carolina, in Columbia, and perhaps some of your own sons or those of your friends are enrolled there. Also, we have the officer-candidate school at Newport, R. I., and the Reserve officer-candidate program for members of the Naval Reserve who are enrolled in college. For training in aviation we have the aviation officer-candidate school, and the naval aviation-candidate program, better known to some of you as the NavCad program. Training in these aviation programs is pursued at Pensacola, Fla.

Considering all these programs, it can be seen that training is only the first step in the broad educational system that extends through the career of naval personnel.

We would certainly not forget nor minimize the important role which women fill in our modern Navy, for theirs is a fine contribution. And they, too, enjoy educational opportunities, beginning with their initial training at the Officer Candidate School, Newport, R. I., for officers and the recruit training commands for enlisted women. Nor would we fail to mention that group of professional women, the Navy Nurse Corps, who are literally angels of mercy as they perform the many functions in caring for our sick and wounded. Yes, the Navy places very high value upon the valiant women who serve, and thus you see that we, too, endorse with enthusiasm the principle of equal rights for men and women.

I understand that your desire for service finds expression in the awarding of educational scholarships to worthy young women of other lands, that they may come to our country for study. Here, then, is evidence that there is a parallel in the emphasis which you, and the United States Navy, place upon education.

When these young women come to this country for an education, it also means that they must travel. Likewise, the Navy offers, besides education, an opportunity for travel, as well as interesting and exciting duty. It also offers as nowhere else a challenge to our young people. The opportunity to fulfill dreams and perform courageous and new deeds still lives. Your code of ethics states that visions and dreams are the seedlings of reality, and we in the Navy are pleased that you believe this, because it is upon this selfsame principle that we stand steadfast.

We believe that service to God and country is our special privilege, and, therefore, we serve with honor. "True course ever" might well be our motto, even as it is yours.

Service—surely this is a term equally applicable to the Pilot Club and to the United States Navy. Each exists for just that purpose.

What closer analogy could possibly be found than your project for the rehabilitation of Vimoutiers, and the Navy's recent passage to freedom operation in Vietnam? If there is a soft spot to be found in our naval personnel, it is in the heart of a sailor, who will give liberally of his time, his money, and of himself, to help those less fortunate than he. So, while you concentrate on making your community, and thus the world, a better place to live, your Navy man is putting into practice this pilot objective at his port of call throughout the world.

I know that in the almost twoscore years since your organization came into being you have accomplished a great many things of which you are proud. Yours has been a noble contribution to your country and your fellow man. The Navy likewise is a proud organization of people who cherish its ideals and principles. Like you, we earnestly desire to make a noble contribution to our country and to our fellow man. We believe that in these uncertain times in which we live that preserving the peace is our most important role. We want peace—a lasting peace—but not at the expense of our freedom and the integrity of our human liberties. We hope fervently to prevent war by assuring the world that we are resolved to maintain the strength to meet an attack from any quarter at any time. We further believe that control of the sea, the primary mission of the Navy, gives the United States her greatest advantage for the maintenance of peace and for victory if war comes.

Never have our opportunities and our responsibilities been greater. Just as you look about you and, with magnanimity and wisdom, decide when and where and in what amount a service should be rendered, so do we, your country's Navy, look about us and do our best to determine the proper course of action to follow.

This would be impossible to do were it not for persons such as yourselves who show a constant and considerate interest, not only in the Navy itself but, more particularly, in maintaining those same idals for which we stand.

And so, when I have the all-too-rare pleasure of appearing before such a charming and distinguished group as you, I am reminded of a favorite quotation from Browning, who once wrote:

"You're my friend.
What a thing friendship is, world without end."

What, indeed? To us it is that masterpiece of nature, for which we are grateful, without which the Navy could surely not exist.

Farm Bill Veto Praised as Example of Courage

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 17, 1956

Mr. MARTIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence from the New York Herald Tribune of Tuesday, April 17, 1956:

FARM BILL VETO IS PRAISED AS AN EXAMPLE OF COURAGE

(By David Lawrence)

WASHINGTON, April 16.—President Eisenhower has given the Nation one of those examples of courage which come rarely in the history of American politics.

For, in vetoing the farm bill, the President was disagreeing not only with Democrats but with many members of his own party in Congress who have been prodded into taking position similar to that of their political opponents for fear of the advantage the latter might get on the stump in the coming campaign.

Plainly the bill has been publicized so widely as a bonanza to the farmers that many Republican Members of Congress in farm States fear they cannot overcome that impression by using statistics or economic arguments. There were those on the Republican side who urged the President to sign the bill and try to get a better one through Congress next time. The argument was that this would save Republican votes in November. But Mr. Eisenhower refused to yield to expediency. He took his position firmly on the basis of conviction and on what he and his agricultural advisers feel is sound economics.

It isn't easy to persuade farmers that a bill which is designed to bolster prices isn't good for them or for the country. But it so happens that the painful facts of what has been happening in agriculture are on the President's side. It is true that by artificially supporting high prices, the Government itself has stimulated the production of vast surpluses.

Today nearly $9 billion of taxpayers' money are tied up in an accumulation of farm products which the Government owns and does not dare to sell for fear that to do so will send prices still lower than they are. In fact, the very existence of the surpluses has all along had a depressing effect on the price structure. The surplus problem has hung like a sword of Damocles over the American farmer for many years.

EISENHOWER'S POSITION

Mr. Eisenhower at the outset of his administration took a strong position against any further accumulation of surpluses and notified Congress that he wanted a system of flexible price supports so that surpluses could be worked off gradually, or at least not accumulated further. But the politicians got busy and passed a bill which they dared him to veto. It was supposed to spell political suicide for the Republican Party in the farm States if not enacted.

Mr. Eisenhower pondered his course as between expediency and simple honesty. He refused to be dragooned by cries that he would lose the election. He declined to accept the suggestion from some Republican sources that it would be better to sign the bill and ask Congress to revise it next time so at least to get by the presidential election this year.

There is an interesting analogy here with what happened during the Republican administration of President William Howard Taft when a high protectionist tariff bill was passed by Congress in the face of demands for a reduction in the cost of living, particularly because of the high prices of manufactured goods then prevailing. Mr. Taft knew it was a bad bill and said so, but nevertheless he signed it. The country lost respect for him, his party became split, and the 1912 election saw Mr. Taft ignominiously defeated in his attempt at reelection.

"INTEGRITY CONSISTENCY"

Mr. Eisenhower has adhered to his conscientious convictions despite the pressure to get him to abandon them. That's what the people have come to expect of him—integrity and consistency.

As for the agricultural States, he will, of course, lose some votes, but there are administrative powers in the present laws which can operate to the benefit of the farmer, and the chances are that farm income will show an improvement by election time without running the risk of making high price supports a permanent part of the agricultural economics of America.

Mr. Eisenhower has played it straight—with firmness and consistency—and has saved the urban families today some substantial increases in the cost of food. And, of course, city dwellers vote, too.

Resolution in Support of H. R. 9566

EXTENSION OF REMARKS
OF
HON. T. A. THOMPSON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 17, 1956

Mr. THOMPSON of Louisiana. Mr. Speaker, under leave to extend my remarks, I wish to include the following resolution signed by officials of the Muller Co., Ltd., of Lake Charles, La., who favor immediate enactment of H. R. 9566 and restoration of uniform parcel post size and weight limits:

RESOLUTION IN SUPPORT OF H. R. 9566

"Whereas the existence of an efficient, economical parcel post system is essential to the pattern of life of our citizens and businesses in both rural and urban areas; and

"Whereas the present discriminatory parcel post size and weight limitations seriously

disrupt the service once enjoyed by all at great and unnecessary cost and inconvenience; and

"Whereas there is no nationwide substitute for parcel post that can and will serve all citizens regardless of address; and

"Whereas the present size and weight limitations have been both a financial and an administrative burden to the Post Office Department: Be it hereby

"*Resolved*, That the Muller Co., Ltd., comprised of 250 members and representing several businesses in Lake Charles, La., favors immediate enactment of H. R. 9566 and restoration thereby of uniform parcel post size and weight limits."

It is respectfully requested that Representative T. A. THOMPSON insert this resolution in the CONGRESSIONAL RECORD, and that he request the chairman of the Post Office Committee to schedule hearings now on parcel post size and weight so that the citizens of Lake Charles may have relief from the present law before the current legislative session is concluded.

THE MULLER CO., LTD.,
ADOLPH S. MARX,
President.
FRANK W. FOXX,
Vice President.
HENRY GREENWOOD,
Secretary.

Mid-America Jubilee on the St. Louis Riverfront

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 17, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a news release setting forth the concept and plans for Mid-America Jubilee on the St. Louis riverfront throughout the month of September 1956, which will be the first in a series of such expositions to be held each year in St. Louis, at that time. I am certain the great city of St. Louis and the surrounding area will present an outstanding event that will have major national, regional, and local impact.

The news release follows:

The outstanding civic, industrial, and agricultural showmanship project of the Midwest, Mid-America Jubilee, is an annual regional exposition to be held on the St. Louis riverfront throughout the entire month of September.

Conceived by the Chamber of Commerce of Metropolitan St. Louis and endorsed by Civic Progress, 26 voluntary committees representing every community interest have been formed.

With the objectives of dramatizing the interdependence of industrial-urban and rural-agricultural interests, stimulating business in the St. Louis area, and increasing pride in the accomplishment of the rich midwestern heartland surrounding St. Louis, the exposition, a miniature world's fair in scope, will occupy approximately 37 acres of the Jefferson Memorial Expansion Park site.

EXHIBITS AT THE JUBILEE

Contemporary in design, the exhibits area will include spectacular, animated displays of maximum visitor interest from a wide range of national, regional, and local industrial corporations. Forward looking in theme, these exhibits will feature many of the latest electronic, atomic, and automotive accomplishments of United States industry.

The military will participate through large-scale displays of the latest developments in aviation, guided missiles, and other defense equipment. A heliport with continuous daytime demonstrations by helicopters will be included. Federal, State, and municipal agenices, together with educational, religious, and welfare organizations, will display their vital contributions to community development.

AGRICULTURE

An extensive agricultural area will include a model Midwestern farm with crops under cultivation, exhibits of livestock and farm equipment, and a judging arena with a continuous cycle of agricultural and livestock special events.

ENTERTAINMENT AT THE JUBILEE

Approximately 100,000 square feet will be devoted to an amusement area featuring carousals, ferris wheels, a miniature railway, a pony ride, and other amusement devices of maximum appeal to youngsters and reminiscent of the Louisiana Purchase Exposition in design.

The exposition will also include a nostalgic 1904 "Meet Me in St. Louie, Louie" beergarden restaurant accommodating 500 at tables and 200 at a standing bar. A German band for waltzes and polkas, a menu featuring German-American and French Creole cuisine and the products of the major St. Louis breweries will be included.

Entertainment highlight of the exposition will be a huge spectacle show with a cast of 350 professional actors, singers and dancers aided by a star of national magnitude. Scores of horses, horse-drawn and automotive equipment will be included in the production to be presented each night throughout the 30-day operating period of Mid-America Jubilee. Presented on a multileveled stage to be erected in front of the historic Old Cathedral, this musical production will, in terms of popular entertainment, relate the romance of the development of St. Louis and the surrounding area. Special scenic and lighting effects, hundreds of costumes, and the efforts of a creative and technical staff of theatrical experts under the direction of Broadway producer-director James Vincent Russo, will blend their efforts into the production of the spectacle script by New York and Hollywood playwright-lyricist Norman Zeno.

In this same area, an afternoon program of continuously changing free special events, reflecting participation by every conceivable type of community organization, will be presented.

A conservative estimate of attendance the initial year indicates a minimum of 500,000 visitors. Front gate admission is 75 cents for adults and 35 cents for children 12 and under.

Sponsored by City Country Cavalcade, Inc.: Raymond R. Tucker, mayor, honorary president; Roscoe C. Hobbs, president; Stanley M. Richman, executive vice president; Arthur K. Atkinson, vice president; Wyllys K. Bliss, treasurer.

Alfred Stern, director of the department of community and industrial showmanship of the congressionally-chartered American National Theater and Academy (ANTA) is managing director, a former member of the production staff of New York's Radio City Music Hall at the New York World's Fair of 1939–40, served as managing director for such large-scale community celebrations as the Detroit Automotive Golden Jubilee (1946); Detroit's year-long 250th birthday festival throughout 1951; the centennial of Omaha, Nebr., in 1954; and the centennial of Flint, Mich., in 1955.

Factors in the Farm Bill Veto

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 17, 1956

Mr. MARTIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Krock in the New York Times of Tuesday, April 17, 1956:

THE FACTORS IN THE FARM BILL VETO

(By Arthur Krock)

WASHINGTON, April 16.—Suppose the President had signed the farm bill, as a number of Republicans in the farm States, including governors, and most Democrats urged him to do:

He would have sacrificed to a cynical concept of political expediency an economic principle he repeatedly said was basic to the first steps toward improvement of the income of agriculture and to its ultimate stability on a prosperity level.

He would have discredited his Secretary of Agriculture, whose unwavering opposition to the continuation of rigid price supports the President steadfastly encouraged and emulated. If Secretary Benson had not resigned, he would have been set down as a man whose desire to stay in office rose above his deep conviction of what the fundamental public contribution of that office should be.

The President would, by signing the bill, have also rejected the views of another counselor on whose judgment in agriculture he greatly relies and with whom he has the closest personal bond: his younger brother, Milton Eisenhower.

In the ranks of the repudiated would also have been (a) the administration spokesmen in Congress, who warned their colleagues of a veto if the conference form of the bill was passed; and (b) the Members of Congress who voted against the legislation as an expression of confidence in the administration's farm policy, some at great political risk.

These are among the calculable debits the President would have contracted by signing the conference report. And to them would have been added a debit as much greater than the sum of them all as it is incalculable. This would have been the inevitable and sharp downward revision of an overwhelming public impression the President has created—that he lives by a set of principles, personal and political. By signing the bill he would have compromised both, and in a sector where they are mutually inclusive.

What many politicians urged the President to do, and Senator KEFAUVER confidently predicted he would do, was to sign legislation that further embedded in the farm economy the component which, above all others, he charged with responsibility for the depressed state of that economy. "It only extends rigid 90 percent parity for another year," was again the argument which, accepted annually by the President's predecessors, has piled higher and higher the agricultural surpluses that are largely responsible for the steady slump in farm income while the income of nearly all other groups has constantly been rising.

THE LOST MAGIC

On this argument Congress from year to year has deferred the institution of the flexible price support system it legislated some time ago. And on this argument the economic condition that is frightening the officeholders in the farming areas has been more and more deeply entrenched by those

same politicians. Though what the President referred to in his veto message as "the insatiable markets associated with war" shrank with the shrinking postwar demand, the 90 percent price system was constantly extended in changing circumstances where it lost whatever magic it may have had. This was demonstrated when, in every year but one between 1947 and 1954, farm income declined despite the congressional mandate for 90 percent parity.

In standing by his principle the President, however, recognized and served certain economic considerations with which political factors are plainly linked. By setting price supports on 5 basic crops at 82½ percent of parity he fixed national averages for a number of farm products that would also have resulted from the bill he vetoed. This undoubtedly will be as welcome politically to the beleaguered farm-belt Republicans as it will be economically to their constituents. The Democrats, and those Republicans who supported the bill the President vetoed, can claim credit for this move by the administration, contending that the passage of the farm bill forced the President to fix these averages. But the hand that feeds will be the President's. And it was evident today that this thought greatly comforted the Republican governors who went to the White House to advocate signing and left with the news of the new levels.

The economic interest of farmers in the United States is not the same in all areas. What helps one group does not help all. Moreover, despite the drive in Congress to pass the bill the President vetoed, and the activity of some farmers, organizations in its behalf, other organizations as actively opposed it. A large body of political, economic, consumer, and agricultural opinion stands with the President against those aspects of the bill that evoked his veto. It was not a case of General Eisenhower and Secretary Benson alone on the burning deck.

Congress may decline to rescue the soil bank from the veto, as the President requested in his message today, but that request, plus the new minimum support levels he fixed, puts him on the affirmative and Congress on the negative side of the equation. And on the moral test of standing by a principle he has all the best of it.

The Church Looks at the Nation's Foreign Policy

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1956

Mr. AVERY. Mr. Speaker, under leave to revise and extend my remarks, I am inserting an address delivered by the Honorable Alfred M. Landon, former Governor of Kansas. The address was delivered before the Topeka Ministerial Association, Topeka, Kans., on Tuesday, April 3, 1956.

Every Member of Congress is aware of the international issues and problems confronting the world today. This administration has made great strides toward the goal of everlasting peace. To achieve and keep our goal we must be ever vigilant. We must constantly appraise our actions and policies in light of changing global events. We must heed and consider the thoughts and wisdom of experienced statesmen, such as Mr. Landon. Mr. Landon's address merits the study and consideration of all Members of Congress.

The address follows:

THE CHURCH LOOKS AT THE NATION'S FOREIGN POLICY

(Address by Alf M. Landon before Topeka Ministerial Association, Topeka, Kans., April 3, 1956)

Three major events have occurred since Reverend Bennett asked me last August to speak today on this subject.

1. Rearming by West Germany.

I have frequently expressed the opinion that that would be the time if Russia was going to challenge Bonn.

Of course, that story may not be fully told as yet. The Kremlin may have other moves up its sleeve. But it can be said that the West German situation is more favorable than a year ago.

2. Selling arms to Egypt by a Russian colony.

That upsets the balance of power in the Near East where there are a lot of cocked and loaded guns.

If these guns are ever aimed and fired, their shots will be heard around the world.

Then the lights of H-bombs may blot out the sun of life and civilization.

3. The exhuming of two Russian men in February.

One from a deliberately ignored and forgotten grave. The other from a national shrine.

One—Dostoevsky—was exhumed as a national hero. The other—Stalin—was buried a national hero and demigod. But he was exhumed as a bestial murderer whose policy and acts were crimes against the Soviet state.

The contrast between the social and political ideals and philosophy of these two revolutionaries gives significance to the official restitution of Dostoevsky and the official degradation of Stalin by the Soviet. It can mean nothing or it can mean a lot.

Dostoevsky was unorthodox. He did not believe in dogmas and creeds.

Deviation from any of the Communist dogma and practices heretofore has meant sentence to one of the Communist slave camps—or death.

Dostoevski believed that the ills that affected Russia and life in general would be corrected through the applying of the teachings of Christ.

Stalin believed those teachings were an opiate. Therefore, the Church had to be crushed and a new generation indoctrinated against Christianity.

He had damned Dostoevski as "a lackey of the warmongers of Wall Street."

However, "beginning on February 9—the 75th anniversary of Dostoevski's death—a whole week was given over to resurrecting Dostoevski as a national hero—honoring him with celebrations—official publications of all his works—library and museum exhibits—documentary films—plays based on his novels—a government sponsored anthology and biography, and so on. He even had a street named in his honor."

The simultaneous timing of the reversal of official judgment on the nonconformist novelist and the Communist demigod evidences a change of some import is taking place in Russia—encouraging to intellectual freedom.

And intellectual freedom is the seedbed of religious freedom and political freedom.

Contrary to former precepts and examples, the "social usefulness" of questioning rigid dogmas and practices has been dramatized in a startling way to the Communist world.

If that be a play—drama—as an opiate to the free world—it is also fraught with danger to the Commintern in loosening its grip on the minds and souls of its subjects.

To exalt the unorthodox among the highly indoctrinated, zealous orthodox is a step backward, dangerous in any tyranny.

If the Soviet's new vision is designed as a trap for the free world—it is also of a design to trap the trapper.

The unmasking of a demigod means the loosening of the tie that binds his cult. Especially is that true when 75 percent of the Russian Communist Party are a younger generation that knows nothing of the spirit of martyrdom for their faith of the older generation.

Even if it be true that there is stability of a kind at the bottom in Russia and her colonies—it is certainly true that there is unrest at the top in the Kremlin and throughout the Communist world.

Another encouragement to the interchange of ideas is the raising of the Iron Curtain a wee mite permitting more travel and communication in and out of Russia.

Whether the new Kremlin tactics are a shift from armed force to increased economic competition, a strengthening of the highly privileged class in Russia and her colonies by relieving the relentless and fearful strains and pressures of terrorism and despotism, an attempt to woo neutral sentiment in the world, by repudiating the bestial cruelties and tyranny of communism, or whether it is a combination of all this.

It is a wise and sound policy to proceed on the basis that the Communists have not abandoned their objective of conquering the world and colonizing all countries for the Kremlin czars.

A highly competent authority—the Research Institute—recently reported the Soviet power is gaining.

It is true that serious differences—almost floundering—exist in NATO over the handling of the Greek-Cyprus issue, the Arab-Israeli disputes, the China policy, and the French policy in north Africa.

Not only have Cyprus and Algiers had a disturbing effect in NATO—they have become symbols to much of the world of the fight of former colonial peoples for political independence.

However, it is also true that NATO is undoubtedly stronger militarily, despite the Soviet's attempts to break up this free world alliance.

Both SEATO and NATO are growing in strength militarily. Whether they are politically stronger is something of a question.

The Formosa situation is greatly changed from a year ago when a Red offensive appeared imminent.

Today Chinese Communists are far better prepared for attacking Formosa than they were a year ago.

Today, however, the likelihood of an attack appears much less.

The parliamentary situation in Japan appears better today than a year ago. But that can be deceptive. The Japanese economy, although improving somewhat, is basically not much better than it has been since the war. They cannot go on indefinitely with a constantly expanding population and ever-decreasing resources.

The rearming of Spain is proceeding satisfactorily. The political situation in Spain after Franco is as uncertain as the political situation in West Germany after Adenauer.

England is suffering from inflation. However, the government is tackling that job with a firm hand and working toward sounder ground.

France and Italy continue to be weak spots both economically, politically, and militarily. There is not much improvement in either country during the past year.

There are powerful Communist forces in some of the South American countries, and some economic distress.

What does it all add up to on basic issues?

Generally, the free countries are stronger economically and militarily today than a year ago.

But that can change rapidly in different areas. In some countries, both Fascists and Communists are working hand in glove to prove that democratic government will not work.

There has been no real change in world policy by the czars of the Kremlin.

On the one hand they are skillfully appealing to neutral and peaceful sentiment, and on the other infiltrating Arab and other countries to stir up strife and bloodshed with other people's bodies.

Easter is 2 days past—when mankind should be thinking of peace, liberty, and progress.

But communism is thinking of anything but that.

Therefore, such concessions as have been made by Russia have been obtained through the increased strength of the free world. That's not a promising international situation.

America's strength and leadership must be directed toward:

1. Formulating a joint foreign policy that is sufficiently flexible to meet the tactics of the Soviet.

2. Energetically and skillfully working to unify the conflicting interests of the free world.

3. Obtaining agreement on the "open skies" proposal of President Eisenhower. I proposed 10 years ago the neutralizing of the key spots in the world. I think now would be a good time to bring that up in connection with aerial and ground inspection and disarmament.

4. Team work with other countries to fill empty pocketbooks and empty stomachs, not by gifts, but by development of health, resources, arts, and sciences.

5. Freer exchange of trade and travel, and communication.

Above all, in the words of Theodore Roosevelt, "speak softly, but carry the big stick," until real disarmament is achieved.

Also, I believe we should speak not only softly, but intelligently and clearly.

Lee De Forest

EXTENSION OF REMARKS
OF
HON. CHARLES A. BOYLE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 17, 1956

Mr. BOYLE. Mr. Speaker, 50 years ago today the "Father of Radio," Mr. Lee De Forest, invented the vacuum tube. His inventions helped make radio and TV possible, and he has won recognition as a leader in the field of electronic communication. Other inventions of his assisted in the development of the wireless telegraph in America. In the fields of wireless telegraphy, radio telephone, wire telephone, sound-on-film talking pictures, high-speed facsimile and picture transmission, and television, he has some 300 patented inventions to his credit. "Radiotherapy" for physicians is another of his accomplishments; the two-electrode—radio—tube which can be used as radio detector, radio and telephone amplifier, and as oscillator in "feed-back" or regeneration circuit, was developed by Mr. De Forest. The invention of "noiseless recording" positive prints in talking pictures, "glow-light" recording of sound on films, and so forth, are other of Mr. De Forest's many contributions. Broadcasts by radio of the voice of Caruso in 1910 and the first broadcast of radio news in 1916 are among his accomplishments. Time does not permit detailing the countless awards and honors which have attested his contribution to our society.

My district and I are very proud of the fact that the office of the American Television Co., with which Mr. De Forest is so closely associated, is located in the 12th Congressional District of Illinois. Mr. De Forest is today being honored by the Radio Pioneers of America, and from the floor of the House I also wish to salute him. The inventions and other work that he has done have helped make ours the great Nation that it is.

Small Firms Gain, It Says

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 17, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, along with other Members of the Congress, I received the other day the fifth semiannual report of the Small Business Administration for the 6 months ending December 31, 1955.

For the information of my colleagues, I include in the CONGRESSIONAL RECORD chapter I of that report, the covering letter to the President, and a comment on the report by Sylvia F. Porter, of the New York Post:

SMALL BUSINESS ADMINISTRATION,
Washington, D. C., March 26, 1956.

The PRESIDENT,
The White House,
Washington, D. C.

MY DEAR MR. PRESIDENT: Pursuant to the provisions of section 215 of the Small Business Act of 1953, as amended (Public Law 163), I have the honor to submit herewith the fifth semiannual report of the Small Business Administration covering operations between July 1 and December 31, 1955.

Respectfully yours,

WENDELL B. BARNES,
Administrator.

CHAPTER I

INTRODUCTION

The improvement in the position of small business which took form in mid-1954—after a decline in small business health over several years—continued through the second half of 1955. This gain is reflected in various economic indicators. Throughout most of 1955 the trend of business failures was downward. New business incorporations hit a new peak. There was sharp improvement in small firms' earnings, both before and after taxes. For the four quarters ending with the third quarter 1955, earnings of small corporations after taxes increased to $627 million from $442 million in the preceding four quarters. Net sales of smaller manufacturing corporations continued their recovery.

The various programs of the Small Business Administration designed to help small business registered notable gains.

During the 6-months period July 1 through December 31, 1955, the Small Business Administration approved 625 business loans in the gross amount of $30,332,390 to assist small firms. This was 20 percent greater than business loan approvals in the previous 6-months period.

The agency's financial assistance program is carried on in close cooperation with the banks of the Nation. As evidence of this, more than 66 percent of the agency's business loans have been in participation with banks.

The severe hurricanes and consequent floods in the late summer and fall of 1955 resulted in widespread damage to homes and businesses, particularly in the northeastern States. The Small Business Administration immediately classified the localities as disaster areas eligible for assistance under the agency's disaster loan authority. Through the cooperation of local banks and through the transfer of personnel from the Washington, regional and branch offices, the Small Business Administration was able to organize emergency offices in each of these areas within a few days after the disasters occurred. For the 6-months period from July 1 through December 31, 1955, the agency approved 2,056 disaster loans aggregating $29,290,391 to assist business and homeowners. This compares with 813 disaster loans for $4,733,423 during the similar period of 1954.

A significant development in the program of financial assistance was the inauguration of the limited loan participation program. This is designed especially to assist small retailers, wholesale distributors and service establishments. Under this plan the Small Business Administration will participate with a bank in a loan to a small retailer, wholesaler, service establishment or other business up to a maximum of $15,000 or 75 percent of the total amount of the loan, whichever is the lesser. The early experience under this program gives ground for belief that under this plan banks, with Small Business Administration cooperation, will be able to meet the financial needs of a considerably greater number of small-business concerns than has heretofore been possible.

There was marked progress in the joint-determination program, the program for reserving Government purchases for small-business participation. In the 6-months period since July 1, more than 2,100 purchases, amounting to approximately $192,800,000, were earmarked for competitive award to small firms. This compares with $173 million in the comparable period of 1954. The number of procurements awarded to small firms increased even more sharply to 2,028, compared with 854 for the 6-months period ending December 1954 and 256 for the same period of 1953. The Department of Defense has been able to increase total awards to small concerns; on the basis of new procurement, total share of small business in the defense dollar during the 6-months period July 1 through December 31, 1955, increased to $1,382,759,000 from $1,222,000,000 for the same period a year earlier.

There is a prospect for even greater participation by small business in Government purchasing as a result of 3 Department of Defense directives, 1 of which was issued in the last 6 months, calling for greater set-asides for small-business concerns. The Small Business Administration cooperated closely with the Defense Department in the development of these directives.

In the area of production and management assistance, much time has been given to assisting small businesses obtain raw materials in scarce supply. These include steel, steel scrap, aluminum, copper, nickel, newsprint, lead, plateglass and other materials. Shortages, bottlenecks and price increases are characteristic of the boom economy which we are experiencing.

The Small Business Administration will continue to expand its assistance to small business by broadening and improving its present programs.

[From the New York Post of April 16, 1956]

SMALL FIRMS GAIN, IT SAYS

(By Sylvia F. Porter)

"A steady improvement in the position of small business, as smaller firms continued to share in the overall national prosperity, was noted by Wendell B. Barnes, Administrator of the Small Business Administration, in the agency's fifth semiannual report."

So went the opening sentence of a recent press release from Washington—and since it was a terse, well-written handout, it was picked up and printed without change all over the country.

But since receiving the press release, I've also received a copy of the agency's 202-page report.

And since the evidence I see and hear all around me has made me exceedingly skeptical of optimistic appraisals of the small-business man's position today, I've taken the trouble to study the whole thing.

With due respect to Small Business Administrator Barnes, his agency's efforts to assist little firms and his understandable desire to emphasize the gains made during his term as SBA chief, I must confess my conclusions from his own report are hardly as optimistic as his.

The report says: In 1955 the sales and earnings both before and after taxes of small firms improved over 1954.

Comment: That's an empty boast if ever I heard one. Through a good part of 1954 we were in a recession. Through all of 1955 our economy was on the greatest nonwar upsurge of history. If the sales and earnings of small business firms hadn't risen over 1954, this would have reflected a squeeze on small business equivalent to a panic.

The report adds: The uptrend of earnings before taxes of small manufacturing firms brought the earnings index "to the highest point in nearly 2 years" although "the level of earnings, as might be expected, is still far below the peaks reached" in the Korean period.

Comment: But earnings before taxes of large manufacturing firms are far, far above the peaks reached during Korea. Why should it "be expected" that earnings of the smaller firms should be "far below"? Is it the assumption that small business is really fighting a losing battle?

The report boasts new awards to small-business firms under military contracts rose from 15.7 percent in the last 6 months of 1954 to 17.6 percent in the last 6 months of 1955, and the net value of awards to small business rose from 19.8 to 20 percent. A large part of the report and of the press release is devoted to this subject.

Comment: But when you dig into other figures on defense contracts, the complexities seem baffling, and the boast seems meaningless.

For instance, for the full 1955 fiscal year, the percentage of new contracts going to small business fell from 18.3 to 18 percent, and the percentage of net procurement slumped from 25.1 to 21.8 percent. The SBA itself points out the net figure is the one which reveals the share of defense dollars going to small business over a long period.

What's more, a just-released separate report by the Defense Department discloses that since 1953 the share of defense contracts going to the giants of America has been swelling.

The report admits small businesses do complain of various problems such as the squeeze on some raw materials, higher prices, such as for steel scrap, which they are unable to absorb, tightening bank credit, inability to compete with larger firms for skilled professional help. But, remarks Barnes, shortages, bottlenecks, and price increases are characteristic of the boom economy which we are experiencing.

Comment: This tendency to minimize the problems of small business is the most startling aspect of the report. Small business is finding it brutally tough to compete against the giants for steel, aluminum, copper, newsprint, etc., and the SBA knows it. Small business is finding its borrowing costs are soaring and its ability to get new money is shrinking, and the SBA knows it. Small business is finding the pressures from every direction are fierce and mounting, and the SBA knows it.

Perhaps it is a great achievement that the retreat of small business in our land was interrupted in 1955. But despite the press release, I find little in the report it presumably summarizes that arouses any huzzahs from me.

United States Is Sending $50 Million Abroad

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1956

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Daily News of April 16, 1956:

UNITED STATES IS SENDING $50 MILLION ABROAD

(By Jack Steele)

The United States Government is sending abroad nearly $50 million a year in social-security benefits, veterans' compensation, and other forms of retirement pay.

The money goes to nearly 60,000 persons in 102 countries in every nook and cranny of the world, except behind the Iron Curtain. More than one-third of it goes to Italy.

Most of the recipients are aliens or naturalized United States citizens who have returned to their native lands to retire and live a life of ease on the benefits they earned in this country.

The facts and figures on this little-known foreign-aid program have been assembled for the first time by Chairman FRANCIS E. WALTER, Democrat, of Pennsylvania, of the House Immigration Subcommittee.

FIGURES

Mr. WALTER believes the figures show:

That many immigrants come to the United States without any serious intention of becoming permanent residents and citizens. As soon as they can collect "nest eggs"—in savings or social security and other benefits—they go back home where their money will stretch further because of lower prices and living standards.

That there is ample justification for a provision of the McCarran-Walter Act which cancels the citizenship of naturalized Americans who return to their native lands and stay more than 3 years. Loss of citizenship does not cancel social security and other retirement benefits earned in this country, but it deprives them of some other rights and protections which go only to United States citizens.

Chairman WALTER got most of his figures from the Treasury, which mails out the benefit checks every month to American consulates which, in turn, distribute them to recipients.

TOTALS

The Treasury figures cover only the month of February and do not include checks sent to Canada and Philippines. Here are the totals:

Type of benefit	Number of checks	Monthly payments
Social security	37,789	$2,235,377
Veterans' compensation	16,556	1,373,661
Government employees' compensation	231	17,803
Civil-service retirement	1,452	112,567
Railroad retirement	2,299	160,177
Total	58,327	3,899,585

This amounts to about $47 million a year.

VIEW

In Mr. WALTER's view, this money represents an indirect form of foreign aid. It helps build up the dollar balances of the countries to which it goes.

Italy leads the list of countries with 20,024 recipients who get $1,448,539 a month—over $17 million a year.

Next comes Greece, with 6,324 recipients who get $390,814 a month or nearly $5 million a year.

Here are the other countries in the top 10:

Country	Number of checks	Monthly payments
England	3,390	$219,541
Ireland	2,769	173,462
Mexico	2,469	166,318
Germany	2,242	143,371
Yugoslavia	1,822	125,661
Japan	1,913	115,777
Sweden	2,094	114,908
Norway	1,754	112,139

Israel has 245 recipients who get a total of $14,572 a month. Egypt has only 36 who get $2,041 a month.

Countries having only one recipient include Angola, Samoa, Tanganyika, and the Phoenix Islands.

Formosa has 11 recipients who draw $1,207 a month. The Ryukyu Islands have 122 social-security recipients who get $6,396 a month.

An Act of Courage and Principle

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1956

Mr. MARTIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune of Tuesday, April 17, 1956:

AN ACT OF COURAGE AND PRINCIPLE

President Eisenhower, in his veto of the conglomerate farm bill, has again displayed the courage with which he upholds the highest principles of his office. Leading Democrats, such as Senator Kefauver, Mr. Stevenson, and former President Truman, had indorsed the mongrel measure. Republicans from the farm States were urging the President to sign, and, as the President said, the farmers themselves, suffering reduced incomes, "had a right to expect workable and beneficial legislation to help solve their problems." In an election year, it has been argued, even a bad farm bill would be better politically than no bill at all. Mr. Eisenhower did not agree.

The bill as patched together out of conflicting philosophies would, as the President put it, "do harm to every agricultural region of the country and also to the interests of the consumers." Consequently, although "with

intense disappointment and regret," he has returned H. R. 12 to Congress without his signature.

The specific reasons for the veto were stated by the President in detail to Congress and to the people. They are familiar to those who have followed the strange course of H. R. 12 through the House and the Senate, as the sound administration program for reducing acreage and adding to farm income through the soil bank was gradually canceled out by the successive addition of high, fixed parity prices, dual parity for many commodities, mandatory price supports for feed grains and multiple-price plans for wheat and rice. This mixture is, in the President's words, self-defeating. It is thus, in effect, a fraud on the American farmer and the American people, compounded by "the long delays which this legislation encountered," which makes remedial action this session difficult.

The President has announced a series of administrative actions, including increased support prices on commodities and the use of Agriculture Department funds to strengthen prices of perishables, in order to help the farmer to the extent that the executive branch can do so. He has also asked Congress to "pass a straight soil bank bill as promptly as possible," to be in operation before fall seeding. The combined program, legislative and administrative, could "begin now to improve the income and welfare of all our farm families."

If Congress fails again to rise to the needs of the hour, the farmers, and the Nation at large, will know where the blame rests. They will know that the President has striven earnestly and conscientiously for a sound farm program; that the obstacles were raised by those, in Congress and out, who insisted on delaying action, on piling up contradictory clauses in a legislative monstrosity that would have been an administrative nightmare. And when the voters look to the heart of the matter they will, one can be confident, prove the best politics is what is best for the country, wholeheartedly endorsing the President's statesmanlike and courageous course.

Salute to Israel

SPEECH
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. MULTER. Mr. Speaker, April 16, 1956, marks the anniversary of the independence of the State of Israel. Eight years ago a new nation arose from the depths of despair and oppression to walk vigorously in a new light of hope, fulfilling a dream of 2,000 years. If we could persuade some individuals in this country to forget for a moment the envy, hate, and animosity indiscriminately hurled against the young nation of Israel, if we could remind them how similar are the struggles and sufferings undergone by Israel to those experienced by our Founding Fathers when they fled religious oppression and persecution to establish a peaceful haven in this country, if we could remember how much we appreciated the sympathies and help of some European countries in the struggle to secure our independence, we would all then be better disposed toward Israel. We would understand that she has only one desire—and that is to live peaceably alongside her hostile neighbors. Because there is this striking similarity in the history of our people and that of the Israeli nation, the American people have deeply sympathized with the cause of Israel and have given liberally to help her in every possible way.

Nevertheless, against this tangible and most generous proof given by a majority of the American public in support of the righteousness of Israel's aspirations, there stands the ill will of a few who nest themselves behind the shield of a Government agency, the Department of State. These do everything to promote hostility rather than peace. They have encouraged Arab belligerency over Israel's protests; they have rejected Israel's request for equal treatment—in short, they have done their best to provoke another war. Our Secretary of State has proved himself insensitive and insensible to the facts and moralities of the area.

How can they ignore the fact that at the very time that the representative of the United Nations was pleading in Cairo for peace, Egyptian murderers shot down in cold blood children at prayer in Israel?

Can we in good faith claim that the best interests of the United States are served by the few in the Department of State whose actions result in encouraging feuding among nations? Why should they be so anxious to appease the Arabs at the expense of Israel? If we agree to extend military assistance to one, we should in fairness grant the same to the other. Are we to have more faith in the Arabs than in Israel? Has not this young state clearly demonstrated how seriously and efficiently she has been working and progressing during the past 8 years?

Israel's record is proof of her aim for peaceful existence to carry on her programs of agricultural and industrial improvement. In her struggle Israel aspires to become again the promised land for thousands and thousands of refugees, so that all people can say, with the Prophet Ezekiel:

> This land that was untilled is become as a garden of pleasure, and the cities that were abandoned and desolate and destroyed are peopled and fenced.

Israel has become the most progressive and energetic state in the Middle East. In the last 8 years more than 400 new agricultural settlements have been created in a small area, compared to less than 300 in the 70 years prior to Israel's coming into existence. Every type of industry has bloomed; transportation and housing have flourished—but beyond this material success, Israel is today the symbol of courage and expectation for all humanity who secretly hope and pray that in this chosen land, the people of the earth, if God touches their hearts and enlightens their minds, might finally reach a mutual understanding and establish the foundation of a new era of everlasting peace for the entire world.

In rejoicing over the recurrence of the birth of Israel, we also voice the prayer that the relations between the United States and Israel will be strengthened and more closely bound.

We pray that the benighted officials in our executive department will open their eyes and their hearts and that they will lend the might and power of our great country, material and spiritual, to establishing true peace in the world.

Supreme Court Decisions Destroying States Rights

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 17, 1956

Mr. MASON. Mr. Speaker, one of the greatest constitutional authorities in the United States and a great American, Dean Clarence E. Manion, in his weekly broadcast on April 15, 1956, pointed out what the recent United States Supreme Court decisions are doing to States rights. Because he is acknowledged as one of our greatest present-day constitutional lawyers, I include a copy of his broadcast as a part of my remarks, for the benefit and enlightment of my colleagues and the people at large:

JUDICIAL LEGISLATION IS DESTROYING STATES RIGHTS—WEEKLY BROADCAST NO. 81

A few days ago, the Supreme Court took still another cut at the shrinking stature of States rights. Reversing the Pennsylvania State court conviction of Steve Nelson, a notorious Communist leader, Chief Justice Warren, for the majority of the Court, said this: "The conclusion is inescapable that Congress intended to occupy the field of sedition * * * therefore, a State sedition is superseded, regardless of whether it (such a State law) purports to supplement the Federal law."

Thus, in substance, the decision declares that since Congress has chosen to legislate against communism, the States of the Union are now powerless to take supplementary legal action dealing with the Communist conspiracy.

The very existence of this Federal anti-Communist legislation, says the Supreme Court, has the effect of depriving the States of any right to assist in protecting the country against any type of revolutionary subversion. Mind you, there is no statement in this Federal anti-Communist law which declares that the statute shall have this drastic, exclusive effect upon the State's legislative and judicial powers.

On the contrary, in the Federal Criminal Code of which this anti-Communist law, the so-called Smith Act, is a part, this appears: "Nothing in this title shall be held to take away or impair the jurisdiction of the courts of the several States under the Constitution thereof" (18 U. S. C. A. 3231).

Nevertheless, Chief Justice Warren and five of his associates, when Congress passed the law, concluded that Congress intended to exclude States from the field of communism. By this judicial discovery of an unexpressed congressional intention, 6 Supreme Court Justices effectively and immediately nullified the existing anti-Communist laws of 42 States of the Union.

This is good news for the Communists, of course. If the effect of the decision stopped there, it would be bad enough, to be sure. But, unfortunately, its evil implications go far beyond that point.

The Supreme Court's decision in this case falls into an established pattern for what is,

in effect, judicial legislation against the constitutional rights of the several States. By holding, in case after case, that congressional laws were intended by Congress to do more violence to reserved State powers than the laws themselves provide, the Supreme Court substitutes its own legislative mind for that of Congress. In this process, the Court goes beyond its power, which is to judge the congressional law, and effectively amends that law into something more than the language of the law says it is.

An outstanding example of this judicial legislation against States rights is observable in the history of congressional action on the subject of natural gas. That history was recently climaxed by a Presidential veto followed by a spectacular senatorial investigation of certain campaign contributions.

In his veto statement, the President criticized what he called arrogant and highly questionable activities of certain proponents of the rejected legislation. In its report, the Senate investigating committee severely censured the irresponsibility of certain people in promoting the late-lamented Harris-Fulbright natural-gas bill.

However, in this cascade of criticism, there was no official censure or condemnation of the Supreme Court. Nevertheless, it was the Court's judicial legislation on the subject of natural gas, and its gratuitous extension of Federal power at the expense of States rights, that brought the Harris-Fulbright bill to the floor of Congress in the first place. Here is the story of that judicial legislation:

In 1938, Congress passed the original Natural Gas Act. That law gave the Federal Power Commission authority to regulate the interstate transportation and sale of natural gas. Unquestionably, Congress had the power to do that, and the act expressly disclaimed any attempt to do anything beyond that. Local production and distribution of natural gas were exempted from the operation of the act in so many of its words.

This was congressional acknowledgment that production, local distribution, and local sale were beyond the power of Congress and within the reserved powers of the several States. Nevertheless, the Federal Power Commission soon began to encroach upon the reserved State jurisdiction. Congress took official notice of this violation of the 1938 act and passed the Kerr bill (1950), which reaffirmed the congressional intention to keep Federal control out of local gas production and local gas sales. But President Truman vetoed the Kerr bill.

The veto encouraged the Federal price-fixers to step up their encroachment upon the domain of the gas-producing States. Litigation resulted which finally reached the Supreme Court. In the now famous *Phillips* case (347 U. S. 672), the Supreme Court denied the congressional reservation of State jurisdiction over the local production and sale of natural gas. The Supreme Court did so, if you please, on the basis of its own private determination of what Congress intended, regardless of what the 1938 act clearly stated, and regardless of what the Kerr bill had reaffirmed.

Three Supreme Court Justices dissented from the decision in the Phillips case. One of these dissenters declared that, "This (decision) brings every gas operator from the smallest producer to the largest pipeline under Federal regulatory control. The Federal Power Commission is thrust into the regulatory domain traditionally reserved to the States" (Justice Clark, dissent, 347 U. S. 691).

After the Phillips decision, Congress prepared to reenact what it thought it had established in 1938, namely, local control over independent local production of natural gas. It is difficult to see why Congress should have to affirmatively deny its intention to invade what is clearly reserved to the States under the 10th article of the Bill of Rights. The 10th article says that powers not delegated to the Federal Government are reserved to the States or to the people.

One might think that the Supreme Court could be relied upon to keep Congress within this limitation, rather than try to invent circumstances calling for its violation. However, during the past 20 years the Supreme Court has given no important indication that it still regards this section of the Bill of Rights as a part of the Constitution. On the contrary, the Court seems bent upon extending every Federal regulation far beyond the letter of the congressional statute from which such regulation stems.

The history of the Federal regulation of natural gas shows that the will of Congress has been ground to powder between the upper millstone of Presidential vetoes and the lower millstone of judicial legislation. What little is left of States rights in this granding process may be absorbed by the imagination. The Supreme Court's excuse for using its palpable extensions of congressional statutes to rub out residual States rights is anchored in what is called the doctrine of "preemption."

The Supreme Court takes the position that where Congress has enacted legislation on any subject the States are then automatically deprived of all power to enact or enforce similar laws on the same subject, even though the State laws are not in conflict with the Federal act.

This doctrine asserts that where Congress regulate some phase of agricultural production, labor-management relations, food, drugs, or any other subject, all existing State laws on the same subject are immediately ineffective. By the same token, the power of the State to legislate on the same subject is automatically suspended during the existence of the Federal legislation. This is so, even where the congressional law is inadequate to protect life, liberty, and property in the federally preempted field.

The frequent result of this doctrine is to leave large blind spots of lawlessness in the area of the State's reserved police power (*Garner* v. *the Teamsters Union, etc.* (346 U. S. 485)).

In the Nelson Pennsylvania Communist case the Supreme Court has now held that this "preemption" doctrine applies to the criminal as well as the civil jurisdiction of the several States. Logically projected, this means that State laws against criminal traffic in narcotics, for instance, will be rendered ineffective and unenforceable in the face of Federal laws on the same subject.

When the Federal Anti-Communist Act was made an issue in the Pennsylvania trial of Steve Nelson, Congressman HAROLD SMITH, the author of the act, wrote the Attorney General of Pennsylvania as follows: This "is the first intimation I ever had * * * in the preparation of the act, in the hearings before the committee, in the debates in the House, or in any subsequent developments, that Congress ever had the faintest notion of nullifying the concurrent jurisdiction of the respective sovereign States to pursue also their own prosecutions for subversive acts."

Nevertheless the Supreme Court has just decided that it knew more about the congressional intention behind the Smith Act than Congressman SMITH himself did. This gratuitous judicial presumption is merely one aspect of the constantly expanding menace to our Federal system of balanced constitutional government. For many years it has been painfully obvious that the Federal Executive and the Federal courts are in an effective combination to destroy the constitutional integrity of the States by the centralization of power in the Washington bureaucracy.

Only a strong, self-conscious Congress and vigilant sacrificial self-reliance on the part of the States can now save the American Republic. The first constructive remedial step has already been taken. Congressman HOWARD SMITH, of Virginia, has introduced a bill in the House of Representatives (H. R. 3) providing that no act of Congress shall be construed to indicate an intent on the part of Congress to exclude or nullify State laws on any subject in the absence of an express provision in the act of Congress to that effect.

Senator MCCLELLAN, of Arkansas, and 11 of his senatorial colleagues have introduced a similar bill in the Senate. If Congress is tired of seeing its purposes stultified by a combination of vetoes and judicial decisions, it will give these bills top priority.

Any Congressman or Senator who does not go all out for the speedy passage of this bill is either numb to the constitutional wickedness of judicial legislation or in league with those who are determined to destroy States rights.

In either case such Congressman or Senator is disqualified for service in this emergency and should be retired by the voters. Send your Congressman and Senators a copy of this broadcast and ask them what they think about the Smith-McClellan bill.

Israel's Eighth Anniversary

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1956

Mrs. GRIFFITHS. Mr. Speaker, under leave to extend my remarks, I should like at this time to join my fellow Americans in observance of an historic occasion—the eighth anniversary of the State of Israel.

This occasion which was officially marked yesterday, gives all of us who cherish freedom an opportunity to reaffirm our support for this great country.

Because we in America so strongly helped with the birth of Israel, we have a special stake in using our best efforts to maintain peace and stability in the Middle East.

Peace would not only benefit Israel, which is using every human and natural resource to provide a better life for its people. Elimination of the tensions which now threaten to erupt in full-scale war will be a source of rejoicing to all people and will allow Israel and her Arab neighbors to direct their energies to the needs of their peoples.

But so long as the explosive situation remains, this country should have no course but to pursue a policy which will prevent the destruction of Israel.

The loss of Israel would not only be a serious blow of itself, but it would set in motion circumstances which, at the least, would drive Western interests from the Middle East and at worst end in a major conflict.

The interests of peace are truly the interests of America. The bonds between this country and Israel are those of democratic people and related cultures.

It is a source of pride to salute Israel on this eighth anniversary of her independence.

And in this connection I wish to include in my remarks the following article which was published in the Detroit

News of April 13, 1956. It is a lucid discussion of the problems in the Middle East:

THE COMMENTATOR

(By W. K. Kelsey)

IF T. R. WERE PRESIDENT

There are various ways by which the United States might contribute to peace in the Middle East, besides the one we are pursuing—which is to keep the United Nations in the picture insofar as that is possible, through the efforts of its Secretary-General, Dag Hammarskjold.

One is the way Teddy Roosevelt might have handled the situation if it had arisen in his time. There was the Perdicaris affair in 1904. John Perdicaris, claiming American citizenship, and his stepson, a British subject, were kidnaped by a Moroccan bandit named Raisuli and held for ransom. The President sent the cruiser Brooklyn to Tangier and demanded through the State Department that the Sultan of Morocco deliver Perdicaris alive or Raisuli dead.

The fact that Perdicaris was released before the sultan received the message did not alter the fact that about 99 percent of the people of the United States cheered the President for making the threat. Note also that 1904 was an election year, and Roosevelt was going after a second term. Well, so is Ike this year. Moreover, we have a fleet in the eastern Mediterranean.

Another approach that might be used is to intimate to the Egyptian premier that if he does not see to it that there is no war, not only will be get not a nickel of American money for the building of the proposed dam at Aswan, but the United States will see to it that the dam is not built with any other nation's money, either.

That may appear like irrational diplomacy, but behind it lie two facts. The first is that as a member of the U. N. Egypt is committed to peace; and a country that violates that pledge is not entitled to any benefits from the rest of the world. The second is that to prevent a country from getting negotiated aid is not an act of war, but rather falls among the penalties permitted by the U. N. Charter against a country that fails in its obligations.

INCLUDING RUSSIA

Another way of dealing with the situation would be to join with Britain and France in inviting the Soviet Union to participate in the declaration of 1950 by which the three powers sought to preserve peace in the Middle East by pledging action against an aggressor.

The probability is that both Britain and France would agree to such an invitation. It would relieve both Governments if the United States were to abandon the role of Don Quixote fighting a windmill of communism in Asia with no better weapon than loud and ineffective talk, which most trained observers who have visited that continent find is doing our cause no good while it advertises the Russian propaganda.

If the present Soviet rulers are so peace-minded, they ought to be glad to be given a chance of cooperating in the Middle East. It might take their minds off supplying the Arab States with arms. If they declined the invitation they would have to dig up some extremely plausible reasons of fall under suspicion in peace-minded countries.

But, as the British press is fond of pointing out, any brisk shift of American policy is not to be expected in a presidential election year. It seems to the commentator, however, that if the administration doesn't come up with a resounding success in the Near East it is going to incur a weight of blame that will endanger its success in November. That blame will not fall on the national hero, but on Secretary Dulles. He may yet become the principal issue in the campaign.

The United States Should Speak for Justice

EXTENSION OF REMARKS

OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1956

Mr. DODD. Mr. Speaker, in these turbulent and troublesome times, it is to be expected that the people of America do not react to every miscarriage of justice and every instance of inhumanity and criminal conduct.

A pattern of barbarism seems to be engulfing a large part of the world. We have been conditioned for crime.

Yet at this time there is taking place in Indonesia an offense against basic human justice which should not escape the attention of the American people. In the city of Jakarta in Indonesia, a young man is on trial for his life simply because totalitarian fury must make propaganda and find scapegoats.

Crimes involving brutality, terrible torture, and unspeakable evil have become more or less commonplace over a period of more than a decade.

As a consequence, the reflexes of conscience have been dulled, but the crime against Leon N. Jungschlaeger seems to me to be one of the worst that has been perpetrated, for it is a crime against the intellect involving perversions of the fundamentals of justice.

With reference to this tragedy presently going on in Indonesia, I want to call to the attention of the House a moving editorial from the Hartford Courant of April 5, and I hope that every Member of this body will read it and reflect on the message which it carries:

THE UNITED STATES SHOULD SPEAK FOR JUSTICE

Probably no more than a handful of people in the United States ever heard of Leon N. Jungschlaeger. If told that he is a man undergoing trial for his life in Jakarta, Indonesia—more than 8,000 miles away by air—Americans would relax and say: "What has that to do with me?" If told that he is the father of a United States Army private they might express more concern. If told that he is the storm center of an agitation in the Netherlands that is hurting the United States, they might get the idea.

There is cause for alarm. The so-called Jungschlaeger case has aroused Holland more than any issue in recent years. Indonesia, as a new nation, has been asserting its rights in arresting and trying a Dutch citizen—in a trial that many European observers think is a travesty of justice. In doing so, Indonesia has been guilty of careless indifference to human rights. Dutch observers contend the trial has been run like a totalitarian courtroom scene in a Communist country. Yet, the United States has dodged the issue.

It is, in part, a problem of colonialism and the new revolutionary nationalism. Indonesia, made up of about 3,000 separate islands in the Malaysian area, was born in a revolutionary struggle after the defeat of the Japanese in World War II. It has tremendous problems in establishing and maintaining law and order throughout its area, problems with Communist infiltration, with headhunters, with people who have never known law. Its fierce pride leads it to chastise and make scapegoats of its former masters at every possibility. Indonesian leaders hide their own inadequacies by blaming them on the colonial powers.

As a result of the revolution, the Indonesians lost most of their trained technicians, administrators, and professional personnel. Some Dutch nationals stayed on. One was Jungschlaeger, 50-year-old manager of the nautical division of the Royal Netherlands Packet Steamship Co. It is charged that he has aided various rebellious organizations in plots against the Indonesian Government. On these charges, he has been held in jail almost 27 months. Evidence introduced against him has not been brought to appear. The trial has been made a focus of ill feeling against the former colonial power. Yet few of the Western nations, in particular, the United States, have protested. Convinced that the United States does not regard this as a case of human rights at stake, public opinion in Holland erupted. Anti-Americanism has been virulent.

This would have been avoided had we taken a determined stand that Jungschlaeger is entitled to a fair trial. Indonesia has its troubles—it has had more than 6 governments in 7 years—but it has no more right than anyone else to impose a wrong. Indonesia should be warned in clear and unmistakable language that because the death sentence demanded against Jungschlaeger seems unwarranted, the world expects a civilized and fair administration of justice from any people that aspires to recognition as an equal among nations.

Nickel Problem: "Almost Completely Insolvable," Weeks

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1956

Mr. McCORMACK. Mr. Speaker, on several occasions lately I have called the attention of this body to the black market situation which has developed with respect to nickel for manufacturing purposes in the United States.

I am placing in the RECORD an amazing letter which the Secretary of Commerce has written to Mr. Willard F. Rockwell, chairman of the board of the Rockwell Spring & Axle Co. Mr. Rockwell's company is one of the large users of nickel for plating purposes and he informs me that his company, last year, spent $750,000 for nickel in the gray market and this year spent $780,000 in the first quarter since sufficient 64½-cent nickel is available only to his company through black and gray market sources at some 300 percent of market price.

In response to Mr. Rockwell's complaint, the Secretary of Commerce on April 7 wrote to him and stated:

This in a general way seems to me to be the story and, as aforesaid, if you find yourself in Washington, we'll be glad to go through it with you to the *n*th degree and give you all of our thinking about a problem which is very difficult and, as I presently see it, almost completely insolvable.

This is an amazing statement in view of the fact that studies by the Secretary's own Department indicate that there have been diversions of defense-rated nickel and that his Department is studying as to what enforcement measures are nec-

essary. Amazing also is the fact that the Department of Commerce has responsibility to check the books of the producers and allocators of nickel to see that there is equitable distribution of this important commodity. It is also amazing that many business concerns are paying unconscionable high prices for black market nickel which seems to be abundant at such prices. It is also amazing to me that the Department of Commerce which has the responsibility to aid and foster industry is standing back contending that the nickel situation is insolvable at a time when businesses large and small are closing down, laying off employees or otherwise curtailing their activities because of inability to obtain nickel.

To my knowledge the Secretary of Commerce has not denied that he is one of the individuals responsible for solving this problem, nor has he recommended legislation which may be necessary to establish necessary controls.

The above-mentioned letter follows:

THE SECRETARY OF COMMERCE,
Washington, April 7, 1956.

Mr. WILLARD F. ROCKWELL,
Chairman of the Board,
Rockwell Spring & Axle Co.,
Pittsburgh, Pa.

DEAR MR. ROCKWELL: I have just been through a long and exhaustive study of the nickel question this morning (Saturday, April 7) and if you would care to come down sometime in the near future, we'll see that you have the complete story and understand just how things seem to shape up. I think, however, that I must tell you that I'm afraid you'll be disappointed in the net result.

Generally speaking, the forecasted 1956 supply of nickel for the civilian economy is short—even short of what it was on an average for the 3 years preceding Korea—and if certain use developments take place in the defense area the situation may be even worse.

Currently, the civilian economy is paying three prices for available nickel—the so-called market price of 65 cents approximately, the price ranging from $1 to $1.35 for Government set-aside supplies, and say $2.50 to $3 for approximately 10 percent of the civilian supply. Most of this latter grouping is composed of nickel-bearing scrap alloys and foreign production—France, Japan, etc.

We find no evidence of importance of any misappropriation of Defense-rated nickel supplies. Our procedures for following Defense-rated orders adequately confirm this view, although despite this fact we are planning some procedural changes which should give us even closer supervision.

The end of it all is that there just is not enough nickel available to take care of Defense requirements and the civilian economy (the stockpile take will be substantially decreased this year). The controls which you urge will not get anybody any more nickel and the undoubted result of such controls would probably bring into operation use determinations and specifically might very well result in the complete elimination of the use of nickel for decorative purposes.

There is some further increase of nickel supply in sight for 1957. What effect it will have on civilian availability will largely depend on the military requirements at that time.

This in a general way seems to me to be the story and, as aforesaid, if you find yourself in Washington, we'll be glad to go through it with you to the Nth degree and give you all of our thinking about a problem which is very difficult and, as I presently see it, almost completely insolvable.

Most sincerely yours,

SINCLAIR WEEKS.

The Long Road Back

EXTENSION OF REMARKS
OF
HON. JOHN. J. FLYNT, JR.
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 17, 1956

Mr. FLYNT. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an address by the Honorable John Ben Shepperd, attorney general, State of Texas:

THE LONG ROAD BACK

(Address by Attorney General John Ben Shepperd to the 57th annual convention of the Daughters of the American Revolution, Tyler, Tex., March 13, 1956)

More than 180 years ago, while the Thirteen American Colonies were still in the throes of revolution, Patrick Henry uttered an admonition to his fellow countrymen which is now a part of the Constitution of the State of Virginia. It says, "No free government, nor the blessings of liberty, can be preserved to any people, but by a firm adherence to justice, moderation, temperance, frugality and virtue, and by frequent recurrence to fundamental principles."

Few organizations, if any, have done as much as the Daughters of the American Revolution to give Patrick Henry's words a real and lasting application. The DAR was founded in 1890, at a time when the industrial age, with its motorized transportation, rapid communication and mechanization, ushered in an era of modernism which has virtually slammed the door on our proud history and with a burst of speed left many of our sacred traditions behind, in a cloud of dust.

It has always been the purpose of the DAR to resist this frivolous neglect of the deep and vital wellsprings of our freedom, which could only tend to the destruction of our constitutional form of government. This motive underlies your organization's actions today, as you work 179,000 strong to preserve a knowledge and appreciation of American history, as you continue to operate some 12,000 Junior Citizens' Clubs throughout the country, conduct extensive programs for good citizenship through your almost 3,000 chapters, and strive to preserve and restore many historical landmarks and national shrines, in order that Americans of today may visit them and become imbued with a deeper knowledge of the origins of their liberties and a greater inspiration for their preservation.

The DAR was never more vitally needed than it is today. We are living in an age of superficiality. History is flowing past us like a mighty river under the ice, while we skate on the surface, too often oblivious to its force and direction.

Ours is an age of flippancy and arrogance, in which it is popular to debunk the great personalities of the past, as if to convince ourselves that they, after all, were not greater or wiser than we.

The old traditions are being tossed away, and mementoes of the past are no longer proudly hoarded in the attic, but are sold to the antique dealer. Here and there what used to be a treasured landmark is now just a relic, a job for the bulldozers; the rugged individualist is now called a reactionary, and the man or woman who declines to go along with the crowd is a rebel.

Ideals of long standing are nowadays ridiculed merely because they are old. Where did we ever get the idea that anything that is old is also quaint and funny? When did the expression "past history" become a derogatory term to be applied to everything that happened before yesterday, as though it had no value or meaning today? Foresight is born of hindsight, and without a profound understanding of our own history we cannot cope with our present-day problems. The nation that does not cherish its history must fear its future.

That is why Patrick Henry said we must recur frequently to fundamental principles; we must go back often to our own beginnings.

It isn't hard to go back. We can pick up a history book and in a matter of seconds be back to the year 1800, when Mrs. John Adams was hanging the wash in the waiting room of the new executive mansion in the town of Washington, where Congressmen were cursing because the inns were bad, the carriages and horses worse, the roads intolerable, and police protection almost nonexistent. Yellow fever and cholera had almost depopulated several of the larger cities, and hardly a member of the Government at Washington was not sick of one thing or another during any given month.

We can go back to 1775, when a handful of embattled farmers gathered on a road between Lexington and Concord and fired the opening guns of the Revolution. Or back to the Stamp Act, and the Quebec Act, the Boston Massacre, the tea tax, the Townshend policies and the tyranny of German George. It is easy to go back and look at the causes of the Revolution and applaud the heroism and statesmanship of our forefathers, because they wrote a crystal-clear page of history with bold strokes of a bloody sword.

But a principle is not an event in time. How do we go back to a principle? What were the principles that motivated the men who met in the Constitutional Convention of 1787 and launched a Nation on a course that was to revolutionize the forms of government of half the civilized world? What mighty undreamed-of concepts were born when Hamilton and Jefferson clashed and compromised?

Hamilton was a Federalist—the arch-advocate of a strong, centralized government, unified under an executive of almost unlimited power; and in that day and time, his views were not unjustified, nor were they unsupported among the rank and file of colonists who feared for the future of a Nation that did not have the central power to maintain its hard-bought freedom.

In total opposition to Hamilton were Jefferson and Madison, stanch defenders of state sovereignty, who believed that men can only be governed badly if governed from afar.

Hamilton's views were based largely on his keen insight into the future and his deep concern for the course of an infant Nation among old, imperialistic powers with armies poised for conquest. Jefferson's and Madison's convictions were based on hard experience; they believed that history was a guide book to the future, and they had been the traditions and ideals of three million self-reliant, locally governed, independent colonists triumph over the armies of the strongest despot in the world.

The belief in State sovereignty was strong in those early Americans. When the fire of rebellion first began to smoulder against British despotism Massachusetts began to shake its fist in the face of Parliament without looking around to see if it was supported by 12 other Colonies. And when the first shots of the Revolution echoed out of the forests of Massachusetts the British Governments in her sister Colonies collapsed—not in a single great coup d'etat, but 1 by 1 as the people pushed them down, hardly knowing or caring whether other Colonies were going to fight or remain loyal to the King.

There was yet no national Army. Each Colony has its militia, and nobody knew how many would send theirs into battle. Massa-

chusetts, for all those farmers at Concord knew, would fight alone. But from every Colony come men and boys, with muskets and fowling pieces and axes and knives. Militia commanders rode from cabin to cabin, farm to farm, village to village, to call men to arms, only to find that the men had already gone. Of the 396,000 men and boys under Washington's command, 164,000 had come out of the hills and the forests unrecruited.

There was no national obligation in this. There was no compulsory military service. This was no hireling army, and no military law compelled them to come, or forced them to stay when the battle grew hot and the winter cold.

There was no family allotment for the brave women—our great-grandmothers—who stayed behind to put their hands to a man-sized plow and level a man-sized musket in defense of their homes when they had to.

And few, if any, of these men, women, and boys had the vaguest idea that they were fighting for the freedom of a great Nation. They were fighting, one and all, for the freedom of their own firesides—against the whole world, if need be. It was not until the following year that delegates from the Thirteen Embattled Colonies—already calling themselves independent States—convened in Philadelphia and pitched their lot together in a unanimous Declaration of Independence.

Out of those 4 years of hardship and sacrifice came a united people governed by 13 sovereign State governments. The strength of their unity lay in the fact of their local autonomy—each colony being able to make its own laws and defend the rights of its own people.

That right of local self-government was very dear to our forefathers, and it was only with reluctance that they gave up even a little of it. For a decade they tried to achieve national unity under the Articles of Confederation, which did not even allow the Continental Congress any taxing power. There was no chief executive. It was Hamilton who told them that this would never work, and indeed, it finally fell apart. Then it was that Jefferson and Hamilton met with the delegates of the 13 States in Constitutional Convention, and with God as their partner, struck upon a compromise that gave us a Constitution without equal or parallel in history.

To the Federal Government were delegated a few transcendent powers, such as any national government must have. All the rest—all the rights and powers by which the people govern themselves at home, according to their own traditions and necessities—were reserved forever to the States and to the people thereof. This was a plan which even Hamilton, the arch advocate of central government, found acceptable and good. This became the principle which was to guide our Nation safely through a 169-year period in which other governments throughout the world crumbled and recrumbled in an agony of attempted imitation of our example. And this is the principle to which we must forever and often recur.

As you leave this place tonight, and go to your respective homes and lodgings, if you would turn a thought toward those by whose courage and suffering it was made possible for you to kneel before your own God, and lay your head on your pillow in peace and security and freedom, ask yourself what your forefathers would speak of, if they would call to you across the abyss of time. What is the question they demand of you, their own children's children, as blood calls to blood across the centuries?

Where, they ask, are those liberties which we wrenched from the hands of tyrants and reposed in the bosoms of humble, God-fearing men? Where is that freedom that we took out of stone castles with iron doors and buried safely under the hearthstones of America? Whose hand has carried it away and laid it among white marble halls on a hill by the Potomac? Is it forgotten, that it must lie among stone monuments? Is it dead, that it must rest in whited sepulchers?

Where is it written that the Government which sits on those cherry-blossomed banks is to be the sole and final judge of the extent of its own powers? We did not write it in the Constitution.

Where is it written that the law of the land shall be promulgated from the bench, instead of the floor of Congress? By whose authority is the Constitution changed without the consent of the people? By what devious means are the sovereign powers of the States overridden, their laws cut down like trees, and their righteous protests drowned under accusations of rebellion? Who delegated to the creature a preeminence over his creators? What freak of Frankenstein is this that rises up to crush those who made him?

This creature was 169 years aborning, but here he is. George Washington feared him and warned us of his coming. "Let the Constitution be changed by constitutional means," he said, "but let it not be changed by usurpation." Jefferson, too, saw this creature afar off, and gave us warning. He said:

"It is not by the consolidation or concentration of powers, but by their distribution, that good government is effected. Were this country not already divided into States, that division would have to be made, that each might do for itself what concerns itself, and what it can so much better do than a distant authority. If we were directed from Washington when to sow and when to reap, we would soon want bread. I do not charge the judges with willful and ill-intentioned error; but honest error must be arrested, where its toleration leads to public ruin."

That is what Jefferson said. He was speaking to his own generation, but his eyes were fixed across 17 decades of time, to a generation that knows the source of atomic power but does not know the location of its own government. For this Nation, of all nations, is the only one in which the seat of governmental sovereignty is in dispute.

It is questionable how long we can follow this uncertain path. Whether we go on down our present course, or turn and follow the long road back to the fundamental principles out of which our freedom burgeoned and flourished, this generation must decide. Uncertainty is a broad avenue to destruction.

You women are, indeed, Daughters of the American Revolution. You are children of an epoch in time which started the greatest nation on earth toward the fulfillment of its destiny. This country can mold its destiny, but it cannot escape it. This generation—modernistic, apathetic, and unconcerned—is your responsibility, as surely as the blood that courses in your veins is the same blood that turned hot at Lexington and Bunker Hill, endured the cold of Valley Forge, and sank deep and red into the soil of America.

In your hands is a generation of children with character unmolded—their minds not yet fully enriched with the history and ideals of their country. You can give them books and more books, as you are now doing. You can teach them government, as you are now doing. You can teach them citizenship, as you are now doing. If you and the children of this generation walk hand in hand, the road back is no longer than the distance up the courthouse steps, to where a county commissioners' court is in session, and where a man is on trial before a jury of his peers. And whether you walk together or alone, the road back is only as long as the distance to the polls. No expanse of years can separate us from those fundamental principles that transcend time. Their spirit fills the air wherever men and women still gather on public squares to hear a man in shirt sleeves campaign for public office. They are revived in that moment when a busy man or woman stops to read an editorial. They echo from the walls wherever men and women raise the voice of debate in a precinct convention. They speak in majestic tones wherever a church organ plays and a choir sings, and they are anchored firmly under the hearthstone of the family that kneels in prayer.

"Freedom is old, not young, yet it is born
anew in the first cry of a freeman's
son;
It is not a living thing, yet it dies if we
do not love it;
It is not weak, yet it must be defended;
It is light, but it weighs heavy on him who
is without it;
It is without price, yet it dearly costs the
one who sells it;
It is not small, but great; yet once lost, it
is never found again."

Our forefathers knew freedom, for it was they who gave it birth. They established it in the firm foundation of courage, sacrifice and faith. It is for you, their children's children, to match their legacy in this present hour, and to preserve by those means to which your noble organization is dedicated, the foundations they laid down for all generations.

In the words of Grace Noll Crowell:

"They placed their clear-cut landmarks for
our feet,
They upraised guards for safety as we go
Across the land, down lane and city street
On winding paths we have not learned to
know.
Remove them not—the marks our Fathers
set,
Keep them in good repair at any cost.
Lest in our harried going we forget.
What roads to take, and find that we are
lost."

Petition Regarding the Siler Bill H. R. 4627

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1956

Mr. DEROUNIAN. Mr. Speaker, I have received the following letter from a group of my constituents, protesting H. R. 4627:

FRANKLIN SQUARE, N. Y., *April 10, 1956.*

Hon. STEVEN B. DEROUNIAN.

DEAR MR. REPRESENTATIVE: At the present time the House Interstate Commerce Committee is considering recommending to the House the enactment of the Siler bill (H. R. 4627).

This bill, which would prohibit brewers from using television, radio, newspapers, and magazines to advertise their products in interstate commerce, is a direct attempt at preventing substantial and honorable manufacturers of a legal product from conducting their business in the accepted American way.

I would like to register my strongest protest against this bill and respectfully to appeal to you to urge the members of the House Interstate Commerce Committee to vote to kill this bill in committee. Also, if this bill should be referred to the Rules Committee, it is likewise requested that you exert every influence to urge the members of this committee not to approve this bill.

Your cooperation will be greatly appreciated.

Albert Barta, Helen Barta, John F. Engle, Florence C. Engle, Mabel E. Schleher, A. Daniel Schleher, Jr., Bianca Zier, Richard Zier, Beatrice Stappenbeck, Arthur Stappenbeck.

Farm Bill Fantasy

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 17, 1956

Mr. DAGUE. Mr. Speaker, Webster defines "fantasy" as "an illusion," and I can think of no more apt description that could be applied to the farm bill now reposing on President Eisenhower's desk, since any benefits that might accrue to the farmer from that ill-conceived piece of legislation are highly illusory, to say the least. It is understood, of course, that the bill was never intended to help the farmer but was promoted for no other reason than to help certain legislators in their effort to prove to the farmer that they are trying to help him. Like the draftee's new uniform, it hits him all over and fits him nowhere. Here is a legislative monstrosity that cuts back production to meet current needs on the one hand, and then on the other stimulates all-out production to further compound the surplus problem. The farmer who tries to live with this kind of a program will find himself in the same predicament as the youngster who inadvertently put his pet chameleon on a piece of scotch plaid and then yelled to high heaven because the creature had busted himself. For plain and fancy legislation, this one takes the cake; plain in its political intent, and fancy in the manner in which it undertakes to disguise that obvious purpose. I voted against the bill when it was reported to the House, and I am glad to see that opposition to it is supported by the following editorial taken from the Philadelphia Inquirer:

NOT THE FARM BILL THE NATION NEEDS

By passing a hodgepodge, backward-looking farm bill over the opposition of the administration, Congress has furnished convincing evidence that it is more concerned with this year's votes than with the real needs of America's farmers.

The Democrats may find they are sadly mistaken in their estimate of the political value of the measure they have passed. There can be no denying there is a serious farm problem; it can be questioned whether the farmers will swallow the line that this bill is in their best interests.

But politics aside, the arguments against the bill are numerous and powerful, and it can be taken for granted that the merits or demerits of the legislation, rather than its blatant effort to snare votes in the farm areas, will be uppermost in President Eisenhower's mind as he decides whether to sign or veto it.

For the measure takes one step in the direction of dealing with the root cause of the farm crisis—and then takes several steps backward. With one section—that establishing the soil bank as recommended by Secretary of Agriculture Benson—it would start to alleviate the overproduction which produces surpluses which in turn have brought about a lowering of farm income. With other sections—restoring rigid, 90-percent-of-parity price supports, a 2-price system for wheat, and alternative parity standards to boost supports—the bill would increase overproduction and eventually the woes of the farmers.

It is possible to find some excuses for the votes of Congressmen from the farm areas—both Democratic and Republican—who favored this bill. Lower farm prices, combined with continued high costs of the things the farmer buys, unquestionably have produced a squeeze on many farmers. Some may desire immediate relief even at the price of future trouble.

But the votes needed to hammer through the bill didn't all come from farm States. They came from representatives of metropolitan centers where wheat is seen only in the form of bread, and cotton in the form of clothing. They came from Congressmen seemingly less interested in the consumers who will be hurt by higher farm support prices than in the possible political gain in the agricultural States.

Here the heavy hand of the Democratic leadership was in evidence. It is obvious that the Democrats saw in the farm situation an issue—possibly the only issue—they could exploit in an election year. By promising the farmers cash payments in the form of higher supports, Congress could both make a play for votes in the farm areas and embarrass the administration.

To underscore the political aspect, two of the leading Democratic contenders for their party's presidential nomination, Estes Kefauver and Adlai Stevenson, backed up the congressional action by piously urging President Eisenhower to sign the measure.

We hope such maneuverings do not obscure the real defects in the bill, in the eyes of the farmers or of the rest of the people. The measure calls for the same old high and rigid support system which built up the present costly and unwieldy surpluses. It proposes a return to the system under which most of the decline in farm income took place. It would prevent—for a year and maybe longer—the operation of measures vitally needed to bring production into balance with markets and to produce stability, instead of harmful ups and downs, for the farmer.

The Nation needs a workable bill to deal with the farm problem on a long-range basis—and Congress has not provided it. As he deliberates his decision whether to sign or veto this measure, we feel sure that President Eisenhower will ignore the narrow—and debatable—political considerations and act in accordance with the best interests of the Nation and the farmers themselves.

Retention of Section 638 in Department of Defense Appropriations, 1957

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 17, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following statement made by me before the Subcommittee on Defense, House Appropriations Committee, April 16, favoring retention of section 638 in Department of Defense appropriations, 1957:

Mr. Chairman, if the Government were as careful in screening every small item of procurement contracts awarded to private industry as it is in determining the threat to private industry and the waste of taxpayers money involved in the employment of a civilian cobbler at X air base, what a wonderful world this would be.

The stated issue is that of alleged Government competition with private business. The general policy of this administration is that the Federal Government will not start or carry on any commercial activity to provide a service or product for its own use if such product or service can be procured from private enterprise through ordinary business channels.

To date a total of 56 facilities have been recommended for discontinuance by the Department of Defense. These would result in the displacement of 540 civilian workers.

The controversial projects number 7, covering 264 civilian personnel.

On the face of it there seems to be much ado about little.

It is the hidden trend that disturbs me. A little here and a little there gradually adds up to the practice of private industry taking over Government itself.

If that philosophy were carried all the way, we might just as well turn the Armed Forces over to private management, although how they could make a profit out of public service is hard to conceive at the moment.

I do not go along with the deification of private enterprise to the point where all public problems—including those involving national defense—are subordinated to it.

I reiterate that, although the facilities they want to discontinue are small in number and may appear to be unimportant, the precedent that may be established on this minor scale by its proponents will lead to further encroachments on the role of our defense services that would make them dependent upon mercenary interests.

We in Massachusetts are not only worried by the fact that they are trying to ease out the work done at the ropewalk and in the chain shop at the Boston Naval Shipyard to private interests, but by the fact that this subtle slide-away policy—unless arrested at the very start—will lead to the closing down of the Watertown Arsenal and the Murphy Army Hospital.

Even career officers in the Armed Forces appear to be knuckling under to pressure exerted by their civilian superiors in the Department of Defense to rubber-stamp policies against their professional judgment.

At the hearings conducted by the subcommittee early this year, the secretary of the Cordage Institute, in answer to a question regarding the 125-year-old ropewalk at the Boston Naval Shipyard, testified: "Yes; it has a fine record in terms of improved productivity and in terms of economy. It has a fine staff of skilled workers. It has been regarded all these years as an integral part of the Navy."

The question of integration is also important.

Experience has proved the wisdom of maintaining key bases and installations, and as self-sufficient as they can be, even during peacetime.

To be implemented by private industry only during emergencies.

The military have special responsibilities. For this they must maintain bases on which the smallest function or convenience has a present use and is in readiness for expansion to meet emergency needs.

We cannot afford to break up this integration.

If this attempt to transfer certain work over to private enterprise gains headway, the logical result would be for the military to discontinue the practice of supplying uniforms for Armed Forces personnel. Instead, they would be given an allowance to pur-

chase uniforms from merchants on the outside.

Under section 638 of Public Law 157 which must be retained so that Congress will have knowledge in advance of any plans by the Defense Department to discontinue facilities, or to transfer them to private enterprise, there is some dissatisfaction concerning the cooperation we are supposed to get from the Defense Department. Evasive tactics show through.

The Defense Department must justify such disposals or transfers of work that, for a period of 3 years or more, has been performed by civilian personnel of the Department. This must be done 90 days in advance of such proposals. Disapproval by either committee of the Senate or the House shall prevent such disposal or transfer.

The ropewalk and the chain shop at the Boston Naval Shipyard are representatives of similar facilities throughout our Defense Establishment that are scheduled for a gradual sellout to private industry.

This trend is dangerous to our national security and is unfair to the loyal workers whose skills will be missing in the event of an emergency.

I join with other Members of Congress in opposing any proposed transfer or disposal of time-tested defense functions.

The profit motive must not be permitted to take over the operation of the largest Department of the Federal Government whose responsibility is to protect our Nation and its people from potential enemies.

The opening wedge must be closed at once.

Self-Interest Should Dictate Foreign Policy

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 17, 1956

Mr. DAGUE. Mr. Speaker, I am sure that I am not alone in the weariness which I experience as I listen to the loud and raucous cries from pressure groups, both at home and abroad, who continue to demand that Uncle Sam take immediate and forthright action in every troubled area around the globe. I have no quarrel with American nationals who have blood relatives in some foreign country, since it is only natural that they would want this Nation to exert its influence on the side to which they are devoted. But I must insist that unless our national self-interest is to be served by such intervention, we should shun such demands as contrary to the welfare of the overwhelming majority of our citizens.

The fact that previous administrations have involved us in political deals abroad to still the clamor of partisans in this country is no reason why we are now bound to take action which would enlarge that involvement. We must always place ourselves on the side of right and justice; but inasmuch as we have ignored the plight of the Baltic States, Finland, and Poland, we can hardly justify taking up the cudgels in other controversies that should be handled by the United Nations. Indeed, I know of nothing that will contribute to U. N. weakness so much as will these unilateral end runs where we rush in singled handed to do the job that properly belongs to the entire commonwealth of nations.

As the following Saturday Evening Post editorial anticipates, this will probably be labeled neutralism and roundly condemned in certain quarters. I can only point out, however, that minding our own business had been traditional with Americans until these "one worlders" took over, and I for one would like to return to that happy state. This view is fully supported by the Post editorial which I commend to your attention:

ISN'T THERE ONE CRISIS UNCLE SAM CAN IGNORE?

When the Nation's policymakers hold their next conclave on what the United States should do about practically everything, it might be a good idea to search the global horizon for one area, however small or insignificant, of which it could be safely stated that its internal affairs were none of our business.

There are so many places in whose affairs we are forced to be concerned—places like some of those recently visited by Secretary of State Dulles with important results—that it would be soothing to the public if an area could be found whose crises we could calmly ignore. Possibly Tristan de Cunha might serve as a pilot project to provide practice for our statesmen in this unaccustomed field. With diligence our diplomats might eventually find themselves actually resisting the impulse to stick their necks out in areas where our national interest is at best remote. Too often the "For God's sake, do something!" bloc favors places outside our orbit of interest rather than posts held by essential allies, like Formosa.

In view of the dismal consequences of many of our well-meaning efforts to settle things all over the world, this suggestion for some new restraints on our meddlesome-Mattie impulses may not be so impractical as the apostles of American world leadership think. As to Cyprus, we appear to have kindled the hopes of the Greeks while enraging the British, who, while feeling free to rebuke us for failing to see the virtues of Communist China, simply loathe being criticized themselves. And the pressure to involve the United States of America in a possible police action along the borders of Israel poses grim possibilities which should be well explored before we edge closer to that melee. In short political realism seems to suggest a statement from high sources which might be summarized as "We deplore tyranny, oppression, and rioting. We are sorry that so many people are discontented and belligerent. But Uncle Sam has only two hands."

Such a policy would undoubtedly be condemned in certain quarters as a modified neutralism. Conceivably the description would be justified. However, even neutralism in matters beyond one's control or concern should not be condemned out of hand. Indeed, President Eisenhower, commenting on Cyprus, said that, while this country desired to contribue everything possible to a reasonable settlement, "the solution itself is going to have to be reached by the people most greatly concerned." Take the case of Nehru. The more neutral he becomes the more money he gets from us; and the more money he gets from us the more neutral he becomes, until finally, after a particularly vigorous denunciation of everything American, he is invited to come to Washington. The United States of America can hardly expect to duplicate Nehru's record, but we might venture "No comment" on at least one distant fracas.

Political Wildcatting in the Everglades

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. UDALL. Mr. Speaker, in order that Members might better sample the flavor of the Florida presidential preferential primary campaign, I am presenting herewith a news story filed from Miami last Sunday by Russell Baker, who is a reporter for the New York Times:

MIAMI, April 15.—For the first time in 5 days a Floridian could walk abroad today without the risk of having his hand gripped by a potential President of the United States. In the dead of night both Senator ESTES KEFAUVER and Adlai E. Stevenson slipped off toward Yankee land, taking with them their handshaking campaign for the Democratic presidential nomination.

Both will be back. The election is still 6 weeks away and the pundits, who have been treated almost as badly as Mr. Stevenson by the Tennessee Senator's refusal to dry up and blow away, are dodging all predictions of the result of the May 29 primary by telling you that it is still too early to discern a trend.

Early it is, and doubtless predictions will be hollow until after the State votes in a complicated four-way gubernatorial primary May 8.

The inescapable impression, however, from the reaction to Senator KEFAUVER's doggedly amiable trek through the orange groves, the quiet courthouse squares, and Miami's gaudy thoroughfares is that Mr. Stevenson had better watch his jugular vein.

The Tennessean's genius for projecting an aura of diffident sincerity, coupled with a strong pitch to the Dixie vote, has apparently gone down like corn pone and grits in the rural areas north of Miami.

In Miami, on the other hand, where the political spirit is more nearly akin to the North than to the wool-hat country, the Senator relies on his reputation for being liberal. This he reinforces by stumping for the spirit of the Roosevelt and Truman program.

PLAYS BOTH SIDES

In short, he has been playing from both sides of the court these last 3 days—as a true son of Dixie in the unadulterated southern communities, as an unreconstructed liberal for Dade County's transplanted Yankees.

Part of the Senator's strategy is to depict himself as a lonely friend of the people, fighting against the overwhelming hostility of the bosses.

The role requires him to play the underdog and he has insisted throughout the week that he was still running behind Mr. Stevenson for Florida's 28 convention votes. His aides, however, have been exuding a confidence that belies their pronouncements.

They have created the impression that they feel he is now ahead of Mr. Stevenson, and perhaps well ahead.

The outcome of the gubernatorial primary May 8 should give the first sound reading on where the trend goes. There are four contenders and the segregation issue has been unexpectly injected as a major issue.

The result will probably necessitate a runoff vote between the two top candidates on May 29, the day of the Presidential primary. This would produce a big turnout, which Mr. KEFAUVER believes would favor his chances.

SEGREGATION AN ISSUE

The contest May 8 also will provide a reading on the importance of the segregation issue. At first glance, a strong showing by the segregation candidate would seem ominous for Mr. KEFAUVER, for he has been widely publicized as more "liberal" toward the Supreme Court decision than Mr. Stevenson.

Offsetting this threat, however, is the Senator's new change-up pitch, unveiled in last week's campaigning. It consists quite simply of reminding his audiences that he is, after all, a Southerner himself and of striving at every stop to ram this point home.

In the back country, meanwhile, the voters are being asked whether they would prefer to entrust the integration problem to a man from Tennessee or to a Chicagoan like Mr. Stevenson.

PRAISES RUSSELL

The Senator also got considerable mileage from the good name of Senator RICHARD B. RUSSELL. Mr. RUSSELL, a Georgia Democrat and the undisputed champion of States' rights in Florida, beat Mr. KEFAUVER there in the 1952 primary.

Last week, Senator KEFAUVER told audience after audience that he was among the greatest admirers of Senator RUSSELL. He now claims much of the support that went to the Georgian in 1952.

He also hit hard on a pledge to secure the South its proper place in the sun if he should win. Precisely what he meant by this phrase was never defined, although he used it repeatedly.

The delivery of the new pitch was calculatedly primitive for a man of Senator KEFAUVER's shrewdness and sophistication. At times his style seemed more appropriate to a campaign for county sheriff than the Presidency.

RECALLS COUSIN MARY

He chatted over and over, for example, of his warm affection for Cousin Mary Noel Moody, a relative who had migrated years ago from Tennessee to Florida.

And in speech after speech he told his audiences: "I grew up in a little small town, and I have the same ambitions, the same aspirations that most of you have."

Samplings of crowd reaction were inevitably favorable. One comment heard repeatedly, almost without variation, was: "He's such a sincere man."

To create this impression the Senator salted his vote pleas with such comments as "If you can't give me your votes, remember me at least in your prayers."

Northeast Airlines Entitled to Approval of Petition for Extension of Service From New York to Florida

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 17, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following penetrating article from the Lawrence Evening Tribune, Lawrence, Mass., April 12, 1956, regarding the vigorous attack by our majority leader against the recommendation that Northeast Airlines not be allowed to go into long-haul service.

The expansion of this service would be one more industrial asset to New England in our effort to assist local industries seeking to expand their markets and attract new industrial firms into our area. It would be a convenience to our people who travel South, and favorable consideration of the petition is a progressive step in the future of all New England communities.

SUPPORT FOR AIRLINE

It is very possible that Representative MCCORMACK'S vigorous attack on the recommendation that Northeast Airlines not be allowed to go into long-haul service will do some good. He makes out such a strong case for the point of view that New England needs Northeast as much as Northeast needs the extra revenue from the Florida run that it will have to be given consideration, as it should be.

What Representative MCCORMACK had to say rings rather ominously upon the ear. He charged, for instances, that the adverse decision of the examiner who heard Northeast's petition goes against "all the weight of evidence, policy, and testimony," and, if approved, "could well cripple New England air service instead of developing a sound system."

We do not need to point out that the interest Greater Lawrence has in this is the interest that it takes in Lawrence Airport as a tremendously valuable regional facility. Having regular airline service out of the airport is one of the amenities which Greater Lawrence has to offer. Representative MCCORMACK argues, as others have, that Northeast has worked hard to qualify, and is now entitled to participate in the long-haul competition in order to share the long-haul profits which would offset the losses its shorthaid network has been sustaining.

It is noteworthy that the interest Lawrence takes in Northeast is shared by 35 other New England communities, which suggests that in seeking to frustrate Northeast, the examiner responsible for the adverse recommendation is showing himself to be hostile to the wishes of a large and powerful segment of the country. In the light of this, it would only be reasonable to expect that the adverse recommendation may encounter rough going when it comes up for review before the Civil Aeronautics Board.

Israel Observes Eighth Anniversary

SPEECH
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. PRICE. Mr. Speaker, today one of the most ancient lands observes its status as the youngest of free nations.

Israel observes its eighth anniversary on this April 16, 1956, its indepenedence threatened by unfriendly neighbors. In this hour of trial I believe the great majority of American join me in the devout prayer that this new democracy will prevail.

Eight years ago the United States was the first to recognize the new nation of Israel. On this anniversary I am happy to see other Members of Congress joining me in an expression of reassurance to Israel that its people still have our friendship and support.

The threat to Israel's survival is a threat to all free nations, and the increasing tension in the Middle East is a threat to world peace. I share the disappointment of the people of Israel over our State Department's delay on Israel's urgent plea for defensive arms.

A Frenchman Finds Fault With United States Aid

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an article that appeared in the Sunday Star of April 15 by Mr. Earl H. Voss. In it he quotes the objections of a high-ranking French diplomat on the subject of our United States aid program:

A FRENCHMAN FINDS FAULT WITH UNITED STATES AID

A high-ranking French diplomat in southeast Asia who prefers, for reasons that will be obvious, to remain unidentified, passed through Washington recently and unburdened himself of some advice for America's foreign-aid administrators in the Orient.

Now that foreign aid is before Congress again, his thoughts are worth listening to:

"Americans send too many experts to administer their foreign-aid programs." These men, he says, annoy the local folk and remind them of their inability to take care of themselves. Americans insist on bringing too much of their high standard of living with them.

"Americans are too much concerned about corruption." Certainly there is graft in Asia and in most underdeveloped countries, he says. But this is inevitable, as all the older hands in Asia are well aware. We ought to learn to overlook most of this graft, he believes, instead of constantly complaining to the Prime Minister.

"Americans spread their aid too thin—too scientifically." United States aid administors try so hard to help all the people of the country, to prevent a privileged few from monopolizing the benefits, that they go to the other extreme, this Frenchman believes. As a consequence, the benefits of American aid are often not noticeable.

"Americans try to take too much credit for their work. They should stay more in the background and stop trying so hard to identify themselves with every dollar of aid they send into a country. After all, the main purpose of the aid is to prove to free countries that their own systems of government—not the Americans'—are better than the Communists'."

"India should be helped to build locomotive factories." One of India's most pressing needs is a bigger transportation system. Locomotives will be spectacular monuments to Indian progress. But it is important that the Indians be allowed to build their own locomotives. They want to say that they can build their own locomotives—and point to the evidence on the tracks.

"Americans would do better to concentrate their foreign aid efforts on one spectacular project per country. After all, the effect Americans seek is more political than economic." He gave an example, in Cambodia, a nation with a seacoast but no port. France, he said, has arranged to build a port for the Cambodians. The United States is building access roads, also expensive, but France will get most of the credit.

"Americans publicize their food surpluses too much." The United States' rice surplus is one of its most unfortunate disadvantages in the Orient, the French diplomat believes. Whenever any country in Asia is unable to sell its rice—or almost any other agricultural commodity—it can always blame America's dumping of its surpluses, whether we are guilty or not.

"Americans try too hard to make others over into their own democratic image." There ought to be more study of Oriental techniques of government and less preaching about how good the American system is.

"Americans are shortsighted in insisting on bilateral economic aid. They should try multilateral aid arrangements." It is easier for 3 or more countries to arrange trade and aid pacts than it is for any 2—especially when 1 of the 2 is the richest country in the world. Multilateral pacts would give participating countries more opportunity to contribute as well as receive. They would feel more of the dignity in the partnership, be less sensitive about the handouts.

Here's Some Agricultural Sense

EXTENSION OF REMARKS
OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1956

Mr. DAGUE. Mr. Speaker, I am indebted to our former distinguished colleague, my good friend Louis E. Graham, for calling to my attention the article by Mr. Hugh Fergus entitled "Our Frustrating Farm Problem," which appeared in the recent issue of the Pennsylvania Farmer.

Mr. Fergus brings more horsesense to the present agricultural situation than any other writer I have followed in recent months, and I am in agreement with him that if they will give Dr. Ezra Benson a chance to eliminate some of our agricultural dizziness caused by too much surplus the patient will come through in good shape.

Following the President's ringing veto of the politically inspired farm bill, it is good to have some down-to-earth comments such as are set forth in Mr. Fergus' article, and I would commend them to the attention of anyone who wants to consider the agricultural situation from other than a strictly partisan viewpoint.

The article follows:

OUR FRUSTRATING FARM PROBLEM

(By Hugh Fergus)

About 20 years ago I knew a young fellow who became ill with the flu and, along with it, dizziness. His doctor knocked out the flu but the dizziness persisted. So he made an office call at the doctor's. After an examination the doctor said, "You have low blood pressure and a leaky heart." He gave him medicine to cure the blood pressure. Still the dizziness persisted and the young man was getting lower and lower in spirits.

Finally his wife suggested he go to another doctor, which he did. The new doctor, after a good examination said, "As far as I can tell there is no leaky heart, and your blood pressure is O. K., but you do have liver trouble. That is causing your dizziness, so take these liver pills as directed."

Right away the patient felt better, knowing that his heart and pressure were all right. After due time he was well again.

A LITTLE SICK

To my mind that is about the situation agriculture is in today. We might be a little sick, but not as bad as we think. A lot of it is psychological like the case of the young fellow above. The politicians, particularly the outs, have been telling us how badly off we are until we are beginning to think our case is worse than it is.

Here at home we have a dog which one of my daughters left with us when she and her husband went overseas. It is a harmless friendly dog, half lap hound and the other half radiator setter. Every once in awhile at night she will bark to get out and after about 5 minutes rushing around outside and barking she will have things under control and will come back in.

One night she went out and barked for about an hour. Finally, thinking she might really have something to bark at, I went out. When air conditions are right, when some one goes out in the yard and yells an echo comes from the lower barn. Well that was what she was barking at—her echo. Just now our situation, Harrisburg in particular, is getting about as much accomplished at this dog was.

To quote figures: In 1955 our gross agricultural income in the United States was 33.7 billion dollars, compared to an average of $33.8 billion in the preceding 9 years including the Korean war boom years.

HOG SPREAD $2.35

Right now I am most interested in beef cattle. In spite of our crying about the present low prices—part of said crying due to paying too much for feeders—the average of native beef cattle prices at Chicago was $22.85 in 1955. Only 7 years since 1914 was this price exceeded, that is, 1947 to 1954 inclusive, when the average for the 7 years was $29.26. As it was, last year's price was good in spite of the highest beef slaughter on record, and even this would not have been so bad if it had not been for the greatest drop in hog prices on record.

Only 12 years since 1941 were hog prices higher than last year's $14.95 average, and 3 of those years were during the First World War. Even now, February 14, hogs have gone up several cents from December's $10.90 low average. Last year corn prices in Chicago were $1.26 per bushel; so, according to the 10 bushels of corn per hundred pounds of pork ratio, the hog feeder had $2.35 spread for his work.

Here in Pennsylvania I do not know of a single farmer taking advantage of corn price supports; but, to cite an instance where they are used, not long ago I read in a Pittsburgh paper where in Indiana the farmers are selling their corn to the Government for $1.62, then going out on the open market and paying 90 cents to $1 per bushel. I know of one man high here in a Pennsylvania farmers' organization who has a brother farming in Iowa. The Iowa brother was bragging about growing corn to sell to the Government.

A lot of our present economic trouble is not so much from low prices as labor's demands for higher and higher prices. Since this new AFL–CIO merger labor has become more than ever the politicians' sacred cow and can run about as wild as it pleases. No more can cost of living be given as an excuse for a rise in wages. Labor leaders demand it to perpetuate themselves in office. If they would ask John Lewis what has happened to the coal industry when the economic laws worked against artificially high prices, they might avoid the same mistake.

ABLE MEN

At the risk of being called politically biased, I think that in our President and in at least four of his Cabinet members we have as able men as we have had in Washington in a long time. Benson is devoutly religious, and my guess is that he asks for Divine guidance for every major move he makes. Let me hasten to say to appease you Democrats that my choice over all for President would be HARRY BYRD, Democratic Senator from Virginia. I could be very happy, too, under Ohio's Lausche. I think in agriculture CLINTON ANDERSON, former Democratic Secretary of Agriculture, is a great man, and his thinking is identical with Benson's.

You know how it is when you doctor a sick child or any of your livestock. They will fight you, but eventually you get the medicine in them and usually they get better. So it is with Dr. Ezra Benson. His medicine may be a little hard to take, but after a while we will be better. We are a little groggy maybe financially, but certainly not as sick as we were in the thirties.

No need of giving you the figures for the vast surplus of agricultural products we have on hand such as a year's supply of wheat, nearly a year's supply of cotton and so on. Now in face of this, here are some of the inconsistencies. In spite of this surplus and already having too much production:

From our latest United States Yearbook on Agriculture, we learn that from 1945 to 1950 an average of a million acres a year was brought into production in our Western States by irrigation, at the expense of all of us. Right after Ike got into office, the president of Mexico and he dedicated a dam along the border that brought into production by irrigation 4 million acres.

In another dam (feel like adding one letter) project a hole was bored 11 miles through the mountains to furnish water for an irrigation project. Travel where you will in the arid or semiarid parts of the West and you will see new irrigation projects.

Another inconsistency in this surplus thing is the soil conservation payments. In spite of the fact that ever since our agriculture extension began 40 or more years ago, our county agents have been preaching drainage, pasture improvement, contouring and so on, our $260 billion in debt Government makes these payments. Many farmers, myself included, are taking them because we feel we are helping pay not only for them but other subsidies as well that I will mention later.

Even though our conservative National Grange and Farm Bureau have recommended that the payments be curtailed, they make good political bait, particularly in the South. Congress passes an appropriation for more than is asked. Before these payments we put in by pick and shovel over 30,000 feet of tile that drained our worst spots. The land we are draining now is not too wet. I certainly would not pay the approximate $240 cost per acre, on land not worth $100 per acre, that the soil conservation people will give you.

COUNTRY SLICKERS

As I already mentioned, there are few if any Pennsylvania farmers taking advantage of borrowing money from the Government on sealed crops. Even where it is practiced, if it were the small farmer who was getting it, it would not be so bad. We quote from that controversial article, "Country Slickers Take Us Again," that Benson approved but did not read: "The Chandler Co., of Saragosa, Tex., is into the Treasury for $814,000 worth of cotton. Senator CAPPER HART, farmer of Indiana, is on the record for a $21,742 wheat loan. Adams Bros. and Co., of Odebolt, Iowa, got $179,127. The Louisiana Irrigation and Mill Co., of Crowley, La., turned its surplus rice over to the taxpayer for $486,227. The list runs on for page after page." Continuing, "They own only a little more than a third of the farms yet grow over 85 percent of the total farm output."

Going back to other years, when the economic laws of supply and demand, diminishing returns, profit and loss, etc., worked for 20 years we did not grow wheat. It was unprofitable. Under controls and par-

ity, 3 years ago when we were in Canada, a farmer here got $1.85 at the mill for wheat, the Canadians on the open market were getting $1.45 and still growing wheat. Ed Bayard used to tell of a group of farmers in a poultry section who were paid for not threshing their wheat. These farmers bedded their poultry houses with the unthreshed wheat.

In Iowa when they were required to cut corn acreage 10 percent the farmers used hybrid seed and increased their yields 25 percent.

A former preacher from here lives in Sheridan, Wyo., where they do dry land farming on a big acreage. As soon as they take the wheat off they plow the land, then harrow after every rain to hold the moisture. In this way they get only enough moisture to grow a crop every other year. This preacher told us one farmer got $10,000 for not growing wheat in the off year when he was not going to grow it anyhow.

Another story from the New York Times, April 9, 1936: "One Montana wheat grower received more than $50,000 from AAA for not planting wheat; this large scale operator received about $7 an acre on land which the Indian Bureau officials said could be rented for 50 cents to $1.50 an acre." I could go on citing many other cases.

FARMERS' SIDE

Here is the farmers' side of taking subsidies. When the farmer gets them and they are comparatively minor, the papers make them into headlines, but ones like the following get a little corner on an inside page. Here are a few:

During World War II the RFC paid through direct subsidies more than three billion dollars for the processing of such things as oil, lead, zinc, wood pulp, and many other commodities. Ocean shipping gets $150 million in subsidies per year when under United States flag. The airlines gets $129 million for carrying mail and direct subsidies. Our post office department in 1953 got $663 million dollars to make up the deficit. This year the Veterans Administration is asking for $4.5 billion, much of it loaded with "fat." The Army is asking over $35 million, which I think if run on a business basis could be cut $10 billion. How much of our overseas relief could be cut without hardship? Did you read the other day where British plumbers have chauffeurs to drive them from one job to the other? And that 500,000 men are needed in England for all the jobs available?

Right now in Washington our Congressmen are building more marblelined office buildings for their use, and are going to spend a few million on a new front on the Capitol building to better balance the dome.

Senator ELLENDER from Louisiana did get a Senatorial swimming pool blocked from being included in the plans.

I do no know where this will all lead. When we do send a good man to Washington and he tries to have our Government economize, a spender comes along, like the one in our congressional district, promises a lot of "gravy" and wins out over the good man.

All frustrating, is it not?

Woman's Congress on Housing

EXTENSION OF REMARKS

OF

HON. PAUL F. SCHENCK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1956

Mr. SCHENCK. Mr. Speaker, it is my feeling based on careful consideration that the coming Woman's Congress on Housing will be very fruitful as I indicated in my remarks made on March 29 and found on page A2777 of the CONGRESSIONAL RECORD. A compilation of the opinions of those in attendance will be of great help to all the home builders of America, because it will enable them to include features and make changes which will lead to greater convenience and better living.

I have learned with great pleasure that Mrs. Robert E. Owen, of 555 Acorn Drive, Dayton, Ohio, has been chosen as 1 of the 100 homemakers across the Nation to attend this home-planning meeting. Mr. and Mrs. Owen were married in 1946. They have 3 youngsters aged 6, 4, and 8 months. So the children play a basic role in her ideas about home planning. In her letter to Hon. Albert Cole, Administrator of the Housing and Home Finance Agency, as reported in the Dayton Daily News and the Dayton Journal-Herald, Mrs. Owen pointed out that—First, basements are essential; second, increased space should be provided for eating; third, added indoor recreational space is essential; fourth, there should be more space for summer recreation space such as a porch and patio. Mrs. Owen also stated, "Whether it is a 1-story house or a 2-story house does not matter as much as the facilities it has—if I could find the features I like, I would take either type."

An enterprising reporter on the Dayton Journal Herald newspaper, Staff Writer Marilyn Floridis, interviewed 25 housewives in Dayton seeking their opinions. The story written by Miss Floridis is, by unanimous consent, included in these remarks and illustrates the opinions of these 25 homemakers:

DAYTON HOUSEWIVES ARE QUICK TO ANSWER GOVERNMENT'S QUESTIONS ON HOUSING

(By Marilyn Floridis)

The Federal Government is asking housewives for their ideas on modern housing.

Writers of the 100 best letters will be invited to a "Congress of American Housewives" late this month in Washington, D. C., where the women will talk with private industry experts and Government officials.

Armed with this practical knowledge, the Government hopes to guide builders in building the kind of homes the American housewives want.

What do Dayton housewives think about modern housing?

In an unofficial survey this week, 25 local women were definite in their opinions. The majority of them said they:

1. Favored a "family room" for informal living.

2. Wanted a utility room on the first floor.

3. Liked best an easy-to-care-for, ranch-type home of 1 story.

Briefed, their opinions about what they want in new homes include these:

Mrs. Elmer Will, 904 Ferndale Avenue: "A family room. We have 6 children and consider such a room important. I like the laundry room near the bedrooms, even if it is on the second floor—it's easier to handle all the clothes and linens that way."

Mrs. Herbert Cammerer, 125 West Peach Orchard: "Stainless steel, double sink, with a disposal on one side and a dishwasher are my favorites. Under-cabinet lighting in the kitchen and aluminum awning type windows are good modern innovations. I like a full basement, too."

Mrs. Louis Becker, 3525 East Third Street: "I like most a modern kitchen with wall ovens, built-in ranges, and automatic laundries. For my own use, however, I prefer a two-story plan."

Mrs. Glenn R. Walters, 4425 Maxlin Road: "Our family room with a washer-dryer-laundry-tub section curtained off and a lavatory to the side is just wonderful. I like a stone fireplace in the living room, too."

Mrs. John Tolnitch, 5681 Little Sugar Creek Road: "Adequate closet space. Well lighted and deep. And smooth walls are easier to take care of, especially in kitchen and bath. Having the oven level with the counter top and built-in burners eliminates a lot of cleaning problems."

Mrs. R. H. Paul, 1201 West Fairview Avenue: "My bugaboo is height of sinks and work areas. They should be higher so you don't have to bend over. I like a one-floor plan, without basement or attic, and a utility room convenient to the kitchen."

Mrs. James Pfeiffer, 2428 Wyoming Street: "A dishwasher and disposal. I favor a one-floor plan with a playroom. Every home should have a basement."

Ruth Hoecker, 322 Wiltshire Boulevard, career girl: "Plenty of storage space so you don't have to store things in the basement or attic, and windows that give outdoor light. I think a kitchen that's easy to move around in, with appliances close together and a waist-high oven is a big help."

Mrs. Manuel Begovich, Jr., rural route 1, Vandalia: "Labor-saving devices, like garbage disposals. I prefer the one-floor plan with a basement, and adequate space outdoors for the children."

Mrs. Charles Truax, 1021 Hollendale Drive: "Washer-dryers, dishwashers, and disposals are all important. All homes should have air conditioning. I think the dining room will return and replace the dining-living L."

Mrs. William Bombeck, 4748 Burnham Lane: "A dining room. Builders put up three-bedroom houses but don't have other facilities to match for expansion with growing children. They never provide a place for the big truck that Grandma gives."

Mrs. Mearick Funkhouser, 546 Garden Road: "I still prefer the gracious, two-story, center-hall house. Family rooms are wonderful for little children, and I wouldn't do without a garage-door lift. Eliminate excess halls."

Mrs. Garner Fanning, 1830 San Rae Drive: "First and foremost, rooms nowadays are too small. Especially kitchens and baths. We're buying a split-level home."

Mrs. Dwight Mikesell, Jr., 2406 England Avenue: "Ranch-style homes, but ones with a basement. I like the bath-and-a-half idea, and a basement for a family room."

Mrs. S. R. Passmore, 836 Harman Avenue: "Separate laundry room with space for a sewing machine. Dutch oven at table level, heating system that's dirt free and noise resisters like acoustic ceilings and wall-to-wall carpeting. I prefer two-story houses with privacy of bedrooms on second floor."

Mrs. Jack Stamper, 1833 North Main Street: "Much of house planning depends on whether you have small children. Trilevel homes are a blessing for watching over children. Including modern appliances in original cost of house makes more young couples able to afford them."

Mrs. Emerson Eschbaugh, 924 East Stroop Road: "I'd like a basement or family room. Important to have a place for hobbies. Separate dining room is good, so that you don't have to look into the kitchen. Louvered doors are too hard to clean and they don't keep the noise out."

Mrs. Sherwood Snyder, 7870 Normandy Lane: "A one-story plan. I think you eliminate clutter by not having a basement. Efficient kitchens, big ones."

Mrs. H. L. Strohmeyer, 601 West Nottingham Road: "Lots of cupboards with sliding doors, and a wall of closets in the bedroom. I'd give up a garbage disposal last of all.

Outdoor terrace living, convenient to the kitchen, is good.

Mrs. Clair Routsong, 652 Garden Road: "I like a patio for outdoor cooking in the summer. And our built-in Hi-fi set is wonderful."

Mrs. Art Rumer, Mad River Road: "Sliding partitions in the house so you can open it up for company. Sliding doors for closets, too, to save space. I think we should get away from steps and short window eaves that don't protect windows or interior fabrics from fading."

Mrs. Jeff Clevelle, Englewood: "A separate utility room. I think one on the first floor would be the most step-saving thing."

Mrs. M. L. Edwards, 1712 Richard Street: "All I want is space. Basement for a recreation room, and larger bedrooms. Area for laundry in basement, rather than utility room, is my choice."

Mrs. Charles E. Brennan, 297 Springbrook Boulevard: "A 1-level or 1½-level home. I like rounded corners, sharp corners are such dirt collectors. A garage that opens on side or back is better than the gaping hole in the front. Fenced-in area for privacy is a must."

Mrs. John H. Fox, 4292 Lefevre Drive: "More cabinet space in homes. I prefer a separate utility room. When the washer-dryer is in the kitchen it makes so much lint and steam."

If any other Miami Valley housewives would like to air their home ideas, to the Government, they can still write in care of House and Home Finance Agency, Washington, D. C.

The Challenges of Crime Control

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 17, 1956

Mr. DODD. Mr. Speaker, I want to call to the attention of the House an outstanding address delivered by Mr. J. Edgar Hoover, Director of the Federal Bureau of Investigation, on April 10 before the National Parole Conference here in Washington, D. C.

In my judgment, this speech should be read by every Member of Congress and also by all of our citizens.

The thoughts expressed by Mr. Hoover in this remarkable address represent, I believe, his thinking over a great many years, and are the fruit of his long experience in law enforcement.

Mr. Hoover's speech is as follows:

THE CHALLENGES OF CRIME CONTROL

(Address of J. Edgar Hoover, Director, Federal Bureau of Investigation, April 10, 1956, before the National Parole Conference, Washington, D. C.)

Much has happened to all of us—and the world—since a conference similar to this one was held in Washington 17 years ago. That was in 1939. You will remember, as I do so well, that we were emerging from an era which had witnessed the overthrow of virtual gang control in community after community of our Nation. Then we had the international gangsters who attacked us and who were responsible for a second world war and the domestic upheavals that follow all wars. We won the war—but we found we still had the problem of crime and criminals with us—a problem that has continued to grow faster than our Nation's growth.

Even though crime increased there was hope that we could do better in the post-war world than we had in the past. That hope is always with those of us who have the duty of dealing with crime and with the problem of parole and probation.

I was hopeful that after the war that steps could be taken to make the worthwhile principles of parole and probation truly effective. This is a humanitarian task. This is a vitally important work and I believe in the objective which you, who are engaged in this work, are seeking and unless you succeed, then our work too often is made ineffective. I want to make that point clear to you—because it seems it has not always been clear to some people in the past, who have regarded me as an opponent of parole and probation.

I want to make it clear, too, that my criticism of the workings of parole and probation is for one reason only—to bring about more effective methods of crime control. Your objectives and my objectives can be reached only if probation and parole are worthy of the name and if law enforcement is worthy of its name. My criticism certainly is intended to be constructive for criticism designed only to destroy never helps anyone.

All of us have our dreams of achieving a goal. And to achieve a goal we must be practical. And to be practical we must speak frankly and face facts. As I see it, while progress has been made in many States and in many areas of the country—probation and parole in some areas are not worthy of the name. I say this without antagonism toward either probation or parole. The time has come for us to get together and try to find a solution to this problem which is a grave responsibility allied to law enforcement and to the rehabilitation of criminals.

As I see it, parole presupposes careful selection of those who will benefit by its application. It presupposes that those who are paroled will have careful and competent supervision. And the same principles apply to probation. I think all of us here subscribe to these principles. It is as obvious to me as it is to you that wrongdoers who have learned the error of their ways shoud be restored to a useful place in society and helped to recognize the values by which they can live at peace with themselves and with others.

From where I stand, parole and probation are only a part of the overall effort to achieve criminal justice. They are a part of our machinery of criminal justice which exists for only one purpose—the protection of society. This machinery fails when any part of it breaks down and leaves society unprotected. When such a breakdown occurs, then somewhere, someone has failed in his responsibility.

Society suffers when any unit of the vast machinery of criminal justice places the interest of the wrongdoer above the protection of society. Those of us who are assigned the responsibility of detecting and apprehending criminals are more and more coming to the view that our efforts, however essential, are but a temporary expedient. We arrest a wrongdoer today, present the evidence which establishes his guilt and bring about his conviction. All too frequently, within a short time thereafter, we are again hunting the same man because he has committed another crime.

Our work is only part of the answer. We know that the time-proven deterrents to crime are certainty of detection and arrest swift prosecution, and the realization that one must pay for his law violations.

I have condemned what I regard in some prisons as a country club atmosphere. By that description, I mean prisons which permit idleness and which neither punish nor rehabilitate the wrongdoers. Fuzzy and shallow thinking which contributes to maudlin sentimentality helps no one. We frequently hear about the plight of some criminal but little or nothing about his victims or the anguish and disgrace he has brought to his own loved ones.

The press accounts of the Boston prison riot last year are a perfect illustration of the misdirected concern in some quarters for vicious criminals which is inconsistent with our duty to protect society. Much was said about the participants in this riot, and their hope for freedom, but men and nations do not deserve freedom as a handout. They must earn and guard their freedom. In the talk of freedom for these men little appeared about their criminal background and their vicious crimes or whether the general welfare of society justified their freedom or whether they had earned their freedom. It is necessary to examine only two of the cases to make my point.

One of the convicts previously had been given the benefit of both parole and probation. He had been arrested for forgery, larceny, robbery and other crimes. He was serving a sentence of 15½ to 20 years, with a 25-year Federal sentence for bank robbery awaiting him. Another had been given the benefit of parole, probation and conditional release. He was serving time for assault, burglary and rape. His case was aggravated by the fact that he had committed a series of rapes and in his assaults had viciously beaten several of his victims. You cannot serve freedom on a silver platter to men like that.

One of the frequent arguments advanced for probation and parole is the overcrowding in prisons which exists today. But how valid is this argument when the population in State and Federal prisons has increased from 179,047 in 1939 to only 182,051 in 1954, an increase of only 3,000 in a 15-year period. To be sure, it is more economical to release convicts on parole or probation. But let us not put the system on the basis of the cheapest price tag. When you do, you get shoddy merchandise.

One of the most serious problems we face today in the field of crime control is that of the repeater. This problem is brought into sharp focus by looking at the background of the population in Federal prisons where in 1954 of those received under sentences of more than 1 year, 63.8 percent were repeaters. When our people check the fingerprints of arrested persons which are received in the Identification Division they find that 70 percent have records of previous arrests.

The only way we have at present of dealing with the repeater is to demonstrate to him that truly "he can't get away with it." But this is not enough in dealing with those who are unreformed and incapable of rehabilitation without extensive and prolonged mental treatment. If I can judge from the reports which come to my desk daily from every section of the country, there is a growing concern among law-enforcement officials over the increase in crimes by repeaters and those who have been improperly selected as beneficiaries of parole, probation, and other forms of clemency. I am certain you are just as concerned about this as we are. Parole upon parole and probation upon probation for those who have not reformed are unreasonable and unjustified. I appreciate the fact that for every flagrant mistake in parole and probation there are scores of cases reflecting dynamic reformation and rehabilitation. What I am saying is not that parole and probation are wrong—but that ill-advised parole and probation reflect adversely upon these methods of protecting society. It is the old case of a rotten apple tainting the whole barrel.

I can best illustrate my feelings by referring to a few cases which immediately

come to mind. One eastern gang of 11 responsible for a $2½-million holdup had received a total of 20 paroles and 17 probations, and 1 was pardoned, thereby blocking a deportation case. Another criminal had killed a policeman in 1932 and was given a life term. After the third parole, following the killing of the police officer, he was arrested burglarizing a safe. Another policeman was killed last fall by a criminal who had been paroled the previous month with a criminal record which dated back 15 years. Within the past few months, there was a nationwide manhunt for an individual who killed 6 persons following his parole less than 2 years ago. A group of parolees on a criminal spree, a little over a year ago, engaged in a gun fight with 2 policemen, and 1 of the policemen and 1 of the parolees were killed. Is this not enough to show that there is a need for improvement?

Since we established the widely publicized list of "10 most-wanted fugitives" in March 1950 a total of 95 criminals has been on the list. Fifty-two had received paroles on at least one occasion during their criminal careers. Of the 18 special agents of the FBI who have lost their lives in line of duty, 11 were killed by criminals who had previously received paroles, probation, or other forms of clemency. That errors have been made and are being made in the selection of persons to benefit from parole is a proven fact and a matter of grave concern. This is not merely the problem of law-enforcement officers—it is your problem also.

The mistakes in selecting the wrong person for release on parole might have been rectified with the type of supervision which the humanitarian principles of parole require. I do not say it is the fault of those who administer parole and probation. But it is the fault of those who permit these conditions to exist.

Politics, poor pay for parole and probation officers, lack of interest by city and State officials and the lack of uniform laws and practices all are involved. Parole supervision too often is a farce and exists in name only in too many cases. Those who have the most expert knowledge of parole hold that proper parole supervision requires a case load of no more than 50 to 65 for each parole officer. When you face the facts, it is a marvel that parole succeeds as well as it does. This is particularly true when you find parole officers carrying case loads of as many as 115. In a State where 45 parole and probation officers are required to supervise 2,800 persons on probation and 1,500 on parole it is clear that these overworked men cannot do their jobs properly. But that is only part of the picture. In addition, these 45 officers are required to make investigations in connection with granting of paroles and probation.

In one State, which boasts of an advanced parole system, maximum parole supervision requires a monthly visit to the parolee's home and place of employment. Minimum supervision requires a visit every 3 months either to the home or place of employment. It is no wonder that parole and probation fail so frequently. In one State, it is reported that 50 percent of those granted parole violate the conditions of parole. Figures vary in other States.

The picture is clear. The time has come for public indignation over the failure to give these men and women a chance to do their jobs properly. And, if it hurts some politicians, well, that is just too bad. At least, your conscience will be clear.

Justice is undermined and respect for constituted authority becomes a mockery when judges take it upon themselves to coddle hardened criminals by giving them undeserved probation. To illustrate, I refer to a case where a judge placed a criminal on probation on the charge of car theft and violation of the Federal Firearms Act. This man previously had been arrested for armed robbery and breaking and entering. For this he received a 10-year sentence in a State penitentiary. He escaped and was later arrested in a distant State. He resisted extradition on the grounds of cruel and inhuman punishment in the State penitentiary. The State made a careful investigation and subsequently the criminal's charges were disproved to the satisfaction of a Federal judge who ordered him returned. After serving 3 additional years of his sentence, he was paroled. When later arrested in a western State with a stolen car, he pleaded guilty but leveled the same old charges of the cruelty of punishment which had already been disproved. The judge placed him on probation for 10 years and told the criminal to behave himself and he would never have to serve the balance of the term for which he was paroled because, as the judge told him, he had "an umbrella over you now."

There can be no doubt that many judges are handicapped by not having complete details. Once a wrongdoer is arrested and brought before the courts, there can be no more important investigative function than to place before the judge the facts which will aid him in arriving at his conclusions as to what is best, both for society and the individual offender. We regard this as so important in our service that our various offices are under instructions to furnish all available case information to judges when so requested.

The Federal probation system does an excellent job of developing information to be submitted in its presentence reports. Likewise, some States do an outstanding job in this respect, but there are others where much improvement is sorely needed.

I want to express my deep appreciation for the splendid assistance and cooperation which our special agents are receiving from most parole and probation offices throughout the Nation. It has been a source of gratification to observe that in the past 20 years there has been a gradual improvement in the cooperation between the professional advocates of parole and probation and law-enforcement officers. It must continue to improve. The police officer on the beat, the county and State officer, and the Federal investigator are primarily concerned with the protection of society just as you are, and the old frictions should be removed. Fundamentally, there should be an even closer bond of cooperation between those charged with treatment of offenders and those charged with detection and apprehension. After all, our end objective is the same.

Under our legal system there is authority to act in most instances only after a crime has been committed. Somewhere and somehow, a new authority is needed—that of prevention. Let me illustrate. A policeman was killed by a 21-year-old parolee. He had been in and out of institutions on numerous occasions, having escaped and been paroled several times. After he had killed the policeman, the parolee's father disclosed that he had made efforts to have his son's parole revoked to prevent him from becoming further involved in serious crimes.

When parents appeal to authorities, not once but time and time again, to have their son on parole committed in the public interest, it is unbelievable that someone would not take action. Yet this has happened more than once. Last December, a 20-year-old parolee kidnaped a 3-year-old girl. The parolee was an admitted sex offender who had attacked girls ranging from 8 to 13 years of age. He had been committed twice to a mental hospital for examination. Paroles granted this criminal had been violated time and again. The parents saw that their son needed help—and he knew it himself. On the day before he abducted the 3-year-old girl, this sex offender had pleaded with his parole officer to come to see him; but for some reason, the officer did not see him. Cases like this cast a shadow, not on the principle, but upon the administration of parole.

More and more, we are finding the earmarks of crime long before the final act of violence occurs. Day after day, individuals who are mentally ill are committing serious crimes. They are bringing misery, not only to themselves, their relatives and their friends, but also to other innocent men, women, and children.

There are many individuals in America with backgrounds of emotional instability where the danger signals are clear and where the individual is clearly earmarked for crime. The time has come when some way must be found to take preventive action, and here is the proposal I hope you will consider: When a person has been convicted and sentenced to prison, the authorities today have the ability to determine in many cases whether the wrongdoer is capable of leading a law-abiding life. But when it is clear that due to mental quirks the likelihood of violence exists, then there should be some legally recognized machinery whereby such individuals can be isolated from society to receive preventive treatment.

These are days of stress and strain. Modern society is geared to a fast tempo. Pressures are heavy from all sides, thrusting vast burdens on us all. Nerves become taut, tempers frayed, minds blurred. Abnormalities appear, which, if recognized in time, can be treated and perhaps lives can be spared. If action is taken, mentally sick criminals might claim no more victims but, on the other hand, they may be made into useful citizens.

The rise in sex offenses is shocking. Last year, while the total number of crimes was leveling off, rape increased 5.9 percent, and this has been the case for the past 20 years when such crimes have increased 163 percent, according to reports on crimes received from local, county, and State law-enforcement agencies. You who have devoted your lives to treatment of offenders know that there are certain types of persons who are mentally and physically ill and need to be treated as much. You also know that there are types of individuals whose prognosis for normal adjustment is so remote as to be improbable. The time has come when society can better be protected by providing some means of enforced treatment for such people. Public health authorities may legally place a family in quarantine if they have a disease which is dangerous to others. The freedom of that family is restricted for the good of the community. If this is accepted as a proper health measure, then certainly there should be a quarantine for mentally ill criminals who should be released only upon certification of competent medical authorities who can also say when the facts justify it, "This man is mentally ill and we cannot approve his release until this illness is cured. He must be kept in quarantine."

Mental illness, emotional instability and abnormality are major problems in crime control just as certain diseases are problems in the health of a community. When official agencies receive information that a person convicted of a crime has a mental illness or abnormality which could endanger others, there should be a responsibility to advise proper law enforcement agencies of the facts. If the case is sufficiently acute, there should be a means, with all the proper safeguards for constitutional rights, whereby treatment could be enforced—even beyond the period of actual sentence, if necessary.

If, for example, the facts are known that a person has a proven record as a sex deviate, there is also a responsibility to see to it that proper authorities are notified so that they may be warned of a potential threat to their community.

If the present trend of fiendish crimes is to be reversed, there is a need for a new attitude and a determination to prevent such acts. It is already the experience of law enforcement that perhaps as many sex crimes

go unreported as are reported. If every sex offender knew that his name was on record, this in and of itself would be a powerful deterrent. If every sex offender knew there were ways and means by which he might get corrective treatment, the lives of potential victims as well as offenders and their families might be spared. A person suffering from contagious disease is removed from contact with healthy persons until the danger is past. So should the mentally ill criminal who endangers the safety of the community be treated. Law enforcement, of course, knows when an offender is placed on probation, but it seldom knows when one is placed on parole. It seems to me there is no valid reason why law enforcement officers should not know when a potential offender is released within their jurisdiction, just as health authorities should know when a typhoid carrier is around. The mere fact that a parolee knows that law enforcement has his identity could be another force of deterrence, and law enforcement could be of assistance in giving a helping hand to make parole more workable. This should be a cooperative effort.

Doubtless some of you already are thinking of reasons why this program I have suggested cannot be done. I could give you right now a dozen reasons why it would be difficult—but it is ridiculous to say it cannot be done to the everlasting benefit of the mentally ill and the community. It can be done if we work together and if you add your pool of ideas.

We complain about high taxes, but last year crime cost every man, woman and child in these United States $122, or a staggering estimated total of twenty billions of dollars. Perhaps this figure could become more meaningful if we realized that for every $1 spent on education, crime cost $1.46; and for every $1 which went to the churches of the Nation, $13 went to crime.

If we could but divert the waste of crime to constructive use—recruit and train the people so sorely needed in every phase of the administration of criminal justice and quarantine the mentally ill criminal until he is cured—the Nation would soon reap a marvelous profit. And there would be the added profit from a decline in sorrow, mental anguish and outright physical suffering resulting from crime.

The challenge in crime control is a challenge to all of us here this morning. We live with it. It is the responsibility of every citizen, of course, but it is our job—it is our basic responsibility, if we do not find the answers—they will not be found. We must provide the ideas and the leadership.

And we must work together in mutual understanding—or else we fail. We must not fail.

Grange and Farm Groups Show Great Interest in the Federal Highway Program

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 17, 1956

Mr. MACK of Washington. Mr. Speaker, correspondence which I am receiving indicates a great and growing interest in the passage of Federal interstate highway legislation this session.

Under leave to extend my remarks, I include the following resolution presented by a group of Washington State Granges indicating their support for such a program:

Whereas we are fully aware that our present systems of highways are far too inadequate to meet the constantly increasing burdens placed upon them by industrial and private use; and

Whereas it is imperative that we must have more, better, safer, wider highways to curtail the appalling, ever-increasing number of highway accidents of which last year alone saw 38,300 Americans (many of them children) killed in traffic accidents, while more than 1 million additional persons were injured, many of whom were permanently crippled; and

Whereas the proposed highway legislation, which calls for an additional spending during the next 10 years to build needed additional highways, will assure more employment and greater prosperity for years to come, inasmuch as it is reliably estimated that this program will create 200,000 additional, steady highway jobs: Therefore be it hereby

Resolved, That we, the members of St. Urban Grange, No. 648, and Adna Grange, No. 417, of Lewis County, State of Washington, in our annual gavel visitation meeting assembled at St. Urban Grange, Winlock, Lewis County, Wash., on this 12th day of April 1956, do hereby go on record urging enactment of highway legislation now in committee in the Congress of the United States, House of Representatives; and be it further

Resolved, That copies of this resolution be sent to Lewis County Pomona Grange and to United States Senator WARREN G. MAGNUSON, United States Senator HENRY M. JACKSON, Congressman at Large DON MAGNUSON, Congressman RUSSELL V. MACK, Third District of Washington.

EMIL HOFMANN,
Master, St. Urban Grange.
JAMES J. BLAKEMORE,
Master, Adna Grange.
HENRY E. STEARNS,
Master, Forest Grange.

WINLOCK, WASH., *April 12, 1956.*

Address by Former President Truman at the Annual Awards Dinner of the Overseas Press Club

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 17, 1956

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include the following address of a penetrating nature delivered by former President Harry S. Truman at the annual awards dinner of the Overseas Press Club on April 3, 1956:

The role of the foreign correspondent is a difficult one. In the first place, he must be able to understand what is going on in a most complicated world, and that is not easy. Second, he must be able to explain and interpret this to an all too indifferent public, and that part of the job is more difficult still. I'm sure that I don't need to persuade this audience that a successful foreign correspondent needs to be a gifted person. But I just want to let you know that I agree with you about it.

Today the foreign correspondent's job has taken on a great deal of added importance because it is the only source from which the American people can get the truth about what is going on in our Nation's external affairs.

We are all aware of the importance of having a press that keeps the public fully informed. But have you ever stopped to think about the unique necessity for this, as well as the unique difficulty, in the field of foreign affairs?

It's hard to fool the people about what's going on in this country. It can be done sometimes, but usually not for long. That is simply because a man is likely to believe his own senses about the things that go on right around him every day. For example, take the American farmer. He is being told from Washington that the Benson-Eisenhower farm program is good for him—that it's just what the doctor ordered, and that it is really much better than the unprecedented prosperity he enjoyed under the previous administration. The farmer has been hearing this for 3 years now. At first he may have believed it. But as time went on—as farm prices went lower and lower—as the farmer's bank account got smaller and his debts larger—as he had to give up thoughts of sending his children to college—things became pretty bad in the farming country and the farmer began to see the light. Now the farmer is not being fooled any more.

TRUTHFUL REPORTS VITAL

With foreign affairs it is different. Few of us have any first-hand contact with events outside our own country. Those events all seem rather distant and strange to us. All we know about them is only what other people tell us. And if these people don't tell us the truth, we may have a totally false understanding of events. At the same time, the world has developed to a point where events that occur in other countries are of overriding importance to us. The great issues which today confront us as a Nation have their origins in other countries just as much—perhaps even more—than in our own.

I need not recite for you in detail the factors that make this true. You know them as well as I—the trade and commerce which binds us so closely to the four corners of the earth that we would be helpless if they were severed; the modern miracles of transportation and communication that make us the close neighbors of 3 billion people of every race and description everywhere in the world; the awful means of destruction that can be delivered by our enemies upon our cities and by us upon theirs. You know about these things. We all know about them. But most of us here at home are preoccupied with events closer at hand. We forget how important the rest of the world really is. And we don't search out the facts about it as we should.

That is why the job of bringing the facts about the rest of the world to the American people is doubly difficult and important. We must know the facts and act on them if we are to have peace in the world and preserve our freedom and independence. At the same time we have a tendency to shut these facts out of our minds or they are crowded out by day-to-day happenings in our own communities. Someone has to bring this home to us—someone has to inform us and make us understand what is going on in foreign countries.

Normally this is a job which is shared by our Government and by the press; and it is a job to tax fully the best efforts of both. Today I question—to put it mildly—whether the Government is doing its share of the job. The President tells us that he is trying to delegate many of his duties and says that his associates can perform them as well as he can. When it comes to giving the people the real facts about foreign affairs, it appears to me that the administration has delegated that function—delegated it completely outside the Government altogether—has turned it over to the foreign correspondents of the press altogether.

Notice that I say facts. To have a false picture is as bad as having no information at all.

The world we live in today is a hard and difficult world. The job our Nation has to do is a hard and difficult job. It will require much money, much work, and perhaps, much sacrifice. There is no reason to believe that the American people will support the massive effort that is required unless they are told the full truth about the urgency and danger of the Communist threat.

But this is not what they have been told by the present administration. From the President's first state of the Union message, where he "unleased" Chiang Kai-shek, to the Secretary of State's complacent report on his latest trip, they have been telling the American people only what seems to be politically expedient at the moment. Sometimes the facts happen to coincide with what they say. More often, they do not.

CONFLICT IN DATA FOUND

I do not have any Central Intelligence Agency. I do not have any sources that can keep me as fully informed about foreign affairs as I had when I was in the White House. But I can read, and I do. I read what your newspapers and magazines print about conditions overseas. I read the statements and views of people I knew and trusted when I was President. I read the stories that come from our foreign correspondents. The things that you are writing are so different from the things that the administration is telling us that both cannot be right. As between the administration and you, I have made my choice. I may be accused of irresponsibility, but I believe you.

I believe the Communist threat is more dangerous now than ever before. I believe recent changes in Soviet tactics are not signs of failure, but evidence of growing economic power. As the Alsop brothers put it, if I may quote them without their permission:

"Except for Dulles, expert opinion unanimously attributes the important changes in the Kremlin's policy line to a new self-confidence, derived from the great improvements in Soviet military posture and gains in heavy industry."

These changes may reduce the danger of immediate armed conflict, but they are no ground for complacency or relaxation. I think it quite likely that the Communists will not start a major war so long as they can make sweeping progress toward their objectives by less violent methods. After all, why should they? But this makes their poison not one whit less deadly. This makes our struggle with them not one whit less urgent. On the contrary, it calls for renewed and expanded effort on our part.

If the struggle to win the confidence and support of the uncommitted peoples of the world is now to be fought in the field of economics, that gives us a great opportunity. For this is the field where we excel. But this is not going to be any pushover. The Soviet system—whether we like it or not, and I don't like it—has shown they have a method, a very effective method, of forming the capital needed for economic development. They will use this ability to the utmost in their effort to achieve world domination. We all know how ruthless they are, and we can be sure they will stop at nothing. Truth and honor mean nothing to them. We might as well understand that this is a contest that we have a chance to lose. It would be criminal and shameful if we were to lose, but it could happen.

I never did believe in half measures and certainly not when our existence is at stake. We ought to put into our foreign aid program whatever it takes to do the job. I see that the administration has asked for some expansion in the program, and I think the Congress ought to give the administration as much as it has asked for. Indeed, I'm afraid the administration has asked far too little rather than too much.

In fact, it appears doubtful if the administration comprehends at all the magnitude of the Soviet economic challenge or has any conception of a program adequate to meet it. The only foreign economic program this administration has ever had is the one inherited from us. They have administered it badly and allowed it to wither away in some important respects. But they have tried—after a fashion—to carry on our old program. While it is said that imitation is the sincerest form of flattery, I wish with all my heart that the Eisenhower administration would stop flattering us and develop something new to meet new conditions.

EXPORT OF CAPITAL NEEDED

It seems plain that the United States is going to have to export capital on a very considerable scale if the peoples who live from north Africa to Indonesia are to achieve economic development as free and independent peoples instead of satellites within the Communist system. Today these people stand among problems which press on them from every side, like a man up to his neck in water—a ripple may drown him. They must have, and will get, help from some outside quarter. If we do not help them, the Russians will. But we must make it plain to these peoples that we do not seek to limit their freedom by commitments of any sort. Rather we wish to help them develop in ways of their own choosing and establish their independence even more securely. In short, we need a bold, new program for foreign economic aid—and we don't have it.

Moreover, I think the administration is likely to have trouble getting from Congress even as much foreign aid as it has asked for. And it is the administration's own fault, because it has not been frank with the American people.

The American people will not support a vigorous foreign-aid program if they do not understand the need for it.

But instead of explaining the need, the Secretary of State tells us that Soviet policy has already failed and is brankrupt. The fact is that Communist policy has never been more aggressive than it is now—in its new form of economic and political penetration. Not since the end of the war has the Communist strategy been more effective and more dangerous. But the administration can't expect us to understand this if it continues to insist that Soviet policy is beaten. The Eisenhower administration's premature claims of success may well be the bar that prevents the actual achievement of success.

Unfortunately the penalties for the failures of those in power are not visited upon them alone. The fantasies of the Secretary of State make it all the more necessary for others to see things through. That imposes a special responsibility on the Americans who write about foreign affairs in this year of our Lord 1956.

I'm sure you'll do your best.

In doing that you will render a service of great value to your country, the greatest Republic in the history of the world.

Have Our Economists Thrown Us a Curve?

EXTENSION OF REMARKS

OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1956

Mr. HAYS of Ohio. Mr. Speaker, in view of the attempt of the Department of Agriculture under Mr. Benson to drive the one-family farm out of existence, of Mr. Benson's obvious leaning towards the processor instead of the farmer, and of his propaganda to make the consumer think that the farmer is getting rich at their expense, it seems to me that the following article from the Holstein-Friesian World of April 7 is extremely pertinent. Being in the dairy business myself I know that the facts contained in this article are true, and that the author has a very good grasp of the subject:

HAVE OUR ECONOMISTS THROWN US A CURVE?

(By Roland Ramsay)

Two years ago when our Government withdrew its rigid 90-percent support of dairy products Mr. Benson took this action because he was convinced that (1) high supports were pricing butter off the American table and (2) that high supports were stimulating overproduction of dairy products. The records show that due to the lower prices on butter and cheese and to the splendid work of the American Dairy Association in advertising dairy products he was right in his first contention but the records of the past 2 years show quite clearly that he was wrong in his contention that a lower support price would discourage overproduction.

The average American dairyman isn't in the business because he hopes to get rich at it nor does he milk too many cows because he wants to create a surplus. The size of his operations is based primarily upon the standard of living each dairyman wants for himself and family. He wants to have a good, comfortable home—he wants to be able to educate his children properly, and he wants to be able to pay his taxes and bills, ride in a decent car, be able to afford some of the machines that will lighten his work and lay up enough savings so he and his wife will not be a burden on the children in their old age.

Individual farms and dairy families meet this problem in their own way and milk the number of cows they do in order to supply the standard of living they want. The overproduction that brought on the abandonment of 90 percent support was primarily caused by the fact that things the dairyman had to buy to supply himself and family had been gradually increasing in price while the things the dairy farmer had to sell were gradually decreasing in price. The average dairyman had little choice but to milk a few more cows in order to maintain his economy.

Now the economists and writers for our nationally circulated farm magazines began at once to advise the dairy farmer how to cope with this new situation. Collectively the story runs about like this: The first thing they do is write off the 12-cow, 100-acre dairyman as simply out of the picture economically. They advise that 24 cows is the smallest number of cows a dairyman can survive with. They usually advise the 24-cow dairyman to take steps to increase his milking herd to 36 and they contend that the ideal size of a good, sound dairy operation under our present conditions is about 50 cows.

The articles then go on to show pictures of dairymen milking 24 to 36 cows per hour in a shiny new walk-through milking parlor, complete with pipeline and bulk tank. Next they show pictures of the dairyman grinding feed—grain coming down from overhead bins into an electrically driven grinder that delivers the ground and mixed feed up to other overhead bins that supply the cows by gravity with metered grain in the walk through and elsewhere about the farm as needed.

Another interesting picture shows the dairymen pressing the button that controls the machine that throws down the silage into the long feed bunks with the conveyor

chains that automatically shut off when the silage reaches the far end of the bunk. Still another favorite picture shows the dairy herd around a large roof-covered structure that holds a season's supply of chopped hay which feeds down with very little attention and keeps the herd hay happy the year around (of course the area around the hay feeder and silage bunks must be paved as well as much of the lots as possible).

These articles are all very interesting to us as dairymen, and most of us agree that we could handle lots larger herds than we now have if we had all those work- and time-saving features. The writers never get around to talking in terms of capital outlay required nor of interest, depreciation and added taxes and operating costs which, of course would vary from farm to farm. I have operated a 12-cow 105-acre farm since the fall of 1928, have ample buildings to handle this size herd—a 12 by 34 silo—a rotobaler to handle hay and bedding—a sprinkler system to insure plenty of hay and pasture as well as grain for my herd—a comfortable modern home and two paidup life insurance policies.

Assuming I am free of debts and could get all the money I needed at 5 percent to modernize my buildings and buy additional cows to bring my herd up to the 24-cow size the experts tell us is the minimum—how much would I have to borrow and would it be a paying proposition? I won't go into the gruesome details other than to suggest that by the time I had my bulk, walk-through and pipeline milker installed—the necessary alteration made to the barn and lots and the 12 additional cows bought I would have spent at least $8,000.

I would have to provide more calf sheds and lots and housing for 12 more cows—I would need another silo and the chopped hay structure and since one can hardly risk being able to always get a custom-hay chopper at the proper time each cutting to insure top quality hay I would no doubt end up buying a hay chopper, wagons, blower and tractor to pull it (by also buying the row attachment I could also fill my silos, you know). I still don't have the automatic silage feeding deal or the feed-grinding set-up but my tractor-pulled grinder already has the feed collector in the roof of the barn so that part isn't too bad.

But, even though I might find that I could milk and feed the 24-cow herd in the same time I do my present 12-cow herd, that doesn't mean I still have a one-man farm. Twice as many cattle take twice as much bedding and make twice as much manure. Twice as many acres of hay and pasture would require twice as much irrigation (or around-the-clock pumping much of the time) so I add 10 or 12 more cows in order to afford a year-round man.

Now then, how much have I spent and how profitable will be the investment? Well, it all depends. A fellow could easily spend $30,000 if he really fixed things up right or, if he was a handy man with tools, did most of his own fixing up and bought a second-hand hay chopper, wagons, blower and tractor, he might get set up for $20,000.

So, for example, let's say that for $20,000 I have been able to transform my 12-cow, 105-acre farm into a 36-cow dairy. Boiled down to facts the problem is, Will the profit from 24 extra cows pay the interest on $20,000 or $1,000 plus the depreciation, taxes, repairs, insurance on this added investment? At only 10 percent this would mean $2,000 plus the wages of a year-around man at $300 per month or a total of $6,600.

If the 24 added cows were able to return an average of $275 each above feed cost, and all expenses were included in the 10 percent taken for depreciation, etc., I would just balance out, but after I got through paying the taxes, repairs, veterinarian, etc., chargeable to these 24 cows, there wouldn't actually be anything left of the $2,000, so I would have little or nothing to pay the principal off at the bank. Suppose I had invested $30,000, then I would have had to average $337.50 per cow over feed cost just to break even. Considering that the average DHIA dairy cow returns less than $200 above feed cost it's pretty hard to even project anything like a paying proposition.

Just how much change there is going on in the dairy business no one really knows. More than the usual number of small-dairy farmers have quit milking cows but a lot of the men that were milking 18 or 20 cows are fixed up to milk 40 cows. USDA officials report more and more milk finding its way to our markets, and as it will take 2 or 3 more years to feel the full effects of our dairy expansion program we can only hope that we do not find ourselves in the same position the pork producers were in this past year.

If in the next 2 or 3 years we find that increased consumption of dairy products has kept pace with the increased production of milk so that the price received for milk stays about steady most dairymen will manage to get along in pretty fair shape. But, if production runs ahead of consumption to any very great additional degree, dairymen will feel the tightening of the squeeze and those with heavy indebtedness will be in trouble.

The same economists and writers that urged dairy expansion as a way to cope with the removal of dairy products from 90 percent parity—the same guys that wrote off the 12-cow, 100-acre dairy farm and urged them to go to at least 24 or, better still, 36 cows can really write a swell article showing you why you are going broke with this 36-cow herd. We all know the story and know that it is true, you know, that in the average 36-cow dairy herd, if feed costs and actual average costs chargeable to each dairy cow were determined, the 12 least profitable cows would show a definite loss, the middle 12 would just about break even, and the top 12 were really making about what the poorest 12 lost. The writers would say to get rid of those cows that were losing you money. They would point out that it's the unprofitable cows that produce the surplus and while they would tell you that with the 12 losing cows gone you might be able to feed and care for the middle 12 to the point where they might show some profit, really the only smart thing to do was to cut clear back to the 12 cows that were really making a profit. Then they would go into ecstasy about the traditional family-sized farm.

The point is the American farmer has learned to rely on our great farm publications for sound advice and the question is just how sound is it to advise dairymen to increase production to counteract the effect of too much production.

I am not a pessimist or an alarmist. I am sure hundreds of dairymen have taken the advice of farm papers and have or are in the process of greatly increasing their dairy herds. However, American dairymen are a pretty hardheaded, straight-thinking class of people and I doubt very much if they allow themselves to be carried away by the program to the point where we will have milk running out our ears. I don't believe any economist can sit in an air-conditioned office and correctly tell a dairyman how large his farm should be and how many cows he has to milk to make a living.

The correct size of a dairyman's operations depends upon the size of his farm, the buildings he has, and, the amount of available dairy minded help he has, and with all this his success depends primarily on his ability as a farmer and cowman and the "dairy inheritance" of his cows. A good dairyman on a 100-acre farm with 12 or 15 cows that average $300 a year over feed cost is in a better position than the fellow with 36 cows that only average $200 over feed cost, or, the man with 50 cows that average $160. The size of a dairyman's monthly milk check is not a very good indication of his annual net income.

Why didn't our economists tell the dairymen that it's the unprofitable cow that is producing the surplus. Why didn't they preach the gospel of DHIA testing and show the dairyman where, by eliminating say 10 percent of his least profitable cows he could actually net more profit from his remaining herd than he realized from the whole herd under 90 percent parity, and in so doing would remove all surplus which would soon advance the price of dairy products to 100 parity on its own merits?

There is nothing wrong with walk-through milking parlors, pipeline milking and bulk cooling tanks or any of the many ways a dairyman can lighten his workload if he can eliminate a couple of $300 a month 44 hours a week men, or cut the family's working hours down to a reasonable time. I am a great believer in open-shed housing for my cattle, but I would hesitate to recommend all dairymen to adapt this system. In our great dairy districts there are thousands of big red dairy barns with 40 or 50 stanchions, mechanical gutter cleaners, two big silos at the end and ample hay storage overhead. Such barns just don't convert to loose housing very well. It would be lots more satisfactory to replace those old stanchions with as many comfort stalls as will fit in (the average cow will produce about 10 percent more milk in a comfort stall than a regular stanchion), go ahead and install a pipeline milker and you have a pretty swell layout. If the 10 or 12 cows you had to eliminate from your herd to make room for the extra wide stalls were low-profit or money-losing cows anyway you would be better off without them and if you could eliminate one man it would make all the difference in the world in your net income.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Appendix

Disarmament

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, April 18, 1956

Mr. HUMPHREY. Mr. President, on February 27, 1956, I addressed the Conference of Organizations on the United Nations, called by the American Association for the United Nations, on the subject of disarmament. I ask unanimous consent to have this speech inserted in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. HUBERT H. HUMPHREY, OF MINNESOTA, AT THE SECTION MEETING ON DISARMAMENT AT THE CONFERENCE OF ORGANIZATIONS ON THE UNITED NATIONS, CALLED BY THE AMERICAN ASSOCIATION FOR THE UNITED NATIONS, FEBRUARY 27, 1956, WASHINGTON, D. C.

Chairman Bolte, Mrs. Roosevelt, Governor Stassen, and friends, it is a particular pleasure to be here today with you and to share this platform both with the President's personal representative in the field of disarmament and with the leaders of the great organizations throughout this country that are dedicating their talents and energies to these problems of overriding international importance. I see many friends in this audience; representatives from every area of American life—labor, business, agriculture, the professions, and our great organizations of fraternal and religious faith. Regardless of your particular interests, you are here because you believe that our country and its freedoms would not survive without a citizenship that was well informed. You are here to inform yourselves through your own deliberations and then to take that information back to the groups you represent. I know that you do not have to be recommissioned for that assignment, but it seems to me tremendously important that the flow of information to your constituency be most certain and most comprehensive. The job of our government would be far more difficult if it were not for people with a sense of community responsibility—people who are at work constantly alerting and informing the public. Just as you have helped to inform others, including Senators and appointees of the President, it is the obligation of your government to provide accurate and detailed information on all matters of foreign policy, national security and disarmament.

I say this in connection with all the manifold problems of national and international policy which now confront us. During the past few days you have been canvassing the broad issues of economic development, collective security, atoms for peace, and colonialism. Today we are turning our attention to the opportunity and the challenge of disarmament, but in doing so, I know we will not forget how interrelated all of these problems are.

This interrelationship was frankly recognized 10 years ago at the birth of the United Nations in San Francisco. The new world organization was dedicated not only to a peaceful world, but to a better world. Everyone acknowledged that security alone was not enough, even though progress in the long run would be impossible without it. Thus article 1 of the United Nations Charter spelled out the two major goals of the United Nations as follows:

1. "To maintain international peace and security, and to that end, to take effective collective measures for the prevention and removal of threats to the peace."

2. "To achieve international cooperation in solving international problems of an economic, social, cultural or humanitarian character."

Thus, there was an early admission that security alone was too hollow an objective. The delegates to the founding conference at San Francisco in 1945 knew in their hearts that security has meaning primarily for those who have something to preserve.

Therefore, as we concentrate on this subject of disarmament, let us never forget that there are other immediate everyday problems that are simultaneously stirring the hearts and hopes of men and women throughout the world. If disarmament itself is to make any headway, people everywhere must have a clear idea of the kind of world that a disarmed world might be. There must be a great incentive. If the net effect of disarmament would be to freeze the status quo, to stifle change, to prevent the correction of existing abuses, much of its attractiveness would fade away.

Actually the pathway to disarmament may very well involve utilizing the great international agencies such as WHO, UNESCO, FAO, the technical assistance programs, capital development programs—all of which have a way of firming up the economies of the nations of the world—so that our international mental health is more conducive to a sane, sensible discussion of the problems of disarmament.

We must always remember that we live and labor in a world of revolution. Protecting and enlarging the freedom of the two-thirds of the world which is still outside Communist control will take more than military alliances to which we seem to be unduly addicted. It will take more than a stockpile of bombs, and more than threats to use them. It is a false notion though widely held, that today's tensions and torments are entirely caused by the Soviet drive for expansion and that military deterrents, therefore, are the chief answers.

Aggressive Communist designs are, to be sure, in the forefront of our current foreign policy predicament, but this Communist threat occurs in the midst of a world-wide revolution for freedom and for material progress. In the underdeveloped countries of Asia, Africa and South America, forces are now at work which will rank among the great movements of history, as important as the Renaissance and the Industrial Revolution.

More than a billion people are on their way to political self-determination, economic development, and human dignity. They are the so-called "underdeveloped nations" and many of them happen to be uncommitted to either side in the cold war.

The Communists have now recognized this Twentieth Century revolution and have sought to turn it to communism's advantage. They have sought to preempt it, to claim it, to own it, and to direct it. We, on the other hand, are today running grave risks of failing to take it adequately into account, and of failing to identify this revolution with our own historic tradition and continuing ideals.

Many of us have been deeply disturbed over the inadequacies of public understanding and of official policy on this new challenge now facing us. I am convinced, for example, that if we are to match the new Soviet political and economic offensive, we must reexamine and liberalize our approach to the underdeveloped—the uncommitted—nations of the world. In those nations the demands for self-government, human dignity, and economic progress are now irrepressible. We had better face up to that. Our own national history symbolizes these self-same demands. We will be faithless to our tradition if we neglect this new opportunity to help other nations reassert our common principles.

I am sure that the uncommitted peoples of the world have been impressed during the last few days with the President's dramatic step forward in sharing "atoms for peace." Let us hope, however, that our approach to peaceful atomic assistance to other nations will proceed within the framework of the United Nations. The President himself, in his famous "atoms for peace" speech to the General Assembly in December 1953, said that he "would expect that (an international atomic energy agency) would be set up under the aegis of the United Nations." We all know that bilateral arrangements may be helpful and at times essential. But I think it would be a mistake to concentrate on these bilateral arrangements as an exclusive pattern for atomic assistance. Too much bilateralism can detract from, and ultimately erode, the multilateral concepts which are the foundation of the United Nations.

The atoms for peace proposals are important to disarmament, too, because they foreshadow the kind of life that a peaceful, disarmed world would allow to mankind.

In turning to a discussion of disarmament itself, therefore, let us remember that neither it, nor the other problems that we have just mentioned, can be pursued in a vacuum. That is what is meant too by the warning which we frequently hear, that large-scale political settlements are the prerequisite to progress on disarmament.

It is a legitimate question to ask whether it is possible to think seriously of disarmament so long as the great powers find no ground for agreement on the basic issues that divide them. It is tempting, of course, especially after the many disappointments that we have suffered, to answer "No" to this question at the outset and let it go at that. We have had ample disillusionment in the past when disarmament negotiations have had to be broken off during the tension-ridden periods of the Berlin blockade and the Korean war.

It is quite true, therefore, that chances for disarmament may depend in part on the

climate of the world political situation. It may be true, as some say, that no disarmament agreement can possibly be negotiated without a political settlement of the German question or the Formosan Straits question.

But to this question, as to most important questions, there is no simple answer. Undoubtedly, the prospects for disarmament are curtailed by the presence of thorny, unanswered political problems. It is equally true, however, that there are crucial divergencies of interests, important diplomatic conflicts, that cannot be solved, either, as long as the armament race goes on. It can be argued that they in turn cannot be brought close to a solution until the framework of a disarmament agreement is firmly established. I know that every person in this room is acutely aware of the danger of war which continues to confront us. I think we know or sense that another war, if it comes, may well destroy our civilization. Is it any wonder that people in this country are united in a deep revulsion to war? This revulsion is shared by people in Europe and Asia and elsewhere. I believe that it is shared by the peoples of the Soviet Union. It may be that an awareness of this revulsion has even penetrated the walls of the Kremlin. Mr. Khrushchev's speech to the 20th Congress of the Soviet Communist Party indicates that he is beginning to appreciate the fact—one which was not, may I say, recognized by his predecessor, Mr. Stalin—that it will not be capitalist countries alone which will be blown up in an atomic war.

This universal abhorrence of war gives us a base to build on. It does not, however, guarantee that we shall avoid a tragic conflict. We must come to grips with the specific problems which lead us to war. One of these problems is the rapid increase of armaments and the incredible increase in their destructive capacity.

It was a concern with this aspect of the problem that led me to introduce Senate Resolution 93, which set up a special Subcommittee on Disarmament. The challenge of this undertaking is enormous. I do not have any simple answers any more than do Mr. Stassen and the dozens of other people in the executive branch of the Government who are working on this problem. The work of the subcommittee has just begun. Certain fundamental principles, however, have already started to emerge. They are the principles which I believe should govern our approach to the problem of disarmament.

First, any disarmament agreement or proposal must, of course, protect the national security of the United States and other nations. It cannot have loopholes which give a potential agressor the advantage he needs to start a war and to win it. Each proposal must be carefully examined before we can be sure that our national security will be preserved. And what we do ourselves we must expect others to do. Protection of the national security is a function of all governments. We can expect others to pursue it at least as zealously as we do ourselves. I do not question their right to do so. I simply stress that we must be equally aware not only of our right but of our duty in this respect.

The protection of national security leads us directly to the second principle which must operate in disarmament negotiations. It is this: No proposal, no matter how good it looks and regardless of who proposes it, should lead us to let down our guard. Until the agreement or agreements are signed by all the necessary parties, until they can go into effect—and prove their effectiveness—the United States and its allies throughout the free world must maintain their proportionate defensive strength.

We cannot let the lofty words, our own or anyone else's, tempt us to think that now is the time to reduce essential expenditures for national defense when there is no armament reduction agreement. The time to disarm is after the agreement to disarm, and not before. No matter how appealing a balanced budget, it must not be pursued, as it appears to me it is now being pursued, at the risk of jeopardizing our capacity for defense or weakening friendly nations abroad.

I might add here that the actions of the United States in all of these areas—economic, military, and political—tend to set the pace. If allied nations see us thinking and acting primarily in terms of economy, they are likely to follow suit. If we shirk our responsibilities, they will do the same. Leadership imposes responsibility to lead—to set the pace—to establish the standards and the guidelines by clear and unmistakable policies and performance. I have yet to see the clear outlines of American policy on many vital subjects.

The third principle has to do with perhaps the most vital element in the maintenance of a democratic and self-governing society. This is the principle of an informed public. I know and you know that the men who are conducting disarmament negotiations, and planning military, atomic, and foreign policy are loyal citizens who have the interests of their country at heart. But they are not omnipotent. They are men with all of the limitations and weaknesses of men. They are not the sole judges as to what facts we should have and what developments might disturb us and discourage us from thinking that all is not well in the world. I have never thought that I needed to be spoon-fed by public relations men and neither do the American people feel that they need to be spoon-fed. Possibly we can't know everything that is going on, but we do need to know a lot more than we know now. There is a tendency here in America today, not only on questions of disarmament, but in virtually every activity of our Government to clamp the secrecy label on far too many items, to keep facts bottled up even after they are revealed and known in many other parts of the world.

The special Senate Subcommittee on Disarmament, of which I am chairman, hopes to conduct virtually all of its work in full public view. There are far too many executive sessions in this city, ladies and gentlemen. There needs to be more open discussion. As chairman of this subcommittee, I intend to do everything I can to see to it that the important facts, the legitimate information on all phases of this subject, are published and made available and understandable to all Members of the Senate, and through them to the American people.

The fourth principle which must guide our approach to disarmament is sincerity—sincerity of purpose. By its very nature, the Soviet system of communism produces men fanatically clever in the art of deception, hypocrisy, and duplicity. There is always a danger that as a result of our frustrating experience of trying to deal with them, some of those responsible for carrying out our policy may tend to take on some of these same characteristics. In our struggle against communism we must be careful not to ape the totalitarian. In our efforts to win this great struggle against forces of tyranny, let us not take on the manners and the habits of the tyrant. Psychological warriors are not going to win either a war or a peace. They may win skirmishes, but they do so at the risk of losing for us the great issues. I should not like to see the day when this country begins to use words in matters of life and death in the fashion of the advertisers. There is no brand name for peace; it can't be spelled backwards. The peace and disarmament proposals which this country makes must be supported by the full conviction that they are workable, plausible, and that they will genuinely contribute to a solution of the basic problem.

As I see it, therefore, the efforts for disarmament are being advanced on three fronts: In the United Nations, the executive branch of our Goverenment, and the Congress of the United States. All of these are essential, if our hopes for effective control and restriction of armaments are to be realized as a practical achievement. The details of what is going on within the first two fronts come to me, as to you, from published reports, statements of our official representatives, and through the newspapers. Many of you have also had reports from your own official observers at the United Nations and your legislative representatives here in Washington. So if I concentrate the rest of my remarks on the Senate work and my views of what we may do, I hope you will understand why, because you have possibly much more information about the first two fronts than I have myself. I would hope that my good friend, Governor Stassen, would see to it that the executive branch does a little more proposing for us and for the world in this field of disarmament. Because after all the executive branch conducts the foreign policy of the United States and the Senate would have little opportunity to dispose if the executive branch never proposed.

With respect to the role of the United Nations, I am saying nothing new to this group when I say that we would not know nearly as much as we do today about the problems of disarmament and the efforts required to attain it if it were not for the United Nations.

But I am here in my capacity as a member of the Senate. It is well to remember that even if the executive branch came forth with brilliant plans, unassailable in their logic, and even if they were accepted by all of the members of the United Nations, they could not come into effect without the participation of the Congress of the United States. Now this is not to try to overawe you with our importance. It is merely to point up an essential feature of our constitutional system. It is also to remind you that the Senate cannot act effectively unless it is fully informed and has sufficient information to render sound judgments. This is the principal reason why last June, I introduced Senate Resolution 93 setting up this special Subcommittee on Disarmament.

The Senate cannot do the negotiating with foreign powers on the subject of disarmament. But we are a vehicle to make certain that the agreements reached will fulfill the needs of the American people and meet the test of acceptability by them. Furthermore, we in the Congress are a means through which the American people have an opportunity to express their views, their hopes, yes, even, their doubts of disarmament, and through which they may learn how present disarmament proposals can affect their future lives.

Now, a few words about this special committee. It is bipartisan: 12 members, 6 Republicans and 6 Democrats. It would be premature to speculate now on the conclusions we may reach. But at the present time the subcommittee has three lines of approach.

First, we intend to have members of the executive branch discuss at public hearings the Government's policy on disarmament and to give us their appraisal of the possibilities of reaching a solution. Governor Stassen led the witnesses with his opening presentation on January 25. He will be followed on Wednesday of this week, February 29, by the Secretary of State, Mr. John Foster Dulles. On March 7, Adm. Lewis Strauss, Chairman of the Atomic Energy Commission, and Mr. Theodore Streibert, Director of the United States Information Agency, will appear. On that same day, one of my colleagues, Senator FLANDERS, of Vermont, will

testify before the subcommittee. He has, as you know, dedicated much of his life to the disarmament cause. On March 15, these gentlemen will be followed by Secretary of Defense Mr. Charles E. Wilson, who will bring to us the critically important views of the Defense Establishment.

Then the subcommittee's second line of approach will be to hold hearings both here and outside of Washington so that we may have the benefit of the views of experts and informed, interested private organizations and citizens. These hearings, I believe, will be somewhat unique. They will be in two parts. The first part of the hearing will consist of testimony from experts, largely men and women at our universities who have made a special study of disarmament. They will be asked to summarize the results of their research and study and pool their knowledge in an effort to assist us in our work. The second part of the hearings will be devoted to those individuals and groups who wish to present their views to the subcommittee. We need to have a good cross-section of the ideas of the people of the United States on this question in all parts of the country and we intend, if possible, to go out and get it.

The third approach of the subcommittee is to commission a series of staff studies. Each will present an aspect of the problem of control and reduction of armaments. We hope that these studies will assist us and other interested Americans to understand more clearly the dimensions of the disarmament problem and the issues which arise from it. The first of these studies has already been published. It deals with the organization of the executive branch to handle disarmament questions. That study itself revealed some of the problems.

For example, I came to sympathize with Governor Stassen in his responsibility. In addition to the Governor's office, 3 executive departments with numerous subbureaus, 2 agencies, 1 commission, 1 mission, 1 council, and 2 boards are involved in disarmament matters.[1]

I hope that while you follow the work of this subcommittee you will also help us. I hope you will make known to us the conclusions that you reach here at this meeting, and I solicit these conclusions and recommendations. As leaders of some of the most important organizations serving the public interest there are contributions you definitely can make to peace and security of the world.

First, you can help by continuing to keep informed. I want to emphasize again that there are no shortcuts. There is a good deal of homework that has to be done by the American people in these crucial areas of national security, foreign policy and disarmament.

Second, you can help bring a sense of realism to the consideration of disarmament by reminding your members of the real dilemma posed by this question. One horn of the dilemma is that we cannot hope to have real peace so long as we and the rest of the world race to build more deadly weapons. The other is that we must not be led or tricked into unilateral disarmament which leaves us and the other free nations defenseless against a potential aggressor.

A third contribution you can make is to caution patience. Disarmament is as hard a problem as we have in the entire field of foreign policy. We Americans have often tended to believe that each defined problem carriers with it a possible solution. In the disarmament field, that might not be true even if each nation would define the problems the same way. A difficulty with disarmament, however, seems to be that definitions are often as lacking as solutions.

Patience can be helpful in this process. Perhaps patience will help in connection with the President's aerial inspection plan. The Government first talked about this in 1946.[2] In 1952 our deputy representative on the United Nations Disarmament Commission, described the use of aerial survey in a working paper submitted to the Commission on "Proposals for Progressive and Continuing Disclosure and Verification of Armed Forces and Armaments." Now the idea has been brought back to life in a somewhat different context. Perhaps patience will gain acceptability for it. That remains to be seen.

But patience is not an excuse for inaction or indifference. You are going to be discussing disarmament later on in small groups. I'd like to pose some questions for you to consider. They won't necessarily be easily answered. Perhaps some cannot be answered at all at this time. But they are questions which I have been asking myself, which my mail reveals, and which I would like to share with you.

Take, for example, the President's aerial inspection plan.

Can aerial reconnaissance alone detect each and every military maneuver of another country? If it can't, are we in possible trouble by proposing it or our accepting it? Should aerial inspection include the entire area in which a potential enemy has control or has control or has bases or has aliances? Even if we reach agreement on the principle of aerial inspection, some commentators contend that it is not fool-proof since there is no ostensible difference between a flight or bombers taking off on a training mission and one taking off with a load of H-bombs in the bomb shafts.

It has been suggested that progress on an overall plan for the reduction and control of armaments must be suspended until a way can be found to detect nuclear weapons which have been previously manufactured and then hidden. Does this mean we have to give up on trying to reach agreement on armed forces and conventional weapons too? The aerial inspection plan is called a beginning. I believe it was said to be a gateway. Is this the only beginning that can be made? Are we to stand with this one proposal committing ourselves almost entirely to this one to the exclusion of others? We are told some of the best brains in the Government are working on this problem, but we have no plan except a proposal which is said at best to prevent a surprise atomic attack between two countries. And I want you to ponder that for a moment. The plan that we have today, which seems to be the core of the American disarmament proposal, if you can call it disarmament, is one merely of being able to ascertain what the participants may do to apprehend an attack.

The world applauded the President's initiative in making the open-skies proposal at the summit conference. But there have been indications since that the world is somewhat worried about our sense of followthrough. For instance, the distinguished French representative on the United Nations Disarmament Commission, Mr. Jules Moch, has flatly stated: "Never have I believed that a formula for control without disarmament would receive the unanimous support of the governments—any more than a formula for disarmament without control."

Mr. Moch himself has proposed a three-point objective for further disarmament conversations: (1) no control without disarmament; (2) no disarmament without control; but (3) step by step, disarmament over all activities that can be controlled.

It is my personal conviction that the situation requires a reexamination at least on the part of the western representatives at the new London conference, of all of the major proposals put forward by President Eisenhower, Prime Minister Eden, and the then Premier of France—Premier Faure—at the summit conference last July.

If we ever expect disarmament to come, we need the world working with us. We do not seem to have the world working with us now, as hard as it might. In all humility, I do not think we are pushing ourselves on this issue as hard as we should.

The Picasso peace dove symbolizes the beguiling success which the Soviet peace campaign has had in many areas of the world. Strangely enough among many millions of non-Communist people, the popular impression today is that the Soviet Union, not the United States, has been most insistent on halting the arms race. No impression could be more damaging to America's prestige abroad. And, of course, no impression could be more false. But, as one who has been in politics, I have found much—sometimes to my sorrow—that what people believe is not always the truth.

Since 1947 when the Soviet threat of aggression and subversion became fully evident to us, American policymakers have assumed that its nature and dimensions were equally evident to others. This led us seriously to underrate the effectiveness of Russian propaganda on peace and disarmament. The fact that much of the world has forgotten our own early imaginative proposals for atomic energy control and disarmament—and we were the first nation to make these proposals—is indicative of a major failure of our information program in recent years. It may also be indicative of the fact that louder and more strident voices have talked about dropping bombs and using massive retaliation rather than constantly emphasizing the potentialities of peace.

Let us reassert our leadership on this matter all along the line. We need the overwhelming majority of the members of the United Nations with us on this great issue of disarmament. I don't think we can make real progress without their help.

We are reassured that other nations are with us because they voted overwhelmingly in the United Nations General Assembly for the United States resolution on aerial inspection. But what are they themselves doing on this question? Have we encouraged them to make as full a contribution to the solution of this problem as we might? These questions are not rhetorical. They are asked in a most earnest search for help on this key issue. I shall be interested to see what your discussions produce.

In military language defense is often spoken of in terms of the long pull ahead. Well, I want to close on the theme of the long pull ahead for peace.

It is a mistake, in my judgment, to say that we are going to get disarmament this year or next year or the year after. It is a mistake to paint a smilingly optimistic picture of the prospects for peace. The disarmament problem, much less the total problem of peace, is not going to be solved either by wishful thinking by advertising or by half-hearted attempts. It will require hard work—sacrificial labor—at many points. It will require some fresh bearings for our foreign policy. I am confident, however, that if all of us in all sincerity devote our efforts to this question—if the people whose stake

[2] Description of aerial inspection contained in the First Report of the U. N. Atomic Energy Commission, 1946.

in this matter is life itself, if you who represent so many groups who have devoted years to the problem of world peace, if Governor Stassen with the boards and agencies of the executive branch, if the Senate and last but not the least, the United Nations—if all of us pull together we can begin to frame our hopes for peace with the realities of peace. We can give substance to the words of a man with whom I have not always agreed, but with whose words I should like to close.

In his remarkable speech before an American Legion convention in Los Angeles a year ago, Gen. Douglas MacArthur forcefully stated the central challenge ahead. He said: "We are in a new era. Old methods no longer suffice. We must break out of the straitjacket of the past. There must always be one to lead, and we should be that one. We should now proclaim our readiness in concert with the great powers of the world to abolish war. The result might be magical."

Indeed, it might.

Can We Halt the Race for Atomic Arms?

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Wednesday, April 18, 1956

Mr. ANDERSON. Mr. President, on April 6 I delivered at the sixth annual conference on high energy nuclear physics, in Rochester, N. Y., an address entitled "Can We Halt the Race for Atomic Arms?" I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CAN WE HALT THE RACE FOR ATOMIC ARMS?
(Address of Hon. CLINTON P. ANDERSON, of New Mexico)

A New England author reminded us many years ago that trouble is like hot weather: It sours milk and sweetens apples.

The power of the atom has its twin aspects: it can blow whole cities to bits; yet it might bind this frightened world together.

Somewhere between the blast of Hiroshima and the hoped-for dawn of such a millenium of perpetual peace lies the no-man's land we now so timidly explore—a narrow strip of neutral territory between the barbed-wire entanglements of the world's great armed camps. In it labor the men of science and religion and politices, the possessors of faith and hope, who believe that destruction need not be the destiny of our day and civilization, who know that it is possible to be secure as well by the majesty of what we do as by the might of what we have, and who trust that the intelligence which enables us to split the atom for a bomb will in time teach us to use the split atom for the advancement of man and the glory of his God.

My academic training gives me no right to speak at a meeting called to discuss problems of high energy physics. My purpose this evening is to ask if there is a role that you men of science may play in proposing an affirmative answer to the question: Can we halt the race for atomic arms?

Day by day in the Congress of the United States we are alerted to that question. It colors the debate on the size of our military establishment. It increases as our agricultural storehouses fill and overflow. It influences the volume of our foreign aid. It throws into sharp controversy the relative value of guided missiles and jet aircraft. It builds a nuclear Navy and equips an atomic Army. We know all about Nike batteries; we watch ground-to-air, air-to-ground and air-to-air encounters. But we find no peace.

And yet, through all our thinking runs the belief that the true significance and greater ultimate effect of atomic energy for the human race will come, not from its destructive capabilities but from its contributions to the betterment of man's lot upon this earth. The weapons of mass destruction are impressive, but so would be the fruits of peace. The difficulty has been that the power to destroy comes before and grows faster than the power to build.

Has that not been the story of mankind? Are not the destructive uses of power the simplest and those most likely first to occur when a new source is discovered?

Certainly man's first experience with chemical and electronic energy as released in an ordinary fire told him of its destructive character. When forests spanned this continent from the Atlantic to the Pacific, our ancestors saw fires originate in lightning, which itself was a source of terror and disaster, and then saw the flames reach up to topple the mightiest trees. They ran for their lives from the fire, and the wild animals of the field and forest ran with them. It took generations to learn how to tame the elemental force of fire, to bend it to their own purposes in the cooking of food, the refining of ores and the casting of metals. Likewise, even though our atomic age had its origin in the New Mexico desert, when a new ray, brighter than the New Mexico sun, lit up the landscape, even though the toll of human life that followed in Japan shocked the sensibilities of the warring world, we look forward to a new age of power and plenty with new servants to do man's work and to raise the standard of living throughout the world.

There is in this new atomic power one additional hopeful element. It took our aboriginal ancestors generation upon generation to learn to tame the energy of fire, but we in this great scientific era have a right to believe the acceleration which we see on all sides today in the growth of technology may be matched, at least to some extent, by an acceleration in the rate at which men of different national origins may learn to meet together in a common need to bring under control and put to beneficial use the immense forces of atomic energy.

This has been a harsh chapter in the history of our world. This new power which promises so much has thus far increased some of our problems and, if we look only at the surface, has made more difficult the eventual arrival of worldwide peace and the utilization throughout the earth of nuclear power.

The conviction is growing that disarmament, the sense in which it was proposed and may have been possible from 1945 to 1948, has now become impossible. There was once a day when a rigid system of inspection could have prevented the growth of dangerous stockpiles of fissionable materials for military use, but in the last decade the sizes of stockpiles held by the principal atomic powers have presumably grown large enough that substantional amounts could be secreted before any inspection system begins, and would be adequate for a devastating attack if one of the powers so chose. But wholly apart from this question of secreting materials before initiating inspection, it might be recognized that even if that did not occur and a rigid inspection system and control of materials were imposed, then still in the event of war, the facilities which have grown up for peacetime uses of atomic energy are of such productive capacity that it would not be long after the outbreak of war that adequate materials would have been produced for full scale atomic devastation.

Moreover, we should not restrict ourselves merely to consideration of hazards implicit in wars of annihilation with atomic weapons. In technology applied to military ends, novelty is ever a prime goal. Thus there is the probability that a war between major powers will lead to types of destruction of a nature and scope not yet conceived, much less demonstrated.

Modern war makes certain for all participants their near annihilation and makes military conquest utterly illogical and absurd. The great powers of today thus find themselves in a sort of uneasy stalemate. Each is concerned with maintaining heavy retliatory forces to insure that the other dare not risk the gamble of military conquest; but in turn dares not risk it on his own save as a result of monstrous blunder.

While much time will pass before we work our way out of our current military stalemate, certainly it is a hazardous stalemate which no one likes, and it may have merit only if we use the time it provides to take advantage of the evident value of peaceful collaboration on projects of common concern. Says the editor of the Bulletin of Atomic Scientists, "Atomic deadlock can have positive value only if man uses the breathing spell it provides to develop a permanent foundation for peace without terror."

On the one hand we may strive to use this period for creating mutual respect for, and consent to use, the machinery of an expanded and strengthened United Nations to mediate international disputes, and to diminish tensions arising from international rivalries. On the other hand, we may move toward direct collaboration on technical projects for which the high level of modern technology makes such cooperation unusually productive and beneficial to all concerned.

Here I would like to mention several projects which seem especially appropriate for joint developments in world laboratories. But before doing so, let us look at some road blocks in that path.

Restrictions on free travel and free exchange of information have become increasingly irksome in recent years. These restrictions have fallen heavily on many scientists, on people in the arts, on businessmen, sometimes on religious leaders or other people whose interests and pursuits are not confined by national borders. The justification of these restrictions is the implicit argument that somehow they increase the national security and well-being of the Nation that applies them. But today with the rapid approach of the time when any country which launches atomic warfare can create untold damage at will, we need to examine whether we can remove many of our restrictions on free travel and exchange of information. We need to encourage, by whatever means we can, the spirit of international cooperation and openness which will minimize the chances of a misunderstanding—an accidental spark that would lead to disaster.

One step we can take in this direction is to remove our present restrictions on transmission of nonsecret scientific information between nations. The United States has helped to foster such restrictions but their contribution to our security is open to question. We know that such measures foster fear and suspicion rather than cooperation and understanding. They decrease the rate of gain of knowledge which is at the maximum only when free communication exists. Physical truths cannot be protected by such policies. They are everywhere the same—equally measurable in any laboratory.

We can break down barriers in communications still further by encouraging an expansion in our present system of exchange of teachers and students between nations. Most of our American universities do not

have visiting professors from other lands on their facilities but would be happy to have them. Many of our own scientists go abroad to study and teach in foreign institutions. They come back with new ideas, a fresher outlook on their own problems which cannot help but be of benefit to science as a whole. An increase in opportunities for exchange of faculty and students between our great institutions of learning would be an important integrating factor in our pursuit of knowledge. We have plenty of disintegrating influences; we need men and women who are concerned with mutal problems and prepared to dedicate themselves to their solution.

The importance of the international meetings of the kind being held here in Rochester cannot be overemphasized. Information exchanged between participants will hasten the day when science will understand the secrets of the nucleus and of fundamental particles, and move man another step forward in his understanding of the universe about him.

A further measure we might well undertake now to promote a spirit of international cooperation would be the establishment of a world passport, which would be granted annually to a select list of nominess from all over the world. Such a passport would permit its holder to travel freely in lands of all member nations. A list of nominees for this honor would be prepared by a committee of participating nations, and the honor would be conferred only on those who received a unanimous vote of approval from all member nations. The list might include, for example, Nobel prize winners, outstanding artists, leaders in religion, in government, in science, in education, and in business. It could become a highly coveted award all over the world—a suitable mark of distinction for our public servants in every walk of life. Above all, it could promote a degree of mutual trust and understanding that might in the end help to halt the race for atomic arms and forestall a war that nobody wants.

A world in which restrictions on communication and on the travel of individuals has been minimized is one in which the combined intellectual and technical powers of many nations can be brought to bear in unison on common problems. We are aware of many problems which can be and should be attacked by an international effort. Even under the imperfect conditions of international communication which exist today, significant projects are underway and important beginnings have been made on others.

There is the superb example of regional cooperation illustrated by Cern, set up by the European Organization for Nuclear Research. Here men of many nations gather together for a joint assault on the experimental and theoretical problems of nuclear physics. There is likewise the inspiring scope of the International Geophysical Year. When it opens, a great network of observatories will embrace the entire earth. Chains of weather stations strung out on three meridian lines from the Arctic to the Antarctic will chart the circulation of the atmosphere during the intense period of activity spanned by the International Geophysical Year. All of the modern instruments of meteorology and geophysics will be mobilized in a global accumulation of data which should provide the basis for years of analysis, speculation, and debate. The final reduction to conclusive findings will mark a new step in man's understanding of his global home.

There is the World Health Organization which through its many laboratories and agencies is waging successful war against the diseases of mankind, and is promoting in the less fortunate areas of the world new understanding of medical care for infants, for the aged and for the handicapped.

In the atoms for peace program, there are more than 25 bilateral agreements between the United States and countries less advanced in nuclear technology.

There is a multitude of activities supported by UNESCO: its educational training centers, its support of travel for scientific and cultural reasons, its contribution to the European Organization for Nuclear Research mentioned above, the creation of the International Computation Center at Rome, the conferences in arid zone research, and the many less noticed activities of the Field Science Cooperation offices. The UNESCO 1954 participation in the U. N. technical assistance programs amounted to 56 projects in 36 countries.

These are but some of the most evident international cooperative efforts bringing the benefits of modern science and technology to peoples around the world.

We have reviewed briefly both the positive and the negative steps toward increased collaboration among scientists of different nations, as they have developed in recent years. Now let us glance at a few fields in which joint efforts may prove especially beneficial.

As a prime example of a project which involves a subject that clearly has no relevance to national boundaries, we may think of climate control or world-wide weather modification. Recent advances in meterology suggest that efforts in this direction may produce useful results sometime in the future. Yet evidently the control of amounts of precipitation, directions of winds and like matters, are not properly planned by a single national power or even by 2 or 3 in regional collaboration. For instance, I believe that much of the weather of the United States is made along the coast of Alaska, in the Gulf of Mexico, or out in the Far Pacific, and my country has little or no control of the sea areas involved. Any regional effects on climate will have, perhaps, attenuated effects on climatic conditions in most distant areas. Moreover, such information as we now have strongly implies that the most effective weather control requires coordinated efforts over vast areas of the earth's surface, and the broader the cooperation, the greater might be the results.

Another example on a large scale which inevitably crosses national boundaries is the project to send a rocket into outer space. Purely from a geographical viewpoint, efforts to send missiles and ultimately passengers to the moon and the nearby planets are of worldwide interest. While the intensely nationalist feelings characterizing international relations on our planet at the present time suggest that we may even see, as a result of interplanetary travel, an extension of the competitive colonialism which the last century saw for the backward areas of this planet, the prospect of seeing different sections of Mars staked out by different national governments of this earth seems on the face of it ludicrous. Are we trying to play God and develop a new planet in our own image and likeness? A much more rational and probably more productive basis for the exploration and development of other worlds would be under an organization which properly reflects the common interests of all the peoples of this earth in such development. The Man in the Moon belongs to the children of every country, is a part of their dream world, and if reached by space ship, might better remain the property of all.

Returning now, however, from the fanciful and the future to the more immediate problems of initial efforts to get a space ship away from the earth, we recognize hazards of a rather severe sort which may arise as a result of the erroneous function of a space missile intended for the moon but which instead, through defective mechanism or planning, lands on the territory of another nation. If such a nation were at that time in an advanced state of tension in anticipation of a possible attack, this simple error might touch off the spark of world conflict.

Which brings me to the competitive race to develop an intercontinental ballistic missile. We in the American Congress have already learned that it would be a drain on all our budgets if that race should set a pattern in the whole field of space conquest. Russia and this country are working at high speed toward the attainment of an intercontinental ballistic missile, called by many "the ultimate weapon." Yet if the missile were to be attained almost simultaneously and prove to be as accurate as now forecast, if indeed it could carry atomic warheads with a striking power of several kilotons and place them within the area of a small circle, then no city in the world is safe, no jet interceptor can police the skies and no highway can promise egress from the affected area. In that day the people of the earth would banish the weapon as poison gas was outlawed in World War II, but only after the expenditure of fantastic sums of money, materials, and scientific skills.

Might it not be better to examine the chance to use space conquest as another project for an international laboratory? If we will never use this weapon once we achieve it, might it not be set aside as one segment of worldwide competition that could be surrendered to the effort to halt the race for a full arsenal of atomic arms in every land? Or must everyone carry his own six-shooter constantly strapped to his belt?

A third area might be research on the problem of controlling thermonuclear reactions in such a way as to produce useful power. Those of you in this audience know far better than I the great amount of energy which may be released in the fusion of the lightest elements to form helium. The great abundance of heavy hydrogen or deuterium the great quantities of this valuable isotope which are contained in the world's oceans, leads to a staggering picture of power availability to lift the yoke of labor from men's shoulders throughout all the world.

It has been estimated that the amount of heavy hydrogen in the oceans is sufficient to meet world power needs at 1,000 times the present consumption and for the next million years.

There seems to me to be no other field of technology today in which there is a more evident need for pooling all of the imagination and ingenuity which the world's scientists can bring together. The riches for mankind which must flow from the solution of these problems are without parallel. The history of science dramatizes again and again that problems of special difficulty are most usually solved by the cross-fertilization of ideas from diverse sources. The effort of any one country to develop controlled thermonuclear reactors in a unilateral manner under the secrecy required by an attitude of competitive nationalism must certainly have the effect of retarding the progress of such a country in this vital field.

As many of you have been saying again and again, science cannot flourish under secrecy. The essence of the scientific process is the exchange of ideas—the comparison of procedures and the development of new ideas and techniques in an active atmosphere of collaboration in which many people may contribute small parts of the solution to produce a whole far greater than the sum of the parts. No one can yet say that the immense problems associated with development of controlled thermonuclear power will be capable of solution. What we can say, certainly, is that if their solution is available to man, then it will be most readily available and perhaps only available in an atmosphere of vigorous collaboration built upon the genius of many people from many lands. It would seem that the enlightened self-interest of all technologically advanced nations would best be served by their contributing heavily to the creation of a joint world laboratory in which the solution of these problems is

sought jointly by scientists from many nations.

Some secrecy-minded individuals may object that the technology associated with each of these fields I have mentioned has possible military applications. This claim is perfectly true; however, it does not necessarily follow that the security of different nations will be furthered by developing these fields under the military security system which our competitive nationalism has imposed upon science in recent years. In fact, it may be just because of the possible military applications from these new technologies that we shall wish to develop them jointly with all principal powers participating in world laboratories created for the purpose. Perhaps we can learn an important lesson from our experiences in the development of atomic energy. The unilateral development of the field of nuclear technology has created the following dilemma. Assuming the universal desire of all peoples to achieve some sort of workable disarmament, we have nevertheless in the development of nuclear technology greatly accentuated both the need for, and the difficulty of attaining disarmament. Whereas modern atomic weapons raise the destructive potential of war to a new level, the suitability of atomic weapons for concealment and surprise use has at this advanced stage in the competition made disarmament by mutual inspection very difficult, if not impossible.

This experience in the field of nuclear technology suggests that similar potentialities exist in as yet undeveloped technologies. Research into the killing diseases of man with the objective of eliminating these diseases may bring us instead new ideas as to how we may visit death on opposing populations by new species of bacteria. Or we may find a new type of rust that will destroy his feed grains, or a virus that will kill his livestock. Successful travel in outer space will suggest new, more effective and even less detectable means of attack on other nations. Unilateral success in the field of climate control will suggest important new schemes for military action against the unfriendly powers. Project Sherwood for the development of controlled thermonuclear reactors provides the greatest promise on the horizon today of immense, cheap power sources. Yet in the event of success for this project, it takes no advanced military technician to realize that such power sources would have great applications in the engines of war. Thus we are led to feel that in every area in which the scientific method has enabled the intelligence of man to gain new mastery over nature, we face the possibility of an added complication in future disarmament efforts.

It is to that problem that I have directed these words. If the great powers find themselves in an atomic stalemate today—and I think they do—it is a carryover of patterns of national security which modern science has rendered obsolete. The military techniques which might emerge from the new areas of technology that I have been discussing can make the stalemate no worse. Already it is at a level in which any major power can precipitate almost total destruction upon an adversary (and in return upon itself) if it should make so tragic an error in judgment. Yet there is the danger that if these new areas of technology are developed in secret, some nation which at some future time is led by reckless rulers, may feel that it has gained so great a lead in some field of science that it may dare to launch an attack for world conquest. While this error in judgment will almost certainly be answered by mutual annihilation approaching totality, every effort must be bent while still we have the chance to prevent such dreadful miscalculations from occurring. Scientists, it seems to me, might suggest to the statesmen that modern technology could make the greatest contribution to the security of great powers if statesmen would move as far as possible from the secret competitive development of technologies under which we have largely operated in recent years. The scientists might urge, indeed, that the race for atomic arms could best be halted by having new fields of science developed jointly by all nations.

The responsibility for carrying forward the proposals here made for cooperative studies of weather modification and for world laboratories of science, must be placed with some international organization. A natural agency for this purpose is the United Nations. Such responsibility, such new avenues for accomplishing good, will strengthen and expand the capacity of the United Nations for reaching its goal of creating a world at peace.

The procedure for implementing ideas of this nature must fit the pattern of life in each land, and therefore what we will first need will be suggestions as to possible courses of action. I hope they will be forthcoming. For my part, I intend to discuss the question with my colleagues in the United States Senate.

I hope that the United States citizens in this audience, and elsewhere, will give me their recommendations. I hope that those of you from other countries will raise the question with your associates back home, and possibly lead to official proposals from your governments to the U. N. on how best to proceed.

If we do succeed, then no nation can make the fatal error of assuming that it has an overwhelming technical lead over a possible adversary. The recent Geneva Atoms-for-Peace Conference illustrated how similar the achievements were in different nations even though each had pursued its program of research and development in careful secrecy. Such similarity of development will no doubt be the case in the future in arms as well as peaceful atoms.

My own experience at Geneva persuades me that many nations know a lot about the atom. When India's Dr. Bhabha opened the pie of thermonuclear power, the blackbirds from 4 and 20 lands began to sing! What was secret at breakfast was table talk at lunch. Nations rushed to hold press conferences and attend activities. Isn't it possible that there might be a similar pattern in weapons, and that no one nation holds all the cards?

Something new seems to be needed in this disarmament business. The nations make little headway in finding grounds for agreement on reducing the size of armies or destroying parts of atomic stockpiles. Very well; why not try to think constructively about disarmaments in potential weapons, in "ultimate weapons." The problems here are simpler because no one nation has so strong a vested interest in the new field that it will be contributing much more than valuable scientific help. It would be a new try at disarmament, this "disarming the future," and it would lack some of the defects of proposals for present disarmament.

This is not a suggestion that all nations pool their efforts in the field of present atomic technology, nor a hint that the testing of atomic weapons be stopped by any of the great powers, and surely not a proposal that Oak Ridge, Hanford, Livermore and Los Alamos be levelled to the ground. It springs rather from the feeling that the new technologies may displace the old, and that a war-weary world might achieve in time a form of disarmament by obsolescence.

If and when that day should dawn, each new technology would no longer be a source of dread power to be somehow kept from destroying us in the convlusion of global war. Rather it would become what men of science have always intended—a means for opening up a new dimension in human life for defining a greater destiny for the forward course of the human spirit.

You men of science labor in that vineyard. May God add strength to your endeavors.

Eighth Anniversary of the Independence of Israel

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1956

Mr. SCOTT. Mr. Speaker, under leave granted, I would like to insert the following statement in the RECORD on the occasion of the eighth anniversary of the State of Israel:

I am happy to join in extending my heartfelt congratulations to Israel on the eighth anniversary of its proclamation as a state. Americans everywhere can be proud of their contribution to this achievement.

As we look back upon the events since May 14, 1948, when Israel again achieved statehood after an exile of over 2,000 years, we find a remarkable record of progress and accomplishment. Here is a country which has given shelter to hundreds of thousands of homeless people, most of whom were victims of the war, and provided them with a chance to live productive lives. On the eastern shores of the Mediterranean, the State of Israel was built, a great new outpost of Western democracy, on a foundation of freedom and liberty.

Israel is an example of democracy in action whose accomplishments for human welfare and civilization in 8 years rivals anything done in countries ruled by dictators. Israel has made this progress without paying the totalitarian price of slave labor and ruthless pressure.

The people of Israel have come from all parts of the world, speaking many languages and representing many cultures. Like the immigrants who came to this country, they have joined in a common endeavor, learned to speak a common language and helped to build a common civilization. This is in miniature a repetition of the great American experiment in creating a civilization out of a wilderness with men and women whose common heritage is their humanity. And, indeed, many Americans have recognized in the people of Israel a spirit that closely resembles that of our pioneers a century ago.

Today Israel is threatened as never before by the forces of dictatorship and oppression. Yet it has maintained the rights and liberties of its people despite the danger of invasion and has constantly sought and worked for peace. At the same time, it has realistically been compelled to provide for its defense against the growing arsenal in Arab lands.

The United States has done much to foster and encourage the development of

Israel, and the people of Israel have repeatedly demonstrated their appreciation. Our country has made a firm commitment to preserve the integrity of the State of Israel, and I am sure that we have every intention of standing by that commitment. Many of us in Congress, however, are convinced that one of the steps we must take without delay is to restore the military balance in the Middle East. We can do this by allowing Israel to purchase the defensive weapons she must have to discourage would-be aggressors.

The fact that Moscow has shipped modern weapons to Egypt and other Arab States in quantity makes it imperative that our country take the lead in helping Israel to defend itself. The press has reported that France, Italy, Canada, and other nations are ready to help this fellow democracy with jet fighter planes and other arms for defense, but I should like to see my country demonstrate its willingness to go further than others in releasing arms to a beleaguered ally. All the world looks to us for the example to follow, and we dare not yield our responsibility to any other nation.

I recognize, of course, that defensive arms to Israel are not a solution to the problem of achieving peace in the Middle East, but their deterrent effect can avert war and give us time to work for peace, time in which tensions may be relaxed and reason prevail. Let no one be deceived into thinking that this is an isolated conflict between the Arabs and Israel. It cannot be localized. Our civilization is so constituted that the problems of the Middle East reflect the worldwide conflict of ideas between the East and the West, and whatever happens between Israel and her neighbors will inevitably affect the lives of all Americans.

As Israel enters the ninth year of its existence, we hope and pray that a beginning shall be made toward the establishment of peace, not only in that troubled area, but for all people all over the world. With firmness and resolution we can defeat the Communist threat of war and bring about the initial steps to a lasting peace. On this anniversary we can bring to the people of Israel an assurance that they do not stand alone in their gallant fight to create a nation of free people under God and that we stand with them against the enemies of democracy.

Campaign Issues of 1956

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. MULTER. Mr. Speaker, on Saturday, April 14, 1956, I had the privilege of participating in the panel discussion of the third annual conference of the Citizenship Clearing House for Southern New York. This year it was held at Brooklyn College, in Brooklyn, N. Y. A very distinguished member of the same panel was New York's secretary of state, the Honorable Carmine G. De Sapio.

The topic assigned to us was "What will be the major party issues in the 1956 presidential election?"

Mr. De Sapio's remarks were as follows:

I am very happy to participate in this panel discussion on the major party issues in the 1956 campaign. I am particularly delighted to be part of a program of the Citizenship Clearing House because I have long admired your purpose and your work, and I have been the beneficiary of your hospitality in the past.

I think probably the best definition of the issues in the forthcoming campaign can be found in the recent state of the Union address delivered by the President of the United States. It was, in every sense, an extraordinary message. It sought to be all things to all people, at the same time that it clearly spelled out Republican awareness of the fact that there are more Democrats in this country than Republicans. The Republicans can sometimes win by pretending to be like Democrats, as they successfully did in 1952, but you may be sure, my good friends, that the Democrats will never try to win by pretending to be like the Republicans.

The amazing thing about the message is that it was received without so much as a flicker of astonishment by such stalwarts of progressive government as Senators BRICKER, CAPEHART, GOLDWATER, and JENNER, those great liberals who would have yelled "socialism" had a Democratic President sent such a message but who applauded enthusiastically in Washington, secure in the knowledge that the words they were hearing were meaningless and empty, just as were the words in their campaign platform of 4 years ago.

But if the state of the Union message was nothing else, it was extremely enlightening. For it demonstrates with dramatic clarity the naivete of the nominal left wing of the Republican Party, and the callous inflexibility of its right wing.

We must assume that it was authored by both, because it was acceptable to both, and reflects the basic thinking of those Republicans who feel that concessions must be made—at least vocally—to the demands of the people for social advancement, as well as of those who hold that it is good politics to say anything, provided you do nothing.

And it was evident throughout the message that the GOP is not only mindful of, but thoroughly alarmed over, the elections which Democrats have won—since 1952—in Oregon, in Maine, in Pennsylvania, in Connecticut, in New Jersey, in New York, and all over the Nation—to say nothing of the election of a Democratic Congress—the Congress which was to have represented a cold war, but which, in fact, made possible the only progress which our Nation has achieved in the last 15 months.

Were it not for the Democratic Congress, the record of the Republican administration during its first 3 years in office—and undoubtedly to the end of this year as well—would have been one of unrelieved gloom to the people of the United States and of the democracies throughout the world. For it is indisputable—though heaven forbid that the Republicans should give credit where it is due—that not one of the major accomplishments in foreign or domestic affairs, which the President cited in his state of the Union message, would have been possible without the Democratic majorities in the House and Senate.

And it is equally true that much more would have been accomplished were it not for Republican obstructionism, sometimes in Congress and frequently in the administration itself.

It was the Democratic Congress—the 84th Congress—which supported the proposal to support Formosa and the Pescadores Islands in the event of a Chinese-Communist attack.

It was the Democratic Congress which ratified the Southeast Asian Treaty Organization as a bulwark against Communist penetration. It was the Democratic Congress which extended the Reciprocal Trade Agreement Act for 3 years, and which simplified our cumbersome customs legislation. It was the Democratic Congress which provided for a trained manpower reserve program; for atomic energy research and peacetime production; for expanding aeronautical research; for constructing foreign military bases and housing; and for a billion-dollar Navy shipbuilding program. And it was the Democratic Congress which refused to bow to a GOP demand to cut the Marine Corps by 22,000 men.

I emphasize the words Democratic Congress not merely to describe the party's numerical superiority in the National Legislature, but—even more important—to underscore the fact that, without exception, the Democratic leadership in Washington was responsible for every step forward which our Nation has taken in the last year. But, even when the Congress was Republican controlled, invariably more Democrats than Republicans supported the administration's military and foreign policy matters * * * measures which implemented the principles which were first laid down by President Truman and which actually represent extension of Democratic Party programs.

It is in the area of domestic policy where Republican reaction particularly thwarted the efforts of the Democratic Congress to carry out the mandate of the people.

Where the administration proposed social legislation in keeping with the spirit of previous Democratic administration programs—such as increased railroad retirement benefits and better FHA mortgage-insurance coverage—these measures found overwhelming Democratic support. But when the Democratic Congress attempted forthrightly to come to grips with the labor, health, housing, education, highway, and other problems, it met either Republican timidity or outright sabotage.

The administration asked for an increase in minimum hourly wages from 75 to only 90 cents. The Democratic majority increased it to a more realistic $1. The administration asked for construction of a paltry 35,000 public housing units replete with bristling restrictions. Against diehard GOP opposition, the Democratic majority was able to increase the figure to 45,000 units and to liberalize the requirements. Under the last Democratic President, the authorization called for 135,000 units a year.

Disregarding the bogeys of socialized medicine and Government interference, the Democratic Congress put human needs ahead of pressure groups and authorized the funds necessary to get the Salk polio vaccine out to the Nation's children and expectant mothers.

The concern of the Democratic Party for human welfare was further illustrated by the fact that Congress appropriated $17 million more than the amounts requested by the administration for health, education, and social welfare.

This concern was also shown in the attempts by the Democratic Congress to liberalize the social-security program, to cut personal income taxes by $20 for each taxpayer and dependent, and to raise the pay of Government workers to a more realistic level than the administration was willing to concede. The first two attempts were thwarted by GOP opposition; the last attempt achieved partial success.

It was the Democratic Congress which acted to strengthen the Small Business Ad-

ministration. It was the Democratic Congress which spiked the administration's attempts to make a national highway construction program a happy hunting ground for profiteers. It was the Democratic Congress which exposed the malodorous Dixon-Yates deal, the "conflict-of-interest" cases and the administration's giveaway programs.

And again this year the Democratic Congress will be the protector of the peoples' welfare and the guardian of the peoples' trust. But Congress alone cannot decisively enunciate our national policy. A Democratic majority in Congress cannot change the basic philosophy of the Republican administration. It can only modify its effects.

And although the State of the Union message was in large measure a report on Democratic achievement and, in some measure, an echo of Democratic policy, it failed to recognize the basic truth that unless you move forward, you stagnate; that unless you progress, you retrogress.

But it had other vital failings. It gave no hint of recognition of the fact that the friendship of the uncommitted peoples of the world cannot be purchased by foreign aid alone. It contained no awareness of the futility of substituting slogans for intelligent, enlightened diplomacy. It showed no change in an attitude which is imperiling the very existence of a small but firm democratic bastion in the Middle East by the continuing denial of defensive arms for Israel. It suggested not a single constructive effort being made to counter the propaganda inroads made by the Kremlin chiefs during their tour of India and Burma.

It evidenced no change in the administration's "special interest" approach to Government. It offered no plan to meet the problems occasioned by the administration's chaotic security program. It treated with vague generalities the shameful problem of discriminatory immigration regulations. And, it finally conceded, after 3 years of vigorous denial, that a farm problem exists—offering a program much of which is simply a renaming of the much villified Democratic farm policies of the past.

In keynoting the Republican campaign of 1956 the state of the Union message carefully ignored the broken promises which were so glibly made in 1952 and which were so completely rejected in the years which followed.

But much of the significance of the message rests in what it does not say—in how it does not fix blame where it belongs for failure to loosen the Taft-Hartley shackles of American labor. It does not tell about the failure to press a program of medical research against mankind's chief killers, the failure to humanize social security protection, and the failure to meet the problems of the farmers. It does not tell about the textile and hard-coal workers in the Middle Atlantic and New England States who have suffered chronic unemployment in the past 3 years, of the thousands of small businesses which have gone bankrupt or have been swallowed up in monopoly mergers, of the millions of white collar workers caught up in the crippling tug-of-war between fixed wages and increased cost of living. And it doesn't once mention the failure to retain for the United States the world leadership which it enjoyed under Presidents Roosevelt and Truman.

Here, then, are the issues in the coming campaign. We will contrast the Republican failures with Democratic achievements in 20 historic years of progess, attainment and security. We will contrast the record of Democratic leadership with the Republican record of inaction, ineptness and indifferences.

And with these contrasts—and on the record—the Democrats will win.

Thank you very much.

Constitution of Massachusetts

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an address by Adm. Samuel Eliot Morison at the 175th anniversary of the Constitution of Massachusetts on October 25, 1955.

Admiral Morison as historian of the United States Navy has just finished 10 volumes on the Navy's activities in the late war. He is a distinguished authority on the Constitution of the Commonwealth of Massachusetts and wrote the history of the constitution. He is the author of several books some of which are the Maritime History of Massachusetts, The Growth of the American Republic, Tercentennial History of Harvard University, Admiral of the Ocean Sea, History of the United States Naval Operations in World War II.

The address follows:

ADDRESS AT 175TH ANNIVERSARY OF CONSTITUTION OF MASSACHUSETTS, OCTOBER 25, 1955

I. THE AMERICAN REVOLUTION FRUITFUL IN CONSTITUTION

Over 40 years ago a striking tribute was paid to our constitution by the leading American political scientist, Andrew C. McLaughlin of Chicago. In his presidential address before the American Historical Association he said:

"If I were called upon to select a single fact or enterprise which more nearly than any other thing embraced the significance of the American Revolution, I should select—not Saratoga or the French Alliance, or even the Declaration of Independence—I should choose the formation of the Massachusetts Constitution of 1780; and I should do so because the constitution rested upon the fully developed convention, the greatest institution of government which America has produced, the institution which answered, in itself, the problem of how men could make governments of their own free will * * *."

What a remarkable thing, that the very people who started the American Revolution, the revolutionary radicals of 1776, should have shown such original and constructive genius in political science. As all modern history shows, it is easy enough to destroy a government when it has become obsolete and ineffective, but very difficult to re-establish the reign of law and order on a new foundation. How many nations in the present century have won their independence; how few have really secured their liberty. And it has almost seemed to be a law of revolutions that they go from one excess to another, and end in a new despotism. As Hosea Biglow taunted the ghost of his Cromwellian ancestor:

"You took to follerin' where the prophets beckoned,
An' fust you knowed on, back come Charles the Second."

The American Revolution developed very differently. The link with Britain was broken, but the Thirteen States remained united. Royal government was abolished, but republican government was established, and on a firm foundation. At the end of the war, 11 of the 13 States had adopted new constitutions; and of these constitutions, that of Massachusetts, whose 175th anniversary we celebrate today, has been the most enduring because it was the best. One hundred and seventy-five years is a short time in history, but a great age for a written constitution. How true was the characteristically tactless greeting of President Charles W. Eliot to Prince Henry of Prussia when he made a state visit to Boston in 1902: "Our ancient Commonwealth greets your recent Empire."

We all take this constructive aspect of our Revolution too much for granted. So I propose to inquire why we were so successful in establishing government under law.

In the first place, the leaders of the American Revolution were deep students of history and of politics, they not only knew what had to be done, but were eager for the task. Take, for example, two of our most flaming patriots, Thomas Jefferson and John Adams. Jefferson on 16 May 1776 when he was working hard in the Continental Congress to have independence declared, wrote to Thomas Nelson in Virginia that he regarded the making of a constitution for Virginia even more important that independence: "In truth it is the whole object of the present controversy; for should a bad government be instituted for us in future it had been as well to have accepted at first the bad one offered to us from beyond the water without the risk and expense of contest." And John Adams, even earlier in 1776, wrote to George Wythe who had asked his advice about a new Virginia constitution, "You and I, my dear friend, have been sent into life at a time when the greatest lawgivers of antiquity would have wished to live. How few of the human race have ever enjoyed an opportunity of making an election of government * * * for themselves or their children. When, before the present epocha, had 3 millions of people full power and a fair opportunity to form and establish the wisest and happiest government that human wisdom can contrive"

Prophetic words; for within 4 years John Adams had the opportunity to draft a constitution for his own beloved and native State.

The first reason, then, why Americans were able to establish government under law for themselves was the conviction of leading revolutionists that it must be done, and their knowledge of how to do it.

II. GOVERNMENT UNDER LAW A MASSACHUSETTS TRADITION

A second and perhaps even more fundamental reason was the long experience of Americans with self-government, and with government under law, before 1776. "We began with freedom," wrote Ralph Waldo Emerson. How true that is. The Virginia Assembly from 1619, the Mayflower Compact of 1620, the Massachusetts Body of Liberties of 1641, the Plymouth "General Fundamentals" of 1636. Almost a century and a half before the Revolution, the Old Colony adopted as fundamental law, annual elections, no taxes to be laid or laws passed without the consent of the freemen or their representatives, no person to suffer "in respect of life, limb, liberty, good name or estate" (and please note that "good name"); "but by virtue of equity of some express law of the colony," or the English common law, and by "due course and process of law." The Plymouth Fundamentals of 1636 guaranteed trial by jury, and declared that nobody should be found guilty without the testimony of "two sufficient witnesses * * * or circumstances equivalent thereunto." A few years later when (believe it or not) there was an outbreak of juvenile crime in Plymouth, Governor Bradford asked the ministers whether he could legally have torture applied to an arrested youth to force a confession; they all replied no, he couldn't do that because it was a maxim of English common law, nemo tenetur prodere seipsum—no man may be compelled to accuse himself. That is exactly the same provision

which in article V of the Federal Bill of Rights has become so controversial in our own time.

Because the people of Massachusetts had always enjoyed government under law, and a very substantial measure of self-government as well, they not only resisted the efforts of George III to govern them by arbitrary authority, but they insisted on securing government under law for themselves. That conviction was not only an intellectual one held by students of government; it went right down to the grassroots, as may be seen by a resolution passed by the small country town of Medfield in 1776:

"While we profess ourselves advocates for Rational Constitutenal Liberty we don't mean to patronise Libertinesm and Licenteousness we are sensible of the necessity of Government for the Security of Life Liberty and property and mean to vindecate and Submit to all Lawful Constiutanal authority."

III. THE CONSTITUTIONAL CONVENTION IDEA

And it was from the grass roots, not from some eminent leader of political thought, that the idea of a constitutional convention came. For the process of making constitutions was very little understood in 1776. In several of the states, a constitution was drafted by the legislature and placed in effect without consulting the people.

On 29 May, 1776, the town of Pittsfield sent a memorial to the General Court that laid down the following principles:

1. "The people are the fountain of power."

2. The colonial "Compact"—i. e., the Province Charter of 1691—was dissolved by George III breaking it; and the General Court has no right to assume that it is still in effect—as, in fact, they were doing. The State was governed from 1775 to 25 October 1780 by what one might call a decapitated Province Charter. The Royal Governor and Lieutenant Governor were regarded as "absent," so the Council of 28 members acted as executive board, and the House carried on as before.

3. The General Court should frame "a fundamenal constitution as the basis and frame-work of legislation" and refer it to the people for their "approbation," for only the consent of a majority can "give life and being to it."

Thus Pittsfield started the movement for popular ratification, but not for a constitutional convention. The General Court on 17 September 1776 requested the people of the State to authorize it, the legislature, to draft a constitution. The war was so hot in 1776 that only about half the towns voted on this proposition. Most of those that did so, said in effect, "Go ahead; but let us have a look at it before it becomes Fundamental Law." But three towns, in replying to this request, made the pregnant suggestion that a legislature was no proper body to draft a constitution, that a constitutional convention should be elected for that special purpose. The three towns that passed resolutions to that effect were: Middleborough, 7 October 1776; Concord, 21 October 1776; Acton, 4 November 1776.

Who started this idea we do not know. We wish we did, because these three town meeting resolves are the earliest suggestions yet discovered in America of a Constitutional Convention.

In Middleborough a committee of which George Leonard was chairman reported, and the town adopted, a resolve to the effect that they were willing to have the legislature draft a constitution, if submitted to the people for ratification. But, they added, "We think it would be rather preferable to select a body of men, some from each county, whose sole business it should be to strike out or plan a new constitution subject to the consent, the approbation or disapprobation, both of the court and people."

The Concord resolves, most explicit of the three, made a very persuasive argument for a specially elected convention as being the only proper body to draft a constitution. Concord also proposed that the convention be elected by manhood suffrage, not by the property qualification that still obtained in State elections; and it suggested the mode of ratification actually adopted in 1780.

These Concord resolves were drafted by a committee consisting of Col. John Buttrick, who had commanded the Minute Men in Concord fight; Col. James Barrett and his son, both farmers; Ephraim Wood, the village shoemaker; and Nathan Bond, a 24-year-old Harvard graduate who is described as a merchant. These men deserve eternal fame, for they set up one of the title pages of democracy.

The General Court disregarded the good advice of these three towns and itself drafted a very inferior constitution which, when submitted to the people, was rejected by a vote of about 5 to 1. The General Court then took up the suggestion of Middleborough, Concord, and Acton, and by a resolve dated 19 February 1779, requested the people to decide in their town meetings whether or not they wished to elect a constitutional convention. They voted for it 2 to 1; the 3 western counties of Worcester, Hampshire, and Berkshire being almost unanimously in favor. And those that opposed did so on the ground that we had better win the war first. Next, the General Court ordered the towns to elect as many delegates to the convention as they were entitled to send representatives; and it expressly declared that all free men 21 years of age and upward could vote.

IV. THE CONVENTION OF 1779–80

There was a general response to this invitation. Very few towns were unrepresented except those in eastern Maine, the island counties, and Cape Cod, which were pretty much cut off by the war. No fewer than 293 delegates from 190 different towns attended the first session, which convened at the meeting house of the First Church in Cambridge at Harvard Square, on 18 September 1779. The convention met at Cambridge because there was a rumor that the British were planning to attack Boston. Had they done so, and succeeded, they would have made a rich haul of Bay State patriots. Boston sent as delegates Samuel Adams, John Hancock, James Bowdoin, Samuel A. Otis, John Lowell, Dr. Charles Jarvis, Samuel Barrett, and Thomas Dawes—but not Paul Revere, who was then under a cloud for his part in the Penobscot Expedition. John Adams came from Braintree and Edward Hutchinson Robbins from Milton. Essex County had an equally distinguished delegation: Stephen Choate, Samuel Phillips, Henry Higginson, Benjamin Goodhue, George Cabot, Winthrop Sargent, and Samuel Holton, among others; and Middlesex sent James Sullivan, Nathaniel Gorham, and Ephraim Wood of Concord. Plymouth sent John Cotton. York, Maine, sent Judge David Sewall; from Taunton came Robert Treat Paine, signer of the Declaration of Independence. Worcester County sent no fewer than 63 delegates, including Levi Lincoln and David Bigelow. From Old Hampshire came William Pyncheon, Luke Bliss, Col. John Moseley, and Caleb Strong. Berkshire sent Dr. William Whiting, Col. Jonathan Smith, and William Williams, signer of the Declaration of Independence. All the Massachusetts signers were there except Elbridge Gerry, who with Artemas Ward and James Lovell was then representing the State in the Continental Congress. Almost every leading patriot of Massachusetts not then serving in the Army or Navy or in Congress was elected a delegate.

One advantage of the convention over the legislature for framing a constitution was the possibility of electing as delegates judges, clergymen, and others who were disqualified for the legislature. The convention of 1779 contained about 15 judges, including the then Chief Justice of Massachusetts, William Cushing, of Scituate, and a future Chief Justice, Theophilus Parsons, of Newburyport. There were also 12 or 13 clergymen, including such well-known figures as the Reverend Samuel West, of Dartmouth, and the Reverend Gad Hitchcock, of Pembroke, the Reverend Jonas Clarke, of Lexington, and the Reverend Peter Thatcher, of Malden. Among the delegates were a future President of the United States (John Adams), 5 future Governors of the Commonwealth (Hancock, Samuel Adams, Bowdoin, Sullivan, Strong), a future United States Senator (George Cabot), and several future Congressmen. John Lowell became a Federal judge and Cushing an associate justice of the Supreme Court of the United States. No debates in the convention were reported or published.

The first session, in Cambridge, lasted only a week. After organizing, and electing James Bowdoin president and Samuel Barrett secretary, the convention appointed a grand committee of 30 to prepare a draft, spent a day in "a general and free conversation which lasted until sunset," and adjourned on 7 September. The grand committee met shortly after at the old court house on the site of Boston city hall and delegated its duties to a subcommittee consisting of President Bowdoin and the "brace of Adamses." That subcommittee, following the precedent of the one that drafted the Declaration of Independence, delegated its functions to the one member most capable of executing them—John Adams, of Braintree.

V. JOHN ADAMS AND HIS BASIC PRINCIPLES

John Adams, now 43 years old, was undoubtedly the greatest expert on constitutions in America, if not in the world; if any proof were needed of this proposition, the age of our constitution is sufficient. Since his college days he had studied constitutions, ancient and modern, had read almost every book ever written on political theory, in the English, French, Latin, and Greek languages; and, what is more, he had thought deeply about politics. Moreover, John was no doctrinaire or egg-head, to use the current term. A practising lawyer for at least 20 years, he knew the good and the bad in human nature, and had no illusions about it. He had served in our General Court and in the Continental Congress, and had plenty of experience of practical politics and politicians. Ambitious, hardheaded, and irascible, rough and often rude in his manner, conscious of his own merit and contemptuous of intellectual inferiors, intolerant of weakness—qualities which you can discern in that magnificent portrait of him by Mather Brown, reproduced in your pamphlet—John Adams had an essential greatness that transcended all his qualities and defects. His cousin Sam and his friend Bowdoin were very wise to "let John do it," not only because John knew best, but because he never worked well in a team.

Adams' draft, and the finished constitution, are logically divided into two coequal parts, the declaration of the rights of the inhabitants of the Commonwealth of Massachusetts, which we may call the negative part as it was largely a limitation on the powers of government; and the frame of government, the positive part, stating what the government's powers are, how they are to be exercised and distributed among the three departments, and how the officers exercising these powers shall be chosen.

If John Adams' Declaration of Rights has been less amended than any other part of the constitution, it is because the rights he enumerated were the result of the experience of centuries. These rights were, in brief, freedom of worship, free elections, freedom

from general warrants or unreasonable searches, equal protection of the law, habeas corpus, and not to "be compelled to accuse, or furnish evidence against himself"—again, old nemo tenetur prodere seipsum, which would be incorporated in the fifth amendment to the Federal Constitution. Several of these rights were taken from constitutional charters of English Liberty such as the Bill of Rights of 1689, and the Great Charter of 1215; many had already been adopted in the Virginia Bill of Rights.

The philosophical basis of these rights is the ancient theory of natural law, or the law of nature; that Almighty God dictated the fundamental decencies of human intercourse, which men and governments should respect. This concept is even older than Christianity; it goes back to the Greek civilization to which we are heirs. One of the finest experiences of it is in Sophocles' Antigone. The heroine of that powerful tragedy, Antigone, has disobeyed a law of the tyrant Creon, ordering the bodies of his political rivals to be dismembered and thrown to the dogs. One of the victims was her brother Polyneices; and in defiance of Creon's edict she has salvaged her brother's remains and given them decent burial. Brought before Creon, she is accused of violating the law, to which she replies:

"Yea for thy laws were not ordained of Zeus,
And Justice who sits high amongst the gods,
Has naught to do with unjust laws of men.
Nor did I think that thou, a mortal man,
Had power to declare both null and void
The unchangeable, unwritten laws of Heaven.
They were not born today, nor yesterday;
They die not, and none knoweth whence they sprang."

It is a long way indeed from ancient Greece to 1780, but John Adams' Declaration of Rights stems from the same source as Antigone's dramatic challenge to the tyrant. Our Declaration of Rights opens with thanksgiving to "the Legislator of the Universe" that he had afforded the people of Massachusetts this opportunity to form "a new constitution * * * for ourselves and posterity"; and a prayer "devoutly imploring His direction in so interesting a design." We can find few finer statements in modern history of the "unchangeable, unwritten laws of Heaven" than the Massachusetts Declaration of Rights.

VI. A "MIXT GOVERNMENT"

Now for the frame of government. Adams' draft, adopted in substance by the convention, was based on an ancient theory first made popular by the French publicist, Montesquieu. The theory of "mixt government," as it was called in the 18th century, is akin to but not exactly the same as our theory of checks and balances. In brief, it was this: Any pure form of government such as absolute monarchy, hereditary aristocracy or unlimited democracy, may theoretically be good, yet actually is bad because, owing to the corrupting influence of power, it always degenerates into some different and abominable form. Pure monarchy degenerates into despotism; pure aristocracy into a selfish oligarchy, and pure democracy into mob rule or anarchy. Hence a government, to secure the happiness of the people, should be given a form that is a mixture of the three. Thus, you should have a strong chief executive to represent the monarchical principle, a senate to represent the aristocratic principle, and a house of representatives to represent the democratic principle. Finally, as a balance wheel to the whole, there should be an independent judiciary to see that the constitution is observed, and that the rights of the people are protected against the government.

John Adams had come to believe in this theory of "mixt government" almost passionately. It was the theory behind the frame of government in the Massachusetts Convention of 1780, and the theory behind the Federal Constitution of 1787. Our constitution of 1780 did not set up a democracy, it was not intended that it should; but a mixed government in which democracy had a part, and an essential part, in the lower house and in annual elections. But this democratic element was balanced by giving the Governor a greater power than the first magistrate of any other State; by apportioning the State senators in districts determined by wealth, not population, and by a high property qualification for candidates—£1,000 ($3,333) real estate for Governor—and £300 ($1,000) real estate for senator; greater than in any other of the Thirteen States except South Carolina and Maryland. This method of apportioning State senators worked out in practice, during the first 20 or 30 years of the Constitution, so that the coastal counties except Maine had 25 senators and all the rest, 15.

Even without an absolute veto, the Governor of Massachusetts was the most powerful chief executive in the United States; and, so great was the fear of one-man power at the time, the convention could only be persuaded to set up a strong governor because he would be elected annually. For Montesquieu had written, "In every magistracy one must balance the greatness of power by the shortness of its duration. One year is the term that most legislators have fixed. A longer term would be dangerous, a shorter one, against nature."

The convention made no apology for this being "a mixt" and not a democratic constitution. The address which accompanied the printed copies of the constitution that were sent to the towns for discussion, stated: "The powers of government must * * * be balanced. * * * The house of representatives is intended as the representative of the persons, and the senate of the property of the Commonwealth." Each is given a negative on the other because "all bodies of men * * * united by one common interest * * * are liable, like an individual, to mistake, bias, and prejudice." Defending this system, the convention's address says, "when the same man or body of men enact, interpret, and execute the laws, property becomes too precarious to be valuable, and a people are finally borne down with the force of corruption resulting from the union of those powers." That is exactly what happened in the governments of Nazi Germany, Soviet Poland, and Argentina Peronista.

It has often been said that checks and balances were devised to prevent anything being done; to make government impotent. That is not true. Article IV of the declaration of rights expressly says that the people of this Commonwealth "do, and forever hereafter shall, exercise and enjoy every power, jurisdiction, and right which is not, or may not hereafter be by them expressly delegated to the United States of America." The frame of government, chapter I, section 1, article iv, confers on the General Court complete legislative power "as they shall judge to be for the good and welfare of this Commonwealth, so as the same be not repugnant or contrary to this constitution." And section ii d, chapter V, which John Adams said was his favorite article, enjoined the General Court "to cherish the interests of literature and the sciences, and all seminaries of them, especially the university at Cambridge, public schools, and grammar schools; * * * to encourage * * * the promotion of agriculture, arts, sciences, commerce, trades, manufactures, and a natural history of the country," as well as to "countenance and inculcate * * * sincerity, good humor, and all social affections, and generous sentiments, among the people."

John Adams was a stickler for traditional forms and phrases. He believed, like Hosea Biglow,

"Th' older a guv'ment is, the better 't suits;
New ones hunt folk's corns out like new boots:
Change jes' for change, is like them big hotels
Where they shift plates, an' let ye live on smells."

He studied the texts of the Old Colony Charter of 1629 and the Province Charter of 1691, and incorporated as much of them as he thought would suit new conditions. Elections were annual, not because Montesquieu recommended it, but because Massachusetts had had annual elections since 1630. "Where annual elections end, there slavery begins," was a favorite maxim of John Adams. The titles His Excellency and His Honor for Governor and Lieutenant Governor were those of the Royal Governor and Lieutenant Governor under the Province Charter. The name of our legislature, the General Court, goes back to the Massachusetts Bay Co. of 1629. The property qualification for the franchise—real estate worth £3 ($10) a year—is the old 40-shilling franchise of the second charter, which in turn was taken from the county franchise in England. If Governor Herter is surprised to read in chapter II section I article vii that he has power to "assemble in martial array and put in war-like posture, the inhabitants," and in his proper person "to lead and conduct them * * * to encounter, repel, resist, expel, and pursue, by force of arms, as well by sea as by land * * * and also to kill, slay, and destroy, if necessary, and conquer, by all fitting ways, enterprises, and means whatsoever, all and every such person and persons as shall * * * in a hostile manner, attempt or enterprise the destruction, invasion, detriment, or annoyance of this commonwealth"; it is because the Governor and Company of the Massachusetts Bay had been granted these warlike powers and duties in those very words, in 1629.

Since the Declaration of Independence the body politic had officially been styled the State of Massachusetts Bay; but John Adams, following the precedent of Virginia, substituted for State "Commonwealth," a dignified rendering of the Latin res publica, and one with many historical associations. At the same time, he managed to defeat a proposal to change the name Massachusetts Bay to Oceana. Some pedantic member (a reader, doubtless, of Harington's great treatise of that name) proposed Oceana, and several members of the Committee of Thirty were in favor of thus renaming the State; but John Adams would have none of it. Massachusetts Bay this body politic had been for 150 years, and the only concession he would make was to lop off the bay, which satisfied members from the interior. The motion for Oceana was made and seconded at the convention on November 9, 1779, but passed in the negative.

I need hardly remind you that our constitution, while retaining the original separation of powers, "to the end that it may be a government of laws and not of men" (declaration of rights, article XXX), is no longer a "mixt," but a democratic constitution. By the process of amendment over a period now of 134 years, the governor's power has been clipped by depriving him of the power to appoint the attorney general and all county officers, such as sheriffs. The senate as well as the house is apportioned according to population, not wealth; all property qualifications have been abolished and universal suffrage prevails in all elections. Yet I think that John Adams would still recognize today's frame of government as his, because the chapter on the judiciary has been maintained intact. That is really the keystone of the arch.

VII. THE VOTE OF THE TOWNS

The second session of the convention, held at Cambridge between 28 October and 12 November 1779, was devoted entirely to a dis-

cussion of the declaration of rights. John Adams sailed for France in the *Sensible* to help Benjamin Franklin to negotiate a treaty of peace on November 13, 1779, and was not present at the third session when his frame of government was debated and amended.

This third session began 27 January 1780, and was held at the Old State House in Boston, which by that time was considered to be reasonably safe from invasion. The session opened 3 weeks late because of the hard winter. Many members from the interior could not get to Boston because the highways were completely snowed under. Transportation was almost as difficult as in October 1955. But by January 20 the post road from Hartford to Boston was open for sleigh traffic, and if you could get to Hartford on snowshoes it was only a 3-day sleigh ride thence to Boston. Only 60 members were present on 27 January; and in spite of frequent and vigorous appeals for better attendance, it never rose above 82. Possibly that is why such an unusually small quorum—60 members—was required in the constitution for the house of representatives. The convention naturally thought that if 60 men could adopt a frame of government, 60 men were enough to pass laws.

In this third and ill-attended session, the convention adopted the peculiar method by which the constitution was ratified. The resolution, drafted by a committee composed of James Sullivan, John Lowell, and Robert Treat Paine, followed the Concord recommendation of 1776, "that when the convention * * * have formed a constitution, they adjourn for a short time and publish their proposed constitution for the inspection and remarks of the inhabitants of this State."

The method was this. The convention adjourned on 2 March 1780, to 7 June. In the meantime printed copies of the constitution were distributed to every town and plantation, and the selectmen were requested to hold a special town meeting to discuss and vote on it, article by article. "And if there doth not appear to be two-thirds of their constituents in favor thereof, that the convention may alter it in such manner as that it may be agreeable to the sentiments of two-thirds of the voters throughout the State."

This method seems unnecessarily complicated; but one can see why it was adopted. Since the breakup of royal authority in 1774, the towns had acquired more power than ever before, and were jealous of it. The emphatic vote with which they rejected the 1778 draft constitution suggested that the same thing would happen to this one if it were submitted in a lump, as the town of Pittsfield expressed it. Giving the people an opportunity to discuss the proposed constitution and to present objections and suggestions to the convention not only pleased them, but gave the malcontents an opportunity to blow off steam. And the convention, by reserving to itself, at an adjourned session, the right to canvass the returns, amend and ratify, made certain that its work would not be lost; that a constitution would be adopted if not the constitution which they had drafted. Any particularly unpopular article could be modified or struck out, without jeopardizing the whole.

There was no public contest over ratifying the constitution. In an era when political pamphlets proliferated, only two against the constitution, and none for it, were published. The 6 weekly newspapers then published in Massachusetts (all but 1 in Boston) made little or no mention of it; their meager columns, crammed full of war and foreign news, found room only for 2 series of articles on the constitution, both confined largely to a discussion of article III of the Declaration of Rights. The series attacking it was written by a member of the convention who signed himself "Philanthropos," and whom I suspect to have been the Reverend Noah Alden, the Baptist minister of Bellingham, who was chairman of the committee that drafted article III. "Philanthropos" was answered by another member who called himself "Iraenius," who was probably Robert Treat Paine.

No members of the convention stumped the State, on snowshoes or otherwise, to argue pro or contra; but each member must have been a center of discussion in his hometown. Until I discovered the returns from the towns in Massachusetts Archives, historians had assumed that there was no contest; that the constitution went over easily. That is far from the truth. There was strong opposition to the constitution, and part of it can be definitely traced to two men who were not members of the Convention. These were Joseph Hawley of Northampton, the patriot leader known as the "Hampshire Cato," and the Reverend Isaac Backus, the Baptist minister of Middleborough and leader of the Baptists in New England. One of the two pamphlets attacking the constitution was written by the Reverend Mr. Backus, the other was a reprint of the "Philanthropos" articles from the Boston Independent Chronicle.

The towns had about 3 months in which to discuss the constitution, and they took full advantage of it despite the long, hard winter and the generally unfavorable war news. Returns were expected from 290 towns. No fewer than 188 are preserved in the State archives, I have personally unearthed about 40 more, and probably at least 25 others have been lost. These returns reveal an amazingly keen interest in constitutional subjects throughout the State, and a high degree of political intelligence among the people. The degree of interest varied, as we would suspect. It was highest in Boston, in Old Hampshire and Berkshire Counties, and along the Rhode Island border. In Boston about a thousand men turned out for town meetings that rocked the cradle of liberty for the better part of 3 days; and no fewer than 887 men voted. In Rehoboth 455 people voted; South Hadley held seven town meetings before it could come to a decision. But in some important towns very little interest was shown. At Plymouth, for instance, only 37 voters from a population of over 2,600 attended; and at Biddeford, Maine, only 10 out of more than 1,000. "We regret so few are met," reads the Biddeford return; but "10 men may save the city."

The tone of all but a few returns was respectful, even deferential. An exception may be made of Middleborough, the home of the Reverend Isaac Backus, and of several towns on the border of our otherwise-minded sister, Rhode Island. They did not like a piece of the constitution, but their principal target was article III of the declaration of rights, which they felt unduly favored the Congregational churches—as indeed it did. Freetown, for instance, found "many articles that appear inconsistent to that liberty that we think we have been so long contending for, viz, the third article of the declaration of rights for one, the power invested in the Governour for the second, the power invested into the house of representatives for the third, and the manner of laying excises or duties on manufactories." Freetown preferred to go on with the decapitated Province Charter "until this present unhappy contest is decided." Western towns where the Baptists were strong were of like mind. Westhampton objected to the Governor's military powers, "upon the supposition that wee may at some time be so unhappy as to have a Governour who may not aime at the good of the Commonwealth"; Shelburne objected to almost everything in these words: "Why we dont except of this article is because we dont (want) a law of three branches." That town was not alone in wanting a unicameral legislature immediately responsible to the will of the people. Many agricultural communities such as Greenwich and Washington objected to the senate representing the mercantile interest, and were alarmed at the General Court's power to lay excise duties on produce. Worcester, in a very well worded and carefully thought-out return, suggested that members of the house be guaranteed per diem salary and mileage. (This could be done under the constitution, but was not actually done until 1811.) Several towns wanted the judiciary to be elected, or appointed, for a term of years; and many demanded that every town be given a registry of deeds and a judge of probate. Boston and about 20 other towns thought that the right to a writ of habeas corpus was not strongly enough guaranteed. Chapter V, section 1, protecting the charter and privileges of Harvard College, naturally became a favorite target. Petersham, where the Harvard Forest is now located, thought that the legislature should be free "to curtail that rich and growing corporation lest it should endanger the liberties of the Commonwealth," and Bellingham proposed that the Harvard treasurer be required by the constitution to publish annually an account of the college funds and income. Bellingham little knew how embarrassing that would have been to the then treasurer of Harvard, John Hancock, from whom the corporation had been vainly endeavoring to obtain an accounting since 1775. Incidentally, the Harvard treasurer nowadays does make public his annual report of how poor the university is; in fact, it was headline news on this very anniversary.

Amusing as some of these objections were, they were not typical. On the whole, the townspeople showed great acumen in pointing out the weaker features of the constitution, and suggesting remedies. Dorchester and Northhampton made eloquent pleas for male suffrage. The Northampton return, drafted by Joseph Hawley, we would now regard as unanswerable. Every male aged 16 and upward paid the poll tax, he observed; and in those days the poll tax accounted for about 40 percent of the entire State revenue. Thus, to disfranchise men because they did not own real estate worth $10 a year, or other property worth $200, was taxation without representation. There was also a certain amount of opposition to the financial qualifications for office-holding; but not so much as one would suppose. Petersham insisted that "Riches and dignity neither make the head wiser nor the heart better. The overgrown rich we think the most dangerous to the liberties of a free state, and we object against a discretionary power in the General Court to alter such qualifications in future." Groton pointed out that the power to raise the financial requirements might result in some towns having no qualified resident to elect. And Middleborough inquired, with some humor, what would happen if the people's choice for governor turned out to be worth only £999 instead of £1,000? Seeing that the convention was elected by adult male suffrage, and that the constitution was submitted to adult male suffrage, it is amazing that these property qualifications for the franchise and for office-holding did not wreck it.

Several towns adverted to the low quorum for doing business in the House; Leverett even anticipated amendment XXXIII passed in 1891, that a majority of the members be required for a quorum. Newton was so forward-looking as to suggest the referendum which was not adopted until 1918.

The most numerous objections were preferred to the two articles which anyone would now agree to have been the most defective: article III of the Declaration of Rights on the relations between church and state, and the failure to include any method for amending the Constitution, except the call of a Constitutional Convention in 1795. Adams failed to include in his draft any method of amendment, not because he regarded it as perfect, but because he thought

that the amending power was covered by article VII of the Declaration of Rights, "* * * the people alone have an incontestible * * * right to institute government; and to reform, alter, or totally change the same. * * *" The convention itself added chapter VI, article X, to the effect that a new Constitutional Convention could be called in 1795 if two-thirds of those voting wanted it. Referring to this article, Roxbury observed that a convention should be made certain in 1795; others that the vote should be taken within 5, 7, or 10 years; Bellingham thought there should be a Constitutional Convention regularly every decade. There was a larger minority against this article than against any other in the Constitution.

When the time came to vote on this proposition, in 1795, only a bare majority was in favor of a convention. But a convention had to be called in 1820 (relying on article VII Declaration of Rights, owing to the separate statehood of Maine. It was the 1820 convention which drafted amendment IX, the regular system of amending the Constitution, which was accepted by the people in 1821 and which is still in force.

VIII. THE RATIFICATION

The fourth, last and ratifying session of the convention met on June 7, 1780, at the Brattle Street Church in Boston. At its previous session the convention resolved that the towns could elect new delegates, if they chose, to attend this session; 21 towns availed themselves of this privilege and sent 24 new members. Braintree, for example, sent Brigadier General Palmer to replace John Adams.

By the time it met for this last session, the convention was fairly desperate to get the constitution ratified and a constitutional government elected. Out in Berkshire a county convention was considering asking the General Court "to set them off to a neighboring State that has a constitution"—e. g., Vermont.

So the constitutional convention, on the day it met, appointed a committee to revise and arrange the returns. It was very difficult to get members to serve on this committee—and no wonder, for the towns' returns were in such form that not even an IBM machine could have coped with them. Hardly any two towns had followed the same system of expressing the views of their voters. Some, instead of voting for and against a specific article of the constitution, drafted a substitute and voted on that; and as no two towns suggested the same substitute for a given article, it was impossible to determine just what two-thirds of the people did want. On the church and state article, for instance, many of the objections were on the ground that it was too liberal, allowing equal rights to Roman Catholics; while the others objected that it was not liberal enough and gave the General Court the power to compel church attendance and collect taxes to support the Congregational ministry.

After checking up on the committee's mathematics, I am of the opinion that they did considerable juggling of the returns on the church and state article (Declaration of Rights, art. III) and on the 1795 convention article (ch. VI, art. X), to make it appear that two-thirds of all those voting were in favor of the entire constitution. But there was certainly a majority in favor of those two articles as they stood, and, in my opinion, a two-thirds majority in favor of all the rest. After all, many delegates were present from the dissident towns, and they had plenty of opportunity to check. They must have been persuaded that it was better to gloss over the two-thirds requirements for these two articles, in order to get the constitution in force, since the process had already taken 4 years.

On 15 June 1780, the committee reported to the convention and the question was put on every article: "Is it your opinion that the people have accepted of this article?" Which, upon every individual article, passed in the affirmative by "a very great majority." The convention then declared "that the people of the State of Massachusetts Bay have accepted the constitution as it stands in the printed form." Next it decided that the new constitution would go into effect on 25 October following, and set the 4th of September for the election of governor, lieutenant governor, and senators, and warned the towns to elect their representatives to the general court by October 15.

As it now appeared that the convention's labors were drawing to a close, a committee was somewhat hastily appointed "to wait on the Reverend Dr. Cooper" (minister of the Brattle Street Church), "requesting him to close the convention with thanksgiving and prayer." While waiting for the committee to wait on Dr. Cooper, the convention passed votes of thanks to Governor Bowdoin, Secretary Barrett, and the Brattle Street Church, but not, strangely enough, to John Adams. The committee appointed to wait on Dr. Cooper presently reported that it was unable to locate the reverend gentleman at such short notice, "whereupon it was moved, seconded, and passed that the Reverend Peter Thatcher," delegate from Malden, "close the convention with thanksgiving and prayer; which service being performed, it was moved and seconded that the convention be now dissolved; which being put, passed in the affirmative."

The elections were duly held in September; there were no party tickets, but John Hancock and James Bowdoin were candidates for governor, and the former won by a 10-to-1 majority. So on Wednesday, October 25, 1780, 175 years ago today, John Hancock was inaugurated the first Governor of the Commonwealth; and at the foot of His Excellency's first proclamation appeared for the first time the prayer in which we all may join, "God save the Commonwealth of Massachusetts."

Unity in Agriculture

EXTENSION OF REMARKS

OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1956

Mr. COOLEY. Mr. Speaker, I want to call to the attention of the House three press releases issued this week bearing fundamentally on the hard times that again have beset our farmers.

The first, from the Department of Agriculture, discloses in cold figures the dimensions of the disaster that has struck Midwest corn-hog farmers. Moreover, this release shows the great increase in the charges for marketing pork, at the same time hog prices were declining.

In the second release, Mr. Herschel D. Newsom, master of the National Grange, after a survey in the Corn Belt and Great Plains, voices alarm at the drop in net farm income, in terms of return for good management.

Mr. Speaker, the third release encompasses a new hope for agriculture. It gives an account of a fervent attempt to bring farm organizational efforts into harmony wherever possible, as Mr. Newsom says, "to gain strength in agriculture through unity."

In my mind there is nothing so desperately needed as unity among farmers to bring agriculture out of the recession that has grown tighter and tighter for many months.

A rather successful attempt has been made to divide farmers against themselves, organization against organization, commodity against commodity, region against region, so that the Nation has become confused as to what is good or what is bad for agriculture and the total economy. I firmly believe that unity among farmers will bring understanding among our friends in the cities, and then we shall see city people and farmers working together to establish a farm program to stop the disaster that constantly menaces agriculture and which, if not reversed, soon will endanger our whole economy and the well-being of all Americans.

I commend those farm leaders who are joined in this effort toward unity.

The press releases referred to above follow:

[From the Department of Agriculture]

Charges for marketing pork increased from 21.5 cents a retail pound in the second quarter of 1955 to a record high of 25.8 cents in the fourth quarter while prices to farmers for hogs were decreasing sharply. The United States Department of Agriculture made this comparison today in a research report on pork marketing margins and costs.

The decline in hog prices from June to December 1955 was the largest on record, both in dollars and percentage.

In the last quarter of 1954, the price spread between what the consumer paid for pork and what the farmer received for hogs averaged 23.1 cents per retail pound. The spread narrowed to 22.8 cents per pound in the first quarter of 1955, and to 21.5 cents in the second quarter; then widened sharply to 24.7 cents in the third quarter of 1955 and to 25.8 in the fourth quarter, the widest spread on record.

Prices for barrows and gilts at Chicago dropped from an average of $19.59 per 100 pounds in June 1955 to $10.73 in December. During the same period, marketing charges for pork rose by the equivalent of $2.50 per 100 pounds of live hog. This rise in marketing charges was due largely to a lag in passing on to consumers the sharp reduction in prices paid to farmers for hogs, rather than to higher marketing costs. It is not unusual for changes in retail prices to lag behind changes in wholesale and farm prices.

This study covered the period from January 1949 through January 1956. During the first week of April 1956, the average prices of barrows and gilts at Chicago reached $15.24 per 100 pounds, an increase of $3.77 per 100 pounds since January 1956. For the first quarter of 1956, the farm-to-retail margin narrowed by 2.6 cents a retail pound of pork. The slaughtering of hogs declined 7 percent below the fourth quarter of 1955. The improvement in hog prices in the first quarter of 1956 was also associated with an expanded pork and lard purchase program by the United States Department of Agriculture, promotional efforts, and publication of research data on price spreads and marketing costs.

The price spread between farmer and consumer has widened in most recent years, the Department reported. In 1947, the spread averaged 17.5 cents per retail pound, a record high up to that time, and it increased to an average of 23.7 for 1955, another record high average. Marketing costs have risen substantially during this long-run

period, and these costs are reflected in the increasing price spreads. Furthermore, hog prices have tended to be much more sensitive in recent years to increases in market supplies.

The report presents six detailed examples of the costs of marketing hogs and pork from farm to consumer, together with the distribution of the consumer's dollar among the farmers and the marketing agencies.

A copy of the report, "Pork Marketing Margins and Costs," Miscellaneous Publication No. 711, may be obtained from the Office of Information, U. S. Department of Agriculture, Washington 25, D. C.

[From the National Grange]

Net farm income, in terms of return for good management, in many areas of the Nation is off to an "alarming degree," according to Herschel D. Newsom, Master of the National Grange.

The Grange, Newsom reports, has been pulling together recent farm income statistics for use as a basis for determining its recommendations and activities in the field of farm legislation. A sample of Corn Belt farm income trends, as shown by official farm account records, is as follows:

Average net farm-management returns per farm by years in central Illinois

Type of farm	1953	1954	1955
20 grain farms	$7,836	$4,632	$1,161
20 hog farms	6,640	4,265	[1] 2,900
10 cattle farms	513	[1] 1,358	[1] 6,795

[1] Loss.

Net farm income return is a figure reached after all farm operating expenses are paid and after deductions are made for interest and labor. Interest is charged at the rate of 4 percent on capital invested in land, and at the rate of 5 percent for other capital invested. Family labor is calculated at the rate of $185 per month.

Statistics from other Corn Belt and Great Plains areas are equally alarming, although the situation is not as serious in the eastern and western farming communities, the Grange leader said.

"Our concern," he concluded, "is twofold: first, it is simply not fair nor right that farm people represent the only segment of our national economy that is not experiencing the greatest wave of prosperity the country has ever known; second, there is real danger of the agricultural depression spreading to other segments of the economy. It's only a question of how long farmers must remain poor before the unhealthy symptoms of a general recession begin to show up in the barometers that indicate the Nation's economic health."

It is the position of the National Grange that the Nation cannot afford to risk the possibility of a general recession—or worse.

[From the National Grange]

In a fervent attempt to bring farm organizational efforts into harmony wherever possible, the National Grange has joined with the other major farm organizations in suggesting periodic joint meetings of policy-level officials of these organizations.

The first meeting in a series of meetings just planned will be held in the Grange Building in early June. It will involve officials of the Farm Bureau, the National Grange, the National Farmers Union, and the National Council of Farmer Cooperatives.

Herschel D. Newsom, master of the Grange, says that this is an extension of the efforts of his organization to gain strength in agriculture through unity.

"It's impossible, of course, to reconcile many of the policies of the national farm organizations. This is because these policies are spelled out by the delegate bodies of these organizations. Still, if the farm minority is going to cope with the power of other groups it must present a united front wherever possible.

"The Grange," Newsom continued, "has been working hand-in-hand not only with the other general farm organizations wherever possible, but with numerous commodity and cooperative groups over a period of years and we intend to continue these wholesome relationships," the Indiana farmer concluded.

Bishop Jules B. Jeanmard Resigns After 38 Years as Catholic Leader in Southwest Louisiana

---

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1956

Mr. WILLIS. Mr. Speaker, the recent resignation of the Most Rev. Jules B. Jeanmard as bishop of the diocese of Lafayette, in the Third Congressional District of Louisiana, centers attention upon a long and distinguished service rendered to the Catholic Church and to the spiritual life of the historical Acadian area of southwest Louisiana.

Announcement that Bishop Jeanmard had tendered his resignation in the 38th year of his bishopric, owing to ill health, was made from Washington by the Most Rev. Amleto Giovanni Cicognani, apostolic delegate to the United States, following acceptance by Pope Pius XII.

Nearing his 77th birthday and entering his 53d year in the priesthood, Bishop Jeanmard has been in charge of the Lafayette see since bringing to the Evangeline country of Louisiana the first bishopric in its history when the diocese of Lafayette, proportionally the second most Catholic diocese in the United States, was created in 1918 by papal decree. He was the first Louisianian to be appointed to the high office of bishop in the Catholic Church and the second native son of the Evangeline country to be ordained as priest. After his ordination in 1903, and before reaching the canonical age of 24, he established an outstanding record in important posts in the archdiocese of New Orleans.

Bishop Jeanmard will be succeeded by the present auxiliary bishop of the Lafayette diocese, the Most Rev. Maurice Schexnayder, also a native of Louisiana, who was born at Wallace in the parish—county—of St. John the Baptist, and studied for the priesthood at St. Benedict in Baltimore and in Rome, Italy, where he was ordained in April of 1925 for the archdiocese of New Orleans. His first assignment was as assistant pastor at Plaquemines, La., from which post he moved to Louisiana State University where he became chaplain of Catholic students. After 17 years of notable service at the university he was named pastor of St. Francis De Sales Church, at Houma, La., remaining there until 1951 when he was consecrated as the first auxiliary bishop in the Lafayette diocese and was assigned to St. Michael's Church at Crowley, La., where he is presently serving as pastor.

Formal ceremonies are to be conducted at the Cathedral of St. John the Evangelist, at Lafayette, on May 24, at which time Bishop Schexnayder will take over the leadership of the diocese. Bishop Jeanmard will continue to reside at the bishop's house in Lafayette.

As southwest Louisiana, with great natural resources and so many other advantages, has steadily grown and developed, so has the diocese of Lafayette kept pace in religious growth under the direction and inspiration of Bishop Jeanmard. A few of the statistics which so well record this progress show that in 1918, when Bishop Jeanmard was assigned to the newly created diocese, it had a Catholic population of 152,000 while the figure for 1955 was 350,000. In 1918 there were 48 church parishes in the diocese, which number had grown to 123 last year, and the enrollment of students in the Catholic schools of the diocese increased from 5,628 to 19,875. Of special significance and importance has been the establishment of so many new institutions in the diocese under the guiding hand of Bishop Jeanmard—churches, schools, hospitals, orphanage, seminary, Catholic Student Center of Southwestern Louisiana Institute of Lafayette, monastery, retreat house, bishop's house—contributing to the spiritual and physical welfare of thousands of our citizens, both Catholic and non-Catholic.

Commenting editorially on the resignation of Bishop Jeanmard, the Southwest Louisiana Register, official newspaper of the diocese of Lafayette, said:

END OF AN ERA

They say "the hand that rocks the cradle rules the world." Certainly family-life lovers of southwest Louisiana confirm this. But if it is so, then even more surely does the hand that consecrates rule a diocese.

A bishop is the father, guide, shepherd, and friend to his people. He communicates life, he dispenses goodness, he touches every member of his flock, whether through the sacred oils of Holy Thursday rushed by runner to every parish for baptisms, the last anointing, or the like; or through the priests whom he sends out in his name, christed by himself, to knead the souls of the people into a likely dough, a new paste of the Lord; or through his teaching, in his letters and sermons, in his pouring on of the spirit of truth in confirmation; or just through his courage and consistency in face of terribly trying problems, vexing personalities, and contrary situations of every sampling.

Bishops have a crucifying lot. They suffer for their people. Not theirs merely the public appearances, the processions, the dinners, and the programs. They are lineal descendants of the Apostles, and all of these Apostles knew martyrdom. But as glorious as suffering is, a person gets tired and wants to rest and just live a bit.

Thirty-seven years is longer than most of Bishop Jules Jeanmard's spiritual children have been alive. He has been a bishop that long, a priest 53 years, and a child of God for 77.

Think of all the masses and psalms and absolutions; think of the decisions and plans; think of the joys and the disappointments of so many years in the life of a man who has been the bishop of a new diocese almost longer than any other bishop in the

country. Then consider how difficult it is for a man to decide to retire, and you will know how these years have weighed on the shoulders of one of the youngest men ever to be named a bishop in the United States of America. That, of course, was in 1918. Look around you and see the results of these nearly four decades of pastoral zeal.

Someone once said that when a man retires from being a pastor he can then become a priest. What they meant was that nowadays pastoral responsibilities for administration, office work, correspondence, finances, personalities, and pressing decisions make life extremely complicated. The priesthood itself would be far more direct, personal, and sacramental. Bishop Jeanmard has kept both facets of his priestly work on a high level and his flock has loved him immensely. "He is one of us," we have often said. It may be possible now for him to enjoy his priesthood, to administer rather than administrate, to pray rather than program.

Most of the residents of this diocese have been confirmed by Bishop Jeanmard; practically all of them have in baptism been anointed with oil consecrated by him; most of the native priests were ordained by him; he is known from the blessings of schools, churches, and other institutions. He is the father of a flock. The devotion and loyalty of a people remain with him as he relinquishes the reins of the diocese to another zealous son of the South. Ad multos annos, Bishop.

Tabulation of Public Opinion Poll

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. HENDERSON. Mr. Speaker, in February of this year I prepared a questionnaire of public opinion on many issues and questions of national importance for circulation in the 15th Congressional District of Ohio, which I have the honor to represent. When I undertook the task, it was my desire to obtain a random sample of opinion which might demonstrate local feelings on these issues and questions. A total of 4,435 of the questionnaires were returned to me by April 1 and were tabulated.

The 15th Congressional District of Ohio is in many ways typical of America. Its interests are diverse. It has farms, large and small. There are located there many factories engaged in the production of a multitude of products. The area is a storehouse of natural resources. The people are thinking people, vitally interested in the affairs of the day. Since the people of these seven counties have such diversified interests, it is my feeling that the answers are those of typical Americans, free from the extremes of sectionalism and provincialism. I regard their answers as a source of valuable guidance on various issues as they are considered. Others in the Congress may also share my great interests in the results of this poll.

The tabulation is as follows:

	Total vote	Number favoring	Percentage favoring
1. Do you support the Bricker amendment to void treaties insofar as they would abridge the sovereignty of the United States?	3,692	2,916	79
2. Do you favor lowering the legal voting age from 21 to 18?	4,340	1,657	38.2
3. Do you favor a constitutional amendment which would prevent the Federal Government from spending more than it receives in revenues during peacetime?	4,237	3,132	73.9
4. Are you in agreement with the present foreign policy of the United States?	3,540	1,880	53.1
5. Do you favor the admission of Communist China to the United Nations?	4,222	340	8
6. Do you favor continuation of technical assistance to underdeveloped nations?	2,973	1,988	66.9
7. Do you favor continuation of military assistance to friendly nations?	3,875	2,847	73.5
8. If answers to questions 6 and 7 are "yes", where do you think aid should be concentrated?			
Increase (1,307—60.5 percent) or decrease (851—39.5 percent) aid to Asia.			
Increase (638—30.8 percent) or decrease (1,438—69.2 percent) aid to Europe.			
9. Should we continue the United States Information Agency which furnishes information about our Nation and its policies to other countries?	3,994	2,295	57.5
10. Do you favor the creation of an Academy of Foreign Service by our Government to train future diplomats?	3,797	2,341	61.6
11. Do you favor Federal aid to education for the construction of public school buildings to be supported by additional tax measures?	4,225	2,090	49.5
12. Do you favor Federal aid to assist in the payment of teacher's salaries and administrative costs of local schools to be supported by additional tax measures?	4,187	1,580	37.7
13. Do you favor increased Federal aid for new highways financed by increased taxes (on gasoline, tires, etc.) for highway users?	4,229	2,377	56.2
14. Do you believe the minimum wage laws should be extended to fields of employment not now covered?	3,986	2,474	62.1
15. Do you favor the administration's health reinsurance proposal whereby the Federal Government would encourage expansion of private health insurance by assuming exceptional risks?	3,891	1,542	39.6
16. Do you support increasing present old age and survivorship benefits under the Social Security Act?	4,255	3,022	71
17. Do you favor the reduction from age 65 to 62 for women to receive benefits under the social security law?	4,314	3,132	72.6
18. Do you favor the construction of additional public housing units?	3,889	1,307	33.6
19. Which farm program do you favor:			
(a) Price support program based on 90 percent parity with acreage restrictions		617	16.7
(b) Price support program based on flexible parity with acreage restrictions		1,276	34.6
(c) No Federal price supports and no crop controls		1,796	48.7
20. Do you support the elimination of Federal taxes on gasoline consumed by farmers in the operation of farm machinery?	4,215	2,495	59.2
21. Do you agree that we must abolish farm surpluses before the reduction in farm prices can be solved?	3,833	2,736	71.4
22. Do you support the President's proposal for a soil bank to transfer acreage from farm production to soil-improvement crops as a means to reduce surplus production?	3,909	2,647	67.7
23. Do you agree with the President's recommendation that family-size farms should receive greater consideration in crop price support payments than large commercial farms?	4,103	3,642	88.8
24. Do you favor legislation to remove acreage restrictions on wheat which is grown and used for feed or seed on a particular farm?	3,915	3,110	79.6
25. Do you favor increased postal rates on first-class mail as a means to decrease the deficit under which the Post Office Department has operated?	4,155	2,237	53.8
26. Do you favor statehood for Hawaii and Alaska?	3,359	2,904	86.4
Alaska only, 212 (6.3 percent); Hawaii only, 122 (3.6 percent).			
27. Do you favor a policy of lower tariffs even though it results in increased competition with domestic industry?	3,946	930	23.6
28. Do you favor a reduction in Federal income taxes without first balancing the budget and decreasing the national debt?	4,114	870	21.1
29. Do you favor a basic pension for all World War I veterans?	3,963	2,198	55.5
30. Is the Eisenhower administration doing a good job?	3,738	3,246	86.8

The Cyprus Question and the Banishment of Archbishop Makarios

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. DIGGS. Mr. Speaker, under unanimous consent, I include in the RECORD a thoughtful analysis of the significance of British action in banishing Archbishop Makarios from his native land on charges that he substituted for himself duties of a political leader in place of his religious responsibilities. The implications of this incident are a sharp reminder that the cause of freedom and democracy is constantly being challenged. We can little afford to take its universal appeal for granted or to turn a deaf ear and unseeing eyes whether it is imperiled at home or abroad. The statement, made by Mr. A. Nicholas Soufras, president of the Federation of Hellenic Societies, Inc., follows:

STATEMENT OF FEDERATION OF HELLENIC SOCIETIES, INC., DETROIT, MICH.

In arresting Archbishop Makarios, primate of the Greek Orthodox Church and national leader of the Greek Cypriots, and banishing him from his native land without trial, the British have committed an act which will forever remain a stigma in our civilization. No British excuse will ever suffice to justify or erase this opprobrium from the minds of civilized people. Former Prime Minister Clement Attlee aptly said in the House of Lords, touching off shouts of approval, "Hitler could do it. Stalin could do it. But Britain could not do it."

Even the Archbishop of Canterbury condemned the British action. Addressing the House of Lords, the archbishop, Dr. Geoffrey Fisher, shattered the Government's pretext that Archbishop Makarios was banished because he disregarded his religious duties and assumed those of a political leader. Said Dr. Fisher, "Archbishop Makarios was continuing a tradition of the past when once again he identified the leadership of his church with a struggle for political freedom." Indeed, the Archbishop of Canterbury shows a clear understanding, not yet grasped by

the Western World, of the role of the Greek Church in the political life of the Hellenic world.

The Western World does not usually understand that, in the black days following the fall of the Greek Byzantine Empire to the Ottomans in the 15th century, there was only the church to look to for leadership. The church kept alive the spark of freedom and the Greek spirit throughout the centuries, and finally, on March 25, 1821, it was Bishop Germanos who raised the banner of the revolution at the monastery of Agia Lavra. The struggle that began on that historic day ended 8 years later with victory and independence for part of Greece.

Similarly, during the long years of the occupation of Cyprus by alien powers, it was only natural that the Greek Church, true to its traditions and responsibilities, should provide leadership for the struggle to gain liberty for the people of the island.

The representative character of the church's role is clearly seen from the fact that the Archbishop of Cyprus, also Ethnarch (head of the Ethnarchy, which is the Cypriot National Council), is elected by democratic process.

For those well-meaning persons who would like to understand the Cyprus question, a very brief historical sketch may not be amiss.

When for the first time the name of Cyprus appears in history, it is mentioned as being a Greek island and part of Greece, having the same culture, the same religion, and the same traditions and sentiments.

The sovereignty of the island, particularly after the fall of the Greek Byzantine Empire, has had a checkered history. Cyprus was finally ceded to Great Britain by Turkey in 1878. The deal was then characterized by Gladstone as "a thieves' bargain." After Turkey entered World War I on the side of the Central Powers, Britain annexed the island in 1914, and Turkey recognized this annexation and relinquished all claims as to the ultimate status of Cyprus by articles 16 and 20 of the Treaty of Lausanne, signed on July 24, 1923. In 1925, Cyprus was made a British Crown Colony—the only colony in Europe.

From the earliest days of British rule, the Greek Cypriots, constituting four-fifths of the island's half-million population, never ceased demanding their right of self-determination.

Said Winston S. Churchill in 1907, then Colonial Under-Secretary, "I think it is only natural that the Cypriot people, who are of Greek descent, should regard their incorporation with what may be called their mother country as an ideal to be earnestly, devoutly, and fervently cherished. Such a feeling is an example of the patriotic devotion which so nobly characterizes the Greek Nation."

But Britain now contends that Cyprus cannot be allowed self-determination because of strategic necessities.

Is it not a fact that the Greek Government has openly stated that it will give Britain all facilities for defense in Cyprus, or any part of Greek territory? Is it not a fact that Greece is a member of NATO, and as such, the Greek Government is prepared to offer full facilities to other NATO powers also, besides Great Britain?

But then the British argue that Greece is unstable for complete confidence. Writes Francis Noel-Baker, MP, in the Manchester Guardian, October 2, 1954: "Surely the whole postwar history of the Greeks proves that we have no more reliable ally on the continent of Europe. There is no people less likely to turn neutralists, or to allow themselves to be drawn behind the Iron Curtain. If we cannot trust Greece, we might as well write off all our friends in Europe and turn neutralists ourselves."

As to Turkey's demands: One is compelled to be reminded of the traditional British intriguery: In their refusal to abandon the Northwest forts and trading posts, which had been ceded to the United States at the end of the Revolutionary War, were not the British savagely encouraging the Indians to massacre oncoming settlers? Turkey, despite British schemes and machinations, has no lawful claim on Cyprus because, whatever rights she might have had, she relinquished all her claims as to the ultimate status of Cyprus by the aforesaid Treaty of Lausanne.

In conclusion, how can Cyprus be used by the British for defense of the eastern Mediterranean in the proclaimed cause of liberty and democracy when the people of the island are consistently denied their own national liberty?

The fact is that in the name of imperial defense, a colonial dispute has been permitted by British obstinacy and diplomatic intrigue to develop into an international crisis, which threatens the very existence of NATO in the eastern Mediterranean.

Would our Government be true to our American traditions and principles if it fails to take a firm stand and support the right of the Greek Cypriots to self-determination?

Let us heed the warning of an early great American sage: "Those, who would give up essential liberty to purchase a little temporary safety, deserve neither liberty nor safety."

A. NICHOLAS SOUFRAS,
President.

University of Illinois Dedicates New College of Law

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1956

Mr. SPRINGER. Mr. Speaker, in a very impressive ceremony from April 11 to 14 the University of Illinois dedicated its new building which will house the college of law.

For some 20 years this building had been the dream of Dean Albert J. Harno, the college of law faculty, and many of its alumni, including this speaker. This dedication was the culmination of this dream.

All of us know that buildings in themselves do not make great scholars nor embryo lawyers. However, they do make possible more adequate background for the student and better conditions under which the faculty may teach and the student body study.

The University of Illinois needed this new building badly. It had been housed in the building which had been the University of Illinois Law School for almost 50 years. The school has expanded tremendously in recent years. The capacity of the school for additional students had become highly limited.

At this time I would like to pay tribute to Dean Harno, who has been dean of the law school for more than 25 years. There is no more highly respected nor able dean of a law school in the entire country. He has been meticulcus in the choice of those on his faculty. He has urged them to be scholarly in their teaching. He has urged the students to be diligent in their studies. This man has left an impact upon the university and the law school which will be remembered long after he has departed from the scene.

On Saturday, the Chief Justice of the United States Supreme Court, Earl Warren, gave the convocation address and received on honorary degree of doctor of law, as did Judge Walter C. Lindley of the United States Circuit of Appeals for the Circuit comprising Wisconsin, Illinois, and Indiana.

Ths was a great occasion in the history of the University of Illinois. In recent years the university has had an intensive building program in the dental school, the medical school, and now the law school. It has become preeminent in the graduate school field. It intends to hold that position through the coming years.

Mr. Speaker, I append herewith the building dedication program for the new college of law building, beginning on Wednesday, April 11, and ending on the evening of April 13:

UNIVERSITY OF ILLINOIS, COLLEGE OF LAW, BUILDING DEDICATION PROGRAM, APRIL 11–14, 1956

WEDNESDAY, APRIL 11, 1956

6:30 p. m.: Seventh annual college of law recognition banquet, honoring student achievement for the year, ballroom of Illini Union Building.

THURSDAY, APRIL 12, 1956

10:15 a. m.–4:45 p. m.: Colloquium: The Advocate at Mid-Century, auditorium of the law building.

Morning session

The Advocate as a Counselor, Thurman Arnold, Arnold, Fortas and Porter, Washington, D. C.

The Advocate in the Trial Court, Joseph C. Hutcheson, Jr., Chief Judge of the United States Court of Appeals, Fifth Circuit.

Afternoon session

The Advocate Before Administrative Agencies, Justin Miller, McClean, Salisbury, Petty and McClean (of counsel), Los Angeles.

The Advocate as a Lawmaker: The Advocate in the Reviewing Courts, Walter V. Schaefer, Justice of the Supreme Court of Illinois.

The Advocate as a Lawmaker: The Advocate's Role in Legislation, William L. Springer, Member of Congress.

6:30 p. m.: College of law alumni dinner, Champaign Country Club.

FRIDAY, APRIL 13, 1956

9:30 a. m.–3:15 p. m.: Colloquium: Law and Society, auditorium of the law building.

Morning session

Law and Social Change in a Democratic Society, Charles E. Wyzanski, Jr., judge of United States District Court, Boston; Roger J. Traynor, justice of Supreme Court of California; Denis W. Brogan, professor of political science, Cambridge University, England; George A. Miller visiting professor of political science, University of Illinois.

Afternoon session

Role of the Law School in a Democratic Society, Herbert F. Goodrich, judge of United States Court of Appeals, Third Circuit.

Law and the Growth of International Society, Alf Ross, professor of law, University

of Copenhagen, Denmark; George A. Miller visiting professor of law, University of Illinois.

4 p. m.: Final arguments in the Frederick Green moot court competition, before the Justices of the Supreme Court of Illinois; auditorium of the law building.

6:30 p. m.: Dinner for delegates of law schools, Illini Union Building; Speaker, A. James Casner, professor of law, Harvard University.

SATURDAY, APRIL 14, 1956

10 a. m.: Convocation: University auditorium.

Greetings: James G. Thomas, president of the Law Alumni Association; Thomas S. Edmonds, president of Illinois State Bar Association; E. Smythe Gambrell, president of American Bar Association; Maurice T. Van Hecke, president of Association of American Law School; Harry B. Hershey, chief justice of Supreme Court of Illinois; William G. Stratton, Governor of Illinois.

Convocation address: Earl Warren, Chief Justice of the United States.

Conferring of honorary degrees.

12:15 p. m.: The dedication: Procession to the law building.

Presentation of the building: Herbert B. Megran, president of the board of trustees.

Acceptance of the building: Albert J. Harno, dean of the college of law.

The Reluctant Veto

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks, I would like to insert in the RECORD an editorial of April 16 commending President Eisenhower on vetoing the grab-bag farm bill. It is reassuring and heartening to note the logic of this editorial coming from a paper that certainly is not politically motivated:

THE RELUCTANT VETO

President Eisenhower has done the right thing in coupling his veto of the grab-bag farm bill with a plan to improve farm income through administrative action and with a plea for prompt repassage of the soil bank. Obviously the Chief Executive did not reach a decision involving such turbulent political implications without a great deal of soul-searching. The farm income slump is serious, and it could easily affect the remainder of the economy. There were strong inducements for Mr. Eisenhower to wink at fixed 90-percent price supports and other obnoxious portions of the bill in order to obtain approval of the soil bank and assist farm income. Nevertheless, as he said yesterday, "because the good features of the bill are combined with so much that would be detrimental to farmers' welfare, to sign it would be to retreat rather than advance toward a brighter future for our farm families."

We cannot help feeling that the President's courage in sticking to principle will win him more respect than he would have obtained by yielding to expediency, particularly since he shows full awareness of the farm plight. His message makes clear his feeling that a reversion to 90-percent supports, in company with a mischievous dual parity system and mandatory support for feed grains, would have aggravated that plight in the long run. Many Members of Congress who voted for the omnibus bill out of desperation must recognize this. Certainly it is wise for the administration to take positive steps to alleviate the farm income squeeze. There will be considerable reassurance in Mr. Eisenhower's announcement that basic crops will be supported at a level of at least 82½ percent of parity in 1956, that the dairy support level will be increased and that $400 million will be available in the next fiscal year for support of perishables. Two-dollar wheat and $1.50 corn, which the President promises, are above present average prices. These guaranties are a sensible exercise of the discretionary powers under the 1954 act and do not involve writing higher mandatory supports into law.

At the same time it is well to recognize that such administrative measures for relief are a stopgap which does not get at the basic causes of depressed prices. The soil bank is one constructive means of removing lands from production so that the accumulation of surpluses may be reduced. It is a noncontroversial plan, and one which we hope Congress will consider again promptly and without vindictiveness. Mr. Eisenhower has sidestepped what added up to a political effort to put him on the spot with a bill which contained measures that legislators knew he would find unacceptable; he has taken steps to improve the farm income situation and has appealed soberly for passage of an unadorned soil bank that could come into operation in time to affect fall crops. We trust that this time Congress will forego the temptations of election year politics to permit a start on the sort of approach that will help relieve rather than complicate the agricultural dilemma.

Farm Legislation

EXTENSION OF REMARKS
OF
HON. ROBERT D. HARRISON
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. HARRISON of Nebraska. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from the information department of the American Farm Bureau Association:

CHICAGO, ILL., April 16.—The American Farm Bureau Federation Executive Committee, meeting in Chicago today, declared that President Eisenhower's veto of the Omnibus Farm Bill provides Congress another opportunity at this session to adopt sound farm legislation.

The executive committee said:

"President Eisenhower's action in vetoing the farm bill is based on sound economic principles. Farmers recognize and resent obvious efforts to make farm program legislation a political football.

"Congress still has the opportunity and responsibility to adopt a workable farm bill that will carry out the objectives of adjusting production to market demand and of expanding markets at home and abroad.

"Farmers need a sound soil bank plan, free of counteracting production-stimulating provisions.

"This farm bill would have marked a return to the price-fixing policies that have played a major part in creating price-depressing surpluses. It would have made more difficult the expansion of markets for farm products in the United States and in foreign countries.

"Among the most objectionable features contained in the bill are: (1) Continuation of fixed 90 percent price supports, (2) double standard method of computing parity prices, (3) the mandatory three-price domestic dumping plan for wheat.

"Instead of helping farmers to get a high net income for their products, these provisions nullified other parts of the bill that might have helped adjust agricultural production to effective market demand. Farmers' incomes will not be in balance with the rest of the economy unless and until farm surpluses are removed and current production is in line with current demand.

"A principal objective of the soil bank is to shrink the overexpanded agricultural plant. In contrast this bill would have encouraged production of wasteful and market-breaking surpluses.

"The provision to dump wheat domestically would have adversely affected the price of all feed grains, as well as cattle, hogs, sheep, dairy and poultry products. This would have aggravated an already serious situation in this regard.

"Likewise, the multiple price plans might have caused widespread retaliation by other countries, loss of foreign markets, and created interntional ill will.

"To repeat and compound these errors would have foredoomed the opportunity to deal successfully with these problems in the future.

"In addition to income-depressing surpluses, farmers are confronted with increased costs of production, increased distribution charges and some loss of markets. There is a pressing need for vigorous efforts in all four of these fields of activity."

The executive committee of the federation is composed of Charles B. Shuman, president; Walter Randolph, vice president, Montgomery, Ala.; and board members—Herbert W. Voorhees, president of the New Jersey Farm Bureau, Trenton, N. J.; Hassil Schenck, president, Indiana Farm Bureau, Inc., Indianapolis, Ind.; George H. Wilson, Clarksburg, Calif.; and R. Flake Shaw, executive vice president, North Carolina Farm Bureau Federation, Greensboro, N. C.

The federation has a membership of 1,600,000 farm families in 48 States and Puerto Rico and is by far the largest general farm organization in the Nation.

Letter to the President

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. JENSEN. Mr. Speaker, on last Monday forenoon, April 16, about 2 hours before I learned the President had vetoed the farm bill, I delivered to him by special messenger, the following letter:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., April 16, 1956.

The PRESIDENT,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: I am quite certain you will remember all that took place during the fall of 1952, when at your request, the writer was called to Denver, Colo., to debate the 90 percent of parity question vs. flexible parity with a member of the American Farm Bureau Federation in your presence. I need not remind you of your decision and of the outcome of that debate, but will only

say it was most gratifying to a great majority of our farmers, and was reflected in the election of 1952. Hence, as a humble Representative of the American people, I feel dutybound to again speak out on this subject which is of such great importance to every American, as well as to our farmers.

I sincerely hope you will sign the farm bill because:

1. The farmer's dollar is now worth only 80 cents at the counter, which our American economy cannot long endure.

2. The 90 percent of parity provision would immediately raise farmer income, hence their purchasing power and in turn would benefit industries and labor, now and over the long pull.

3. When the American farmer dollar buys 100 cents worth at the counter, he buys over twice as many dollar's worth of processed and manufactured goods on an average than do other Americans per capita.

4. Most everyone favors the soil bank provision, for obvious reasons.

5. The bill embodies about 90 percent of your own nine point farm program, both in principle and purpose.

6. The American people are today spending on an average of less than 24 percent of their income for food, which is less than at any time in our history, except when a number of foods were subsidized during World War II. We must weigh a slight price increase in finished goods against millions of jobs now in jeopardy.

7. When the threat of lower prices of raw products is eliminated, then the thousands of processors and manufacturers of raw products will know they can safely purchase a year's supply of their raw products needs (amounting to billions of dollars annually) without financial loss if the parity provisions now in the bill are maintained. For the past 3 years they have been buying from hand to mouth, either from the producer or from the Government surpluses, due to the threat of lower raw product prices under the flexible parity proposal, which is the primary cause for the piling up of surpluses in Government warehouses and grain bins, instead of being purchased and stored by private processors and manufacturers, as should be, and will be if the parity support provisions in the farm bill are made law by your signature.

Therefore, I plead with you to sign the farm bill.

Respectfully,

BEN F. JENSEN.

Now, Mr. Speaker, may I say that I yield to no man in the high regard and respect I hold for our great President, but I, too, have a duty to perform and a conscience to satisfy and live with by voting my honest convictions on every question which comes before Congress, including this veto message. For these reasons and for the reasons set out in my letter of April 16 to the President, I cannot find it in my heart to sustain the President's veto of the farm bill.

Some Aspects of Law in the Atomic Age

EXTENSION OF REMARKS

OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Wednesday, April 18, 1956

Mr. ANDERSON. Mr. President, on April 16, the northeastern regional meeting of the American Bar Association asked me to discuss some aspects of law in the atomic age.

I ask unanimous consent that the text of that address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SOME ASPECTS OF LAW IN THE ATOMIC AGE

(Address of Hon. CLINTON P. ANDERSON, of New Mexico)

I appreciate the opportunity to talk this morning to you members of the bar. It is hardly a unique experience for me as a layman to address a group of lawyers. Well over one-half of the Members of the United States Senate are members of the legal profession and I find occasion to talk with and to them at times. My task this morning, however, does present a novel opportunity, for I plan to discuss with you some of the problems which as lawyers you will face in the atomic age. I will be pleased if at the conclusion of my remarks you are convinced that a man cannot live for a lifetime as a business man, farmer, and public official without absorbing portions of the learned advice of his counsel.

Until the passage of the Atomic Energy Act of 1954, the interest of the organized bar in the development of the Nation's atomic energy program was almost nonexistent. With a few notable exceptions the legal profession gave scant attention to this most important matter, and the contributions which lawyers customarily make to public affairs here lagged behind that which accompanied other current developments. That atomic energy prior to 1954 had a limited impact upon the law is understandable in the light of the conditions of the predominantly Government-financed operations which then existed. Only the patent bar to a limited extent and the lawyers for the Atomic Energy Commission and its principal contractors had a real professional interest in the subject.

This is not the situation today. The 1954 act opened the door to private initiative and set the framework for the development of a complex atomic energy industry. Lawyers can no longer remain detached or aloof, and it is not surprising to find the bar now playing an interested and substantial role in the growth of the country's program for the peaceful uses of atomic energy. Thus, the American Bar Association now has a special committee on atomic energy, and at its last annual meeting received some one-half dozen papers dealing with atomic-energy matters. The organized bar associations of the cities of New York and Chicago have have active committees on atomic energy law. The Federal Bar Association last fall conducted a 2-day briefing session in Washington on atomic energy, attended to capacity by lawyers from all sections of the country. Leading law schools now conduct seminars on legal problems in atomic energy. The Bar Journals and Law Reviews contain an increasing number of articles on the subject. The current issue of Duke University's Law and Contemporary Problems is devoted entirely to legal problems in the development of atomic power. I have been informed that a forthcoming issue of the Texas Law Journal will also be devoted entirely to the subject.

Various approaches have been taken toward the subject of atomic energy and its legal problems. One extreme has been that atomic energy has brought about a strange "brave new world" with an entirely different set of problems than exist in any other field, and given rise to a separate body of atomic energy law capable of being understood only by an esoteric group of specialists. The other extreme is that atomic energy problems are no different from any others and can be dealt with accordingly under traditional patterns.

I prefer a middle course which recognizes pragmatically that there are some unique aspects present, but also recognizes the feasibility of applying and adapting traditional doctrine to these new situations. Thus, we may hope to approach the peaceful uses of atomic energy in the pattern of normal private enterprise, recognizing that there will be unique aspects in this field which give rise to an active role by the Government.

The uniqueness of atomic energy lies in its nature and in its sources in uranium and thorium metals. Here is a new natural resource of substantial proportions, capable of destruction in devastating proportions, but capable also of achieving the more abundant life for all mankind.

For reasons of national defense, the development of this resource became a national monopoly for bomb-production purposes. Federal ownership of fissionable material (or special nuclear material as it is now known) has been continued under the Atomic Energy Acts of 1946 and 1954 because of security and other considerations. Legally, therefore, we are dealing with a resource which is Government property. And I can assure you that the accountability for this material even transcends that to which normal Government-issued property is subject.

Seriously though, we are dealing with more problems than that of Government property in the narrow sense. We are dealing with a Government-owned, contractor-operated industry of very large proportions. We are also dealing with a parallel-growing, privately financed industry which will operate under Government regulation. At the present time we are in a transition stage with the Government acting as a proprietor, promoter, and regulator.

The legal problems of atomic energy stem from these Government roles. I want to emphasize this morning the newer problems under the Atomic Energy Act of 1954, particularly in the privately financed development of atomic energy.

However, I would stress that a very substantial part of the atomic industry is still Government financed. The big money is still being expended here. From a legal standpoint, there are a number of unique problems in this neglected field of the law. We have a new institution called a "Government Prime Contractor" whose operations are a sort of hybrid between private industry and direct Government operations. We have rather unique types of contractual arrangements with these prime contractors and subcontractors that do not fit standard forms. But more of that some other time.

Of primary concern to the lawyer is the fact that privately financed atomic energy activity is a regulated business—necessarily so because of two principal characteristics: first, the potential hazard to public health and safety which is involved, and, second, the presence of a paramount concern for the interests of the common defense and security. The Atomic Energy Act of 1954 provides the broad outline of a plan for the control of essential materials and facilities. In general, the control scheme adopted has two main features: (1) A system of licensing which permits a review of proposed activities and the imposition of such conditions as may be deemed necessary, and (2) continuing supervision of a licensee through the conditions and terms included in the license, through rules and regulations, through inspections, and through reports.

Under the broad statutory power which it has over materials and facilities, the Atomic Energy Commission has issued a series of regulations and standards dealing with the detailed health, safety, and security aspects of the atomic energy business and with the rules of practice and procedure for those

who seek Commission action or who are subjected to Commission orders. Students of constitutional and administrative law are familiar with the legislative technique of delegating to an administrative agency the authority to prescribe the standards of a uniform regulatory scheme, when the field requires special knowledge, or the hand of an expert, but leaving that flexibility which is necessary or desirable.

There is nothing unique in this application of the general rules and principles of administrative law in the field of atomic energy. However, the atomic energy lawyer must be familiar, not only with the statute and the rules and regulations, but must also acquire, for complete understanding, knowledge of the technical implications which are involved. This, in turn, may require the acquisition of a new and somewhat strange vocabulary.

Another field of interest to the lawyer is that associated with international trade in atomic energy goods and services. American industry, with the lead given by the Manhattan project in the war years and by the Government's research and development program since then, should enjoy a competitive advantage in the world's atomic market place. This is particularly true with respect to the manufacturers of reactors, reactor components, high-level radiation sources, control devices, and instruments of all sorts. It is also true of architect-engineers and others who may be employed to perform consulting services for foreign countries or their nationals.

Here the lawyer will need more than an acquaintance with the rules of international trade generally. To serve his client well, he will need in addition a knowledge and understanding of the United States program for cooperative assistance with the free world in atomic energy matters. Among other things, this will involve knowledge of the bilateral agreements for cooperation which we have with other nations, the substance of their provisions, and the limitations which are imposed in the interest of the common defense and security. It will require an understanding of the important matter of supplying fuel for foreign reactors, the allocations which have been made, the policy and procedures which are applicable, and the type of private international arrangements permitted. Comprehension of these matters cannot be acquired through the traditional sources of law but must be derived through a selective use of nonlegal materials.

Particularly apt for discussion in the city of Hartford and of special interest to me as an insurance man are the problems of legal liability and insurance.

The basic device used in the production of atomic energy—a nuclear reactor—is potentially a dangerous instrument. The major hazard involved is not heat or blast, as commonly assumed, but radiation emanating from the highly radioactive fission products accumulated within the reactor as waste during periods of operation. These fission products are more toxic than any substance heretofore known, and more insidious. They can neither be seen nor felt. Exposure beyond tolerable limits may bring no sensual reaction, and it could be some time before the effects of exposure become apparent.

A major reactor accident could result in the release of large quantities of these fission products into the atmosphere, contaminating a wide geographic area.

Widely publicized statements describing the theoretical effects of a major reactor incident in graphic terms have contributed greatly to the fears and doubts of the public and of potential members of the atomic energy industry. It must be carefully noted that these statements are designed primarily to plead the cause of care and caution in atomic energy activities. Proper perspective must be given to the theoretical data presented and the conclusions reached. At the present time it seems reasonably certain that inherently safe reactors can be designed and constructed. Engineering data assures the essential integrity of containment, or the placing of reactors in protective, gas-tight envelopes. Constant and extensive research in reactor safety and radiation protection has provided a basis for increased understanding of the problems involved and for the development of standards and health-safety regulations. The published operating history of 25 reactors in the United States over a period in excess of 12 years shows no accidents involving radiation injury sufficiently serious to cause lost time of personnel during 606,686 operating hours and 17,799,000 man-hours.

Nevertheless, in spite of this remarkable safety record, the catastrophic incident remains a possibility. Regardless of design, location, or isolation, there is no such thing as an absolutely safe nuclear reactor—just as there is no such thing as an absolutely safe chemical plant or ore refinery. There is always present a finite possibility of the occurrence of an event, or series of events, the result of which would be the release of unsafe quantities of radioactive material to the surrounding area. What is frightening about this possibility, however remote it may be, is that the potential damage—the maximum conceivable damage—which can be caused by such an accident is far greater than that which can result from other industrial accidents.

Questions of legal liability and insurance thus are of immediate and significant interest to the growing atomic energy industry and its lawyers. The latter also foresee that it is inevitable that nuclear accidents will give rise to unique legal problems involving statutes of limitation, workmen's compensation procedures, techniques of proof and the introduction of evidence, the conflict of laws, Federal-State relations, and other conceivable technical questions.

The rules of legal liability are a matter of concern not only to the future owner and operator of a reactor but also to the manufacturer and supplier of component parts and to the architect-engineer who may be responsible for the design of a reactor and the supervision of its construction.

The owner and operator is faced with the possibility of being held liable for damages caused by a reactor accident without regard to the question of negligence because of the alleged ultrahazardous activity involved. The manufacturer of reactor parts and equipment, cognizant of Justice Cardozo's famous opinion in *MacPherson* v. *Buick Co.*, and faced with a likely application of the doctrine of strict liability, must assess his potential liability in terms of every project for which he has manufactured and supplied parts and equipment. Under recent cases, the same appears true of the architect or design engineer.

The only way in which all segments of the industry can protect themselves, in the absence of prohibitive indemnity clauses in commercial contracts, is through insurance. The availability of such insurance in adequate amounts remains a major problem in the effort to develop a private atomic energy industry, and is held by many to be a serious deterrent to large-scale nuclear enterprises.

Under the 1946 act, the atomic-energy program was financed almost wholly from public funds. Accordingly, the Government assumed directly all risk of loss under its general policy of self-insurance on Government property and through indemnity provisions in contracts covering third-party liability. As a result, the private insurors of the country had only a limited knowledge of the hazards involved in atomic-energy activities, no real basis upon which to evaluate those hazards, and no need to develop and make available private coverage in the field.

It is a great credit to the insurance industry that it has recognized a public responsibility in the premises and has indicated, in the short time that has been available, its readiness to provide liability insurance covering nuclear activities in unprecedented amounts. I have no hesitation in saying that the work of the insurance study group has been one of the most encouraging indications of the willingness of private enterprise to be self-sufficient in atomic-energy affairs.

However, in spite of the $65 million, third-party-liability coverage which the private insurors have indicated they will offer, the atomic-energy industry—almost unanimously—has indicated a reluctance to proceed without assurance that they will be financially protected to the full extent of their potential liability. This may be beyond the combined capacity of the insurance industry. This poses a very serious problem. The unwillingness of the industry to get on with the job without open-ended coverage is a serious and immediate threat to the public interest in the rapid development of the peaceful uses of atomic energy and raises a question concerning participation by the Federal Government in the insurance problem and in the reactor program generally.

No one is very happy over the prospect of the Government entering the atomic-energy insurance field. Yet the Government does have a basic responsibility to do everything possible to develop an atomic-energy industry as rapidly as possible and, at the same time, to make certain that in the course of such development a risk of unprecedented loss is not thrust upon the public without adequate provision for relief. It would seem, therefore, that if the reluctance of the atomic-energy industry is well-founded, this Nation may face this alternative: either some form of Government assistance must be provided in the insurance field, or the Congress may decide to proceed with Government-financed reactors under normal-indemnity provisions covering third-party liability in order to keep the program rolling. That problem now faces the Atomic Energy Commission and the Congress, and insofar as it is the burden of the Joint Committee on Atomic Energy, we intend to determine our policy as promptly as we can.

Several bills have been introduced in the present session of the Congress in an attempt to meet the problem, and recently the joint committe held an executive seminar to hear the views of both the atomic energy industry and the insurers. This proved to be a very valuable experience, and the committee is considering holding open hearings on the insurance problem in the near future.

I should point out at this point that the recent survey made by a committee of distinguished public citizens, known as the McKinney Panel on the Impact of Peaceful Uses of Atomic Energy, concluded that the time had not arrived to consider the need for a Federal atomic insurance program covering peaceful uses. Rather, the panel suggested that the efforts of private insurance companies to deal with the problem should be encouraged, and expressed the opinion that at least 2 and possibly 3 years remain in which to conduct research and accumulate knowledge and experience before any substantial private activity would be delayed or stopped because of the inability to obtain adequate insurance. The panel concluded that a Federal atomic insurance program constituted a threat to private atomic enterprise, not a benefit. It is, the report states, "a last resort not yet called for and one which may not be needed." I would hope that the forthcoming hearings will thoroughly explore the entire field of insurance and test the soundness of the panel's conclusions.

In addition to questions of liability and insurance, the nature of the hazards con-

nected with atomic energy work suggest the possibility of other legal problems.

Consider the question of the statutes of limitation which require the commencement of an action for damages within a prescribed number of years after the cause of action occurs. In most jurisdictions, the period of limitation begins to run from the date of the alleged wrong—in the case of radiation injury, from the date of exposure. But, as I have pointed out, the insidious nature of radiation is such that the fact of overexposure and its effects may not be manifest for many years. By that time, the statutory period may have expired and the cause of action barred. This seems to me a legal problem which will require careful thought in the interest of preserving the rightful claims of the general public. Some modification of the statutes is indicated in order to extend the period of limitations in actions for damages caused by radiation, or to recognize that actions involving radiation injuries present a special case of public policy which outweighs the general desirability of requiring that lawsuits be brought to trial with a minimum of delay.

Similar problems are presented in the field of workmen's compensation in connection with the general requirement that notice of a compensable injury be given the employer within a short time after its occurrence and that claims for compensation be made within a limited period after the injury or disability becomes apparent. It seems certain that a reconsideration of local workmen's compensation laws by State legislatures will be necessary unless the atomic energy worker is to be severely penalized. Indeed, many of the legislatures and industrial commissions now have the problem under consideration.

I have previously referred to the wide geographic area which quite possibly could be affected in the event of a major nuclear accident. This may include at least two adjacent States. In such case, there will be a problem in what lawyers call the conflict of laws: What law will govern in the event of a so-called "interstate tort"—the law of the State where the radioactivity was released or the jurisdiction where the exposure took place? It is obvious that legal imagination and boldness will be required in solving unusual questions such as this.

Let me give you a few legal brain twisters:

1. How do you prove or disprove negligence in the atomic-energy industry if the operations are shrouded in secrecy?

2. If radiation damage appears, how do you prove which of several possible radiations caused the damage?

3. If radiation damage appears after a long period of time and you can prove where the damage came from, how do you collect if the organization responsible is not longer in business?

4. If radiation causes damage to the genes in a parent, to whom does the right of action belong—the parent or the deformed child?

5. If it takes an Einstein to understand the theory of relativity, how can a jury decide whether a reactor is run negligently or carefully.

In this brief time, I have tried to outline for you what I believe to be some of the legal problems which will exist in the transition period of the atomic age. That some of the problems will be unusual or unique is apparent, and their solution will require legal pioneering of a high order. This, however, is a common experience attending the growth of any new industry, particularly when it widely affects the activities and conduct of the general public and is dependent upon continuing technological advance. In addition to the unusual problems, there will be the everyday, run-of-the-mill questions of adaptation to these circumstances. This will require high standards of craftsmanship. The history of the legal profession has been a dynamic one, and I am confident that the lawyers of the Nation are capable of meeting any challenge which may be presented by this new scientific and industrial force—the energy of the atom.

Cotton Cannot Go It Alone

EXTENSION OF REMARKS
OF
HON. JAMES O. EASTLAND
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Wednesday, April 18, 1956

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address delivered by the distinguished Senator from New Mexico [Mr. ANDERSON] at the annual meeting of the Western Cotton Shippers Association, in El Paso, Tex., on April 12, 1956. This is one of the greatest agricultural speeches which has ever been delivered.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

COTTON CANNOT GO IT ALONE

(Address by Hon. CLINTON P. ANDERSON, of New Mexico)

This is a difficult time to be talking about farm problems and particularly about cotton. The Senate took weeks to pass a farm bill. About a year ago the House of Representatives passed a farm bill also. The two bills were far apart. Now the conferees have spent two weeks trying to bring them together into something that will receive Presidential action. You will notice I did not say will receive Presidential approval. I have not been able to determine accurately for myself whether the program was to produce a bill that the President would veto in the hope that some slight political value may result, or whether it was planned to work out a bill that the President could sign.

Today I want to review what the Senate tried to put into its farm bill and what has happened in the cotton picture which seems to make the action taken by the Senate the proper one for the industry as well as for the country.

We had long hearings on the new farm legislation. I commend the Senator from Louisiana, Mr. ELLENDER, for traveling across this country trying to find out what the farmers wanted. After I studied the hearings I became convinced that farmers were not unanimous in what they wanted. In one part of the country there seemed to be quite a bit of approval for a program of flexible price supports. In other parts of the country the committee was assured that farmers would settle for nothing less than 90-percent rigid price supports. There was a good deal of testimony indicating that they would take 100 percent if pressed hard enough.

When the hearings were over, our committee tried to write a farm bill. We had before us all the suggestions that had been developed, boiled down to what the committee felt might be considered in a final bill.

When we came to our final votes, my first motion was to strike the price provisions from the bill on the theory that we should be seeking to shrink agricultural production, and that the soil bank which had been proposed by the President to do that, had a chance for early enactment, possibly as early as the middle of February. I thought we could then proceed to fight over the price question at our leisure. Further there was then in the bill a surplus disposal provision based upon a resolution which I had submitted the first day of the Congress, and I wanted to see it passed.

I have said repeatedly that there are two ways to help the American farmer. The first is to dispose of the burdensome surpluses which hang over the market and depress all agricultural prices—not only for cotton, corn, wheat, and rice, but for livestock as well. Therefore, I felt it necessary to make sure that the Secretary of Agriculture came back to the Congress within 30 days and reported what he was going to do to get rid of these surpluses. That resolution, in my opinion, could have been acted upon by the Senate Agriculture Committee in the first 2 weeks of the new session, and the Secretary would have been before us by the middle of February telling us how he proposed to get rid of surpluses. We could have either taken that medicine or we could have stirred up a new batch, but we could at least have been on our way. Now, 60 days later, we are in the process of trying to pass agricultural legislation which has, to be sure, a surplus disposal provision in it. It still requires the Secretary to report, but gives him 60 days from the date the bill is signed, if it is ever signed. In my opinion, that frees him from any responsibility whatever of coming before the Congress and telling us what he proposes to do.

That was important, because the very first thing that is going to be of interest to the cotton producers and the cotton shippers of this country is whether or not the Secretary intends to dispose of about five million bales of cotton per year in some sort of surplus-disposal program. If he does not, we will continue to accumulate oppressive stocks of cotton. If he does,, you will see cotton markets stiffen and cotton prices reflect the result of his program of stepped-up disposal.

The second problem is to bring our expanding agricultural production under control. Let me say to you that we now know enough about the production of cotton so that we have the technology to raise the average yield per acre across the United States on a harvested-acre basis to 700 pounds per acre. Do not cross off that figure too lightly. The average for 1950 and 1951 on a harvested-acre basis was a yield of 269 pounds; 1952 was 379 pounds; 1953 was 324 pounds; and 1955 was 416 pounds. We are on our way and 700 pounds per acre is not an impossible yield. Therefore, if we are to have high cotton production per acre we have to have some device to bring our expanding agriculture production under control. The soil bank, since it was first advocated by Henry Wallace in 1937 and as it was again advocated by President Eisenhower and Secretary Benson in 1956, is the best single device that can be used to bring about that result.

These then were the two things which I thought needed to be done first. Facing that situation, what did Senator EASTLAND, who was the leader in our cotton legislation this time, seek to do? In the first place, he wanted to see a large export program. He talked with the Secretary of Agriculture steadily and effectively, and the newspapers of February 29 carried a story that the Secretary of Agriculture would put all the Federal-owned surplus cotton on the world auction block effective August 1, and that in return for support of the administration's flexible price-support system he had offered Southern Senators a somewhat higher support price on cotton than they might otherwise have had in view of the large stocks we had on hand.

I was tremendously interested in the story, because I thought it was important to start moving cotton. The Secretary set the export goal as "somewhere in the neighborhood of 5 million bales a year as our share of the

world market." That was a very big step in the right direction. We were able to do other things if he could have an export program that moved 5 million bales of cotton.

What were those other things? First of all we put into the bill a provision that we would price cotton on average grades and staples rather than on Middling ⅞-inch. That on the face of it would reduce cotton prices a couple of pennies a pound. We had a long discussion of that in the committee. I took hard work on the part of Senator EASTLAND and me to bring about the adoption of that proposal. We felt that cotton was losing markets at home and abroad and that a reduction of 2 or 3 cents would be desirable. Senator EASTLAND took the position that he would be willing to accept this reduction in price if the Secretary in turn would not reduce the acreage for 1957 and 1958.

I want to comment on that because it is of real importance. If the Secretary used a planted-yield-per-acre basis for the last 5 years, he had the authority, under the law, to reduce cotton acreage to a 1957 allotment of 15,841,000 acres as against the 1956 allotment of 17,400,000 acres. If, however, he used the harvested yield per acre, he would find the average for the last 5 years to be 326 pounds per acre and that would give a 1957 allotment of 14,724,000 acres. I think the Secretary can use either the harvested yield or the planted yield as his yardstick. I think in view of the enormous cotton surplus he would be well advised if he used the harvested-yield basis. Therefore, the cotton economy of this country faced a shrink from 17,400,000 acres to 14,724,000 acres, which was too large.

Furthermore, the Secretary, under the flexible price support program, if he had so desired, could reduce the price level to a figure in the seventies instead of a figure in the eighties. It was indicated by the Secretary that he would be willing to hold the price level at about 86 or 87 percent of parity if Congress would change the provision on grades and staples to average from Middling ⅞-inch and would also be willing to freeze cotton acreage for 1957 and 1958 at 17,400,000 acres.

The effect of that program would have been substantial. It would have said that America was going into the business of regaining a fair share of what historically had been its part of the world export market. That did not mean to go all the way because at one time we had 50 percent of the world's export market—yes, at one time we had 60 percent. Recently we have been down to as low as 20 percent. But 5 million bales would be a reasonable share for the United States to have, and the Secretary could slowly have begun whittling away at the surplus. Meanwhile the price would have dropped a little bit so that cotton would have stayed in competition domestically and worldwide. All of that, I think, would have made a fairly well-rounded program.

However, it didn't work out that way. We were able to get the bill through the Senate with the provisions for average grades and for freezing the acreage still in the bill. But when it went to conference, the conferees took the sweet and rejected the bitter. They kept the provision which would freeze the acreage at 17,400,000 acres, but added to it 90 percent price supports, which means that American cotton will not move domestically as rapidly as it should, will in fact continue to lose its domestic markets to the synthetics, and will not move in world trade without subsidy. It meant, to put it bluntly, that we were going to produce cotton for the Treasury of the United States and sell it to the Commodity Credit Corporation in exchange for drafts on Uncle Sam. No greater damage could be done to the cotton farmer of America than to have that sort of philosophy prevail.

Therefore, my message today to you is that cotton can't go it alone. Cotton as it grows in the field in the United States is going to have to have some help from the Congress and from the trade if it does not face extinction. The supply in the United States for the current marketing season, 1955–56, has touched an all-time high of 25.7 million bales, higher than the previous record of 24.6 million bales in 1939–40. During the time that this huge stock was accumulating, cotton has had 90 percent price supports. As a matter of fact, due to the use of Middling ⅞ inch as the grade when the average growth was better than that, cotton has had about 94 or 95 percent price support and has enjoyed a more favorable position than most other crops. The result has been to price cotton out of the market at home and abroad.

The production of synthetic fibers has been increasing with great speed. It is only 15 years ago that 81 percent of the total fiber used in the United States was cotton, and only about 10 percent was rayon and other synthetics. In 1954 it had gone to 69 percent use of cotton and last year to 66 percent. Just how far do the so-called friends of the farmer want it to go? How far are the advocates of 90-percent price supports in the Congress of the United States willing to have rayon and other synthetics take over before we have a realistic approach to the cotton problem?

But we cannot consider only cotton at home. The production of cotton has been increasing all around the world. The only thing that has changed is that the United States has not been able to share in the new markets. Our exports have been gradually decreasing. They averaged 5.3 million bales from 1935 to 1939, but less than 4 million bales from 1950 to 1954, and dropped to 2.4 million bales in 1955. If we want to throw away our world markets, we can. But when we do we jeopardize cotton farming as an industry in the United States.

Cotton can't go it alone. It needs help from Congress, not only in its pricing but in its marketing. The Department of Agriculture, during the latter part of the year 1945 and early 1946, made a very intensive study of the need for research and marketing methods. Material that was accumulated filled a whole wall of filing cabinets in the Department of Agriculture. It took weeks to analyze the uses that were being made of cotton and the possibilities for research in cotton as well as other crops. After that long study, we sent to the Congress a research and marketing bill which was enacted into the Research and Marketing Act of 1946.

Just a few days ago, Senator CAPEHART proposed that we spend a hundred million dollars a year for agricultural research and facilities. I called his attention to the fact that the act of 1946 would have authorized $9½ million in 1947 but nothing was appropriated. It would have authorized $19 million in 1948 and $9 million was appropritaed. It would have authorized $48 million in 1950 and $19 million was appropriated. It would have authorized $61 million in 1951 and only a tiny fraction of that was appropriated. It would have authorized almost unlimited appropriations in every year since 1951 so that today under the Research and Marketing Act of 1946 we could be spending $100 million on research for agricultural commodities.

We saw in 1946 the problem that has now arisen in 1956. We saw that cotton was going to face competition from synthetics at home and abroad. We were trying hard to provide the necessary basic research so that cotton could find new markets. Instead of that, the cotton producers of this country have been denied their chance for a fair share of trade in this country and in other parts of the world. The great producers of synthetics can afford to take from their treasury millions of dollars each year for research. But farmers of this country can't spend it individually and they can't spent it collectively very well.

To be sure, the Supima cotton producers have done a good job in marketing and are on their way to a very creditable demonstration but over the country, generally speaking, no one can sign up the man who has a mule and a few acres of cotton to a fund promotion. Therefore, we have felt that the combined force of the Government might be able to do for all the farmers what a great industrial organization like DuPont might be able to do for its product. The very fact that these research and marketing appropriations have not been made shows that cotton and other commodities have not had the things to which they were entitled and I say to you that cotton can't go it alone. It needs help fighting through the right kind of research and marketing appropriations in the Bureau of the Budget and in appropriation bills before the Congress of the United States.

And now, some words more directly aimed at the western cotton shippers.

A most important factor in farming is what to do with the harvested products. In your membership, we assuredly have a trade group who are truly valuable in the marketing of harvested cotton. That great commodity of streaming white gold plays an important part in the commodity economy of the great Southwest and West.

I think that the cotton pricing structure of the merchandising system is the most sensitive merchandising operation of any I know. Price reactions or fluctuations occur, by reason of a multitude of variable circumstances. The recorded price changes, occurring by seconds during the market hours of your great cotton futures exchanges, are flashed in a matter of seconds to the four corners of the world—equaling the mechanism of a fine jeweled watch.

Members of your organization offer a complete worldwide marketing service. You buy the produced cotton right at the gin or warehouse and merchandise it out in quantities desired by the spinners worldwide. Your finance system is a marvel—your word is your bond—you make a verbal offer over the telephone for $10,000, or $100,000 worth of cotton, and many times no bilateral contract is ever signed, yet the seller never worries that there will be any hitch. Too, you phone the spinner and the same is true. Very few organizations have a record like that. I congratulate you for this.

Foreign consumption of synthetics today is equivalent to 8.9 million bales and domestic consumption is at the annual rate of 4.5 million bales. Those rates have grown rapidly and attention must be given to the vast inroads. The synthetic producers are a most aggressive group of people. The capacity for producing man-made fibers is increasing every year and new mills are scheduled to be built during this year that would permit the expanding of output to the equivalent of another 1 million bales of cotton.

I hope I can give you some good news. I think you as cotton handlers can make plans for a good business this coming season. I look for close to 9½ million bales, or better domestic consumption, and 4 million export, a total of 13½ million versus 11¼ million for this current season. You fellows should share in a greater percent of those increases than some of the other areas. Therefore, I would make plans for full steam ahead.

Some apprehension may exist that the present export plans would be unreasonable on the cotton trade in this area, but I would like to believe that you men have enough inventiveness to make up for some of the misgivings of the sales program. Surely the CCC, with its past experience in selling vast amounts of cotton to the trade, will be fair in its treatment, and not be so restrictive as

required in the recent 1-million-bale program. I think that the quality of the cotton favors you manifestly—your area has improved its quality to such a high level that you now have cotton as fine as is grown anywhere, worldwide, and a good product never is at the bottom of the totem pole. You have the finest of qualities; therefore, I have faith your cotton will move to the spinners where you have established its reputation.

Now let us take a closer look at the export situation. The production of cotton in other countries has been climbing steadily since the war, and this year rose to an all-time high of 25.3 million bales—an increase of 7.5 million bales over the 1934–38 level and 12.3 million bales over the 1946 level.

There is no denying that our price policy has been the most important single factor in encouraging this competition. There is no denying either that if the price policies of the past are continued that the United States will be completely out of the cotton-export business in a few years' time. This is not to say that price is the only factor. Some of the foreign countries are following policies of economic nationalism designed to encourage production of both cotton and rayon for self-sufficiency and to provide a means of earning foreign exchange. In such countries price is a secondary consideration, but, fortunately, this situation is not general. It is also true that the shortage of dollars has been, and still is, a factor limiting our exports, but the purchasing power of the rest of the world is improving every year, and the ability to finance imports is less of a factor. Also, the United States is continuing to provide special financing to aid countries in balance of payments difficulties through direct economic aid, sales of local currencies, loans, and the like.

The most important effect of the new export program will be to set a price for cotton that will remove the incentive for expansion of production of both cotton and rayon abroad. Once the fibers are produced we can assume they are going to be sold because other countries simply aren't in a position to hold their stocks off the market for long.

It is necessary that this price be low enough to discourage competing production, if we are to be successful in rebuilding our exports. At the same time the United States cannot afford to engage in price wars to the extent that we break the economies of friendly countries and thus create new economic, political, and even military problems and impair our international security objectives. Our sales will have to be orderly. We must recognize that our surpluses will have to be liquidated over a period of years.

The policy will have to be essentially long range in its nature. Unless some confidence is reestablished in cotton prices the foreign mills may be frightened away from cotton and encouraged to go more and more to the man-made fibers, the prices of which are relatively stable. At the present time the increased use of man-made fibers is coming largely through blending a portion of these fibers with cotton primarily in an effort to reduce the raw material cost. If cotton prices are lowered to a realistic level, and if there is a reasonable assurance that these prices will be fairly stable, I am confident that the use of these blends can be discouraged and that cotton can regain many of these markets. On the other hand, the uncertainty of price and of supply will make this objective very difficult indeed.

While the foreign market is the most important aspect of the cotton marketing problem at the moment, and while it undoubtedly offers a large opportunity for expansion given a reasonable export price policy, we cannot afford to take the domestic market for granted either. Although the cotton farmers of this country do not have to face the competition from foreign-grown cotton in the domestic market to any significant extent except in the field of extra long staples, the competition from man-made fibers in the domestic market is very real. At the present time the price advantage of rayon over cotton is from 5 to 9 cents per pound in the various end use markets. The quality improvements that have been made and are being made every day in the man-made fibers, tend to increase this competition. The uncertainty of the cotton prices is an additional factor that plays into the hands of our competitors in this market and encourages the mills to use the man-made fibers, prices of which are more stable.

Over the long range the price to which the cotton supports can be lowered must be geared to the cost of production. We must redouble our efforts in research and education to employ all of the resources which modern science can command to find new and improved ways of cultivating, harvesting, and merchandising cotton in order to cut these costs.

If we are successful in our efforts to reduce cost and if we develop a realistic long-range pricing policy, I have no doubt that cotton can and will be able to meet its competition and that our production can continue to expand.

At the same time, we cannot afford to neglect the opportunity for expanding consumption and stimulating the demand for cotton products on the part of the ultimate consumers. There is a real opportunity in this country and throughout the world to increase the use of cotton not only as a percentage of the total textile fibers consumed, but also by increasing the use of textiles by encouraging people to be better dressed and to make their homes more comfortable and more attractive. The programs in research and sales promotion that have been developed in this country have proved their effectiveness. These can and should be expanded. In the rest of the world the opportunity may be even greater. An addition of only 2 pounds of cotton per person per year—the equivalent of 1 pair of overalls or 1 bed sheet—in consumption in the free world would require an addition 6 million bales of cotton and would leave the average person in the free world consuming only one-fourth as much cotton as the average person in the United States. With the rapid increase in the standards of living around the world, the possibility of these objectives is improved. The increase in the population throughout the world is a further factor. I have no doubt that the demand for cotton can be increased, that the production of our farms can be increased, that the income of our cotton farmers and those who handle cotton can be protected and improved if we face the situation and have the courage and the imagination to adopt the policies that are necessary to maintain cotton in a strong competition position from the standpoint of price, quality, and sales effort.

Our Supima producers are setting a fine example of meeting the issues. They are matching the finer world-recognized qualities of the Egyptian cotton through research. They are setting aside $3 per bale for promotion. They have set their support levels at 75 percent of parity. That is what I call a forthright program designed to meet the situation head on. The Supima people who are our neighbors and friends have the cotton spotlight of the world on them. Washington was dazzled when they came forward not too long ago to sell their program. The spinners over the world, too, have taken special note, and the Egyptians are really watching.

The sales promotion of Supima, too, is moving with vigor. Just think, a small group of producers moving in breeding and developing in a few short years such an outstanding quality and now producing some 45,000 bales currently, with prospects of some 100,000 bales. Imagine what the results would be, if just half of the Cotton Belt would take on the same amount of vision, fire, and enthusiasm of the Supima growers. Let me tell you, we would be moving 15 million bales annually in a short 3 years. The cotton business would soon be out of the Government's hands and freedom of merchandising would be enjoyed to the fullest extent.

I want to close on that note of hope. God still helps those who help themselves. Cotton farmers, ginner and shippers will be in need of help unless all join to put King Cotton back on a throne by programs of courage and vision in which you may take the lead and in which, I hope, the Congress may give you effective support.

Texas Exports More Than Half of Gas Output

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Wednesday, April 18, 1956

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an Associated Press article which appeared in the Dallas Times-Herald on Sunday, April 15, 1956.

This article sums up the facts on the natural-gas situation in Texas. It also cites the opinion of a leading student of the industry that Texas would receive much more for its gas if the gas were kept in the State and converted to petrochemicals.

These facts and figures are well worth the study of my colleagues.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEXAS EXPORTS MORE THAN HALF OF GAS OUTPUT

HOUSTON, April 14.—Texas last year exported over 50 percent of the natural gas it placed on the market.

Twenty-eight companies moved a total of 2,416 billion cubic feet of gas out of the State.

Texas' 1955 output—48 percent of the Nation's production—was 5,740 billion cubic feet, of which 4,454 billion was marketed.

The Texas Railroad Commission reports the balance was used for pressure maintenance, repressuring, and cycling or was burned in the field for lack of a practical market outlet.

Of the 270 billion cubic feet of gas vented or burned in the field, 231 billion was casinghead gas produced coincidental with crude oil. Some 111,644 Texas oil wells produce casinghead gas. The commission prohibits venting unless there is no market outlet that would be practical economically. Numerous Texas oil wells are far removed from gas pipelines, construction of which would not be justified by the amount of gas produced.

Of the gas marketed, 3,869 billion cubic feet went to transmission lines, 432 billion was used as plant fuel and on the leases, and 152 billion went into the production of carbon black.

An oil editor this week suggested that Texas would receive greater return for its gas if it would keep more of its production at home.

Thomas C. Ponder, petro-chemicals editor for Petroleum Refiner, told an oil recovery conference at Texas A. & M. College that

unit value of natural gas increases 12½ times when used to make petrochemicals.

He said the increase is only 2½ times when used as fuel.

Ponder said Texas' exported gas last year had a value of $496 million.

"If that gas had been kept in the State and made into petrochemicals its value would have jumped to $6,200,000,000," he said.

Ponder said the average petrochemical sells for approximately 9½ cents a pound.

"In 1955 over 32 billion pounds of petrochemicals were produced and were sold for more than $3 billion," he said. "The average petrochemical requires about three-quarter cents worth of natural gas to manufacture. This is increasing the value of the gas 12½ times."

Communism

EXTENSION OF REMARKS
OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 18, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by David Lawrence at a luncheon at the Waldorf-Astoria Hotel, in New York City, on April 16, 1956, on receiving the award for outstanding pro-American accomplishment, presented annually by the American Jewish League Against Communism.

I am informed by the Public Printer that the address is estimated to make 3⅔ pages of the RECORD, at a cost of $294.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY DAVID LAWRENCE AT THE WALDORF-ASTORIA HOTEL, NEW YORK CITY, APRIL 16, 1956, ON RECEIVING THE AWARD FOR OUTSTANDING PRO-AMERICAN ACCOMPLISHMENT PRESENTED ANNUALLY BY THE AMERICAN JEWISH LEAGUE AGAINST COMMUNISM

We stand here today not as Protestants, Catholics or Jews, and not as Democrats or Republicans, but as Americans of all faiths and political beliefs.

We have come here to express our uncompromising opposition to communism in all its forms—Communist despotism which enslaves the individual, Communist imperialism which carries on wars across the world, Communist colonialism which keeps in bondage states once independent and free, and the Communist conspiracy in our midst, engineered, directed, and financed by our enemy, the government in Moscow.

But today I wish primarily to draw attention to Communist treason inside America.

All Americans ought to be against treason—and most of them are.

But there are some who do not understand the word "treason." They do not seem to realize why treason was singled out in the Constitution for special mention as the worst crime that can be committed against the United States. Those who do not understand the scope of the word "treason" fail also to perceive that the paragraph in our Constitution denouncing treason supercedes any claim to individual license. For if traitors should succeed in overthrowing our Government, then the Bill of Rights and the rest of the Constitution would become worthless.

In section 3 of article III of the Constitution, we find these words:

"Treason against the United States shall consist only in levying war against them, or in adhering to their enemies, giving them aid and comfort. No persons shall be convicted of treason unless on the testimony of two witnesses to the same overt act, or on confession in open court.

"2. The Congress shall have power to declare the punishment of treason."

It will be noted that there are two clauses in the definition of treason itself—that which condemns treason as levying war and, separated by a comma, there is an alternative clause which defines treason as adhering to our enemies, and giving them aid and comfort.

Is there any doubt what is meant by adhering to our enemies?

And do we wait until treason has consummated its conspiracy and then try to punish traitors, or does the Congress have the right by law to adopt measures which will prevent the successful execution of plots of treason?

Our courts have given us a clear answer.

If was Judge Learned Hand of the United States Court of Appeals in this city, who on August 1, 1950, rendered a famous opinion that tells us what constitutional measures can be taken to avert treason. He wrote:

"The American Communist Party, of which the defendants are the controlling spirits, is a highly articulated, well contrived, far-spread organization, numbering thousands of adherents, rigidly and ruthlessly disciplined, many of whom are infused with a passionate utopian faith that is to redeem mankind. It has its founder, its apostles, its sacred texts—perhaps even its martyrs. It seeks converts far and wide by an extensive system of schooling, demanding of all an inflexible doctrinal orthodoxy. The violent capture of all existing governments is one article of the creed of that faith, which abjures the possibility of success by lawful means. That article, which is a commonplace among initiates, is a part of the homiletics for novitiates, although, so far as conveniently it can be, it is covered by an innocent terminology, designed to prevent its disclosure.

"Our democracy, like any other, must meet that faith and that creed on the merits, or it will perish; and we must not flinch at the challenge. Nevertheless, we may insist that the rules of the game be observed, and the rules confine the conflict to weapons drawn from the universe of discourse.

"The advocacy of violence may, or may not, fail; but in neither case can there be any right to use it. Revolutions are often right, but a right of revolution is a contradiction in terms, for a society which acknowledged it, could not stop at tolerating conspiracies to overthrow it, but must include their execution.

"The question before us, and the only one, is how long a government, having discovered such a conspiracy, must wait. When does the conspiracy become a present danger? The jury has found that the conspirators will strike as soon as success seems possible, and obviously, no one in his senses would strike sooner. Meanwhile they claim the constitutional privilege of going on indoctrinating their pupils, preparing increasing numbers to pledge themselves to the crusade, and awaiting the moment when we may be so far extended by foreign engagements, so far divided in counsel, or so far in industrial or financial straits, that the chance seems worth trying. That position presupposes that the amendment (in the Constitution) assures them freedom for all preparatory steps and in the end the choice of initiative, dependent upon that moment when they believe us, who must await the blow, to be worst prepared to receive it. * * *

"True, we must not forget our own faith, we must be sensitive to the dangers that lurk in any choice; but choose we must, and we shall be silly dupes if we forget that again and again in the past 30 years, just such preparations in other countries have aided to supplant existing governments, when the time was ripe. * * * We hold that it is a danger clear and present."

That is one of the greatest legal opinions rendered in our times. It warned us that we must not wait until a conspiracy has been effected before we take measures to protect ourselves.

This contingency is precisely what the Congress of the United States has had in mind in enacting during the last 15 years various laws on espionage and subversive activities.

But what has been the reaction to such legislation? Who has opposed it? Many misguided Americans who have not been able to see through the Communist conspiracy have been in the forefront, and many loyal Americans who have been duped by this conspiracy have opposed such legislation. They, of course, always vaguely say that they favor some sort of protection against disloyalty, but their general opposition to the principle involved is unmistakable.

It is our duty to make clear to those who have been deceived by Communist tactics that they unwittingly give aid and comfort to the enemy when they endeavor plainly to frustrate their own Government in its effort to protect itself against Communist treason.

What is the nature of the treason in our midst? I will read you a vivid description of treason in our times—treason within the last several years, treason as defined by the man who was commander in chief of our allied forces during World War II and later was called back to duty when the Communist menace became so clear to the nations of the world that they formed the North Atlantic Treaty Organization as a measure of defense against Communist aggression.

It was Dwight Eisenhower who, in October 1952, said to an audience in Wisconsin:

"I have come to Milwaukee tonight to talk with you about communism and freedom.

"These two plain words—we all know—bespeak two distinct worlds. They signify two titanic ideas, two ways of life, two totally irreconcilable beliefs in the nature and destiny of man.

"The one—freedom—knows man as a creature of God, blessed with a free and individual destiny, governed by eternal moral and natural laws. The second—communism—claims man to be an animal creature of the state, curses him for his stubborn instinct for independence, governs with a tyranny that makes its subjects wither away.

"These two ideas are as opposed as danger is to safety, as sickness is to health, as weakness to strength, as darkness to light.

"Great truths can, at times, be startlingly simple. This one is of that kind. It is so simple a truth that it seems almost too obvious, almost stale.

"But let not our memories be too short. Only a few years have passed since many moved among us who argued cunningly against this plain truth. Their speech was persuasive, and their vocabulary clever. Remember? It went like this: 'After all, while we stand for political democracy, they stand for economic democracy. Fundamentally, these are but two slightly different roads to the same goal. We both believe in freedom.'

"We all must remember that sophisticated lie. We will never forget it. For it partly poisoned two whole decades of our national life. It insinuated itself into our schools, our public forums, some of our news channels, some of our labor unions, and—most terrifyingly—into our Government itself.

"What did this penetration into Government mean? It meant contamination in come degree of virtually every department, every agency, every bureau, ever section of our Government. It meant a government by men whose very brains were confused by the opiate of this deceit. These men were

advisers in a foreign policy that—on one side of the world—weakly bowed before the triumph in China of Communists hailed as 'agrarian reformers.' On the other side of the world this policy condoned the surrender of whole nations to an implacable enemy whose appetite for conquest sharpened with every victory. This penetration meant a domestic policy whose tone was set by men who sneered and scoffed at warnings of the enemy infiltrating our most secret counsels.

"It meant—in its most ugly triumph—treason itself."

Those were the words of Dwight Eisenhower—and he went on to say:

"These years have, indeed, been a harrowing time in our history. It has been a time of both honest illusion and dishonest betrayal—both terribly costly. It has been a time that should have taught us, with cold finality, the truth about freedom and communism.

"Most of us, young or old, wise or naive, have learned. An important few have not. They have learned very little—and they admit nothing. They are men about whom there is nothing great except their vanity and their complacency. They are the proud prisoners of their own mistakes.

"Who are these men?

"They are those who cheered the blithe dismissal of the Alger Hiss case as 'a red herring.' They are those who applauded two weeks ago when an administration servant grandly declared that Communists in our national life were 'not very important,' and that we should not waste time chasing 'phantoms.' They are those who slapped their sides with laughter when the same man dismissed the quest for Communists in our Government as a kind of silly game being played in the Bureau of Wildlife and Fisheries.

"Do you think these fish stories, ghost stories, and animal stories are really very amusing? Such comedy touches do little to relieve the tragic knowledge that we have been for years the gullible victims of Communist espionage experts. These experts in treason have plundered us of secrets involving our highest diplomatic decisions, our atomic research. Tragically, we do not know how much more our security may have been jeopardized.

"This, I repeat, has been a calamity of immeasurable consequence. * * *

"You can never cure malignant growth just by a hearty bedside manner: I must be blunt, for this is a serious matter. I speak not as a partisan or as a candidate but simply as an American citizen—moved to honest anger by this persistent, gnawing threat of Communist treason in our national life. I know that millions of both parties today are moved to anger and to action. * * *

"Perhaps my deep concern is sharpened by personal experience and personal knowledge. I know what fifth columns can do to a free nation. I know the awful effectiveness of Fascist fifth columns before and during World War II. I know what Communist fifth columns have done in East Germany, in Poland, in Czechoslovakia, in East Austria, in Rumania, in Hungary and Bulgaria. At first hand I saw some of these nations struggling desperately to maintain their independence of the Kremlin. The name of Cardinal Mindszenty symbolizes all those gallant men and women who led that struggle and the bitter fate which overtook them.

"I know how close these fifth columns came, in postwar years, to forcing their way to power in some countries of Western Europe. And I know personally what alertness was required—both in our wartime operations and in our NATO planing—to guard against espionage. I learned that national secrets and national security can be guarded, and that there are ways to defeat the cleverest of spies—whether Nazi or Communist. * * *

"Armed with a clear and uncompromising respect for freedom, how then shall we defend it?

"To begin with: all of us—citizens, jurists, officials—must remember that the Bill of Rights contains no grant of privilege for a group of people to join together to destroy the Bill of Rights. A group—like the Communist conspiracy—dedicated to the ultimate destruction of all civil liberties cannot be allowed to claim civil liberties as its privileged sanctuary from which to carry on subversion of the Government.

"At the same time we have the right to call a spade a spade. That means, in every proved case, the right to call a Red a Red. The time is past when we can hide our heads in the sands of stubborn ignorance or spend our days in the leisurely indulgence of abstract argument.

"As we clear our own minds, we can go on letting others speak theirs. Our system entitles every political voice to be heard—but let each voice be named and counted. Let every political medicine be offered in freedom's market place, but let it be plainly labeled—especially if it is poison. Let every person or organization distributing political literature through the mails be made to disclose its source of funds and its membership. Let every organization affecting our political life be compelled to make public its finances, membership and affiliations. In short, let us use every legal resource to insure that all groups which enjoy the right to free speech extend that right to talking about themselves—plainly and publicly.

"Having done this, let us make one more fact plain: To work for the United States Government is a privilege, not a right. And it is the prerogative of the Government to set the strictest test upon the loyalty and the patriotism of those entrusted with our Nation's safety.

"Every official of Government must bear clear reponsibility for the loyalty and fitness of his own immediate subordinates. And every official of the Federal Government—on every level—must ever be ready to answer any question from appropriate sources touching upon his loyalty and devotion to the United States of America.

"If we add candor to our fidelity to freedom's principles, I sincerely believe our attack on the Communist threat will be well under way."

Now, does anybody think that, since that speech was made in 1952, the Communists have abandoned their efforts to penetrate America? Does any one think the goals of Communist infiltration are being sought with less vigor than before? The passage of the Communist Control Act by Congress just 19 months ago indicate that the menace has by no means been removed.

Perhaps the most up-to-date information that we have on the activities of the Communist Party and its stooges in the United States was given before a subcommittee of the House Appropriations Committee on February 1, 1956, by the Director of the FBI, J. Edgar Hoover. The hearings were released for publication on the 20th of last month. In his testimony Mr. Hoover says in part:

"The membership of the Comunist Party at the present time is estimated to be 20,289. These are the so-called hard-core Communists of the country.

"There is no question from the investigations we have conducted that the party takes its orders and directions from Moscow. * * *

"The number of persons engaged in front activity has been estimated by Communist leaders themselves to outnumber the actual Communist Party membership by a ratio of 10 to 1, or better. * * *

"There is no question but that the Communist Party in this country is a fifth-column potential. The hard-core membership of the open party is aided by a reservoir of concealed members, the underground, which is engaged in such activities as colonization of strategic defense industries—supposedly being done on a secret basis. We have been able to keep abreast of those efforts and are aware of their activities in that field.

"They have utilized the Communist-front groups and the so-called pseudo liberals, as I am inclined to call them: Individuals who are not members of the Communist Party and who quite vociferously deny any sympathy with communism but who, through being duped by Communist contacts, espouse causes sponsored by the Communists.

"They oppose security programs and sponsor liberalizing security measures; they oppose urgently needed internal security measures; and they advance the theory that the menace of communism is a mere myth or hysteria.

"They contend that the Communist Party is a political party just like the Republican and Democratic Parties and not a conspiracy designed to overthrow the United States Government by force and violence. It has been held by courts that the Communist Party is dedicated to the overthrow of the United States by force and violence."

Now treason is not a matter of harboring abstract beliefs and keeping them secreted in one's mind. The so-called liberals have raised a smokescreen on that issue. They are trying to make the American people believe that many of us are seeking thought control or that we wish to interfere with the expression of unpopular beliefs. The so-called liberals ignore the fact that the late Justice Oliver Wendell Holmes of the Supreme Court of the United States told us that the right of free speech does not mean the right to shout "fire" in a crowded theater.

For there is no right to preach treason. There is no right to teach or advocate treason. Congress has specifically prohibited it. There is no right to hold a Government job and at the same time participate in any movement which constitutes an adherence to the cause of our enemies. Acts—not thoughts or beliefs—are the criteria.

The essential point is that our Government is not obligated to take any risk of acts of treason. Hence, the security regulations in our governmental departments are concerned with the prevention of criminal acts—acts that have been manifested all over the world by Communist imperialism, which uses infiltration as one of its principal weapons.

Congress has repeatedly used the phrase "Communist conspiracy" in the preamble to the many laws designed to protect the national security. The Communist Control Act of 1954 declares "that the Communist Party of the United States, although purportedly a political party, is in fact an instrumentality of a conspiracy to overthrow the Government of the United States" and that "its role as the agency of a hostile foreign power renders its existence a clear, present, and continuing danger to the security of the United States." For we are dealing with a plot organized, instigated, planned, directed, engineered by a foreign government which is our enemy.

Why do I use the word "enemy"? I have lately read a speech by an industrialist in this country who naively says we should not use the word "enemy" with respect to the Communist regime—it might offend them. Yet, please note that in the 1954 law Congress uses the phrase "a hostile foreign power" in referring to the Soviet Union.

Let us be realistic. We have already met the Communist imperialists on the battlefield. We lost more than 33,000 boys in Korea. Their mothers and fathers grieve for them today because they were the victims of the shells or the bullets, or the bayonets of the Communists of Soviet Russia.

As a matter of fact, we still are in a state of war with Communist China. Our armies in Korea are stationed on an armistice line with ammunition in their guns. Our armies are alert 24 hours a day as they face the possibility of sudden attack by the Chinese Communists. While we have a cease-fire agreement, we do not have a peace treaty.

Although for a little while the Communist government in Peiping disavowed responsibility and called the Chinese armies in Korea volunteers, this camouflage was later abandoned. We know now that the Communist regime in China made war upon the tens of thousands of American boys who had been drafted for military service.

And where did the bulk of the munitions come from to kill 33,000 of our boys and wound 103,000 of them in Korea?

The bullets, the munitions, the weapons came from Soviet Russia. The late Andrei Vishinsky, in a speech before the Political and Security Committee of the United Nations General Assembly in March 1953 confessed, admitted, conceded that the munitions of war had been supplied to the Red Chinese armies in North Korea by the Soviet Government.

To the discredit of the United Nations, it must be recalled that on hearing this statement, it took no punitive action in the Assembly.

The United Nations has had plenty of opportunity ever since to denounce the Soviet Government for its complicity in this crime of the century. But it has not done so.

Those of us who espoused the cause of the League of Nations in the 1920's, and those of us who were enthusiastic about the United Nations when it was founded in 1945, and those of us who still believe that the United Nations can be the greatest moral force for peace in this world that has ever been mobilized, are disappointed that the United Nations failed us at a crucial moment. It evidently did not possess the courage necessary to deal with reality and truth.

Precisely because the United Nations failed to denounce Soviet Russia and expel its gangster government from membership for its acts of treason to the United Nations, we are today being misled into believing that "peaceful coexistence" with such criminals is a practical possibility.

Why are we now involved in many international commitments around the globe to furnish military and economic aid? Only because the United Nations as an instrument of collective security has failed us. We have found it necessary to organize regional pacts and make regional commitments to assure our safety as against a common enemy.

For the enemies of peace today in the world are the Communist government in Moscow and the Communist government in Peiping.

Why do we not have a peace treaty in Korea today? I was in Geneva in May 1954, when the Four-Power Conference was held. Chou En-lai, Foreign Secretary of the Red China Government, in a formal address to the conference, denounced the United Nations when the United States proposed that a peace treaty that would unite Korea be drawn up under the auspices of the United Nations. Chou En-lai said a commission of neutrals—his kind of neutrals—should be appointed to negotiate, but the commission must not have any connection whatsoever with the United Nations. The position of Red China has not been modified since.

Yet we hear some well-meaning citizens in our ranks talking today about admitting Red China to a seat in the Security Council of the United Nations.

Of what avail will the United Nations be if it condones treason, if it takes its enemies to its bosom without the slightest sign of their repentance, if it allows conspirators to enter its councils and sit as equals alongside of free nations?

We are against the Communist imperialism of today because it has not divested itself of its cloak of treason in the society of nations.

We are against Communist imperialism today because it means despotic colonialism. For Communist colonialism has imposed slavery upon the peoples of Soviet Russian and upon the peoples of the satellite countries.

A true liberal is against tyranny everywhere. A true liberal is against enslavement. A true liberal is against imperialism and against every form of colonialism that means enslavement of the people.

There are among us those who misuse the word "liberal." Many who call themselves liberal are not liberals at all. There are men who have been deceived into believing that liberalism means the protection of the right of conspirators in our midst to advocate and to practice treason.

We who believe in freedom for all peoples, we who believe in the right of self-determination for all peoples, we who believe in the right of every individual to think as he pleases, would limit individual rights only by the superior right of all the people in a nation to be protected against conspirators—those who would by force or violence overthrow a free government or aid an enemy to conquer us.

Lately we have been hearing much about the Bill of Rights and due process. A whole cult has grown up in America which preaches that individual rights are unlimited, and that the general phrases of the Constitution can be ambiguously interpreted to protect traitors in our midst.

Let me read you here a brief extract from a speech made in the House of Commons less than a month ago by the Secretary of State for the Home Department of Great Britain, Major Lloyd-George—son of the former Prime Minister. He spoke on March 21 as follows:

"I should like to make three points in reply to those who may still feel that such measures are unnecesary. First, however distasteful were the measures which successive governments over the last few year have had to take, we cannot sit back and do nothing while our security is imperiled by a menace, the existence of which is accepted on all sides.

"Secondly, while some of our countermeasures, it is true, are alien to our liberal traditions, so is the menace which they set out to circumvent. That is a point that we must never forget. As my right honorable, friend the Chancellor of the Exchequer said in the November debate, communism has set progress back 3 centuries. We are now, thanks to Communist activities, back in the age when a man who holds this new creed thinks it loyal to be disloyal and has no scruple about betraying his own country. We are, therefore, driven into adopting steps which we take only because of protecting the liberal traditions that we in this country hold dear.

"Thirdly, while I do not for a moment underrate the hardship of those who, because they are adjudged to be the dupes of the Communist creed, are moved to other work or, if it is impossible to find nonsecret work for them, lose their appointments in the civil service, I should like to make one comment on that. Hard as their lot is, we can all make a shrewd guess as to what their lot would have been had they been employed in the civil service of a Communist power, and it had been discovered that they belonged to or sympathized with a movement holding views about communism analogous to those which Communists hold about democratic government."

Have some of us in America already forgotten the fifth columns in Western Europe prior to 1939? Have we forgotten already the traitors in recent years in America who abused our institutions and transmitted to other governments documents and secrets of great importance to them in guiding them in how to frustrate our policies in the world as well as in making atomic bombs?

The word "treason" does not mean merely the conveyance of information of a military character. Burgess and Maclean were intimately familiar with the diplomatic policies of the United States Government. They were able to inform the Communist Government because they had access to the inner councils of our Government by reason of the messages sent to our allies. Burgess and Maclean were able to asist the enemy in conducting their maneuvers in the cold war. There is every reason to believe, moreover, that Burgess and Maclean, in the fateful month of November 1950, were able to tell the Communists what was being discussed among the governments, particularly Great Britain, concerning the use of our maximum military power in Korea.

During that month of November important messages were being exchanged between our Government and the other governments which had military forces in Korea. It was important for the Communists to know whether we would apply maximum military power. They learned that our allies would not go along with us on that decision. Hence, the Chinese armies poured into North Korea, confident that their supply lines in the rear would not be bombed.

Burgess and Maclean now have appeared in Moscow. They have adhered to our enemies and given them aid and comfort. They are traitors to Great Britain and the entire Western cause. Burgess and Maclean sit in Soviet Russia today advising Bulganin and Khrushchev how to dupe the West—how to foster weakness and how to encourage the appeaser in our midst. Burgess and Maclean can tell them in detail what happened in November 1950.

There is no chapter in all our history more revealing of the weakness of free nations than what happened in the 5 months after our intervention in Korea in 1950—when the word went forth to our military commanders that they must not use all their weapons to defend themselves and that they must acquiesce in the murder of our boys rather than allow our own airplanes to bomb the supply lines which were bringing weapons of death to kill our troops.

We heard in 1950 and we have heard ever since the cry that the use of maximum power would have involved us in a third world war. None of us wanted a third world war in 1950 and we don't want one now, but the chances of becoming involved in a third world war have been immeasurably increased by our failure to win a clear-cut victory in Korea. It may be said that the failure there led to defeat in southeast Asia and open defiance of us today by Soviet Russia in the Middle East.

Do we have to reread the pages of history to learn that appeasement leads to war, that the real warmongers of today are the appeasers, that their lack of courage, their willingness to accept the blandishments of the enemy—anything to get peace, peace at any price—is increasing the danger to our country today and could conceivably drag us into a third world war?

It is, of course, in the nature of democracies to be restrained, to hesitate, to procrastinate, to do everything possible to prevent the outbreak of war. When we actually enter a war, there is no justification for any softness or cowardly hesitation.

I remember clearly the night of April 2, 1917, when I heard a President of the United States who had tried by every possible means to prevent war, saying to the Congress that the United States must "formally accept the status of belligerent" which had been thrust upon us.

Woodrow Wilson, during the war, called again and again for "force, force, to the utmost, force without stint or limit." The phrase, "force without stint," electrified America, for Mr. Wilson knew that, once we had decided to defend ourselves, there were no limitations we could impose upon our fighting men if we intended to act in good faith toward them.

When war does come—be it a little war or a big war—we must keep faith with those whom we are drafting for military service. We must tell the mothers and fathers of today that, when their sons get up to the battlefront, they're not going to be asked to take the bullets of the enemy and the bombs from airplanes without hitting back at the enemy's supply lines—just because some people back home speculate about a possible enlargement of the war.

We are today the victims of a strategy of terror. Again and again, public men talk loosely about the possibility that the whole human race will be destroyed by atomic weapons. There have been invented weapons of destruction which can wreak havoc on many places in the world, but the mere existence of terrible weapons that could be used against them has never prevented nations from defending themselves when attacked. The impression we are conveying today is that we will be afraid to defend ourselves if we are attacked by an unscrupulous enemy who uses nuclear weapons.

There comes a time when the risk must be calculated and when the risk must be taken. The big question is whether today, by means of the strategy of terror, we are being pressured into avoiding the taking of the risks that we should take to prevent world war III.

I do not mean to imply that this Nation should at any time initiate a war but, when attacked, we must recognize a state of war thrust upon us and defend ourselves.

It is pertinent to read here a passage from the Gathering Storm, a book by Sir Winston Churchill, which expresses that thought more clearly than anything I have read anywhere. Sir Winston was describing the events leading up to the outbreak of World War II in 1939. He wrote:

"In this sad tale of wrong judgments formed by well-meaning and capable people, we now reach our climax. That we should all have come to this pass makes those responsible, however honorable their motives, blameworthy before history.

"Look back and see what we had successively accepted or thrown away: a Germany rearmed in violation of a solemn treaty; air superiority or even air parity cast away; the Rhineland forcibly occupied and the Siegfried Line built or building; the Berlin-Rome Axis established; Austria devoured and digested by the Reich; Czechoslovakia deserted and ruined by the Munich pact; its fortress line in German hands; its mighty arsenal of Skoda henceforward making munitions for the German armies. President Roosevelt's effort to stabilize or bring to a head the European situation by the intervention of the United States waved aside with one hand, and Soviet Russia's undoubted willingness to join the Western powers and go all lengths to save Czechoslovakia ignored on the other; the services of 35 Czech divisions against the still unripened German army cast away, when Great Britain could herself supply only two to strengthen the front in France—all gone with the wind."

"And now, when every one of these aids and advantages has been squandered and thrown away, Great Britain advances, leading France by the hand, to guarantee the integrity of Poland—of that very Poland which with hyena appetite had only 6 months before joined in the pillage and destruction of the Czechoslovak State.

"There was sense in fighting for Czechoslovakia in 1938 when the German Army could scarcely put half a dozen trained divisions on the Western Front, when France with nearly 60 or 70 divisions could most certainly have rolled forward across the Rhine or into the Ruhr.

"But this had been judged unreasonable, rash, below the level of modern intellectual thought and morality. Yet now at last the 2 western democratcies declared themselves ready to stake their lives upon the territorial integrity of Poland.

"History, which we are told is mainly the record of the crimes, follies, and miseries of mankind, may be scoured and ransacked to find a parallel to this sudden and complete reversal of 5 or 6 years' policy of easy-going placatory appeasement, and its transformation almost overnight into a readiness to accept an obviously imminent war on far worse conditions and on the greatest scale.

"Moreover, how could we protect Poland and make good our guaranty? Only by declaring war upon Germany and attacking a stronger western wall and a more powerful German army than those from which we had recoiled in September, 1938.

"Here is a line of milestones to disaster. Here is a catalog of surrenders, at first when all was easy and later when things were harder, to the ever-growing German power. But now at last was the end of British and French submission. Here was decision at last, taken at the worst possible moment and on the least satisfactory ground, which must surely lead to the slaughter of tens of millions of people. Here was the righteous cause deliberately and with a refinement of inverted artistry committed to mortal battle after its assets and advantages had been so improvidently squandered.

"Still, if you will not fight for the right when you can easily win without bloodshed; if you will not fight when your victory will be sure and not too costly; you may come to the moment when you will have to fight with all the odds against you and only a precarious chance of survival.

"There may even be a worse case. You may have to fight when there is no hope of victory, because it is better to perish than live as slaves."

The appeasers of yesterday brought on World War II. Let not the appeasers of today force us into world war III. We must oppose communism in all its ugly forms—Communist aggression in so-called little wars around the globe, Communist colonialism in enslaved nations, Communist infiltration of the free governments of the world, Communist subversion of the institutions of democracies. For communism is the generator of war.

Iowans Are Cool to Veto Message

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, April 18, 1956

Mr. JOHNSON of Texas. Mr. President, I wish to commend to the attention of the Senate a very able article that appeared in the New York Times this morning. It was written by Seth S. King, a reporter who has obviously taken the trouble to talk to the people who are most directly affected by farm legislation—the farmers themselves.

The outstanding impression gained from his article is that the veto message and the President's subsequent television address completely ignored the people most directly affected. Instead, they were aimed at other sections of our population.

Mr. President, the President's message did not get through to the Nation's farmers because it did not face up to their problems. Instead, it was designed to meet the problems of next November.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IOWANS ARE COOL TO VETO MESSAGE—MANY FEEL PRESIDENT DIDN'T GIVE ENOUGH DETAILS—SOME BACK ACTION ON FARM BILL

(By Seth S. King)

DES MOINES, IOWA., April 17.—Many Iowa farmers were disappointed today over the way President Eisenhower explained his veto of the farm bill.

Reaction to the veto itself was mixed. A number of persons said they were bitterly disappointed that the legislation had been killed. Nearly as many others said they thought the President had little choice in the matter because several provisions in the bill probably would have done more harm than good.

But many of those holding both views said that the President's presentation was not detailed enough for the farmer.

"It probably was all right as an explanation to city people, but he left too many questions unanswered," one said.

Another complaint was directed at the lack of details on the price increase programs the President said he was ordering.

Roswell Garst of Coon Rapids, one of Iowa's largest seed corn growers, said that the President had not made clear how the veto would prevent further crop surpluses if the Department of Agriculture was planning a new support for corn.

GREATER THAN EVER

"If the soil bank had gone through, we'd have made 300 acres on our farm idle," he said. "But now if corn, planted in excess of the allotments, is going to be supported, then the surplus will be greater than ever."

Ernest McNamara, who farms near Winterset, said he did not favor the farm bill.

"But I think his explanation was not very clear. He didn't explain what difference it would make if supports are going to be at 86 percent on corn instead of 90 percent. I think a lot of people around here would want to know."

A newspaper editor in northwest Iowa said several farmers had called him today to discuss the veto.

"They did not think the President called the farm bill a bad bill, but he really didn't make it clear why it was. As a Republican, that is the thing that worries me most. I was disappointed in the veto message and the radio and television explanation. That's been our party's problem out here. The party people in Washington just are not getting through to the farmers."

The same editor said the farmers in his area already were asking why the Department of Agriculture had waited so long to develop a soil bank program if it had been clear last year that one was needed.

STATION HAS OPINIONS

Radio station KICC at Spencer, in the heart of Iowa's richest farm land, invited farmers to call in last night and express their opinion, for use on the air, of the President's veto.

During the hour before the President's radio address was carried 29 called. Twelve were opposed to the veto, thirteen were for it and four were undecided.

In a half-hour period after the President had spoken 17 persons called the station. Nine were against the veto, four approved and four gave qualified opinions that were undecisive.

Some of the Midwestern reaction to the veto and the President's message was governed by the type of farming operation.

Wilbur Goodhue, who raises livestock and the crops to feed them on a farm near Carlyle, Iowa, said he approved of the President's plan for price supports for all corn.

"This sounds better than a lot of corn with no price floor under it," Mr. Goodhue said. "The allotments we now have are too rigid, and too many farmers won't comply. That would mean a lot of cheap corn produced, and cheap livestock would follow. But if there are supports under all corn, a lot of it will go into storage and there will be fewer hogs raised in Iowa because there will be less corn available. It won't help the surplus any, but it will probably help the livestock farmer some."

SOME CALL IT UNFAIR

But in the Spencer area, where most of the high-yield corn is sold commercially, some farmers thought the new support plan was unfair to them. They said they would have been satisfied with this year's allotments if price supports were raised to $1.50 a bushel, as the President announced. But they said if other farmers overplanted their allotments, the total corn produced would skyrocket and the open market would be further damaged.

In Kansas, the livestock raisers, who are becoming as numerous as wheat growers, were reported to be satisfied with the veto. The bill passed by Congress would have raised price supports on feed grains and would have increased their feed costs.

"But I'd guess that the eastern half of Kansas, where the big wheat farmers are, is plenty mad today," one observer said. "They thought they wanted the domestic parity plan in the bill passed by Congress. Even the President's home county of Dickinson around Abilene wired him to sign. They think they'd be left out."

In recent weeks Iowa's rainfall has been far below normal. The ground has been unfavorably dry during spring plowing.

One farmer expressed the thoughts of many other Iowa farmers when he said today: "I'd rather see some rain than either the farm bill or the veto."

The Farm Situation

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 18, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two GTA daily radio roundups.

There being no objection, the roundups were ordered to be printed in the RECORD, as follows:

WEDNESDAY, APRIL 4, 1956

Farmers Union Grain Terminal Association is the Nation's biggest grain-marketing cooperative. Its territory is the Midwest—Montana, the two Dakotas, and Minnesota. Each year more than 100 million bushels of grain flow from these States through the cooperative marketing channels operated by GTA. That's a quarter of all the grain that goes through the Minneapolis and Duluth Grain Exchanges.

No business grows that big—least of all a cooperative—unless it's got the know-how, the facilities to do the job, and the backing of its customers. GTA's got all three, and more to boot. Look at it this way: GTA has the welfare of its customers—the farmers—at heart. Because GTA is a cooperative, those customers are its owners. They determined long ago that GTA should do more than just market their grain. Run-of-the-mill buying and selling was not enough. They decided at the beginning that GTA should also be their voice in the legislative halls of the Nation and help fight their battle for fair incomes and decent living on the farm. That GTA is doing.

These farmers knew that co-ops content to meander quietly along the channels of commerce usually sink in the first storm. In the fullest meaning of cooperation, dealing in pins and prunes isn't the answer. The brutal truth about cooperation—and most farmers can vouch for this—is that it becomes larger and stronger the closer you get to it, and smaller and weaker the farther you get away from it.

And the moral for farmers in that is simply this: Stick by your co-ops. Patronize them. Attend their meetings. They are your businesses, so make them work. We heard one old farmer, a veteran cooperator, who had pioneered a number of co-ops and had gone through many bitter economic battles in his younger days, explain it this way: He said that farmers sometimes are beyond understanding. They seem to realize that it pays to belong to a co-op. There's nothing to pay in, and they get money back. They know that. But still they hang back, maybe just figuring that nothing can be that good.

But, then, somebody crosses them up—takes advantage of their rugged individualism. As the old farmer put it, "makes 'em buy at retail and sell at wholesale." Then, he says, you can't hold them back with a five-plow tractor. They build a co-op, no matter what time, trouble, or cost it takes.

Well, that's human nature. That's the way people are. There was no holding the farmers back when they set out to make GTA a working reality. Look at it now. Built in adversity, GTA has weathered good times and success without changing its original purpose—to get farmers a better living. Why don't you join up with GTA? It's easy. Just see that your grain goes to market GTA, the co-op way.

MONDAY, APRIL 16, 1956

What is a surplus? That's a good question, because it seems to be one thing when we are talking about agriculture and entirely another one when we are talking about manufactured goods. We want enough food to go around, but the Minneapolis Star editorial writer calls a 3-month supply of corn, and less than 1 year's supply of wheat, a surplus. All the food reserves held by the Government—and that includes food the Government owns outright, as well as food that it has loaned money on—are valued at about $8 billion to $10 billion, depending on who does the figuring.

This reserve is for everything accumulated and unsold over a long period of time—the whole kit and kaboodle. It is a big supply of food, worth a considerable sum of money. It is desirable to reduce the supply to a manageable reserve. No one quarrels with that desire—not, that is, when it is a careful and sensible reduction, planned with the welfare of farm people and the real requirements of the Nation taken into consideration.

But did you ever hear about the billions of dollars worth of manufactured surpluses that the Government owns? Do you know, for example, how big this surplus is now? Here's a statement from a publication called the Government Surplus Weekly. It prints only information about how to buy Government surpluses. The publication advertises: "Government surpluses—$10 billion—billions, not millions, but billions of dollars—$10 billion inventory—top quality. Thousands of items, all types of products—a clean sweep—your bid sets the price—bargains—savings up to 94 cents on the dollar."

Yet the newspapers and radio do not complain. Have you heard any indignant outburst from the price flexers in or out of Congress? Have you heard businessmen complain about these manufactured surpluses? Some may have, but if so, we've missed these complaints. It is all a part of the prosperity merry-go-round. The reason is suggested in the Government Surplus Weekly, which states: "The big money is in Government surplus. Bargains, profits galore in Government surplus. New, top-quality merchandise is being sold daily by hundreds of Government surplus-disposal agencies for only 6 percent to 15 percent of the original cost."

These are manufactured surpluses, turned out by factories. And according to the Government Surplus Weekly, "This business of surplus is a fast-growing permanent industry. This year's Government surplus sales will triple—yes, triple—last year's record-breaking sales." That's how a $10 billion inventory of Government surplus factory items—not farm supplies—are being sold for as little, often less, than 10 cents on the dollar.

So let's take a fresh new look at surpluses—not just farm supplies but all kinds of surpluses and decide what is best for the people. Let's have a policy from the Government that draws a line between abundance—which is a blessing we all enjoy—and surplus. That's a fine line to daw, but we've got to have it if consumers are to live with plenty and farmers are to be justly paid for their labor, management, and investment. This is GTA, the co-op way.

Solicitation of Proxies From Holders of Securities

EXTENSION OF REMARKS
OF
HON. EVERETT M. DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 18, 1956

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed to me by J. Sinclair Armstrong, Chairman of the Securities and Exchange Commission, on the enforcement of the Securities Exchange Act, with particular reference to the controversy relating to the question of raiding as practiced in connection with the solicitation of proxies, about which we have heard so much recently.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SECURITIES AND EXCHANGE COMMISSION,
OFFICE OF THE CHAIRMAN,
Washington, D. C., April 10, 1956.

The Honorable EVERETT M. DIRKSEN,
United States Senate,
Washington, D. C.

DEAR SENATOR DIRKSEN: In your letter of February 6, 1956, you mention the question of raiding, presumably having in mind the Libby-McNeill & Libby proxy contest. You ask whether the Commission has taken any action or submitted any recommendations to Congress for amendment to existing law.

The problem with which the Securities and Exchange Commission is concerned involves the solicitation of proxies from holders of listed securities registered under the Securities Exchange Act of 1934 and listed on a national securities exchange for the election of directors, with respect to which the Com-

mission has jurisdiction under section 14 of the act.

The problem has been of major importance to the Commission in administering the Exchange Act in the past several years. There have been contests for representation on the board of directors and for control of corporations under the Commission's proxy jurisdiction numbering 22 in 1954, 17 in 1955 and 7 to date in the current 1956 proxy season. Some have aroused great interest, such as the contests for control of the New York, New Haven & Hartford Railroad Co., the New York Central Railroad Co., Montgomery Ward & Co., Libby-McNeill & Libby Co. and Fairbanks, Morse & Co.

These contests for control have been of great interest to the Congress. Senators and Congressmen have expressed interest individually and various committees of the Congress have been concerned. The subject was gone into extensively in the hearings held during the spring of 1955 by the Committee on Banking and Currency of the Senate. A good deal of data was furnished to the committee by the Securities and Exchange Commission, both as a basis for the committee's staff report (84th Cong., 1st sess., S. Rept. 1280, pp 141–142, July 30, 1955), and as direct testimony by our Chairman Ralph H. Demmler (hearings before the Committee on Banking and Currency, U. S. Senate, 84th Cong., 1st sess., on factors affecting the buying and selling of equity securities, March 3, 4, 7, 8, 9, 10, 11, 14, 15, 16, 17, 18, 21, 22, and 23, 1955, pp. 930, 931, 942, 943, 955, 956, 959, 960, 961, 978, and 979). In the committee's report dated May 26, 1955, the following recommendations appear:

"Proxy regulation: Section 14 of the Securities Exchange Act, which deals with the solicitation of proxies, simply provides that it shall be unlawful to do anything 'in contravention of such rules and regulations as the Commission may prescribe as necessary or appropriate in the public interest or for the protection of investors.' This blanket authorization to the Commission is the subject of rather comprehensive rules regarding the solicitation of proxies.

"Senator CAPEHART has introduced a bill (S. 879) which would require certain additional disclosures from persons seeking to control issues listed on a national securities exchange. This question, together with the whole subject of modern methods of corporate control, and effective corporate democracy through the exercise of the right to vote share in importance. A subcommittee under the chairmanship of Senator LEHMAN will shortly hold public hearings on these subjects."

Also I have recently testified on behalf of the Commission on this subject before the Subcommittee on Government Information of the Committee on Government Operations. (The printed transcript is not yet available.)

The Commission has not recommended any particular legislation. However, we have commented favorably on a bill, S. 879, introduced by Senator HOMER E. CAPEHART which would expand the statutory requirements for reporting their holdings by large stockholders, and on a bill S. 2054, introduced by Senator J. WILLIAM FULBRIGHT which would extend our jurisdiction over the proxy soliciting of security holders of about 1,200 companies not presently under our jurisdiction as their securities, though enjoying wide public ownership and trading on the over-the-counter markets, are not registered or listed on a national securities exchange. No action on these bills has as yet been taken, however, by the Committee on Banking and Currency of the Senate. A counterpart, H. R. 7845, to Senator FULBRIGHT's bill has been introduced in the House of Representatives and is pending in the Committee on Interstate and Foreign Commerce. Our Commission expects to make further recommendations with respect to S. 2054 and H. R. 7845 within the next several weeks.

The Commission's enforcement responsibilities for violations of its proxy rules are exercised not by administrative proceedings within the Commission but rather by actions for injunctions in the Federal courts. In the Libby-McNeill & Libby case, we brought such a suit and were sustained by the courts, including the Court of Appeals for the Second Circuit which rendered a fine opinion sustaining our powers under section 14 of the Exchange Act against attack on a number of legal grounds including the argument that our rules violate constitutional guarantees of freedom of speech and press. It was particularly pleasing to me to have this decision sustaining our rules against this challenge because of fears expressed in the press, which I believe have now been allayed, that the act of the Congress imposing standards of fairness and accuracy of disclosure with respect to certain corporate acts, such as proxy soliciting, in some way impinged on these traditional and deeply cherished constitutional liberties. I am enclosing a copy of our litigation press release on conclusion of the Libby case.

During the past 3 years, the Commission has been actively engaged in administering its proxy rules and has recently made a comprehensive revision of the rules as they apply to contests for election and removal of directors (Securities and Exchange Act release No. 5276, effective January 30, 1956). I will now describe this in some detail.

Section 14 (a) of the Securities Exchange Act of 1934 provides that it shall be unlawful for any person to solicit such proxies in contravention of such rules and regulations as the Commission may prescribe as necessary or appropriate in the public interest or for the protection of investors. The Commission's rules, as they existed up to their recent revision, were designed primarily for the typical uncontested proxy solicitations. Generally speaking, the type of information required under the proxy rules, both before and after the recent revision, provides the security holder with a broad basis of financial information about the company and specific information about the persons seeking to be elected directors, their business experience, their remuneration and contractual relations with the company, if any, and bonuses, stock options, and other emoluments of office. However, within the last several years, experience with the proxy rules in a substantial number of proxy contests indicated the desirability of spelling out more specifically and of broadening the disclosure requirements of the rules in the context of contests for corporate control.

In January of this year, after an original amendment proposal (August 1955) and a modified proposal (December 1955) had been published and circularized, the comments thereon carefully considered, a public hearing held by the Commission, and study of the proceedings of the Senate Banking and Currency Committee and its Subcommittee on Securities with respect to this general subject, the Commission adopted a revision of its proxy rules, contained in Securities Exchange Act release No. 5276, enclosed. The rules as now amended deal with many of the problems which have created difficulties in past contests.

The revised rules spell out precisely the procedure to be followed and the information to be filed with the Commission and furnished to investors by all participants. The term "participant" is defined to include, apart from the issuer and any director of the issuer or nominee of management, any other committee or group which solicits proxies, any member of such a committee or group and any person (whether or not named as a member) who acting alone or with other persons, directly or indirectly, is concerned in the organization, direction, or financing of any such committee or group. It also includes any person who finances or joins in the financing of the solicitation of proxies (except persons who contribute no more than $500 and who do not otherwise come within the very broad definition of participant). Finally, participant is also defined to include any person who lends money, furnishes credit, or enters into any other arrangement (pursuant to an understanding with a participant in a contest) to induce the purchase, sale, holding or voting of securities of the issuer for the purpose of supporting or opposing any other participant in the contest. Certain exclusionary provisions are designed to remove from the broad scope of the definition persons who act in a ministerial capacity or who, in the course of business, effect transactions with participants such as, for example, an attorney whose activities are limited to the performance of his duties in the course of his retainer and who is otherwise not acting as a participant.

The revised rules specifically provide that no solicitation may be initiated by any participant in an opposition solicitation unless a detailed informational statement is first filed with the Commission, the substance of which must be included in the proxy statement used by the participant. This informational statement, which the Commission has denominated as schedule 14B, a copy of which is enclosed, requires that there be on file with the Commission prior to any solicitation by an opposition group information of the following character:

1. The name, residence, and business address of the participant, his current principal occupation or employment, and all of his material occupations, positions, or offices during the previous 10 years.

2. Any participation by him in other proxy contests within the past 10 years with an identification of the persons involved and the subject matter of the contest.

3. Information as to the convictions in criminal proceedings within the past 10 years.

4. The amount of each class of securities of the issuer and of a parent or subsidiary owned beneficially directly or indirectly and the amount owned of record but not beneficially; the amounts of such stock, held beneficially or of record, which were acquired within the previous 2 years indicating the dates of acquisition and the amounts acquired on each date; if any of such securities acquired within the previous 2 years were obtained by borrowed funds, this fact must be stated including an indication of indebtedness as of the latest practical date and a description of the borrowing transaction other than a normal margin purchase or regular bank loan.

5. A statement whether or not participant is a party to any arrangement or understanding with any other persons with respect to securities of the issuer including joint ventures, loan or option arrangements, puts or calls, guaranties against or division of losses or profits, or the giving or withholding of proxies, and, if any such arrangements exist, the details must be furnished.

6. A statement of the amount of the securities of the issuer owned beneficially by associates of the participant; the time and circumstances under which a participant became interested in the contest, and the nature and extent of his activities or proposed activities must also be stated.

7. Information must be furnished as to the participant, and any associates of his, concerning any material interest in any material transaction with the issuer effected in the previous fiscal year or in any material proposed transaction with the issuer or any of its affiliates; finally, statements are required as to any future employment of the participant or any of his associates by the issuer or any of its affiliates, including a description of any arrangement or understanding and an identification of the parties thereto.

The Commission believes that this amendment of the proxy rules represents an important step forward under the Federal Securities Exchange Act for protection of investors in securities listed on national securities exchanges.

Sincerely yours,

J. SINCLAIR ARMSTRONG,
Chairman.

Answer to Attack on the American Legion

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 18, 1956

Mr. MARTIN of Pennsylvania. Mr. President, many organizations which are doing a great deal to aid in keeping America as our Founding Fathers intended it to be are being harshly criticized.

A short while ago a metropolitan newspaper published an article with the headline "The Greedy Legion." The article stated that the American Legion was wrecking America.

My own Legion post, the Edwin Scott Linton Post, No. 175, in a communication to its members, made a very good statement in answer to this criticism. I ask unanimous consent that the statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Of course there are those who think we are selfish or are trying to set ourselves up as a privileged group. They should take a trip through one of our VA hospitals and after looking at some of the patients, I am sure those with a conscience would change their minds. Then someone should ask them this question. What would be the plight of these men if there were no veterans benefits? There is one big reason why we must keep fighting for these benefits. Every time our Government starts to economize in peacetime you will find recommendations made to do away with this responsibility.

An attack of this nature brings out the fact that we have been very lax in our publicity. Do they ever mention any of the following of our activities? We have spent better than $125 million in the field of child welfare work. More than 4,000 Boy Scout troops are sponsored by Legion posts. We sponsor a Boys' State camp and Boys' Nation program teaching the fundamentals of good government to the youth of our land. Over 20,000 school medal awards are given annually in recognition of good citizenship on the part of our school children. We sponsor essay and oratorical contests, through which more than 300,000 high-school children each year learn more about the Constitution of the United States. We participate in a program of flag education. We sponsor a Junior Legion baseball program with good sportsmanship as its theme. We carry on a back-to-God program with emphasis on religious training. We have been aggressive in combatting communism and all un-American activities. We have been fighting continuously for an adequate system of defense for the Nation. And these are all national programs and do not list the accomplishments of individual posts in carrying on our work at a community level. Can all of this also be interpreted as wrecking America? Comrades, it is time to start blowing our horn a little and make the public aware of some of these activities. Did you know about them?

There is one point that you should bear in mind. Any attack on the American Legion will certainly be joined by any force advocating the overthrow of our form of government, since the pattern of our activities is so definitely nationalistic and to preserve the way of life we fought for.

Winning Citizenship Essay by Pauline Webster

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 18, 1956

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an essay written by Miss Pauline Webster, of the First Congregational Church of Braintree, Mass. Rev. John P. Robertson, minister of that church, delivered the prayer upon the convening of the Senate today. Miss Webster is one of his parishioners. This essay won not only the local, but also the regional contest, and is well worth reading.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

A LETTER TO MY CONGRESSMAN

Please, Mr. Congressman; will you listen to me? Will you hear my words? I have something to say.

Who am I? I am a teen-ager. There are millions just like me.

You see me everywhere: at the corner drugstore—drinking a coke; in school assembly—saluting the flag; at the football game—scoring a touchdown; in the sickroom—fighting back tears; at the supermarket—waiting on trade: and in Sunday services—bowing in prayer.

Yes, you know me. I am a 20th-century edition of American youth and I speak for Christian citizenship. The kind of citizenship that makes my home and your home, my community and your community, my country and your country the places we love. The kind of citizenship that makes me stop and realize and be grateful. Grateful to every man who sailed on the *Mayflower* and built a colony, signed the Declaration of Independence, and wrote the Constitution that we might have a country under God. The kind of citizenship that makes me look back and remember—remember and be thankful.

Thankful to every pioneer who crossed a river or climbed a mountain, cleared a path or cut down a forest, blazed a trail for a new frontier that we might have communities in which to live, love, and be happy. The kind of citizenship that makes me look at today—look and be aware. Aware and mindful of the U. N. delegate as he strives for peace, the Congressman as he introduces a new bill, the labor leader as he fights for his cause, the politician as he wrangles for lower taxes, the lawyer as he preserves justice, the doctor as he mends broken bodies, and the minister as he builds faith that we may maintain our belief "that all men are created equal."

What does Christian citizenship mean to me—a teen-ager?

It means a lot of things—things both big and small.

It means taking a stand for Christ—being put on a spot.

It means fighting—fighting against vandalism and juvenile crime, drinking and lawlessness, prejudices and discriminations so that we youth of today will be stronger for tomorrow.

It means making decisions—asking myself questions. Questions like these: Am I to be my brother's keeper? Do I respect the faith of my neighbor? Is social drinking the thing to do? Does a Christian carry arms? Do I mind the color of another man's skin? Can I, a youth, fight communism? Questions like these—and more.

Christ challenged his disciples with this command. He said to them, "Go ye into all the world and preach."

I hear this challenge; I hear it well.

As a Christian I hear, as a Christian I accept. Accept it too, for that lad in the city and the one on the farm, the girl in the slums and the other across town. Accept it for the youth working at school or dreaming of marriage, planning a career or serving abroad, building a business or helping at home, knowing well that when I serve others I also serve myself.

So, Mr. Congressman, I speak for Christian citizenship because as a teen-ager I've been taught as a citizen I understand, and as a Christian I believe that "except the Lord build the house, they labor in vain that build it."

Federal Tax Policy

EXTENSION OF REMARKS
OF
HON. MARGUERITE STITT CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mrs. CHURCH. Mr. Speaker, at the request of a prominent Chicago attorney, who has specialized in Federal taxation for 37 years, and under unanimous consent, I insert in the Appendix of the RECORD a letter expressing to me his considered answer to statements made in the report on Federal Tax Policy for Economic Growth and Stability:

HUGHES & HUGHES,
Chicago, April 5, 1956.

Hon. MARGUERITE STITT CHURCH,
House of Representatives,
Washington, D. C.

DEAR MRS. CHURCH: The 930-page booklet entitled "Federal Tax Policy for Economic Growth and Stability" and the staff report entitled "The Federal Revenue System," issued by the Joint Committee on the Economic Report, trespass on the province of the Ways and Means and Finance Committees in that these documents are mainly devoted to assailing provisions of the Internal Revenue Code adopted by those committees after most exhaustive and thorough consideration.

The graduated progressive income tax, as pointed out by the American Bar Association in its advocacy of the Reed-Dirksen amendment limiting it to 25 percent in peacetime, is the second point in the Communist Manifesto and such is heartily advocated by all followers of Karl Marx. The value of private property consists in what it will earn and when the Government in income tax alone takes 52 percent of the earnings of our corporations, plus an additional income tax taken on their dividends, it certainly owns more of them than anyone else. It takes much more in other taxes. To

give one example, the annual report of United Airlines for 1955 states its net earnings were $11,244,577 and its income tax $12,748,000 (in addition to this, its shareholders paid income tax on dividends) and on page 4 states, "more than $52,300,000 was paid to or collected for Government in 1955." In other words, the 52-percent income tax was less than 25 percent of the Government's take as a result of United's yearly business.

The committee papers fail to go into or consider the basic question what this tax situation is insidiously doing to and where this ill tax wind is blowing the American economy and way of life.

The Treasury has spent the billions it has collected in social security taxes in past years and at present rate of increase, its social security annual payments will, before many years, exceed its annual social security tax collections. Where will the difference come from? If the total national wealth is $700 billion, how long can it stand an annual tax take of $70 billion? Questions such as these should have been considered in the report.

The committee report assails alleged allowances such as depletion. Indicative of its authors' state of mind is the fact the staff reports devote 1½ pages to the arguments for oil depletion and 4 pages to the arguments against it.

The terms "allowance" and "subsidy" applied to depletion, deliberately adopted as weapons of attack by former New Deal professors, are false and can only proceed from a communistic attitude that everything belongs to the Government and by allowing one to keep his own property it thereby subsidizes him. Typical of the arguments is Professor Gray's parroting, at page 437, of the Truman Treasury's statement that "three-fourths of the total benefit accrues to large corporations." This ignores the fact it really accrues to their hundreds of thousands of stockholders, including widows and orphans and our large insurance companies in which almost every American family has a stake as well as all our leading privately financed colleges who own thousands of shares in these companies.

If depletion were a bonanza, oil companies would have earned much more than other companies, but at page 456 of the papers, it appears they did not. Eight wildcat wells in nine are dry. The domestic oil companies at present rate of consumption have on the average only enough reserves to last less than 14 years. Consumption is annually increasing and if they are not encouraged and stimulated to discover more oil, what will happen to our present mode of life with its great dependence on oil?

While devoting pages to the alleged discrimination of the 25 percent tax on capital gains (England and Canada do not impose any tax on capital gains) the committee panelists lightly pass over the biggest discrimination in the tax law in that over 24 million people on farms are allowed to raise their food and enjoy shelter tax free, whereas all other workers must pay on the money they earn to pay for food and shelter. I would not change this because the essence of taxation is that people differently situated cannot be taxed alike without causing gross discrimination and, unlike the committee, I am not seeking ways to increase anyone's taxes. The failure of over 90 percent of the committee panelists to object to existing exorbitant tax rates and their efforts to increase people's taxes speaks for itself.

Military expenditures are money down the drain if Russia does not intend to attack and thousands share the writer's views it has no more intention of attacking us than we have of attacking it. The blunt fact is that unless our Government expenditures (giveaway to foreign nations to date amounts to over $10,000 for every person in Illinois) and taxes are cut soon and sharply, the second point in the Communist Manifesto will have become a conquering Communist army and change our way of life to Communist ownership of all property. Citizens can no longer sit supinely in sight of this process.

Faithfully yours,

JOHN E. HUGHES.

The Farm Bill

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. ARENDS. Mr. Speaker, under leave to revise and extend my remarks, I am inserting in the RECORD an editorial which appeared in the Chicago Daily Tribune of April 18, 1956.

It precisely and concisely states the situation with respect to the farm bill. It points out how once again the Democrat Party has made the farm problem a political football at the expense of the farmers.

I am also inserting the statement I released to the press on the veto message:

[From the Chicago Daily Tribune of April 18, 1956]

THE FARM ISSUE REDEFINED

When the Democrats in Congress cooked up their vote buying monstrosity in place of the workable farm program that the President submitted early in January, they must have thought they were dealing with another Dewey. They expected that if Mr. Eisenhower did veto their bill, he would thereafter sit quietly while they told the farmers about all of the wealth that would have been poured on them if it had not been for a callous Republican President.

The Democrats miscalculated. In his speech to the Nation, explaining why he had to veto the farm bill, President Eisenhower demonstrated that the moral courage that prompted the veto is fighting courage as well. He brought forth a sound alternative program, salvaging what he could from Democratic sabotage and delay.

Now the burden of action has been shifted to the Democratic majority in Congress. If its members do not enact the President's recommendations, it is they who must accept responsibility for failure to provide relief for American farmers.

Mr. Eisenhower said he would call a special session of Congress to meet after the national conventions if an acceptable farm program is not enacted before that time. The proposals he put forward Monday evening have been thoroughly discussed. They were, in fact, embodied in the farm bill he vetoed, but were rendered unworkable by the discredited high price-support plan that the Democrats tacked onto that bill.

Twice on Monday, in his veto message and again in his address to the citizens, President Eisenhower exposed the fraud of the high price supports that the Democrats seek to perpetuate. They are the source of the unmanageable surpluses that are depressing farm prices and driving American agriculture toward socialism.

His soil-bank plan was designed to reduce these surpluses and still support farm income by paying farmers to rest and improve acres that are not needed for present production. Because the Democrats paltered so long with the farm bill in Congress, the time has passed when that plan can be put in effect this year, even though the vetoed bill provided for it.

The President proposed that he be authorized, nevertheless, to pay 50 percent of the soil-bank benefits to any farmer who signed to observe land conservation practices next year. These payments could be made any time after July 1, and as Mr. Eisenhower pointed out, would enable farmers to buy the seed, trees, fertilizers, and new machinery they might need to start preparing their land for soil-bank use.

All that is required is that Congress pass the soil-bank bill, unencumbered by the nostrums that evoked the veto on Monday. If the Democrats fail to do this, it is they who must answer to the farmers for the callous disregard that candidates Stevenson and Kefauver have been piping about.

This is by no means the best possible farm program. It will defer for a full year the job of cutting farm surpluses. But it is the best that can be achieved at this time after the Democrats have played politics with the problem for more than 3 months.

STATEMENT OF HON LESLIE C. ARENDS, REPUBLICAN WHIP, 17TH DISTRICT OF ILLINOIS, ON FARM BILL VETO RECORD

It is obvious from the President's veto and his message that he is thinking solely in terms of what is best for the welfare of our farmers and the country as a whole.

The bill sent the President by the Democrat-controlled Congress, after long, costly delay, is purely a political measure, not a cure to the farm problem but a political narcotic to try to fool the farmers.

President Eisenhoyer recognized it as such. He will not play politics with the welfare of agriculture. Once again by vetoing this bill President Eisenhower demonstrated his statesmanlike greatness. I am sure his action has the overwhelming approval of the majority of our farmers.

If an attempt should be made to override the veto, I am sure it will fail. I, for one, will vote against any motion to override.

It is now the duty and the responsibility of the Congress to act immediately on the soil-bank proposal. As the President points out this can be done in a few days, if the Democrat leadership will permit, and stop all this political maneuvering.

Opposition of the American Flag Committee to the Alaska Mental Health Bill

EXTENSION OF REMARKS
OF
HON. EVERETT M. DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 18, 1956

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by the American Flag Committee, expressing its opposition to H. R. 6376, the Alaska Mental Health Act.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF THE AMERICAN FLAG COMMITTEE IN OPPOSITION TO H. R. 6376, THE ALASKA MENTAL HEALTH ACT

I. INTRODUCTION

On January 18, 1956, the House of Representatives passed by voice vote H. R. 6376, the Alaska Mental Health Act. It is now before

the Senate Committee on Interior and Insular Affairs, whose chairman is Senator JAMES E. MURRAY.

Careful examination of the provisions of this measure has convinced us that its adoption in present form would gravely impair the most cherished constitutional rights not only of the residents of Alaska for whose benefit the act is proposed, but of all citizens of the United States coming under its jurisdiction.

We have no wish to prevent or delay the construction, within Alaska, of hospitals, clinics and other facilities for the diagnosis, care and treatment of its mentally ill. We sincerely deplore the fact that such accommodations are presently lacking, and that Alaskan patients must now be hospitalized at Portland, Oreg., more than a thousand and possibly 2,000 miles from home and loved ones. We wish to see this injustice corrected, and we pledge our support to any legislation exclusively directed toward this end.

We regret that the framers of the Alaska Mental Health Act saw fit to inject controversial provisions into what could have been a simple and wholly unobjectionable measure of relief for the people of Alaska.

Among our most serious objections to the act are the following:

II. BROAD DEFINITION

The present Federal statute for Alaska limits compulsory asylum commitment to those judged to be insane. The Alaska Mental Health Act repeals this statute (48 U. S. C., sec. 47) and authorizes forcible hospitalization of any "mentally ill individual" whose detention is requested. Section 101 (i) defines such a person as one "having a psychiatric or other disease which substantially impairs his mental health or an individual who is mentally defective or mentally retarded."

In terms of modern psychiatry, such a loose definition could be interpreted to almost every living human being. Many authorities high in the profession regard strong personal religious experience as one symptom of a psychotic personality. Some relate intense patriotic feeling to paranoia, a grave mental disorder. Americans holding extreme political views, whether to the right or left, have been called crackpots and collectively described as constituting a lunatic fringe. Personal idiosyncrasies are coming more and more under the scrutiny of "experts," and the random speculations and remote theories of the psychiatrists have been so popularized among the lay public as to encourage us all to become amateur diagnosticians.

It is one thing to seek psychiatric advice and treatment on one's own volition, but quite another to live in the shadow of a law which relatives, associates, or public officials can invoke to bring about one's compulsory hospitalization. Under the all-inclusive definition which the Alaska Mental Health Act applies to mental illness, literally hundreds of emotional, mental, and physican conditions which pose no danger to the public could be cited to compel a citizen to suffer detention and unwanted treatment in an insane asylum.

Instead of expanding those areas in which the psychiatrist is permitted to assume judicial authority in relieving a citizen of his freedom, it is our belief that Congress should inquire into the advisability of enacting legislation to more clearly define and limit the circumstances under which due process of law may be compromised at the foot of the psychiatrist's couch.

III. APPLICABILITY

In line with what has gone before, we object to the act on the ground that its commitment features are the same for persons who have broken no law as for those carrying out violence, destruction, and other acts indicating possible derangement.

In cases of overt misconduct which can be shown to have resulted from obvious psychological disturbances, it might be beneficial both to the wrongdoer and the public to have legal machinery by which the offender could be offered hospitalization and a possible cure, rather than imprisonment as a willful criminal. Even under these circumstances, we believe that compulsory commitment to an asylum should be limited to the violently insane and to those who are obviously incapable of intelligent behavior or of refraining from doing physical harm to those about them.

The Alaska Mental Health Act contains no such stipulations. Its sweeping language exposes a citizen to compulsory hospitalization whether he has or has not committed a wrongful deed. Armed with a physician's written opinion that a person is mentally ill under the broad definitions which the act sets forth, almost anyone can cause the individual to be seized against his will and spirited away to an asylum. The physician in question is not required to substantiate his opinion by the presentation of facts which conform to any standard of evidence, nor is he held in any way responsible for his action if the individual whom he has caused to be hospitalized is later proved to be mentally sound.

We object to the basic structure of sections 103 and 104 of the act, which by the ease of their application would encourage guardians, parents, husbands, wives, adult children, relatives, friends, policemen, health officers, and welfare officials to bring about the hospitalized confinement of an unwilling citizen.

We object to the fact that, upon the strength of the unsubstantiated opinion of a single doctor (secs. 103 (b) and 104 (a)) or of a policeman, health or welfare officer acting as an amateur psychiatrist (sec. 104 (b)), a citizen may be seized on the street, at work, or in his home, and forcibly transported to a mental hospital, where his plea for release may be ignored (sec. 106 (a)) for from 5 to 15 days.

Also, one of the most serious objections which we raise is to the lack of any prohibition against administration of drugs, use of hypnosis, or commencement of any other treatment authorized by section 115, during the period the individual is detained against his will, and pending judicial review of such detention.

In our opinion, sections 103, 104, and 106 (a) would greatly encourage those who, through malice or for reasons of personal gain, intimidation or a wish to be rid of a burdensome dependent, seek commitment of one not in need of asylum care. This conviction is strengthened by the fact that a provision carrying penalties for causing such unwarranted commitment was removed from the act by an amendment which the House adopted prior to final passage.

IV. COMMITMENT PROCEDURES

Section 106 (a) allows the head of a hospital to delay the release of an unwilling patient for as long as 15 days, to permit a United States commissioner to begin formal commitment proceedings under section 108.

Just in case an intended victim has somehow eluded hospitalization under section 104, any interested party may commence proceedings for his commitment under section 108 (a), simply by filing a statement that he has refused to submit to examination by a licensed physician.

Section 108 (b) allows the commissioner to withhold notice to the citizen that application for his commitment has been filed.

Section 108 (c) authorizes the commissioner to name two physicians appointed by the Governor of Alaska to examine the unwilling citizen. If 2 physicians are not available, this section allows the commissioner to settle for 1.

Section 108 (d) allows the commissioner to compel the unwilling citizen, to whom notice of impending commitment has been withheld, to submit to examination.

Section 108 (e) is especially vicious. It permits the commissioner to ignore the reports of examining physicians if they indicate that the citizen is mentaly well, and to schedule a commitment hearing in the same manner as if he had been declared insane. It also authorizes his continued detention for an additional 15 days.

Section 108 (f) is highly ambiguous and subject to contradictory interpretation. It states that the proposed patient shall be "afforded an opportunity to appear at the hearing, to testify, and to present and cross-examine witnesses." Later, however, it states: "The proposed patient shall not be required to be present, and the United States Commissioner is authorized to exclude all persons not necessary for the conduct of the proceedings." Now, if the presence of the proposed patient is not required, it is obvious he is not necessary for the conduct of the hearing. If it could not go on without him, the act would so provide. Since it does not, the conflicting language of this section could well be interpreted to empower the Commissioner to exclude the proposed patient from the hearing.

Beyond this, section 108 (f) modifies the present Federal law which grants all persons a right to testify at a commitment hearing. By the new provision, only those "necessary for the conduct of the proceedings" are permitted even to attend, and the Commissioner is apparently the sole judge of who is and who is not so qualified.

Another departure from present law is the stipulation that the Commissioner, who acts as a trial judge, is not bound by rules of evidence regarding the citizen's mental condition or his place of residence. Thus, every idle gossip, every prejudicial or otherwise irrelevant statement made about the "proposed patient" by those seeking his commitment, may be accepted by the Commissioner in reaching his decision. Suspension of the rules of evidence is particularly destructive of a fair hearing in commitment cases, where unsubstantiated charges of irrational behavior may constitute the sole argument for compulsory hospitalization.

Section 108 (f) impairs still another guarantee of justice. By present law, no citizen may be committed in Alaska except a jury of six men unanimously find him to be insane and so declare in writing. The Alaska Mental Health Act "modernizes" the procedure by allowing the Commissioner to act as both judge and jury unless the "proposed patient" or his counsel or a member of his immediate family requests, in writing, that a jury be selected.

We strongly object to this perilous innovation. We have noted in other areas—notably in the field of accident cases in New York City—attempts to convince the public that juries are costly, inexpedient, obsolete, and unnecessary to a just verdict. We deplore such appeals to abandon one of the most vital safeguards to life, liberty, and property which our Federal Constitution and those of our several States provide. Any act which compels a citizen to request in writing a protection which the Constitution treats as an absolute right is wrong in principle and should be rejected.

V. BASIS FOR COMMITMENT

Section 108 (g) defines the basis on which the proposed patient may be committed to an asylum. He need not be judged insane, as under present law, but merely "mentally ill; and * * * in need of custody, care, or treatment in a hospital and, because of his

illness, lacks sufficient insight or capacity to make responsible decisions concerning hospitalization." Under the act's loose definition of mental illness, this language would apply to anyone disagreeing with the necessity for his own commitment.

Stripped of its confusing legal phraseology, the Alaska Mental Health Act is a measure to provide means for compelling a citizen to undergo unwanted psychiatric and medical treatment. The indignities it could force upon sane, law-abiding citizens are far more hazardous than those which its proponents say are being suffered by the truly mentally ill who, by present law, must be committed as a result of trial by jury.

VI. OTHER HAZARDS

Commitment under section 108 (g) may be for an indeterminate period, and section 109 (a) allows the commissioner to transfer the patient, without his consent, to any agency of the United States certifying his eligibility for care and treatment at its expense. So transferred, the patient comes under the combined rules and regulations of the claiming agency and the authority of the Governor of Alaska and the head of the hospital relinquishing him, which authority is delegated to his new custodian.

Thus, while the chief aim of the act is claimed to be that of keeping Alaska's mental patients in Alaska, close to family, relatives, and friends, it really provides for handing many of them over to Federal agencies which are authorized to lodge them in asylums or hospitals which they may operate anywhere in the United States, Puerto Rico, Hawaii, the Canal Zone, or, in the case of the armed services, in a foreign country.

Section 119 (c) carries such transfers much farther still. Here, the Governor of Alaska is empowered to make an agreement with any of our 43 States for the physical transfer of Alaskans to hospitals within their borders. Once again the purpose of keeping Alaska's patients close to home and family is defeated. These folks are currently lodged at Portland, Oreg., 2,000 miles away. Under section 119 (c), they could end up in Miami, Fla., more than 4,000 miles from the hospital which the act authorizes for their care and treatment in Alaska.

But, the real mischief of section 119 (c) lies in its stipulation that the transfer pacts must be reciprocal in application. That is, States receiving Alaskan patients are entitled to ship their own mentally ill to hospitals in Alaska, where they will be hospitalized and come under the full authority of the Alaska Mental Health Act.

It should be obvious to anyone reading H. R. 6376 that it is not a territorial bill for giving the people of Alaska their own hospitals. This is Federal legislation in the field of mental health, establishing and encouraging the application of the principle of the inter-transfer of mental patients between the several States and Territories of this Nation. The act gives Federal sanction to State laws which would expose their residents to compulsory removal to States and Territories thousands of miles from their homes, and establishes a precedent for further legislation for the imposition of Federal control of Americans alleged to be mentally ill.

Section 117 allows the head of a hospital to restrict the patient's right to communcate with family, friends, legal counsel, or others, including his representatives in Congress, if such restrictions are held to be "necessary for the medical welfare of the patient." No restraint is permitted, however, upon sealed mail directed to the Governor of Alaska or the Commissioner who ordered the patient's detention.

Why should this be? If the patient's condition is such that he would be harmed by the effort involved in writing to members of his family, to friends, associates, an attorney or a United States Congressman, will the harm be less if the object of his correspondence is the Governor of Alaska or the Commissioner responsible for his detention? We question the basic motive of this provision which, while permitting control of the patient's contacts with sources he may feel to be friendly to his release, encourages him to communicate his thoughts, feelings and plans, if any, to the officials charged with supervising his enforced hospitalization.

VII. UNQUALIFIED LAND GRANT

Section 202 (a) transfers 1 million acres of Federal land in Alska to the Alaskan Government, to facilitate the program set forth in the act. This is a vast area to be given over to the support of Alaska's mentally ill, since there are but 359 patients at Morningside Hospital in Portland, Oreg., which presently lodges all of those committed in the Territory.

Sponsors of the act say that only a fraction of this land will be used to quarter patients, and that most of it will be sold, leased or invested to provide Alaska with the funds needed to make the program self-supporting. The act, however, fails to fix the number of acres to be devoted to each such purpose. Although it is claimed that Alaska's needs have been studied and accurately determined, the act does not designate hospital sites nor in any way restrict their area. As far as its language goes, the acreage could be divided equally, half to be sold, leased or invested, and half for a modern installation which might be used to solve the hospital shortage problems of our 48 States.

We approve the principle of a land grant of sufficient size to provide and maintain adequate facilities and services for the diagnosis, care and treatment of the mentally ill of Alaska. We insist, however, that the area conveyed should bear a reasonable relation to that actually needed for such purposes.

VIII. RECOMMENDATIONS

In view of the foregoing objections, to which we could add substantially in a more detailed analysis, we recommend that H. R. 6376 be discarded, and that a new bill be drafted which will provide Alaska with facilities for the diagnosis, care, and treatment of its mentally ill within the Territory, while leaving the present commitment procedures unchanged. In view of the fact that the Federal Government owns in excess of 93 percent of the area of Alaska, we believe that a land grant to the Territorial Government, both for use as hospital sites and as a source of revenue for maintaining their upkeep, is justified and proper. In conveying such land, however, the area to be put into hospitals and hospital grounds should be clearly specified and defined, and the area to be sold, leased, and invested for revenue, by similar specification and definition, should be so restricted by law.

We believe that legislation following these recommendations would solve a substantial part of Alaska's mental health problem, and in a manner which could provoke opposition from no responsible quarter.

As for modifying the present law regarding commitment in Alaska, changes designed to remove the necessity for incarcerating the violently insane in a prison might be effected by separate legislation. Under no circumstances, however, should the law be altered to permit the compulsory hospitalization of a person who has committed no act of violence or destruction, who is rational, and who is capable of distinguishing right from wrong.

The fantastic commitment features of the Alaska Mental Health Act highlight a crying need for long and careful study of the basic concepts of modern psychiatry as they relate themselves to American jurisprudence and its standards for protecting the rights and liberties, as well as the property and physical safety, of the individual. There is certainly a place for the psychiatrist in our society, but that place must not be occupied in the robe of a jurist or the seat of a legislator. To enact laws which compel an American to be treated for an emotional disorder which has caused no harm to the public is to set the precedent for later laws forcing him to undergo unwanted treatment of other, and perhaps more serious, physical afflictions.

The danger signal is up. It should be heeded.

Nation of Softies?

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 18, 1956

Mr. MARTIN of Pennsylvania. Mr. President, all of us are concerned about the fact that 35 percent of young Americans fail for military service because of physical unfitness. A very interesting editorial entitled "Nation of Softies?" appeared in the Sunday Star of March 11. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NATION OF SOFTIES?

Dr. Paul Dudley White, the most celebrated of the President's heart consultants, seems to have exaggerated a bit in recently declaring to a House Appropriations subcommittee that ours is "one of the unhealthiest countries in the world today." Yet, although his statement does not square with statistics showing that average life expectancy in America is considerably higher than in most other lands, there can be little doubt that we are in danger of becoming a nation of softies.

A fairly alarming indication of this is the fact that about 35 percent of the young Americans called for military service are rejected because of physical unfitness. Another warning sign can be found in studies showing that our boys and girls compare poorly with European boys and girls in tests measuring the strength and flexibility of abdominal and back muscles. There is a large amount of additional evidence along the same line, all of it too disturbing to be shrugged off as it were inconsequential.

What accounts for the trend? Many factors are involved in the answer, but certainly the technology and comforts of our way of life play a key contributing role. As Dr. White has said, "We now have so many push buttons that we have stopped the use of our muscles. * * * Also our diet has become richer and richer." Further, as other experts have pointed out, great numbers of American children, if not pampered, are physically too inactive in this age of automobiles and spectator sports. All too often, for example, they spend their after-school hours indoors watching the dubious wonders of TV.

As far as city children are concerned, all this is largely understandable. Our automobile traffic is potentially too murderous for today's youngsters to ride bicycles, or play street games like punchball, the way their elders did in an age when nobody had to worry much about being run over. But this is only one aspect of the problem—a big and important problem requiring action of the

sort contemplated by President Eisenhower last summer when he scheduled a national conference to deal with it.

What the President had in mind at that time was the drafting of a countrywide program to encourage our young people to build up their bodies with systematic physical exercise and direct participation in sports. The conference was called off because of his heart attack, but the idea behind it ought not to be dropped. The signs of growing softness in America plainly indicate that some such meeting of experts is sorely needed.

Address by Governor McKeldin, of Maryland, Before Philadelphia Fellowship Commission

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, April 18, 1956

Mr. BEALL. Mr. President, today, more than at any other time for almost a century, a careful reappraisal is being made of the factors in our country which have forced many of our citizens to follow a segregated way of life. As a border State between the North and the South, Maryland is in a position to feel the strains which have unfortunately developed on both sides of the Mason and Dixon Line during this period of transition. Gov. Theodore R. McKeldin, of Maryland, recently gave a clear picture of the current situation in our Free State when he said:

In Maryland the Constitution of the United and the statutes made in conformity thereto are the supreme law of the land.

His words were delivered in Philadelphia at a dinner during which he was presented the National Fellowship Award, sponsored by the Philadelphia Fellowship Commission. In addition to discussing Maryland's position, Governor McKeldin also pointed out that the goal of right-thinking men is not "equality" in itself but the excellence which can result from a respect for the rights of all Americans regardless of race or color. Because the Governor's speech is so thought-provoking and timely, I ask unanimous consent to have it included in the Appendix of today's RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Because the State of Maryland lies below the Mason and Dixon Line men from Maine cannot see it as anything but a southern State. Because it lies above the Potomac, men from Mississippi cannot see it as anything but a northern State. Both are wrong. It is a border State. Skeptics say this means that it belongs to neither, but Marylanders say it means that it belongs to both.

The position of a border State is not always a happy one. In great crises it may mean being caught between the upper and the nether millstones, in danger of being ground to powder. That was Maryland's fate in the most terrible crisis that has afflicted the Nation, from 1861 to 1865. A dozen times it was literally the battlefield on which the armies of the Union and the Confederacy came into collision. Early's cavalry burned the house of a Governor of Maryland and occupied ground that today is within the city limits of Baltimore.

During the entire 4 years it was a spiritual battleground, with brother arrayed against brother, engendering hatreds, traces of which have lingered down to our own times. One of the most hideous tragedies of the fratricidal struggle occurred at the battle of New Market, Va., when by the fortunes of war the First Maryland Infantry, USA, was thrown against the First Maryland Infantry, CSA, and in sober, literal truth kinsman fell at the hands of kinsman.

But by way of compensation, moments come when the border State, may, if its wisdom is sufficient to the task, act not as the dividing line, but as the connecting link between regions of our common country. This I count as a happy circumstance, for he who has the opportunity to act as mediator between brethren is fortunate among men.

I need not remind you of the gravity of the crisis that has recently developed in connection with the effort to eliminate anything that smacks of second-class citizenship among men loyal to the United States. The position of my own State on the issue can be stated briefly. In Maryland, the Constitution of the United States and the statutes made in conformity thereto are the supreme law of the land. I do not say that they will be enforced because I do not need to say so. I say that they will be obeyed, so the question of enforcement will never arise except as a matter of police routine, not serious enough to cause any grave anxiety to the Governor of the State.

I mention this because I would not have you think that I am here to plead the cause of Maryland exclusively, or even primarily. But because of Maryland's intimate connection with States farther south we are keenly aware that our own problem is relatively small, and so we are not disposed to praise our own wisdom and virtue in handling it with comparatively little trouble. Our own difficulties have been just great enough to enable us to appreciate the magnitude of the task that our neighbors face.

Some of them are obviously going about it in the wrong way. In every large population, including the population of the South, there are dark forces, forces of prejudice, ignorance, and passion, constantly straining at the leash of civilization. They must be restrained with a strong hand, and no failure to restrain them can be condoned. This problem cannot be solved by mob rule and wherever and whenever mob rule is tolerated the solution is postponed and made more difficult than ever.

But I venture to remind you that the element that makes mob rule poisonous is the fact that it is based on prejudice and passion, not on justice, truth, and devotion to the general welfare. And I remind you that it is possible for grave citizens, not in a street mob, but sitting in orderly council, to be ignorant of the truth, swayed by prejudice, and neglectful of the general welfare. I submit that any man who assumes that the problem facing the South is simple and easy is a dangerous counsellor; for his assumption has no relation to the facts.

The Supreme Court of the United States was keenly aware of this truth when it struck down the policy of segregation in the public schools. It has proceeded, and it has ordered the inferior courts to proceed, with great caution in putting its order into effect; and any man who believes that the Court was motivated by race prejudice is too great a fool to merit serious attention.

The Court holds that equality before the law is the right of every American regardless of race or color; and it has found that the policy of segregation is inseparable from legal inequality. But the Court has never held, indeed no thinker worthy of the name has ever held that equality is an end in itself. Equality may be attained as readily by pulling down the excellent as by raising the inferior. The end is excellence, and equality is desirable only to the extent that it is a means of attaining excellence.

Less than a hundred years ago both the economic and social systems of the Southern States were overthrown and utterly demolished by war, invasion, and conquest followed by 10 years of military occupation. There is no modern parallel to this catastrophe. Germany is not a comparable instance, for only the economic system of Germany was destroyed and that kind of damage can be rapidly repaired. It was repaired in the South. Fifty years after Appomattox the South was vastly richer than it had ever been before the war.

But a completely new social system is not so easily constructed. Much, very much, has been accomplished. I believe that future historians, with a better perspective than we can have, one day will be astonished, not by the slowness, but by the speed with which a formerly subjugated race was integrated in a new social system; and they will divide the credit between the Negro South and the white with great praise for both.

It is folly, however, to ignore the fact that both races have worked hagridden by a gnawing anxiety from which the rest of the country is happily free—anxiety as to the strength of the social fabric they were creating. There was no precedent to reassure them for their aim was to achieve something that has not yet been successfully accomplished anywhere in the world—a society in which a very large minority can live on amicable and equal terms with a majority of a disparate race.

It is a magnificent ideal, one of the greatest that has ever been cherished by mortal men; but it is as difficult as it is magnificent. Southerners, white or colored, would have been less than rational if they had not been aware of the dreadful ease with which they could slip back and plunge the South into such rancorous and bloody hatred as subsists between Moslem and Hindu in India, between Arab and Jew in the Levant, and between Afrikander and "native" in South Africa.

No doubt this fear has frequently been exaggerated, especially by apprehensive whites; but to say that it is baseless is to ignore the immense difficulty of the task and the frailty of mortal men as they strive toward an ideal.

Worst of all is to ignore the existence of the ideal. Of course, it has been betrayed by the debauched, and never glimpsed by the stupid. Far be it from me to deny that the South has any lack of either villains or fools. Their presence is all too evident and the damage they have done is known to the whole world.

But villains and fools we have everywhere, and nothing but trouble can be expected of them. Wise men waste no time on the hopeless in any situation but search carefully for those elements from which something of value may be won. I submit that we have in the South a large number, an inspiringly large number, of able and trustworthy men in both races. They do not always occupy conspicuous positions; indeed, men whose idealism is stronger than their personal ambition come rarely; and then usually by chance, into conspicuous positions. But these relatively obscure leaders' importance is out of all proportion to their numbers.

What I fear in the present situation is not the clamor of the reckless demagogs. They have always been noisy and they always will be. Much more dangerous is the possibility that slow and silent discouragement may creep upon those southern leaders, and especially those Negro leaders, whose work of a lifetime is threatened with destruction.

We cannot go backward on their account, and I think none of them would have us do so. The Court has spoken. The case is decided. But it is utter folly to think that on that account there is no more need for careful procedure, for tolerance, for sympathy, above all for patient hearing of the evidence, all the evidence, and a scrupulous

rendering of exact justice as far as that is humanly possible.

Bear with me while I repeat that I am not pleading for myself or my State. In Maryland we are doing fairly well, much of the credit for which is due to the wisdom and integrity of our Negro leadership, but much also to the fact that our problem of race relationships never has been among the most difficult. I am arguing the case of men and women who have a much harder task than ours and are therefore entitled to greater consideration.

Let us never forget the loftiness of their aim. It is easy enough to be tolerant where there is no temptation to intolerance. It is easy to be free of race prejudice where there is nothing to excite race prejudice. But to create a society that will be tolerant in spite of pressure, that will be fair when unfairness would be profitable is as difficult a work as can be undertaken by man. Yet think of what success would mean. It would at once set the American Republic on a level attained by no nation since governments were instituted among men, it would vindicate the theory of self-government finally and forever.

The most formidable weapons that our enemies have ever raised against us are not made of fire and steel, but are forged out of our own frailties and follies. To establish on our shores a biracial society in which equal justice under law is a condition and not a theory would shatter those weapons in our enemies' hands. Men who are honestly and diligently striving to accomplish this are worthy of our sympathy and support, for in a very real sense the chastisement of our peace is upon them. Instead of denouncing them for not doing better, we should regard their existence among us with lordly pride.

Government Responsibility in Labor-Management Affairs

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, April 18, 1956

Mr. CARLSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent address by Joseph F. Finnegan, Director of the Federal Mediation and Conciliation Service, which was delivered at the 1956 industrial-relations conference at the Kansas State College, Manhattan, Kans.

The topic Mr. Finnegan chose was Government Responsibility in Labor-Management Affairs. His address is an outstanding one on some of the current problems affecting labor and management, and I commend it to the Senate.

I am informed by the Public Printer that the address is estimated to make 2¼ pages of the RECORD, at a cost of $180.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

"Westinghouse Strike Settled." Your newspaper, the morning of March 21, 1956, carried such a headline. This rang down the curtain on our longest major strike in more than 20 years. Some 55,000 men and women in more than 40 plants of one of America's major corporations had been on strike for 156 days—nearly half a year. Direct losses in wages to employees were somewhere around $100 million. The company lost some $300 million in sales. The direct and indirect effect on families deprived of income, communities deprived of purchasing power, consumers deprived of products, suppliers deprived of market, and accumulative losses to the company, are beyond the possibility of computation.

A few discordant ripples marred the smooth surface of the formal settlement of the strike, due to local problems at individual plants and localities; but these local difficulties were almost anticlimactic. So we can now take a fairly objective look at the Westinghouse strike and try to assess its effect and meaning. What, particularly, can we learn from it in terms of the Government's responsibility in labor-management affairs? What does the Government conceive its responsibility to be? Did this bitter, long-drawn-out strike demonstrate that our governmental principles, laws and procedures are sound or unsound? Did Government measure up to its responsibilities or did it evince weaknesses that demand reappraisal and possible change?

The fundamental responsibility of Government in labor-management affairs emerges clearly from the turbulent and fluid labor scene only if we correctly understand our American philosophy of free collective bargaining. It seems to me that free collective bargaining, operating in a free and competitive economy, can mean only that when labor and management meet at the bargaining table are not only free to bargain, but are charged with joint, direct responsibility for working out their own problems without Government domination. As free men, employers, and employees should not, under normal, peacetime circumstances, be required to submit to decisions of the state concerning conditions governing their relationships. Any other answer would be in derogation of man's inherent dignity, be he worker or employer. Any other answer would be a negation of the enacted philosophy of free collective bargaining, which is the keystone of our national labor policy.

Obviously, however, Government does have definite responsibilities in making free collective bargaining work; in fostering and improving a favorable climate or atmosphere, with the minimum of legal restrictions, under which labor and management will have the best possible opportunity to enjoy harmonious relationships. Over the years the Federal Government has sought to discharge its fundamental responsibility in labor-management affairs by establishing legal ground rules governing the parties' relationship, through legislation such as the original Wagner Act which, as amended, is now commonly referred to as the Taft-Hartley Act. Other legislation has sought to establish at least some measure of social consciousness and responsibility for the conditions under which men and women earn their living; for example, minimum wages, maximum hours, and matters affecting health and safety.

How effective has governmental policy been in helping make free collective bargaining work? If we consider the Westinghouse strike dispassionately, against the backdrop of our total national industrial experience in collective bargaining, it seems to me that this strike, far from indicating a failure or weakness in our governmental approach to labor-management affairs, tends to demonstrate the inherent soundness of both the doctrine of free collective bargaining and the present administration's concept of Government's role with respect to the labor and management relationship. It is true that this labor dispute resulted in the loss of millions of man-days of production, and countless millions of dollars in wages, sales, profits, taxes. It commanded national attention, caused waves of indignation and produced much head shaking and dire prophecies of national calamity; yet statistics on the cost of this landmark strike are meaningless unless considered in relationship to the overall, national picture of our productive industrial economy.

The estimated $100 million lost in wages by the Westinghouse workers represents only some eight one-hundredths of 1 percent of the income from wages of all other workers in this country during the strike period. The $300 million lost by the company in sales is hardly a drop in the bucket of nearly $200 billion of our gross national product for that 5½ months. The strike cost some 8½ million man-days lost to production; but during that same period, our national economy was absorbing about twice this number of man-days lost through avoidable industrial accidents, and more than 20 times as many man-days lost by unexcused absenteeism. I do not mean that any of these things are unimportant. I call them to your attention only to emphasize that when we take a look at the whole picture, we find a remarkably sound relationship existing nationally between management and labor. Out of the 75,000 to 100,000 collective bargaining agreements negotiated in this country each year, there are relatively few instances of active labor-management combat. I think that the Westinghouse strike, because we have all unconsciously accepted it as being a radical exception to the normal company-union way of life, proves that our fundamental governmental approach to the labor-management relationship has been sound and constructive.

What I have said up to now may make it sound as though responsibility of Government in labor-management affairs is quite simple and clear cut. This is not true. It is often rather easy to agree upon general principles. The trouble comes in the day-to-day application by the Government of those principles: in remaining nonpartisan and unbiased while resisting pressures, influences and impulses that may be violative of the long-range national objective; and in persuading both labor and management to approach the bargaining table with a mature and responsible attitude which will underwrite the premise of free, voluntary collective bargaining. This is the keystone of our democratic approach to the vexatious problem of trying to strike a proper balance between labor and management, the two segments of our country upon which our national safety, prosperity, and welfare depend.

Government nonpartisanship and resistance to pressures and influences are easier to talk about than to carry out. As the Westinghouse strike dragged on month after month, its effect spread and snowballed. As was to be expected, the hue and cry mounted for some sort of governmental action to "lower the boom" on either the company or the union, or both of them—depending upon whether their respective public relations were high or low at the moment. Mayors, governors, and Federal officials—all were deeply concerned. Civic, religious and other groups organized to "do something" about this major strike. Numerous forms of legislation and mandatory intervention were discussed or proposed by these inteersted and deeply concerned pressure groups, mainly with the idea of forcing a settlement. I am glad to be able to tell you that none of those pressures or proposals, based on partisanship or expediency, prevailed. They were not only resisted—they were rejected.

Another facet of Government responsibility in labor-management affairs that was dramatically emphasized by the Westinghouse strike is the principle that the parties control their own destinies and must discharge their responsibilities to all segments of society through collective bargaining. Labor and management must accept the fact that

freedom to bargain is inextricably linked with the responsibility to decide and to reach agreement. The Government can and should make available skilled and effective mediatory assistance, but the Government must not only not usurp the parties' decision-making prerogatives, but must steadfastly refuse to let the parties pass the decision-making buck to it.

Even though you followed the day-to-day developments in the Westinghouse strike through the newspapers, radio, TV, and magazines, I doubt if you can appreciate all of the maneuvers that went on to induce various forms of governmental action that would have had the effect of injecting Government into the decision-making phase of the controversy.

I feel it is important for you to know that under the Eisenhower administration Government at all levels refused to take over and relieve the parties of their duty and responsibility to work out their own destinies. When this strike was settled, it was on the basis of a voluntary agreement negotiated between the parties themselves, without governmental compulsion or fiat.

I would be the last to deny that the parties got a very substantial assist and some real prodding in their collective-bargaining efforts from the Federal Mediation and Conciliation Service. But mediation is a voluntary, noncompulsory process—an extension of free collective bargaining, rather than a substitute for it. In the last analysis, Westinghouse and the IUE finally wrote their own settlement ticket. As a result, I can assure you that the relationship between the parties today is better than it could possibly be had we violated the principle of noncompulsion by Government. In my opinion, also, the basic relationship between management and labor throughout the country has been clarified and improved by the position taken by Government in the Westinghouse dispute. That position is, as I stated before, that the parties—not Government—control their own destinies and through collective bargaining must discharge their own responsibilities to all segments of society.

So much for the general principles underlying the responsibility of government in labor-management affairs. To implement and effectuate those principles calls for a substantial amount of diverse legislation, as well as a number of separate agencies, each charged with specific duties and functions. It might be helpful for orientation purposes to give you a quick rundown on the principal labor laws and agencies dealing with different facets of the labor field; not from the standpoint of complete or technical analysis, but rather to indicate their general scope, purpose and operation.

The United States Department of Labor is, of course, the largest and most important Federal agency dealing in matters relating to the labor force of the Nation, whether represented by unions or not. You are familiar with the Consumer Price Index, issued by its Bureau of Labor Statistics, and with various of its manpower and other related functions. Its Wage and Hour and Public Contracts Division has responsibilities that will be of interest to you, since it is charged with the enforcement of various labor laws and regulations having a more immediate and easily discernible impact on your everday life. I shall touch briefly on some of these.

The Fair Labor Standards Act, generally known as the wage-and-hour law, was passed in 1938. It applies to employees engaged in interstate commerce, or the production of goods for interstate commerce, and sets minimum wages—recently fixed at $1 per hour—requires overtime payment at the mandatory rate of time and one-half for over 40 hours worked in any one week, and establishes a minimum age for employed workers.

The Walsh-Healey Public Contracts Act, passed in 1932, applies to Federal contracts for the purchase of materials in excess of $10,000. It calls for the payment of prevailing wages as determined by the Secretary of Labor, requires overtime at one and one-half times the regular rate after 8 hours per day and 40 hours per week, establishes minimum ages for workers, prohibits convict labor on such contracts, establishes applicable health and safety rules, and prohibits home work.

The prevailing wage law, usually called the Davis-Bacon Act, was passed in 1931. It covers all construction work for the Federal Government, and requires the payment of prevailing minimum wages, as determined by the Secretary of Labor.

The 8-hour law, passed in 1892, applies to all Federal purchases or construction, and simply requires the payment of overtime at one and one-half normal rates after 8 hours work per day.

The National Labor Relations Board (NLRB) is a Federal labor agency you hear a great deal about. This is really a bi-functional organization. The "Board" itself is a 5-member "labor relations court" appointed by the President. It is quasi-judicial, and acts in an appellate capacity in determining the right of representation of employees by unions, and as a trial court (through a special master, called a trial examiner) in matters relating to unfair labor practices by either companies or unions.

The Office of the General Counsel (appointed by the President) was divorced from the Board by the Taft-Hartley Act. The General Counsel, through his field staff, acts in initial determination of representation rights of unions, and also as prosecuting attorney to investigate, prosecute, or enjoin unfair labor practices by companies or unions, as defined by the Labor Management Relations Act, 1947.

It is well to bear in mind that the National Labor Relations Board is interested only in the rights, obligations, and restrictions of the act. It has no jurisdiction over, nor interest in, the negotiation of collective bargaining agreements or their content, nor in operations under the contracts as such. Of course, unfair bargaining practices during contract negotiations, illegal contract provisions (such as those calling for discrimination because of union membership or activity) or certain conduct of the parties during the contract term, might be the subject of National Labor Relations Board proceedings. However, the Board would be interested only because such matters might be infringements of the law, and not because of the contract itself.

Another Federal agency dealing in labor relations matters, with which my own organization is sometimes confused, is the National Mediation Board. This is composed of three members appointed by the President, and was created under the Federal Railway Labor Act. This Board has jurisdiction over interstate railroad, express and airline operations only, and has a dual function. It acts to determine representatives for collective bargaining purposes, and assists through mediation and conciliation in negotiation of collective bargaining agreements—but only in railroad, express, and airline operations.

A companion board, also created under the Railway Labor Act, is the Railroad Adjustment Board, made up of 36 members, of whom half are appointed by the railroads and half by the unions. This board acts only to decide grievances arising under labor contracts with the railroads; express companies and airlines are not covered.

I naturally would think that the last of the Federal agencies to be discussed is the most important, since it is the one I have the honor of heading as director, the Federal Mediation and Conciliation Service. My appointment is by the President, with confirmation by the Senate, and is for no fixed term.

The Federal Mediation and Conciliation Service was reconstituted as an independent agency, reporting only to the President, by the Labor Management Relations Act, 1947. Its predecessor was the United States Conciliation Service of the Department of Labor, which was authorized in 1913.

We are a relatively small and highly decentralized organization. My national office staff in Washington is very limited in size, and aside from liaison and cooperaton with the other Government agencies, is primarily concerned with fixing basic policies and handling personnel and budget matters.

The country is divided into eight areas, each headed by a regional director. These regional directors and a staff of some 215 mediators are charged with almost complete responsibility for actual mediation activities. Mediation is a highly personal operation, so that each mediator, apart from administrative requirements, is essentially an independent agent in the handling of each specific case.

The mediation process itself is a fascinating study and in many ways an even more fascinating activity. At first blush, you may find it difficult to understand how mature representatives of labor and management can find themselves in a situation which they cannot solve, but which can be solved with the assistance of an outsider who is a relative stranger to their bargaining relationship. Actually, there are many ways such a situation can come about without attempting to cover the whole subject, here are a few of them:

We sometimes find the parties deadlocked over what are termed issues of principle. These include issues such as the union shop, straight seniority, and pay for time not worked, such as holidays. The mediator in such situation can frequently be more effective than the partisan party representatives in urging a reevaluation of positions, based on the changes that have occurred in labor relation practices in the particular industry and the thinking of the people living and working in the area of the plant affected.

Institutional issues are sometimes most difficult to resolve. These are situations where either the company or the union feels it is completely bound either by general organizational policy, or by other contracts or conditions. To illustrate, consider a local union demand for a particular type of pension program conforming to well-established plans of its international affiliate, as opposed to the company insistance on an existing pension plan of its own which covers a great many nonunion employees in that plant, and perhaps several other plants. You can realize the difficulty of harmonizing these opposing institutional programs; yet the mediator ordinarily is able to help the parties work out an agreement.

Emotional blocks are frequently encountered where severe clashes of personalities or unexposed resentments have not only prevented the parties reaching an agreement, but may have made a farce of collective bargaining. Bad communications which have prevented the parties actually understanding each other's positions and the reasons for those positions, and lack of knowledge by the parties of all the existing facts and compelling circumstances involved, may easily cause a deadlock which the parties themselves seem unable to break.

The intensity that can easily creep into hard collective bargaining often results in a complete loss of objectivity by one or both groups, and with this loss of objectivity comes the inability to place issues in their proper perspective and to thoughtfully consider alternative solutions to the problems.

Not infrequently, we run into what might be called tactical blocks, where one party or the other may have placed itself in a tactical position from which it cannot gracefully retreat without someone to help it save face. We also occasionally run into situations where internal politics or internal conflict in either the company or the union may create a situation where it is difficult, if not impossible for the parties to openly talk with the frankness and honesty necessary to reach an agreement across the bargaining table. These are only illustrative of the situations and conditions that call for the presence and skill of a mediator.

Mediation itself involves no secret formula, nor obscure hocus-pocus. I believe, in its simplest form, it involves having the right man on the job at the right time; and the right man is basically a practical, mature, and capable labor-relations expert who is thoroughly experienced in the various techniques of mediation, and who can command the respect and confidence of the disputing parties.

Important elements of mediation are a proper sense of the appropriate time for intervention by the mediator in the negotiations, and his neutral status in calling and controlling conferences. The mediator normally will not enter a situation until the parties have exhausted good-faith collective bargaining. The fact that the mediator calls meetings and supervises the discussions frequently may remove the bargaining roadblock. This is particularly true if the parties are involved in tactical maneuvers in either seeking or avoiding meetings, or in procedures during conferences, since such maneuvers reflect intangible pressures and may indicate strength or weakness.

The use of joint and separate conference is routine, and the early attempt of the mediator to develop good negotiating attitudes and an objective approach to the issues, and to inspire confidence in himself and his impartiality, is standard procedure.

Beyond this point, each situation develops its own mediation demands. The mediator may seek to raise doubts in the minds of the parties about firm positions they have taken, and to develop some willingness to yield ground through suggestions, provocative questions or a clarifying restatement of issues. Many times the real problem is to develop true facts and situations and to isolate the wheat from the chaff. Developing alternative solutions and compromises, handling the bargaining to encourage progressive recessions, and controlling the critical timing of offers and proposals, all are important.

At times, when the parties have reached an emotional point where they cannot talk directly to each other, the mediator may have to function as a messenger boy; at other times, when face saving is involved, he may serve as a whipping post. Each situation calls for different handling and the successful mediator is one who can diagnose the correct approach to effect a good solution. The flexibility of our organization lets us almost "tailor make" our operations in each situation, to conform to the bargaining problems that exist. We often will assign more than one mediator to the case. If necessary, the regional director may take an active part or members of my Washington staff may participate. We try, as far as we possibly can, to make the service fit the need.

The thoughts I have expressed today are neither new nor original with me, but it seemed to me that there was a need for a restatement of them at this time; particularly those remarks concerning government responsibility in labor-management affairs.

We are all familiar with that old saw which runs "that government is best which governs least." That is still true. I submit that the ends of both labor and management are best served by government which insists upon the parties making their own settlements and is neither "pro-labor" nor "pro-management," but "pro-American."

Those representatives of labor and management who seek to enlist the aid of Government on a partisan basis and who criticize it because it has refused to take sides, do a serious disservice to our American concept of industrial democracy. They are blind to the fact that the true friend of labor and the true friend of management is that government which carries out its role in labor-management affairs in an impartial and even-handed manner.

If shortsighted representatives of labor or management should ever succeed in causing Government agencies dealing with any aspect of labor matters to take on a partisan color, those agencies will have lost their utility as peacemaking instrumentalities in the collective bargaining process. When political expediency, prompted by either labor or management pressures, takes over and we find Government injecting itself into bargaining problems in a partisan role, then indeed should the warning signal be sounded—because, at that point, the underlying tenet of voluntary, free collective bargaining will have been "sold down the river," and a totalitarian type of thinking substituted which is foreign to our basic American philosophy.

Needs of the Recipients of Old Age Assistance

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. ROOSEVELT. Mr. Speaker, the real needs of the recipients of old-age assistance are so urgent and so important to them that it is a pleasure to place the remarks of Mrs. Frankie Childers, a citizen of California, before my colleagues:

To Committee on Ways and Means,
House of Representatives:

My name is Frankie Childers. I am a registered representative of the National Institute of Social Welfare, whose offices are located at 300 New Jersey Avenue SE., Washington, D. C., and western headquarters at 1031 South Grand Avenue, Los Angeles 15, Calif.

Mr. Chairman and members of the committee, as Mr. George McLain, president of the National Institute, has already pointed out the defects of the administration bills now being considered by you, I would like to present what the recipients of public assistance, themselves, believe should be enacted.

The problem of our aging population is commonly recognized as a national problem. So, too, are the problems confronting those on public assistance. Only Congress can solve these problems through legislation designed to alleviate the misery and suffering of the millions of Americans who fall in this category.

A study of our Nation's public assistance laws reveals a grave lack of uniformity between States as to the amount paid and the qualifications for the receipt of such aid.

While Congress in the Public Assistance Section of the Social Security Act in 1935 did require uniformity of administration, they neglected to establish humane standards of need.

Chambers of commerce, taxpayers associations, and other spokesmen for the economic royalists of our day brought pressure on State lawmakers to impose conditions that deprive recipients of their right to human dignity.

In doing so, these spokesmen for the economic royalists backtracked and copied ideas from the infamous "poor laws" started piece-by-piece by Queen Elizabeth in England in 1563 and brought together into an early welfare and institutions code in the year 1601.

Thus, the basic pattern for organized public assistance in the United States today exactly fits the mold carved in the 16th century by Elizabeth and abandoned as inhuman and unfair by the English decades ago.

Take for instance our residence requirement laws governing applicants for public assistance. A strange law, indeed, because under any other circumstance the United States is considered the legal residence of all of us. No passports are needed to travel from State to State—our Constitution says that no tariffs can be imposed by States—in time of war, no one escapes the responsibility of defending his country because of State residence laws.

Then where did the residence law imposed on the needy come from? Just look back to the days of Elizabeth for your answer. You'll find that some of the parishes were richer than others, some had better climates, some gave more generous aid. So the settlement or residence act was passed, restricting the obligation of any parish to those who had a legal residence there. Legal residence could be acquired by birth, by ownership of land, or by apprenticeship.

Take the pattern of our so-called responsible relatives law. Yes, take it right back 350 years and fit it neatly into the "poor laws of Elizabeth." You couldn't just be a pauper. Your whole family had to be paupers before you could expect any aid from any source. The "responsible relatives clause," imposed by most of our States, is your modern version. These and many of the other laws dealing with public assistance, designed to harrass and intimidate recipients of aid in this country, stem directly from the "poor laws" of England.

Yet, the English recognized their folly more than a hundred years ago and greatly liberalized these vicious provisions. Then, in 1908 England repealed her "poor laws" altogether and passed the Old Age Pension Act, which includes all her citizens receiving such aid as a matter of right.

During the 20 years that the Social Security Act has been the law of the land it would seem that Congress by now should have seen the inequities in the public assistance section of the law. I am sure that each and every member of this committee, as well as each and every Member of Congress, has received much mail from their districts asking for the improvements which I plan to cover today.

While many, many worthwhile bills have been introduced by the good Members of Congress, individually, covering most of these subjects, I will speak specifically on H. R. 7848, introduced by Congressman JAMES ROOSEVELT, of California, because he has brought together in one bill a major program of overhauling the public assistance section of the Federal Social Security Act.

Pension groups throughout the country have found a rallying point behind H. R. 7848 because of its comprehensive scope. In early November of last year old-age pension and social welfare representatives from all over the United States gathered for a national conference in Los Angeles and adopted a program encompassing the type legislation public assistance recipients need and want Congress to adopt.

Most of this is covered by H. R. 7848.

This bill requires the laws of the 48 States to be uniform by having Congress establish a minimum standard of qualifications for the

applicants and recipients below which no State shall go.

For the first time a legislative intent would be established by Congress "that public assistance shall be administered promptly and humanely, with due regard for the preservation of family life, and without discrimination on account of race, sex, religion, or political affiliation; and the assistance laws be liberally construed."

As the Federal grants-in-aid to States for public assistance apply to the aged, the blind, dependent children, and the permanently and totally disabled, the bill provides that the States cannot window-shop on these programs, but must adopt all of them.

Other features of H. R. 7848 are as follows:

1. Raises the present federally imposed ceiling on matching of funds from $55 to $100 monthly for each recipient. Additional Federal funds will be made available to States with low per capita income while the wealthier States would be matched 50–50. An increase in Federal funds would be made available for needy children payments.

These amendments will encourage States to increase their payments to the needy by providing for larger Federal payments to the States with a low per capita income, and matching payments of the higher income States. It would not decrease the amounts which these States now receive.

2. The age for women applicants and recipients would be lowered from 65 to 62.

The House Ways and Means Committee has already provided for the lowering of the age for women on OASI in H. R. 7225, and, therefore, it is logical that they do likewise for those on old-age assistance.

3. The aged and handicapped would be allowed to earn up to $50 per month and needy children, up to $30 per month to supplement their assistance checks.

An aged or handicapped recipient, under present laws imposed by Congress, is sentenced to idleness and prohibited from earning even the smallest amount under the threat of having such earnings deducted from their aid payment. This privilege has already been granted by Congress to the blind.

Children, especially of school age, should be encouraged to better their lot instead of being forced into idleness because of the Federal provision that all "outside income and earnings be deducted from the amount of aid granted them."

4. Recipients may own a home of an assessed value less all encumbrances, up to $5,000 free from the imposition of a lien, and the ownership of such home will not be used as an excuse to deduct a so-called occupancy value from their payments.

Some years ago the Federal Social Security Agency adopted the following policy: "Compulsory transfer of control of property in order to qualify for assistance violates a cardinal principle on which the Social Security Act is based—that needy persons should not be differentiated by reason of their need and that recipients of assistance have the same right of self-determination by reason of their need in the use of their resources as others in the community."

Such ownership is now considered as a resource and a value is set anywhere from $3 to $15 a month, which amount is deducted from the aid payments to a recipient homeowner. Married coupled have double the amount deducted from their aid.

5. Elimination of the practice of enforcing collections from the relatives of recipients.

In a letter dated March 18, 1947, W. F. Mitchell, Acting Commissioner of the Social Security Administration of the Federal Security Agency, recommended the elimination of these clauses from State welfare codes:

"We are quoting the statement we made to State welfare agencies when we recommended that provisions conditioning eligibility for assistance on the ability of relatives to support the applicant be eliminated from State public assistance laws.

"The assistance laws in many States provide not only that assistance received from relatives shall be taken into account in determining an applicant's need, but also that the existence of relatives considered able to support shall make an applicant ineligible for aid.

"In some instances it may be known that the relative is actually not contributing to the support of the applicant and yet, because of the State law, assistance must be denied.

"The enforcement of such relatives' responsibility laws is sometimes tempered in the administration of such laws, yet the very existence of such provisions in the State assistance law represents a threat to needy individuals and subjects them to the uncertainties of administrative discretion.

"The income and resources of an applicant that are considered in determining need should be actual and not merely potential.

"The general support laws of the States provide the means of enforcing support from relatives if the individual or State wishes to take such action. The public assistance laws should not be used as a means of enforcing the support laws of the States."

6. Should an otherwise qualified person not meet State residence requirements, the Federal Government will pay its share direct to the person until they have met the residence requirement.

The present Federal law allows the States to impose a residence requirement not to exceed 5 years out of the 9 years preceding application. Many States require less than this maximum. Some States differ upon the interpretation of what constitutes residence. Other States discontinue payments as quickly as possible should the recipient be absent on a visit. Thousands of elderly, blind, and handicapped persons have found themselves suddenly becoming citizens without a State. This amendment will help to ease their suffering.

7. Prohibits publishing the names of recipients.

If a person in dire need of public aid applies for same, and after a careful investigation by competent welfare workers, is deemed worthy of such aid, how could chiseling be prevented by holding his name up to public reproach, so that those who like to shout "pauper" could do so?

To permit promiscuous invasion of the privacy of the aged, the blind, physically handicapped, and dependent children receiving assistance, by making public their misfortune, could, therefore, only result in perpetuating a useless and unnecessary indignity upon them.

This needless humiliation of public assistance recipients is reminiscent of the old custom of putting town drunks and wife beaters in stocks in the public squares to shame them before fellow townsmen.

8. The value of any United States surplus food made available will not be deducted from the recipient's aid.

During the 83d Congress, surplus foods were made available to the States for the unemployed and those on public assistance. The refusal of many States to pay the small cost of handling these foods, however, nullifies this congressional action to aid those on public assistance. The answer, therefore, is Federal surplus food stamps acceptable by grocery stores, which will supplement the recipient's income, and prohibit aid payments from being reduced because of it.

9. Household furnishings, etc., and an insurance policy or burial arrangement up to $500 in value is exempt. A floor of $1,200 is established under the amount of personal property which a single recipient is allowed to have.

10. Recipients should not be discriminated against because of marriage and no person receiving such public aid shall be deemed a pauper, and no warrant drawn in payment shall contain any reference to indigency or pauperism.

Some of these provisions may seem minor to you gentlemen, and not worthy of congressional consideration, but I can assure you that they are of the utmost importance to the constituents in your district. Correct these inequities and you will have gone far down the road toward solving the problems besetting our needy old, blind, physically handicapped, and dependent children.

When making laws dealing with these citizens, you must always keep in mind that although you pass the original laws with all good intentions, they must then be administered by the Department of Health, Education, and Welfare. On the State level the legislatures then tack their own provisions onto the law and deliver these to the State social-welfare department or commission, who in turn make additional rules and regulations for administration by local communities. The local authorities then adopt their rules, regulations, and policies concerning the provisions.

Unfortunately, by the time all of these people have given your good intentions a thorough working over, and the welfare worker doles out what is left to the recipients, it's doubtful in most instances that you could recognize the laws that you have passed.

This is why we, who work directly with the recipients year after year, urgently appeal to you gentlemen to set at least this minimum standard of need. Good intentions are not enough. You must spell into the law a "Bill of Rights" for the needy of America.

Thank you.

Watsonville (Calif.) Register-Pajaronian Wins Sigma Delta Chi Public Service Award

EXTENSION OF REMARKS

OF

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1956

Mr. GUBSER. Mr. Speaker, the Sigma Delta Chi Professional Journalistic Fraternity yesterday announced that its 1956 award for public service in journalism would go to the Watsonville Register-Pajaronian which is published in Watsonville in the 10th Congressional District of California.

Only twice before in the history of the award has this honor, one of the very highest in American journalism, been bestowed upon a newspaper not published in a metropolitan city. Never before has it been awarded to a newspaper in the West. Neither has it ever been given to a more deserving recipient.

Under the leadership of its editor, Mr. Frank Fletcher Orr, the Register-Pajaronian has long been the conscience of its community. A rare combination of aggressive and meticulous reporting, imaginative editing, and judicious editorial comment have made this newspaper an outstanding example of sound, constructive American journalism with a reputation which far exceeds its immediate circulation area. I know that the community of Watsonville daily enjoys the expressed respect and admira-

tion of great metropolitan newspapers of much larger circulation.

Mr. Speaker, the community of Watsonville is no different from hundreds of cities of comparable size throughout the length and breadth of the United States. Its newspaper, the Register-Pajaronian, faces similar problems with similar resources as do scores of newspapers of comparable circulation from coast to coast. What makes it outstanding, and what now has won for it the coveted honor of the Sigma Delta Chi award, is the intelligent approach, the refusal to compromise with truth, the fearless determination to learn and report all the facts, and let the chips fall where they may.

This week, when the American Society of Newspaper Editors will hold its meeting here in Washington, much will be said about Freedom of the Press. We all know that there are many forces working consciously or inadvertently to restrict this freedom. May I suggest that in the United States of America, freedom of the press will never be in danger so long as courageous, intelligent editors with capable staffs are doing their jobs the way Frank F. Orr and the staff of the Register-Pajaronian have been and are doing theirs in Watsonville, Calif.

The late great William Allen White proved to all America with his Emporia (Kans.) Gazette that a small-town newspaper can, through sheer enterprise and excellence, gain influence far beyond the confines of its own small circulation area. As the representative of the 10th Congressional District of California, I am intensely proud that the Watsonville Register-Pajaronian is gaining national recognition for taking the same approach.

Panama Canal Policy: An Engineer's Evaluation

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1956

Mr. DORN of New York. Mr. Speaker, one of the major policy questions that has been before the Congress for a number of years is the increase of interoceanic transit facilities. As a member of the Committee on Merchant Marine and Fisheries, which has legislative jurisdiction over interoceanic canals generally, I have been impressed by the volume of published information on various phases of this complicated subject. Thus, I invite attention to the documentation on Isthmian Canal policy by Hon. CLARK W. THOMPSON, of Texas, in the CONGRESSIONAL RECORD Appendix of March 23, 1955.

A recent important contribution to current Isthmian discussions is a considered evaluation of the Panama Canal problem by E. S. Randolph of Baton Rouge, La., an experienced Panama Canal engineer, in the April 1956 issue of the Proceedings of the United States Naval Institute. The following biographical account of the author appeared with the article:

A registered professional engineer in Baton Rouge, La., Mr. Randolph was employed for some 35 years in the Canal Zone. He was in direct charge for the Government of the construction of Madden Dam and later headed the organization making the investigation for the Third Locks Project.

Mr. Randolph's statement, which represents the matured opinion of a responsible engineering leader gained from long service with the Panama Canal, merits the most careful study by all concerned with Isthmian problems, especially the higher officials of the executive departments and the members and staffs of cognizant committees of the Congress.

The engineering appraisal by Mr. Randolph is a timely sequel to an overall evaluation of Isthmian Canal policy in the March 1955 issue of the United States Naval Institute Proceedings. The latter was inserted by Chairman HERBERT C. BONNER, of the Committee on Merchant Marine and Fisheries, in the hearings before his committee on the operations of the Panama Canal Company and Canal Zone Government, March 29–31, 1955, pp. 37–50.

The Martin-Thompson bills mentioned by Mr. Randolph are: S. 766, introduced by Senator THOMAS E. MARTIN, of Iowa; and H. R. 3335, by Representative CLARK W. THOMPSON, of Texas. These are companion measures that would create an Interoceanic Canals Commission to supply the Congress with adequate means to resolve the issues involved in determining future Isthmian Canal policy, with appropriate recommendations in the premises.

To provide nationwide distribution of Mr. Randolph's considered judgments on this vitally important national problem, under leave granted, I quote its text:

AN ENGINEER'S EVALUATION OF ISTHMIAN CANAL POLICY

(By E. S. Randolph)

Within less than 50 years after completion of the Panama Canal, the United States is faced with the fact that as magnificent a construction job as it is, the canal cannot much longer fill the needs it was built for. It is being outdated both as regards the size and number of ships that need to transit. Recognition of this fact is evidenced not only in the constant study by congressional committees but in numerous articles appearing in magazines and newspapers.

The high-level-lake and lock canal with modifications as proposed by numerous authorities can be readily constructed by altering the present canal without interrupting traffic.[1] All needed improvements can be built into the structures and waterways as the work progresses. The plan is entirely practical as an engineering project and is the first comprehensive plan for the marine operational improvement of the shipway. It is a plan for which precedents exist concerning the engineering and construction, estimates of cost and of time required to build, and cost of maintenance and operation year after year.

The canal enterprise includes all services of management and government for the population as well as for transit and other accommodations for the vessels in passage. These administrative problems can be very engrossing, as can the problems of correlating the interests of the diplomatic service and Armed Forces with the canal interests. Engineering considerations of long-range planning are therefore likely to receive secondary priority.

The policy during the construction of the canal was to retain a chief engineer, a member of the Commission, for the duration of the project. After completion, the policy has been to replace the controlling engineer about each fourth year. For the control of landslides there was no substitute for the experience gained before and after admission of water to the cut. For the control of floods pouring into Gatun Lake there was a long-range experience to be gained. Now, as the canal approaches the limit of its commercial capacity, there is a wealth of knowledge gained by long observation of the behavior of geologic formations and engineering materials, and the efficiency of different shapes and types of navigation structures, which knowledge is possessed by those who have devoted years of time to observation and study of the many special problems. Looking back, it would seem that the better policy would have been to establish a career position of chief engineer in the operating organization and to have filled it with a person having long and continuous responsible engineering experience in the canal service on the Isthmus of Panama and whose vision, projections, and accomplishments all stemmed from intimate knowledge of, and association with the Panama Canal. As long as such a policy is not adopted, errors made in the past must inevitably be repeated.

This writer, after 35 years employment on engineering works on the canal, during and after its construction, and additional years in the United States, concludes that it is neither necessary nor desirable that the head of the civil government of the Panama Canal be a professional engineer, but it is necessary that he be a capable executive. The engineering considerations relating to the maintenance and improvement of the utility are so broad, numerous, and highly specialized that the responsible engineer can do them justice only if he functions expertly and freely in his assigned duties, unhampered by responsibility for administration of the canal and by detailed directions, however well intended.

It is apparent that unceasing consideration should be given to future programs for maintaining the canal in adequate condition. Major modifications should be planned years ahead of need, and plans should be periodically modified to meet changing conditions. The first consideration is: When will expanded facilities be required? Because this question cannot be exactly settled it should be reviewed at yearly intervals. If not done, it is probable that the too late start made in 1940 will be repeated.

The start of the third locks project, in 1940, followed an investigation made without adequate funds to perform the immense investigation essential before successfully undertaking such a construction program. After war threatened there was insufficient time to complete the investigation.

The 1947 report of Isthmian Canal Studies contains much valuable technical information, but the recommendations no longer meet the tremendous changes in the art of warfare, nor do they now present a true picture of present-day costs. There is no Government agency which can properly undertake a comprehensive plan of major action for the modernization of the ship canal across the American Isthmus.

The "high-level" canal plan is characterized by its maximum utilization of the present waterway, with retention of the best features proven by over 40 years of opera-

[1] See Isthmian Canal Policy—An Evaluation, by Capt. Miles P. DuVal, USN (retired), in the March 1955 proceedings.

tion during both peace and war and with a correction of those features which have been found to be defective. The work of construction would involve problems that were solved during the construction and maintenance of the original canal. The convenience and certainty of operation would be a foregone conclusion. The maintenance problems would be known with certainty. The most economical use of existing structures and waterways would be made. The present firmly consolidated earthen dams and dikes would be retained as they are or strengthened if found necessary. The Gatun Lake receives the waters from the tributary rivers and diverts them to useful purposes. This "high-level" canal can be planned with every assurance of success and can be constructed for less cost and in less time than can any other design so far considered. The simplicity and relatively moderate proportions involved in the "high-level" plan may render it less glamorous and so operate against its adoption. The judges of the merits of the "high-level" plan may find it has less popular support than its excellent and serviceable qualities warrant.

The sea-level plan contains engineering and constructional features which are grossly without precedent in the Isthmian area. There would be masses of excavation and embankment work involving a wide variety of soils and rocks, earthen structures of great size and weight, and deeper cuts than previously made. The oversize dredging equipment required for deepening the cut before lowering the water level would necessitate a program of development involving unforeseeable risks, delays, and costs. Without experience, there is no solid basis for the evaluation of the action of the materials under the new order of pressures which would be developed.

Because tidal currents would prevail if locks at the Pacific entrance of the sea-level canal were not used, the waterway would necessarily be deeper, wider, and straighter than required for the high-level waterway. Heavy maintenance problems (perhaps insuperable) would develop because of the higher banks through a longer distance. The bottom of the proposed new channel would be about 108 feet lower than the bottom of the present cut, at Contractor's Hill, thereby cutting into an heretofore undisturbed geologic formation known to be unstable.

The success or failure of such a waterway would be a matter for demonstration after completion rather than before it is commenced as in case of high-level plan. The time and the cost to build the sea-level construction, not to mention the cost of maintenance after completion, are unknown quantities, but all would be vastly greater than required for the high-level plan.

The complexity of the sea-level plan and opportunities for experimentation are of a nature to intrigue members of the engineering profession. The massiveness of the physical work contemplated might well attract manufacturers and construction contractors to the project. The judges of the merits of this plan must ever be on guard against an enthusiasm which is not justified by its overall qualities inherent in the plan itself, or by any results to be attained therefrom.

Contrasting the high-level and sea-level plans, the former would not require any initial lowering of the undisturbed bottom of the 8-mile cut to obtain increased depth for navigation. The latter contemplates tremendous excavation of a new channel through the central mass that would be more than 100 feet deeper than the present cut and many miles longer. The problem of landslides would be greatly accentuated. The experience gained from maintaining the present slopes would probably not apply to the proposed new slopes at much greater depth because the qualities and arrangement of geological formations encountered would be different, as would be the internal stresses. The present cut is bordered by great valleys where once landslides were in motion.

Having walked in the bottom of the deep cut and having explored and studied the moving earth slides, this writer, who perhaps has a more respectful attitude toward them than have those who merely read of their histories, advises against stirring up numerous new and greater landslides unless justification is so overwhelming that the experience of the years can be deliberately rejected.

In the sea-level plan, the great diversion dams are proposed to be constructed by dumping excavated spoil from barges through the waters of Gatun Lake. Later the lake would be drained during an interval when it must be closed to traffic. There is no previous experience to guide the engineer to a safe conclusion of this work. The problems of subsidence, heaving, and lateral flow of the swamp muck under the lake will be present, but its action may be delayed until the lake water is lowered and the dikes become operative.

The builders of the Panama Railroad about 100 years ago, projected a line and built a fill through the Charges River Valley and upon the swamp muck. Any engineer who has to deal with that muck should make a thorough study of the difficulties encountered then, also again when the present railroad causeway was built on the drained swamp bottom to a height of 92 feet above sea level.

During the construction of the causeway the weight of the new fills caused, at places, a subsidence under the fill accompanied by an upheaval at the sides of the fill. This action was overcome by laying counterweight fills where heaving was observed or anticipated. The work was in plain sight above water, which would not be the case when depositing fill through water. Engineers who have encountered this swamp muck have invariably experienced difficulty.[2]

Having been employed by the Panama Railroad Company when the causeway carrying the relocated railroad line was being constructed, this writer doubts the advisability of carrying out the "sea-level" diversion plans without much additional assurance of their reliability.

The optimum water level in Gatun Lake is that maximum desirable level for required increase in navigable depth through the 8-mile length of the central mass and for other purposes. Increase in depth can be better attained by raising the water level than by cutting below the undisturbed bottom, thereby causing additional stresses in the high banks of the cut and precipitating new slides. Associated is the appreciable increase in minimum depth which would result from the dampening of surge waves if the Pedro Miguel Locks were removed. The optimum level can be determined only after a major engineering investigation. As long as such increase is possible, no new structures should be erected along the high-level waterfront without ample freeboard.

Widening and straightening of navigation channels could proceed before, during, and after the building of new high-level locks, by dredging at an economical rate, only when required for the accommodation of larger vessels, and by use of an augmented maintenance fleet of standard dredging equipment. The minimum dimensions, as determined by navigational considerations, need be anticipated only a few years in advance. Within the 8-mile length of deep cut, considerations of slide-control dictate that proportions be determined by more rigorous analysis than in all other reaches.

It is doubtful if any security would be gained by rejecting a high-level-lock canal in favor of a low-level-lock canal. I submit that the insecurely poised banks of any economically feasible sea-level cut through the Isthmus of Panama would be susceptible to atomic bombing so as to close the canal to traffic for an indefinite period, possibly years. There appears to be a relation between the depth of cut and security against refilling from the sliding of banks.

The interoceanic canal problem, includes, besides engineering and geology, grave questions of diplomatic relationships, economics, and marine operations. However great may be the pride of authorship of any proposal, the issues must be decided on their merits at the highest plane of wise and experienced judgment and statesmanship. This I firmly believe can be best accomplished by an independent and broadly constituted Interoceanic Canals Commission as provided in the Martin-Thompson bill now pending.

[2] R. C. Sheldon, Trans-American Society of Civil Engineers, vol. 114, 1949, pp. 847–9.

Inadequacy of the Administration's Proposals on Social Security

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. ROOSEVELT. Mr. Speaker, the inadequacy of the administration's proposals on social security were devastatingly revealed by a witness from California before the Committee on Ways and Means and I am happy to place them before my colleagues:

To the Honorable Members of the Committee on Ways and Means, House of Representatives:

Gentlemen, my name is George McLain. I am president of the National Institute of Social Welfare with offices located at 300 New Jersey Avenue SE., Washington, D. C., and with western headquarters located at 1031 South Grand Avenue, Los Angeles 15, Calif.

As president of the National Institute of Social Welfare, I appear before you today also to speak for 26 individual State pension and social welfare groups, who have formed a confederation under the National Institute of Social Welfare with a collective membership totaling around a quarter million citizens.

While serving as chairman of the California Institute of Social Welfare for the past 15 years, I have worked daily with recipients of public assistance; the old, the blind, physically handicapped, and dependent children of California. It has been my duty to help these people with their individual problems, representing them before county welfare departments and the State social welfare board on appeals.

During the last decade and a half I have been in constant attendance at every session of the California State Legislature, appearing in behalf of social welfare legislation, and it has been my privilege, to come back here to our Nation's Capitol and appear before your distinguished committees in behalf of similar legislation on several occasions.

I come before you representing the public assistance recipients' point of view. After handling many thousands of cases for

recipients, I believe that I am qualified to give a first-hand observation, from the recipients' standpoint, of where many of the inequities in the social security law lie.

Mr. Chairman and members of the committee, we are most happy that you are now considering the public assistance section of the Federal Social Security Act. And I am most grateful that you have afforded me this opportunity to appear and give the views of my organization on the pending legislation.

However, I am sorry to say that I do not believe the specific legislation now under consideration, H. R. 9091 and H. R. 9120, which embody the administration's thinking on public assistance, corrects any of the inequities existing in this section of the Social Security Act. Indeed, I believe that passage of this legislation would further hinder—not help—the recipients under question. I feel sure that neither of the authors of these bills nor President Eisenhower have this in mind.

Whenever studying proposed legislation, we must naturally project it into the future and consider the State and county administration should it become law. Only by doing this can we understand what effect it will have on the recipients, for they are dealt with on a county level. And, believe me, if you gentlemen had the time to observe the administration of some of the laws passed by you for relief of these unfortunates, you would be hard put to recognize the end result as being the same laws.

The plain fact is, I consider the legislation now under consideration to be headed in the opposite direction of what needs to be done.

Should either of these two bills become law, you would be adding to, not subtracting from, the heavy burden of harassment and loss of dignity now carried by the helpless victims of our society, our public assistant recipients.

Wordage of the "Declaration of Purpose" on page 2, as well as the legislative preamble, sounds most worthy and appealing. However, careful analysis of the legislation has convinced me that right there is where any resemblance to liberalizing the public assistance section ends.

On page 3, under title I—"Matching of Assistance Expenditures for Medical Care," these bills propose a $6 per month maximum for aged, the blind and the physically handicapped, and a $3 maximum payment per month for dependent children of which the Federal Government would pay one-half.

On the surface this would seem to be a good provision, but I wholeheartedly oppose it, and I'd like to tell you why.

No. 1, I should like to point out that each and every one of these people right now desperately needs a "cost of living" increase. Latest figures available from the Department of Health, Education, and Welfare bear me out on this statement. These figures reveal that the average old-age assistance payment throughout the United States is only $53.93 per month; the needy blind receive an average of $58.09; the physically and totally disabled, $56.18; and the average for a needy child is $24.35 per month. These pitiful amounts are supposed to take care of food, clothing, shelter and all personal needs for these individuals.

These facts and figures cannot be taken lightly. They spell just one thing—malnutrition. Not since 1952 has Congress shown any consideration for these needy citizens, and then only to the extent that a temporary $5 increase for the aged, blind and physically handicapped, and a $3 per month increase for needy children was voted.

No. 2, should this medical provision be enacted, recipients in at least 22 States would would not gain any advantage. According to the Social Security Bulletin issued in March 1956, these 22 States are right now making average payments of old-age assistance below the Federal matching ceiling. It only stands to reason that if these States will not, or cannot afford to, match even the present $55 Federal ceiling of matching funds established by Congress, they certainly are not going to match any additional 50–50 provision.

You gentlemen can, and I'm convinced that you genuinely want to help our public-assistance recipients. For this reason, I beseech you to consider first the pitiful straits these people are in merely to keep body and soul together with the present low level of payments. I urge that any increase in Federal funds voted by you not be tied down to medical needs alone. The needs of human beings vary widely, and who is to say that medical needs should take precedence over all other human needs? Indeed, a little more money for nutrition and protective health measures might eliminate much of the medical needs.

No. 3, any increase (including the medical provision, should you deem it worthy) should contain more liberal Federal sharing of funds to enocurage States to pass these advantages along to recipients. In other words, if nearly half of the States right now aren't even matching up to the $55 ceiling, how in the world do you expect that they'll match the $6 medical provision? Therefore, the only hope I see to give recipents any advantage at all is either to have the Federal Government make a direct contribution for a cost-of-living increase (or medical needs), or at least to make the matching formula attractive enough to States that they will participate.

As you are doubtless aware, under the present assistance payments, the Federal Government starts off by putting up $20 against the first $5 the State contributes, and then the Federal Government matches on a 50-50 basis any additional State contributions up to a total of $55 per month. I have already pointed out the disadvantages of the 50-50 matching formula and sincerely hope that you will work out a more beneficial one for the recipients' welfare.

Now, gentlemen, we come to the section in these bills which really sends cold shivers up and down my spine.

On page 7, line 6, an "Advisory Council on Medical Care" is proposed to "advise, consult with, and make recommendations to the Secretary on matters of policy under the provisions of the Social Security Act relating to medical care for recipients of Public Assistance."

I don't think that there is a member of this committee, or, indeed, a person in this room, who is not aware of the consistent stand taken by spokesmen for the medical profession against the entire Social Security Act. Can you gentlemen really be seriously considering legally creating a post inside the Department of Health, Education, and Welfare from whence they can attack this act. Such a move would be like installing a bunch of termites in your own house so they could start gnawing away and finally bring it tumbling down around your head.

Surely you gentlemen are not unaware of the fact that some 40 representatives of the American Medical Association, the physicians' and surgeons' lobby, recently appeared before the Senate Finance Committee and strongly opposed H. R. 7225, the bill which your committee wrote and the House overwhelmingly approved last year to liberalize the Federal Social Security Act.

Are you also aware that in 1953 the Association of American Physicians and Surgeons passed a resolution to abolish Social Security altogether.

And surely you are not unmindful of the rotten influence the medical profession exercised in the Department of Health, Education and Welfare during the time Mrs. Oveta Culp Hobby was Secretary. You can't have forgotten the shameful events leading up to her resignation. Mrs. Hobby had an advisory council. Need I elaborate?

As an illustration of A. M. A. influence during Mrs. Hobby's reign, a Washington newspaper published an item in January which reported that James W. Foristel, Associate General Counsel for the Health, Education, and Welfare Department—a post he held under Mrs. Hobby for 2 years—resigned to became legal adviser for the Washington office of the American Medical Association—the same post he held prior to his appointment by Mrs. Hobby in 1954.

The Advisory Council on Medical Care as proposed in these bills would cement into law the medical profession's control over the lives and physical welfare of millions of helpless Americans, many of whose religious beliefs are contrary to such influence.

I cannot put too much emphasis on my opposition to this measure.

I now direct your attention to page 8, line 19, under title II—"Matching of public assistance expenditures" and "Gradual reduction of Federal share of old-age assistance supplementing OASI benefits."

This, gentlemen, is a measure designed to turn the clock back, if I ever saw one. It would invoke a cruel sentence on the needy persons who find their old-age and survivors insurance monthly benefit payments insufficient to provide for their needs and who must apply for old-age assistance to supplement their income.

In proposing this the administration has really put the cart before the horse. Such a provision will make sense if and when the minimum social-security benefit is raised to a level consistent with the cost of living. I don't think anyone would dare say that the present minimum old-age payment of $30 comes anywhere near meeting the needs of a human being.

The Federal Government now puts up $20 to the State's first $5, and then matches the State on a 50–50 basis on the balance of the payments up to a maximum of $55 for public assistance. This proposed amendment would do away with the basic Federal inducement of $20 and the Government would resort to a 50–50 matching from the inception of the payment.

In my earlier testimony I pointed out the hardships endured even under the present matching formula. To take away part of what is now being given would be catastrophic. States would be forced to sharply curtail assistance now being given to needy people who receive some OASI benefits. This would create a class within a class among our needy aged population and cause untold misery to millions of oldsters.

I was pleased to see that Congressman JERE COOPER, in introducing the administration bill, issued a press release which contained the facts of the bill's provisions. In his release Chairman COOPER stated that the revised matching formula for persons added to the old-age assistance rolls after June 30, 1957, who receive old-age and survivors insurance benefits, would bring about a curtailment of Federal funds to the States amounting to $6,500,000 by the fiscal year 1958 and $73 million annually by the year 1967.

In other words, because the individual had coverage under the Federal Social Security Act to which he contributed during his working years, he would be penalized because he later found himself and his spouse in need of public assistance to live.

There can be no fear of duplication of pension payments from the same source as Congress has provided that "all outside income, earnings, and resources must be taken into consideration in determining the amount of aid granted an applicant or recipient of public assistance."

The present administration's avowed intentions of "getting out of the public-assistance program," a move that this provision is

reportedly to start, is a frightening thing, while at the very same time they oppose any liberalization of the OASI sections of the Social Security Act.

I say that we will always need a public-assistance program based upon need to provide for those whose income from other sources is so small that they must seek additional help from their Government. Don't penalize old-age and survivors' insurance beneficiaries because Congress has not seen fit to extend to them sooner the benefit of coverage under the Social Security Act or that Congress has failed so far to make such payments realistic with today's living costs.

On pages 9 and 10, Title II—Matching of Public Assistance Expenditure," these bills call for temporary extension of 1952 matching formula. The so-called McFarland amendment in 1952 granted a $5-increase to the aged, the blind, the physically handicapped, and a $3-increase to needy children. Unfortunately, a condition was imposed that it should expire in 2 years. In 1954 Congress extended this small increase for another 2 years, which is due to expire in September of this year. These bills would again extend the $5 for another 2 years.

In view of the rising cost of living during these years is it not obvious by now that not only does this provision need to be made permanent, but that these people desperately need an additional increase to keep pace with this increased cost of living?

I am adamantly opposed to the provisions beginning on page 10, line 6, Title III—Self-Support and Self-Care for Those on Old-Age Assistance. Such a proposal for the needy aged is not only ridiculous when you consider the circumstances, but I think is designed as a means of forcing old people off the roles to face slow starvation rather than face the harassment that such a provision could impose.

Statistics show that the average age of a recipient of old-age assistance is 76 years old, that three-fourths of them are women, that the majority of them were reduced to dependency not only because of their sex, but due to the devastating depression of the early thirties. To seek to make them self-supporting at this late date is the height of unrealism considering the difficulty that even a man of 45 now has in getting a job.

While such a scheme may have negligible merit for dependent children, the blind, and physically handicapped, it's utterly ridiculous to expect old people in their 70's, 80's, and 90's to trek down every month to the county welfare office and take a physical examination to see if there is enough life left in them to be able to take a job and get off the roles.

It appears very likely to me that this proposed amendment is designed to return our social welfare program to the work relief test of the depression days.

California made an attempt in this direction a while back by contacting business firms, etc., to secure jobs for a so-called untapped pool of workers 65 and over. The net result of their efforts was to find that anyone who could work was working and didn't apply for public assistance until they were just plain physically unable to work any longer.

This brave attempt upon the part of half-baked crackpots who are out to save the taxpayers money at the expense of the needy, wound up by costing the taxpayers more money in equipping offices and paying high salaries to the instigators of the idea.

With the State and county welfare officials racking their brains to figure up harassments for the needy, I most certainly hope that Congress won't add impetus to this practice by encouraging work tests as this provision would do. Believe me, States can think up enough devilment on their own.

Further, on page 17, line 17, we find a section titled "Cooperative Research or Demonstration Projects." This proposed amendment seeks to let the bars down completely on the public assistance program and invite every, Tom, Dick, and Harry to get into the act of pestering these poor unfortunate souls. It not only invites, but actually finances private nonprofit organizations and agencies to snoop and poke around into the lives of these people.

Here again, the magic words are "prevention and reduction of dependency" and "help improve the administration and effectiveness of programs carried on or assisted under the Social Security Act."

My heavens to Betsy, if Congress and the State legislatures aren't capable of handling this program, what in the world will happen when all of these outsiders start officially moving into the picture with utterly no responsibility to the people for their actions.

The President, our Members of Congress, governors, and our State legislators are elected by the people and responsible to them—if any or all of them are not competent enough to run a government function such as this, then I say the future looks hopeless.

Already, one of the major ills of the public assistance program is the duplication—as it is administered by the Federal Government, State governments, and local governments. Invite all these outside organizations with their own axes to grind in as officials—with no responsibility to the people—and they would eventually be running the whole program. And then, only God could help the needy.

In this same amendment, the Secretary of Health, Education, and Welfare seeks the advice and recommendations of specialists. Is there anything under present law which prevents him from seeking this advice? I think not. It's my opinion that if the Secretary is not sufficiently experienced or competent to run his Department, without a multitude of official outside interference then you either need a new Secretary, new Department heads—or both.

In summing up my objections to H. R. 9091, said to be President Eisenhower's answer to the public assistance problems, may I say that it is my studied opinion that adoption of this measure would throw the program into complete chaos and destroy practically the whole intent of Congress when they first established the public assistance section of the Social Security Act.

1. I cannot see how saddling the public-assistance recipients with rulings of a bunch of "doctors-turned-politicians" can do anything but harm the needy.

2. I urge that the small increase voted by Congress back in 1952 be made permanent thereby relieving State tension and the recipients' fear that this pitiful amount will some day be cut off their checks.

3. I strongly urge that any increase considered by you gentlemen not be tied down to medical needs alone. Surely the Eisenhower administration is not being consistent when they ask for $4,200 million for foreign economic aid on one hand and turn around and propose to withdraw $72 million a year from States because needy recipients may also be receiving old age and survivors insurance benefits.

4. The imposition of a program titled "Self-Support and Self-Care" to those on public assistance could only wind up as "work relief" practiced during the depression. This could only add to the present trend of making longevity a curse instead of a blessing.

5. The financing of outside private agencies to participate with equal authority in the Public Assistance Act would go far toward destroying the whole program and its original intent of helping people who need it with a minimum amount of harassment.

I do pray that out of this hearing you will design a bill to establish a uniform standard of need for public assistance, below which no State shall be allowed to go, and that in establishing need you gentlemen will seek to restore to the applicants and recipients their right to human dignity.

I also urge that you design a new formula for Federal grants-in-aid to States for public assistance designed to encourage States to raise payments to the needy aged, blind, and physically handicapped up to $100 per month, with a corresponding increase for dependent children.

As in all fields of human endeavor, we need to progress, not retrogress as these administration bills would do. Whether we progress or retrogress in the public-assistance field is up to you gentlemen.

Thank you.

To Pause, Now and Then

EXTENSION OF REMARKS
OF
HON. MARGUERITE STITT CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I am happy to include a confession of American faith appearing in Collier's for April 27, 1956, and which comes with a telling significance at this hour in our history:

TO PAUSE, NOW AND THEN

In this high-velocity world of ours, so many new things demand knowing that it is seldom anyone except the dogged historian, the duty-ridden student, or the professional researcher who deliberately pauses to look back.

In the series The American Tradition, which begins in this issue with Philip Van Doren Stern's story of Lincoln's poignant journey through Richmond, Collier's invites you to look back. They are not—this and the others of the series which will follow from time to time—stories to be bolted like a commuter's breakfast. They are stories to be read in an easy chair, when there is quiet and time to ruminate and savor, and flesh out the images brought into the mind's eye.

For there is much to be had from these stories, read in this way.

There is excitement, to be sure; no greater drama is written than can be found in Mr. Lincoln's walk through the fallen city of Richmond—a city no humbler in defeat than was Lincoln in victory; or in the handcart trek of the Mormons—through incredible suffering borne with incredible courage—westward to Utah; or in the clatter of cannon and oak and tearing sail as Captain Hull's seamen fought and whipped the proud *Guerriere*. But there is more than excitement to be had from these stories, told in this way. There is truth, and in truth, inspiration.

For these stories are fact, not legend. The series sets out to be a study into the sources of America's greatness, and that greatness derives from human beings, not flattering portraits hung on a wall.

There have been—as Professor Commager suggests in his introduction to the series—many authentic heroes in our story, men like Washington and Jefferson, Lincoln and Lee, who can hold their own in any Val-

halla. But there have been no demigods, no supermen, no Caesars or Alexanders or Napoleons. Washington, far from serene self-confidence, was plagued with fear of his own inadequacy; and it was Lincoln who said in all sincerity at Gettysburg: "The world will little note, nor long remember, what we say here."

It remembered those words, certainly, but it elevated almost to holy write the words he spoke a moment later, enshrining the doctrine of "government of the people, by the people, for the people."

Here was the essence of the drama, the greatness, the miracle of America—that it could set and maintain in motion a system in which every man was a leader, and every leader a follower.

This is the American tradition—of uncommon men discovering in their union a strength far greater than the sum of their strengths; and of these uncommon men keeping faith with their doctrine, generation through generation, across two centuries.

This is a tradition worth recounting, worth reliving through those moments, rich in excitement, deep in human drama, in which this unique entity of America took form. The stories will not always be of fife-and-drum quicksteps and crackling gunfire; that part of the American foundation that was built in the frozen quiet of Valley Forge is quite as strong as that part built at Cowpens or Yorktown.

But throughout will run the magnificent drama of people, marching through triumph, plodding through misery and tragedy, forever conscious, as Commager notes, of a peculiar destiny. The story has meaning, today, for all those millions in the world who, moved by the same impulses that moved our forefathers, are reaching for freedom and dignity.

And the story has special meaning for Americans. For in the desperate confusion and peril of the atomic age there is a risk that we may lose sight of this destiny, that we may forget something of its meaning and its worth. There is no better way to recall it to mind than to look back, to walk with the tall man through the desolation of conquered Richmond, to stand with Hull on the *Constitution's* pitching deck, to plod with the heroic brothers as they pushed westward past the fresh roadside graves of their loved ones—and to reflect how many hands have borne the torch it is now ours to carry, and to pass along still burning bright.

Max Abelman Honored by Philippine Republic

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. KEOGH. Mr. Speaker, on Sunday, March 4, 1956, there was presented to Max Abelman, of Brooklyn, a special diploma of honor from Dr. M. V. De Los Santos, president of the University of Manila. The presentation was made by His Excellency, Gen. Carlos P. Romulo, Philippine Ambassador to the United States, and was held in the Nurses Residence Hall of the Jewish Hospital, of Brooklyn. Surrogate Maximilian Moss, chairman of the executive committee of the hospital, presided. Following are the addresses made on this occasion:

Chairman Moss. His Excellency the Ambassador General Carlos P. Romulo, His Excellency the Ambassador Felixberto Serrano, other guests of great distinction, Chaplain Goldberg, doctors, nurses, ladies and gentlemen: American hospitals are playing a very vital role in creating better understanding and good will between foreign governments and the United States through their intern and resident medical training programs.

Thousands of doctors of foreign lands, graduates of recognized medical schools, are trained each year in this country. When they return to their countries upon completion of their work here, they serve as ambassadors of good will. Just as Max Abelman serves as an ambassador of good will for Brooklyn. They not only bring with them the latest American medical techniques, but also our attitude of friendship and democratic traditions. The combination is invaluable for America and the world.

The Jewish Hospital has trained more than 50 Philippine interns and residents since 1942 and will continue in close cooperation with that nation's great government.

I should like to read a letter from the President of the Philippines:

MALACANANG,
Manila, February 21, 1956.

Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MR. ABELMAN: It has gratified me to learn that you will be the recipient of a Special Diplomat of Honor to be conferred upon you by the University of Manila for your humanitarian activities. I still remember the excerpts from the issues of the CONGRESSIONAL RECORD dated January 11, and 13, 1955, wherein your charitable and civic activities were commended by Representatives FRANCES P. BOLTON and EUGENE J. KEOGH of the United States Congress. Surely the conferment of this latest award on your good self is a fitting recognition of your devoted work.

Please accept my sincerest congratulations and best wishes.

Cordially yours,

RAMON MAGSAYSAY,
President of the Philippines.

Chairman Moss (continuing). President Magsaysay refers to one of our Brooklyn Congressmen, who is sitting in the front row here today. He flew in from Washington purposely to meet General Romulo and to pay his respects to Max Abelman.

Gene, I couldn't present you any better than to read a letter from the President of the Philippines mentioning you. Congressman KEOGH.

Congressman KEOGH. Your Honor, Judge Moss, Your Excellencies, Dr. Goldberg, our very distinguished and genial friend, Max Abelman, and ladies and gentlemen: I had expected that I would just be one of those like you sitting here quietly, but sincerely showing our deep and abiding respect to a great Brooklynite and a great American; but, being a Member of Congress, you know, prompts one always to be ready to talk, especially on as pleasurable an occasion as this, for it affords me an opportunity in Brooklyn to greet His Excellency, General Romulo, with whom I recall having served while he was his country's representative in the United States Congress—and I am sure I am not telling secrets when I tell you that "once a member, always a member." We have followed him with great pride and great interest in the tremendous work that he has done and is doing in the cause of freedom and democracy.

I also welcome the opportunity to pay my respects, too, to his country's representative in the United Nations and to welcome him to Brooklyn. I wish to compliment them on the selection of the honor today and to extend my sincere congratulations to Brooklyn's ambassador of good will at large, who I know, has always been interested in advancing and promoting the common and beneficial interest of these two great countries. I therefore join with you, Mr. Chairman, in extending to Max Abelman our very sincere congratulations. With them go our prayers and hopes that he will be spared to serve with us for many, many years to come in the great and good and elevating work that he has dedicated himself to.

It is indeed, therefore, Mr. Chairman, a pleasure that I shall long remember that I should have been privileged to be with you today and, on my own behalf and on behalf of the congressional delegation from the great country of Brooklyn [laughter] to extend our best wishes to the great sister republic of the Philippines and to the great American who has brought these two countries even closer together, Max Abelman.

Chairman Moss. Dr. Ferreol mentioned Dr. Cotui and I should like very much if he would say a word. Dr. Cotui!

Dr. COTUI. Mr. Chairman, Mr. Abelman, Ambassador Romulo, Ambassador Serrano, distinguished guests: I have been assigned a job by the Chairman, and it may sound ridiculous in the face of all the sublime things we have heard, and that is to propose that we change the name of this hospital to the Philippine Hospital of Brooklyn. [Laughter and applause.]

Chairman Moss. We Americans should take a lesson from Dr. Cotui. He can say some very powerful things in one sentence.

There are several letters that I know you would want me to tell you of after you hear the names of the persons who wrote them. There is a letter from Harry S. Truman. There is a letter from Henry A. Wallace. There is a very long letter and a very intimate one, speaking of many activities together in Middlesex Medical College and otherwise, from Abe Stark. There is a letter from Governor Dewey. There is a letter from Mayor Wagner. And there is a letter from Jim Farley which refers to Max as "nature's nobleman."

I am shortening the session by not reading the letters.

There is the last letter in this portfolio from Ed Silver, our district attorney, and I think he actually speaks the same sentiments of all the letters when he says the following: "It is most fitting that a man who has spent so many years as you have"—meaning Max—"on behalf of humanity should receive it at the hands of another great humanitarian, General Romulo.

"If all the people you have helped could attend the function, you would have to hire Madison Square Garden and it would be crowded at that."

We have many distinguished personages here today and our time is very limited. The general must leave for Washington, and we must, of necessity, limit the speeches, but I am sure we all want to hear from His Excellency Ambassador Felixberto Serrano, permanent delegate to the United Nations from the Philippines. Ambassador Serrano.

Ambassador SERRANO. Mr. Chairman, Mr. Abelman, my beloved General Romulo, and my American friends, when Mr. Abelman called me up by telephone at my office about 2 weeks ago, asking me if I could be present on this occasion, I answered him without hesitation "Yes," because I had acquired previous knowledge of the fact that General Romulo had been selected to confer upon him this award, and so I said to myself there could be no occasion more pleasurable than that in which one of the few greatest friends of the Philippines and the Filipinos shall be honored through one of the few greatest friends of America and the Philippines. I am referring to Max Abelman. The award to Mr. Abelman, in my opinion, has a dual significance. It is a recognition of

his continuing dedication to humanity: and, on the other hand, it has the larger significance of being a symbol of the friendship between your people and mine.

For 48 years we have forged these relationships; and, even if our political ties have been severed, we remain, as we were before, friends of yours in peaceful collaboration and perhaps, shall I say, in a noble comradeship.

Few things ever last in this world. It is my hope and my prayer that the services of Mr. Abelman and the recognition accorded to those services by my country and by one of the greatest institutions in my country, and what is more important, the bonds of friendship between your country and mine, shall never be forgotten and will last as long as the world shall be a place where we want to live in peace and happiness.

Chairman Moss. Thank you, Ambassador Serrano.

We are fortunate in having with us the Senior Chaplain of the United States Navy, who is here in a dual capacity. He is a warm friend of General Romulo's of many years' standing. He is a warm friend of Max Abelman's of many years' standing.

And with that, Chaplain Goldberg, would you honor us with your remarks, sir?

Rabbi JOSHUA GOLDBERG. Your Max's Your Excellencies, Ladies and Gentlemen: These two are also titles—"Your Max's"—because Maximilian Moss, as you know, is one of our outstanding Jewish leaders and an outstanding jurist, and Max Abelman is entitled to every possible honor as far as I am concerned for a very personal reason.

When I came back, having served in World War I and hardly speaking English, upon returning to the United States of America I was teaching Hebrew at the time in a religious school, and it occurred to some people to recommend me to Max Abelman, who was at that time the executive director of the Brooklyn Federation of Jewish Charities, as a possible candidate for assistant executive and in his wisdom he decided that I would not do, so for that alone he is entitled to a diploma of honor for whatever I have become across the years. Across those same years I have ever watched the ever-growing influence of good will which came from his personality and it is a pleasure to be here this afternoon to witness the conferring of this award.

I would like to say one more word, and that is to General Romulo in the presence of the permanent delegate to the United Nations from the Philippines. It is something to remember. It was before the police action in Korea, before other people awoke to the possibility of the invasion of Communist ideology into the major portion of Asia. I recall him speaking bluntly, articulately and to the point on the necessity for the free nations of the world to understand that the danger is not only European but the possibility is that it may veer altogether and in a cataclysmic way with all its force descend upon Asia.

In those days his voice was a voice in the wilderness. Alas and alack, the vision of the statesmen at that time was blurred by other interests and right now we are reaping the fruits of our blindness and the folly of our thinking in those days.

He is a man who is a true statesman, who sees things ahead and does not have the perspicacity of looking behind him.

His smiling face breaks through all the strains and stresses of the present revolutionary forces that operate in Asia. Asia is of the future. The teeming masses of mankind in Asia are looking for self-expression and for the place in the sun to which they have always been fully entitled. From there came wisdom, and wisdom and great ideas will yet flourish and come from that part of the world, but they can only flourish and wisdom can only be brought about and widen its horizon if it grows in a climate of freedom and liberty, and to this General Romulo has dedicated his smiling face and his stout heart. He has become almost an organic part of America, and, what is more, an organic part as a world statesman in the field of the search and the thirst for liberty.

Finally, it is pleasant to see this thing happening in a hospital. This is the common denominator of mankind. Pain and suffering make us all brothers under the skin regardless of the wisdom that may come from Mississippi or other places, wherever they might be. This is the place in which there is unity of that greater force in which the brotherhood of man is truly expressed through the love of men by reaching God. It is beautiful and it is good that it happens here. My congratulations and thanks.

Chairman Moss. Mr. Isidor Leviton, president of the hospital, wishes me to present personally greetings and the expression of his warm admiration and affection for General Romulo and his deep appreciation to Max Abelman for his long record of communal achievements.

Mr. Leviton also wants to submit his regrets to the general in not having been able to be present today as he was unable to return in time from out of the State, and on that note, with this message from the president of the hospital, we now move to the occasion that really brought all of us here today.

We are greatly honored to have present His Excellency the Ambassador to the United States from the Philippines, General Carlos P. Romulo, who in 1949 was the fourth President of the United Nations General Assembly. He has been Foreign Minister of the Philippines and chairman of the Philippine delegation to practically every session of the United Nations General Assembly.

About 10 days ago he was honored in Miami when he received the World Brotherhood Pioneer medallion for distinguished world statesmanship.

As recently as a few days ago, he again was honored by Robbins College in Florida, receiving the medal of deistinction for his work for world peace.

In 1946 General Romulo received from the same college an honorary degree.

Today we are privileged and honored to have General Romulo with us. He is here by request of Dr. Mariana De Los Santos, president of the University of Manila, and the university's board of trustees, so that His Excellency the Ambassador might present the "Special Diploma of Honor" to our dear friend Max Abelman in recognition of his humanitarian activities.

I therefore have the great privilege, great pleasure and honor now to present to you Gen. Carlos P. Romulo.

Ambassador ROMULO. Mr. Chairman, my good friend and worthy colleague, Ambassador Serrano; my good friend Max; ladies and gentlemen and friends: I thank you, Mr. Chairman, for your very generous words of introduction. I thank my longstanding friend there [indicating Rabbi Goldberg] for his quite fulsome praise—undeserved—which reminds me of an incident in 1950 when I happened to be in Peoria, Ill. I was in a hotel lobby trying to buy a newspaper when I observed that a man was watching me very closely. Finally, overcome by his curiosity, he approached me and he said, "You are General Romulo, aren't you?"

I said, "Yes; I am."

He said, "You are Foreign Minister of the Philippines?"

I said, "Yes; I am."

"You are president of the United Nations General Assembly?"

I said, "Yes; I am."

"You were aide-de-camp to General MacArthur?"

I said, "Yes; I was."

He scratched his head, looked at me from head to foot—and that didn't take much time [laughter]—and then he said, "I'll be doggoned." [Laughter.]

So whenever I listen to good friends like the chairman here and the chaplain, and I want to be deflated, I recall that incident. [Laughter.]

At lunch today I told them the story of the widow who was in a seance and she asked for the spirit of her departed husband and the one in charge of the seance said, "Well, Mrs. Smith, your husband is here now."

So she said, "Harry, are you there?"

Harry answered, "Yes, darling. I am here."

"Are you happy there, Harry?" she asked.

And he answered, "Very happy, darling."

Again she asked, "Tell me, happier than when you were with me?"

And he answered, "Much happier, I must confess, darling."

So she said, "Then," she said, "heaven must be a wonderful thing."

And Harry answered, "I ain't there."

I also told them at lunch this noon that when I was in Wichita, Kans., several months ago, I found myself in a hotel, and naturally they have a Bible, a Gideons' Bible, in all those rooms. I usually relax by reading the Bible, so I opened the Bible and I happened to open at Psalm XXIV, and at the end of Psalm XXIV it said, "If you are still lonely, turn to Psalm CXX. And at the end of Psalm CXX there was a note: "If you are still lonely, call Mabel."

I must confess at the end of reading Psalm CXX I was no longer lonely and so—for the purposes of Mrs. Romulo, who is here today—I did not call Mabel.

I am very happy indeed to be with you this afternoon. I am not a stranger to this hospital. This is, I think, the third time that I speak from this rostrum here. Away back in 1949 I came, as president of the United Nations. Then in 1950 I signed my name on a wall here, in one of the wards in this hospital——

Mr. ABELMAN. The children's ward.

Ambassador ROMULO (continuing). The children's ward; yes. And then it was away back in 1948 and 1949 when Max Abelman and I met each other for the first time and we discussed how we could convince the trustees of this hospital to allow Filipino doctors to come here as internes and Max Abelman introduced me to the trustees of this hospital, and that has been a friendship that I have cherished all these years. That Max Abelman should be the recipient of this particular distinction by an institution of learning in the Philippines is but a pale token of the gratitude that my people feel toward this humble man—sometimes a persistent cuss when he wants to accomplish something—but really in his modesty and his humility he is a credit not only to this foreign country known as Brooklyn, but to the United States as a whole.

And indeed, how apropos that in a country like the Philippines one of its institutions of learning should think of expressing its gratitude to a private citizen such as Max Abelman for his efforts in our behalf. Generally it is the high officials of a government who are given recognition. Generally it is the men in the high places who are recognized, but in my country we take a special pleasure in recognizing those who have served us in any capacity, in whatever sphere and no matter how humble.

Max Abelman has rendered service not only to the Philippines but also to the United States, and in Brooklyn you may take him as an ordinary citizen, an average Tom, Dick, or Harry—"A prophet is not without

honor, save in his own country"—in his own section we take him for granted. It is Max—it is Tom, it's Dick, it's Harry—but it is the average Tom, Dick, and Harry who represent your country in the eyes of those abroad, and you are judged—and I am referring to the American people—by the deportment and the conduct of the average Tom, Dick, and Harry. And in these days when we are engaged in a life-and-death global struggle the implications of which and the significance of which are far-reaching, a global struggle the like of which mankind has not seen in recorded history, it is important that the average American Tom, Dick, and Harry should be appreciated abroad, as this token that I will soon present to Max Abelman shows that Max Abelman's efforts are appreciated in the far-away Philippines.

I am glad that the chaplain here spoke of Asia, how important Asia is to you, to your national security, to the safety of your lives. I remember it was in Harvard University that the chaplain was referring to, when I was given an honorary degree there in June 1950, and I then said that I was afraid the cold war was about to explode into a shooting war and that shooting war was to take place in Asia, and I added, "possibly Korea." And 1 week later the North Koreans attacked South Korea.

And it is because I had watched the trend of events very closely in Asia and I knew what was coming, as I am watching—and it is in the nature of our duty to watch—what is happening in the world today.

That Max Abelman should have taken this interest in Filipinos is a very encouraging sign of the times in the United States, because if you visualize your geography, your American perimeter of defense lies from the Aleutians away up north, through Japan, Korea, Okinawa, Formosa, Guam and the Philippines, and that Pacific chain of defense can only be as strong as its weakest link, and if any of the links in that chain falls under communism, your national security in Brooklyn is seriously threatened, because, don't forget, the Pacific Ocean no longer affords to you the protection that it gave you 10 years ago.

The Pacific Ocean has been annihilated by modern technology, so that while you may think that in terms of mileage that Pacific chain of defense is 10,000 miles away from Brooklyn, in terms of guided missiles, in terms of supersonic planes, in terms of snorkel submarines, in terms of the atom bomb, that Pacific chain of defense is your next door neighbor. So that it is paramount that America should take a more active interest in Asia, and tokens of your interest in Asia such as welcoming these Filipino doctors here in this hospital are not only an empty gesture of friendship, but it really helps to safeguard your national security, because you cannot allow any of those links in that chain to fall under communism.

That is why President Eisenhower announced to the world that the United States will defend Formosa to the last. Why? Because Formosa is an important link in that chain, and if Formosa falls under communism, that whole chain can snap, and if that chain snaps, your national security here in Brooklyn is gravely menaced.

That is why you fought in Korea, because you could not allow that link in that chain to fall under communism; so that the American boy who fought and died in Korea really fought and died for the safety of his sweetheart here in Brooklyn; the American boy who fought and died in Korea really fought and died for the safety of his relatives in Boston, Mass.; the American boy who fought and died in Korea really fought and died for the security of his friends and his dear ones in Tallahassee, Fla.

So don't forget that the welcoming of these Filipino doctors here in this hospital will, I hope, serve to show the peoples in Asia that there is a bond of friendship that the Americans want to cultivate and to strengthen with our fellow Asians, and how imperative it is for us to realize that in the midst of our abundance, in the midst of our contentment brought about by the superlative American standard of living, in this global struggle in which we are engaged, let us not forget that no one nation, no matter how rich or no matter how powerful, can win this war alone. We must have friends and allies, precisely because of the atom bomb—and you know, the guided missiles, the intercontinental ballistics missiles, which 2 years ago they told me in Washington could make the United States and U. S. S. R. in 20 minutes—in 20 minutes—and the atom bomb which can raze cities and entire populations, and, we know, soon, entire countries—and America unfortunately no longer has a monopoly of these terrible weapons. I say "unfortunately" advisedly, because the other side that has them, too, does not have the restraints of either ethics or religion, and since we know that these terrible weapons can destroy entire cities and soon entire countries, even when they are used against us—God forbid it—that is precisely the time when we need other countries, other peoples, and other populations to rise to our defense, and that is why I say no one country, no matter how powerful or how rich, can win this global struggle alone.

And so, when I present this diploma of honor that I have been charged by the president of the University of Manila to hand to our good friend, Max Abelman, I do so conscious of the fact that Max Abelman is a representative of the average Tom, Dick, and Harry of the United States, who in turn represent that clean, wholesome, honest American conscience that is deaf to the tinkle of the gold dollar and blind to the allurements of power, that clean, wholesome, honest American conscience that always asserts itself in cases of emergency on the right side of truth and freedom and democracy; that this is a symbol, modest though it be, of the appreciation of a people for the services of this symbolical Tom, Dick, and Harry of the United States, that my people do not forget favors extended to them, that they appreciate such favors, that they hold such favors in grateful remembrance, and that Max Abelman, having gone through the stages of anticipation and realization and appreciation through which every human being goes in the course of his life in this mortal world of ours, now stands on that stage of appreciation where his efforts are appreciated, recognized, and cherished, and since he is about to enter the stage of recollection, may he, when he sits on his rockingchair and looks back toward a fruitful, maybe a hectic, career, in his mind's eye he can see in the dim and distant far-away Philippines a vision of these doctors that he has helped and of the suffering humanity that these doctors have helped to relieve and that here in the Jewish Hospital, here where pain and suffering are the levelers of humanity, he has exerted an influence that will be as abiding as it is appreciated.

And so, Max, it is my pleasure, in behalf of the University of Manila—and this morning when I talked to President Magsaysay over the phone at the Waldorf—he called me up and I told him that I was here to present this diploma to you—he asks me to congratulate you in his name and to tell you that he hopes some day you can visit the Philippines where not only the University of Manila but all these recipients of the generosity of the Jewish Hospital can show you how deeply they appreciate your efforts in their behalf.

Editorial Comments on Veto of Farm Bill

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. WIGGLESWORTH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following excerpts from newspaper editorial comments, gathered by the New York Times, the Associated Press, and the United Press, on President Eisenhower's veto of the farm bill:

EAST

NEW YORK

Courage again displayed

The Herald Tribune (Independent Republican): "President Eisenhower has again displayed the courage with which he upholds the highest principles of his office. The President disclaims the title of 'political expert.' He applied the single yardstick: 'Is it good for America?' If Congress fails again to rise to the needs of the hour, the farmers, and the Nation at large, will know where the blame rests. They will know that the President has striven earnestly and conscientiously for a sound farm program; that the obstacles were raised by those, in Congress and out, who insisted on delaying action, on piling up contradictory clauses in a legislative monstrosity that would have been an administrative nightmare. And when the voters look to the heart of the matter they will, one can be confident, prove that the best politics is what is best for the country, wholeheartedly endorsing the President's statesmanlike and courageous course."

One hundred-percent act of conscience

The Daily News (Independent): "There is nothing dictatorial about this veto. It may hurt General Eisenhower politically; but, on the other hand, it may help him. Time and again in our history, acts of courage and conscience on the part of public men have paid off in increased popularity and respect. This Eisenhower veto of the farm bill was 100 percent an act of courage and of conscience.

Not expedient, but right

The Daily Mirror (Independent): "President Eisenhower has met a decidedly political farm bill with a nonpolitical veto. His action was not expedient, but it was right. The President risks a loss of farm votes. We believe, however, that the admiration of the people generally for his nonpolitical decision will offset any damage that will accrue—or be drummed up—because of that decision."

Veto entirely justified

The World-Telegram and Sun (Independent): "President Eisenhower vetoed the farm bill because he said it was contradictory and self-defeating—which it was. The veto was entirely justified, as most of the bipartisan farm bloc which concocted the bill knew it would be."

NEWARK, N. J.

Statesmanlike action

The Star-Ledger (Independent): "President Eisenhower's statesmanlike veto of the politically motivated farm bill shows awareness of the fact that agriculture and its problems are the vital concern of the Nation as a whole. The President's action was sound. The President based his disapproval of the bill on the obvious and undeniable fact that it was contradictory and self-defeating."

PHILADELPHIA

Political hazards ignored

The Inquirer (Independent): "President Eisenhower's veto of the mixed-up farm bill is an act that will win the approval of most Americans because it plainly reflects courage, integrity, and a sure grasp of the real essential of the farm problem. The message rejecting the measure makes it clear that he was thinking, not of possible political hazards, but of the real interests of the farmers, and of consumers and taxpayers as well. For the fact is the bill, in its entirety, would be bad for the farmers and bad for everyone else."

PITTSBURGH

Smart course rejected

The Post-Gazette (Independent): "The easy, smart, and politically profitable thing for the President to have done was to sign the farm bill. But Mr. Eisenhower rejected the smart course. He believes, as we do, that the farm bill—with its return to rigid price supports—is bad for the American people and ultimately for the farmers."

BOSTON

Political acumen shown

The Herald (Independent-Republican): "It took courage to veto the farm bill, but it is not courage that counts most in the matter, it is political acumen or savvy, or know-how, or whatever you want to call it. It is the process of gaging the public response to a policy and adapting the measures taken to that end. It is the ability to go the long way around to an objective when the direct route is closed."

SOUTH

WASHINGTON

No yielding to expediency

The Post and Times Herald (Independent): "Obviously the Chief Executive did not reach a decision involving such turbulent political implications without a great deal of soul-searching. We cannot help feeling that the President's courage in sticking to principle will win him more respect than he would have obtained by yielding to expediency, particularly since he shows full awareness of the farm plight."

BALTIMORE

President does "what's right"

The Sun (Independent Democrat): "The President's strength does not rest on any great talent as a political manipulator, nor does it rest on sensational intellectual capacity. It rests on his instinct for doing "what's right" when he finds out what right is. When the President does "what's right" he appeals instantly to that great mass of people, farmers included, who also believe in doing "what's right." We doubt that the President will suffer politically by facing up to a bad bill and calling it bad."

RICHMOND

Nation is in his debt

The Times-Dispatch (Independent Democrat): "President Eisenhower's veto of the farm bill was one of the most courageous acts performed by a Chief Executive in recent years. He showed rare independence and devotion to the Nation's well-being. The now vetoed farm bill had so many monstrous weaknesses that it had to be killed. Mr. Eisenhower placed the Nation in his debt when he killed it."

MIAMI

Gain in public esteem

The Herald (Independent): "The United States is fortunate that men of stature rise at right moments to keep the Nation on an even keel. We think that the President in vetoing the mish-mash measure—which did nothing but appease pressure groups—and that Secretary of Agriculture Ezra T. Benson, who stood firmly by his sound reasoning, have gained enormously in public esteem and prestige."

MEMPHIS

Only honest course taken

The Commercial Appeal (Independent Democrat): "No one should have been surprised that the President vetoed the hodgepodge bill laid before him by a vote-minded, irresponsible Congress. He took the only course that was honest and straight-forward. The soil-bank feature of the farm bill would have put a brake on production and speeded the end of the surpluses."

MIDWEST

CHICAGO

Bill deserved veto

The Tribune (Republican): "President Eisenhower's veto of the Democratic farm bill was good politics because it was honest politics. Progress toward a rational farm policy is delayed for a year. The cost must be assessed, in all fairness, against the Democrats. They delayed the enactment of a good farm bill until it was too late to execute its provisions, and produced instead the vote-buying monstrosity that deserved the veto it has received."

Sound economic verdict

Daily News (Independent): "Mr. Eisenhower's verdict was based on sound economic principles, and if Congress will now get busy on an honest effort to pass a workable farm bill, it can be had within a week."

Monstrous bill rejected

The Sun-Times (Independent): "In vetoing the monstrous farm bill, Mr. Eisenhower showed such courage, statesmanship, and good sense in his arguments against it that he has risen to a new high stature in the minds and hearts of his countrymen—and we believe that must include many farmers, too."

CLEVELAND

Gain in public estimation

The Plain Dealer (Independent Democrat): "It was an act of statesmanship which raised Mr. Eisenhower higher in the estimation of thoughtful Americans than anything he has done since he became President."

DETROIT

Brave choice made

The Free Press (Independent): "It was a brave choice, whose political consequences may be tempered by the farmers' recognition that it was prompted by conscience."

ST. LOUIS

Gain in votes expected

The Globe-Democrat (Independent): "His veto may have cost the GOP some votes. Failure to veto would have cost more. Upon calm consideration we believe most of the Nation, including understandably restless and antagonistic farm elements, will conclude he was right."

KANSAS CITY

Bill bad for America

The Star (Independent Republican): "After the most careful consideration of the bill in its entirety he (the President) came to the conclusion that it was a bad bill—for farmers and for America—because it tended to increase surpluses which already have become a tremendous burden on all farm prices."

MILWAUKEE

Full credit deserved

The Journal (Independent): "President Eisenhower deserves full credit for vetoing a thoroughly bad farm bill. He has given the American farmers and American people a persuasive explanation of why he did so. If he had signed the farm bill monstrosity under political persuasion, he certainly would have fallen in the estimation of many of his admirers."

OMAHA

People's belief upheld

The World Herald (Independent): "In his [the President's] veto of the farm bill he remains the broad-gaged, honest, and courgeous leader they [the American people] thought he was. If he had taken any other course he would have repudiated all that he stands for in American public life."

LINCOLN

Farmers are people, too

The Nebraska Journal (Republican): "The honesty and integrity of President Eisenhower, demonstrated by the veto in the face of tremendous political clamor and expressed bluntly in his message to the people, shed more light on the whole subject than weeks of doubletalking congressional debate. Honesty and integrity are qualities the people understand, and too many politicians seem to forget that farmers are people, too, not just votes to be bought at so much apiece."

INDIANAPOLIS

Not ballot box problem

The Star (Independent): "Democratic leaders think they have Mr. Eisenhower in a hole and are not going to be easily persuaded to let him out of it. We hope, however, they will arise above partisanship this time and attack the farm problem where it really is, on the farm and not in the ballot box."

MINNEAPOLIS

Many votes will be kept

The Tribune (Independent): "In placing what clearly are deep-felt convictions ahead of political expediency [the President] may hold the allegiance of more votes than will now desert him."

DENVER

Democratic gain doubted

The Post (Independent): "It took unusual courage for the President to veto the farm aid bill which he knew to be bad. But his reasons, as given in his veto message and his address to the country, are so persuasive that the Democrats will find it difficult to make capital out of his action."

SOUTHWEST

DALLAS

No Eisenhower doubletalk

Morning News (Independent): "Dwight Eisenhower has again faced the Nation courageously with a forthright action, explanation and no doubletalk. There has been double dealing but not in the White House."

PHOENIX

Temptation resisted

The Gazette (Independent): "tempting though it was to remove one of the Democrats' few campaign issues by signing the bill, the President has had the courage to put economic soundness first."

FAR WEST

SAN FRANCISCO

Public thanks deserved

The Chronicle (Independent Republican): "The farm bill veto was an act of economic wisdom and political courage for which President Eisenhower deserves public respect and thanks. This country's agricultural economy has been saved from a dangerous and costly retrial of a scheme which is basically responsible for the trouble the farmers are having."

LOS ANGELES

Bad bill, but good veto

The Times (Republican): "President Eisenhower sent a bad bill back to Congress with a good veto when he disapproved the omni-

bus farm measure. We predict the act will help him politically, though it was plain from the tenor of his talk to the Nation that he had no regard to political effects."

SEATTLE

Bill is self-defeating

The Times (Independent): "It took genuine statesmanship and a high degree of political courage to veto a farm bill which many voting farmers believe contained the nostrums to cure their present economic ills. He—the President—deserves acclaim for disposing of a farm measure which was so full of contradictions and inconsistencies that it would have defeated all its own best purposes."

PORTLAND

People's trust justified

The Oregonian (Independent Republican): "President Eisenhower stood by his principles, justifying once again the trust that so many people place in his integrity and political courage. There is still time for Congress to take sound action on the farm problem. If it fails to do so, the onus will be on it rather than on the President, where, of course, the Democrats will desperately try to replace it."

Hon. James C. Murray's Address at the Annual Dinner of the Ancient Order of Hibernians, Held at the Mayflower Hotel on March 17, 1956

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. TUMULTY. Mr. Speaker, it gives me great pleasure to insert in the RECORD the stirring address of the Honorable JAMES C. MURRAY, of Illinois, delivered at the annual dinner of the Ancient Order of Hibernians on March 17 at the Mayflower Hotel.

The dinner of the Ancient Order of Hibernians is one of the finest in the country. Congressman MURRAY held the audience spellbound with his eloquence. His speech was a personal triumph and a tribute to the district which sent him to Congress and which he so ably represents. Realizing the speech with its scholarship and its message would be enjoyed by others, I am taking the liberty of inserting it in the RECORD. The speech follows:

When I received your kind invitation to speak at your outstanding St. Patrick's Day dinner, I made up my mind to be completely objective. Since an Irishman can be objective about everything except Ireland, I attempted to avoid as my topic our Emerald Isle. I thought that I might talk about our own country. When I started my address as follows—From the rock-bound coast of Maine—I had to stop because I became instantly aware of the fact that Maine was a founder of my own family and of a great Irish king.

I knew that I could not talk about Scotland because I am certain I would get into an argument with my Scotch constituents when they learned that Scotland comes from the word "Scotia"—as Ireland was originally called—which was settled, in part, by St. Columba.

To avoid controversy, I skipped over England, although I paused briefly enough to observe that the only extant manuscript of the earliest English epic Beowulf was written in Gaelic lettering. If I were to talk upon France, I would have to dwell on St. Columbanus' monasteries at Luxeuil—and in Italy, at Bobbio, which were the principal centers of the reconversion in education made by Irish monks of a Europe lapsed in barbarism. If I were to dwell on Switzerland, or for that matter, in any country up to the Ukrainian, I would find evidence of Irish teachers and missionaries.

Being thus frustrated in my attempts to find something to speak about other than Ireland, I decided to make my oration an objective speech about the Irish from the Celtic viewpoint. One of the gifts that St. Patrick secured for our race prior to his death was the promise that no son of Erin would experience the horrors preceding the destruction of the world. It would seem from this prophecy that some time prior to the end of the world, the last Irishman would have passed away.

If an historian at that time were to attempt to write the history of the Irish and were to predicate his history upon the Irish as pictured by present-day columnists, radio announcers, and other such organs of public information, I am afraid we would have a very misconstrued picture of ourselves.

I sometimes wonder whether or not the picture painted of the Irish by present-day organs of propaganda is one founded on jealousy, or aimed at the destruction of the things that an Irishman stands for. Since our basic virtue is spiritual rather than material, I am convinced the reason is the latter.

Oftentimes I wonder whether we ourselves, in our attempts to enjoy God's world, realize what we stand for. For the purpose of setting the record straight, if not to advise you of your birthright, and the obligations it entails, I would like to relate our Irish inheritance.

Biblical scholars tell us that we sprang from 1 of the 12 lost sons of Joseph. I don't know whether this is correct, but I do recall a song my grandfather used to sing which indicated that the Irish made the passover from Egypt to Israel with Moses. It goes like this: "It must have been the Irish that swam the River Nile because only an Irishman would fight a crocodile."

Anthropologists relate that we came from the stone-age hunters and fishermen which might be the basis for our stone throwing and tall tale telling ability. Bronze-age scholars related that our ancestors' gold and copper gave Ireland a preeminent position in early commercial and artistic world.

Regardless of what the early pages of history might have disclosed of an Irishman, we know the principal reason for our existence finds its source in our Apostle—St. Patrick. It is the love of God in every Irishman instilled by our Apostle and nurtured by our martyrs that is the divine spring from which flows the greatness of our race. From this divine fountain flows the love of individual liberty which has dedicated Irish everywhere to its cause. From it springs our saints, our missionaries, clergy, teachers, patriots and mothers.

Our birthright has proven to be the most formidable armor against every attack—against godliness or individual liberty—regardless of its form. Greater than the atom, our heritage is an indestructible eternity.

That which makes us Irish has been subject to every conceivable assault since its inspiration. Cromwell attempted to destroy it by military might but succeeded only in fostering it. Others attempted to suppress it by legislation but merely nurtured it. Today we face the most subtle attack ever hurled at our birthright. It is not hurled only at us as Irishmen—but as children of God. It is the assault of Satan's stepson who chose as his birthplace and growth the one place on the face of the earth not visited by our missionaries and patriots—Red Russia.

Its subtleness is most dangerous because it attempts to undermine our spiritualness by appealing to our worldliness. Our vices are encouraged, our virtues discouraged. Our humor stressed, our compassion depressed. Our intemperance glamorized, our esthetic-ness criticized. Our vanity appeased, our meekness derided. Our pride fostered, our humility starved. Our earthliness praised, our love of God taunted.

To those of you who might feel that we as Irishmen have not the strength or wherewithal to meet this latest and greatest assault made against that which an Irishman stands for, I would like to recall some of the contributions that our ancestors, fathers, brothers, and even sons and daughters made to the liberty under God represented by our own great country.

Historians approximate that one-third of Washington's army were of Irish descent, so you see we were here a great many years prior to any "potato famine." The only reason that there are not more of our wives in the DAR is because we were too busy building railroads and developing our country to keep track of our ancestors.

The founder of our Navy was an Irishman, as you all know. The early builder of the present-day Democratic Party—Andrew Jackson—was an Irishman.

As a matter of fact, one of the Congressmen wrote me that St. Patrick must have been a Democrat.

The greatest award given by this country for individual contribution to its cause is the Congressional Medal of Honor. It is an award presented for acts of bravery actually performed and not inspired in the mind of a competent press agent. The very creation of the Medal of Honor was inspired by deeds of an Irishman in the Civil War—Maj. Gen. Phillip Karney.

The first deed for which a Congressional Medal of Honor was awarded was a deed performed by a native Irishman during Indian warfare in the settling of the West—the name of that distinguished son of Erin was Col. Bernard J. D. Irwin, an M. D.

Over two-thirds of the Congressional Medal of Honor winners who were born on foreign soil were born in Ireland—this despite the fact that Ireland is comparatively a small country.

In recent years the deeds of our brothers, sons, and daughters in behalf of our country occupy as prominent a place in our history as did the deeds of their forebears. The first American bombardier to sink a Japanese ship in World War II was an Irishman. The first American to kill a Jap in World War II was an Irish-American. The first American flier to bag five airplanes in World War II was an American of Irish descent by the name of Edward O'Hara.

The first American to be eulogized by the President for bravery in World War II was an American of Irish extraction. The first American Coastguardsman to catch a spy, had Erin's blood flowing in his veins. And the first American to make himself a human torpedo was another of our kinfolk.

Although our War Department does not classify data on the basis of nationality, the Irish War Veterans, United States of America, have estimated that during World War II, 3½ million persons of Irish or part-Irish descent served in our Armed Forces.

I did not intend to bring any message to you, but if there is any message contained in this address, it is merely to urge you to be more Irish—for being more Irish—you will be more American. And being better Americans, you will have successfully borne the obligations required of your emerald inheritance.

A Bill To Provide Financing of Needed Housing

EXTENSION OF REMARKS
OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1956

Mr. WICKERSHAM. Mr. Speaker, at the request of a number of builders, laborers, lumber and material suppliers, and veterans' groups in my district, I have introduced a bill to provide financing of needed housing.

This bill is similar to one introduced by Hon. ALBERT RAINS, of Alabama, and referred to the Subcommittee on Housing of the Committee on Banking and Currency.

Here is a summary of provisions of the bill:

TITLE I—AMENDMENTS TO THE NATIONAL HOUSING ACT

Section 101 dealing with FHA title I home improvement loans provides—

(1) A 2-year extension.

(2) An increase in the maximum loan amount to $3,500 (present ceiling is $2,500) and from $10,000 to $15,000 for loans to improve multifamily structures.

(3) An increase in the maximum loan term to 5 years (present ceiling is 3 years).

(4) A sliding interest rate scale permitting a 5-percent discount on loans below $1,000, with a 4-percent discount permitted on that portion of the loan which exceeds $1,000. Presently a 5-percent discount is charged regardless of loan amount.

Section 102 would permit the FHA to become a self-insurer againt fire and hazard risks to properties acquired by FHA as a result of foreclosure.

Section 103 would liberalize rental housing insurance under FHA's section 207 by—

(1) Permitting a loan up to 90 percent of value (present ceiling is 80 percent of value).

(2) Increasing loan ceilings to $2,250 per room (present ceiling is $2,000) and up to $2,700 per room for elevator-type structures (present ceiling is $2,400). In high-cost geographic areas the Commissioner is authorized to increase the per room maximum by an additional $1,000. These liberalizations would establish loan ceilings for section 207 similar to those permitted for urban renewal insurance projects under section 220.

Section 104 would amend cooperative housing insurance under section 213 by providing—

(1) A new device to permit a cooperative sponsor to obtain a commitment for a loan up to 85 percent of replacement cost and proceed with construction before the prospective cooperative has been formed. This would overcome the marketing difficulties involved in the present requirement that the cooperative be sold 100 percent before construction can begin. The sponsor would certify intent to sell to a cooperative upon completion. Should he fail to sell the project he would be regulated by FHA as to rents, capital structure, and rate of return. Also, if the sponsor fails to sell to a cooperative, he cannot use this special insurance feature again.

(2) Authority to the FHA Commissioner to permit in the high-cost geographic areas an additional $1,000 per room in computing the maximum permissible insured loan.

Section 105 would increase the FHA mortgage insurance authorization to make available $3 billion for the next fiscal year.

Section 106 would permit a profit and risk allowance of 10 percent for sponsors of urban renewal insurance projects under section 220, although the FHA Commissioner could prescribe a lesser percentage if he certifies that a 10-percent allowance is unreasonable.

Section 107 would liberalize relocation housing insurance under section 221 by—

(1) Increasing the maximum permissible loan to $8,600 and to $9,600 in geographic high-cost areas. (Present ceilings are $7,600 and $8,600, respectively.)

(2) Permitting no downpayment financing by requiring only that the borrower pay at least $150 in cash to apply toward closing costs.

(3) Increasing the permissible loan maturity from the present 30 years' ceiling to 35 years and up to 40 years where the Commissioner finds such longer maturity necessary for low-income families.

Section 108 would amend the cost certification requirement by making such certifications incontestable after the Commissioner's approval of the certification, barring fraud or material misrepresentation. It would also permit an allocation of general overhead costs acceptable to the Commissioner to be included in the total certified cost.

TITLE II—SECONDARY MARKET LEGISLATION

Section 201 would liberalize the operations of the Federal National Mortgage Association by—

(1) Permitting advance commitments under the secondary market operations. Such commitments would be issued at a price high enough to provide production support to builders and yet sufficiently below the prices offered by the Association for immediate purchase to discourage excessive sales to FNMA pursuant to advance commitments.

(2) Reducing the stock purchase requirement to no more than 2 percent.

(3) Requiring FNMA until June 30, 1957, to pay par for special assistance mortgages.

(4) Increasing the advance commitment funds available for special assistance operations to $400 million (present ceiling is $200 million).

(5) Providing a $50 million revolving fund under the special assistance program to support FHA section 203 (i) loans. Section 203 (i) loans are designed to encourage low-cost housing in outlying and rural areas.

(6) Amending the present revolving fund for section 213 mortgages to make it clear that the $5 million limit per State is on outstanding commitments, in other words to make clear that the State suballocation can "revolve" exactly the same as does the $50 million nationwide revolving fund.

(7) Exempting from the $15,000 limit on loans eligible for purchase the following: (a) Military housing loans insured under section 803 and (b) FHA-insured and VA-guaranteed loans made in Alaska, Guam, and Hawaii.

Section 202 would establish a new secondary market support program for GI loans. Under its provisions the Secretary of the Treasury could invest up to 10 percent of the reserves of the national service life insurance fund by purchasing VA-guaranteed loans in geographic areas where discounts on GI loans are heaviest. Both current reserves and future premiums could be used. Since the fund's reserves are approximately $5½ billion, the program could supply approximately $550 million in funds to support the market.

Only loans guaranteed after enactment would be eligible for purchase. In case of serious default, provision is made for purchase of the defaulted loan from the fund by the Administrator of Veterans' Affairs.

The program would expire on July 25, 1957, the present expiration date for the GI loan benefit of most World War II veterans.

Tht Federal National Mortgage Association would act as the Treasury's agent to purchase and service loans. Payment for such services is limited to a maximum of three-fourths of 1 percent. Since the GI loans purchased would yield at least 4½ percent, the fund would earn a minimum of 3¾ percent on its mortgage portfolio.

TITLE III—HOUSING FOR ELDERLY PERSONS

Sections 301, 302, 303, and 304 would establish a new loan program for housing for the elderly, similar to the college housing loan program.

These sections would provide $250 million to the Administrator of the Housing and Home Finance Agency for loans to nonprofit corporations for the construction or rehabilitation of housing for the elderly.

The interest rate could not exceed 3½ percent per annum and the maximum loan term would be 50 years. The cost of funds to the Administrator from the Treasury could not exceed 3 percent.

The bill would permit loans only when private capital is not available upon the terms and conditions provided in the bill.

TITLE IV—SLUM CLEARANCE AND URBAN RENEWAL

Section 401 would increase the funds available under present law for capital grants for slum clearance and urban renewal projects by an additional $1 billion. The sum would be made available in $500 million increments on July 1, 1956, and July 1, 1957.

Section 402 the Housing Administrator would be authorized to extend urban renewal assistance to major disaster areas, under certain conditions, without regard to requirements that the community must have a workable program for the prevention and elimination of slums, that the urban renewal plan must conform to a general plan of the locality, requirements of public hearings, and certain requirements with respect to the predominantly residential character or blighted character of urban renewal areas.

The FHA sections 220 and 221 urban renewal housing programs would also be amended to permit temporary waiver of the present workable program requirement, and urban planning grants would be permitted for a community affected by a major disaster without regard to the fact that the community's population is 25,000 or greater.

Section 403 the urban planning grant authorization would be increased from $5 million to $10 million.

Section 404 would extend to private nonprofit educational institutions of higher learning the same privilege with respect to Government construction planning advances, as that now enjoyed by tax-supported educational institutions of higher learning. Both such types of educational institutions receive equal consideration under provisions of the college housing loans program, and this change would place them on a parity with respect to planning advances.

TITLE V—PUBLIC HOUSING

Section 501 would provide 50,000 low-rent public-housing units annually for a 3-year period beginning August 1, 1956. Provision is made for carrying over to subsequent years any unused portion of the annual quota.

Section 502 would make low-rent public housing available to elderly persons (65 years or over)—

(1) By making elderly single persons eligible.

(2) By authorizing the construction of units specifically designed for elderly persons. The section provides 10,000 units annually for a 3-year period beginning July 1, 1956.

(3) By increasing the permissible per room cost for units for elderly persons to $2,250 (present ceiling, $1,750).

Section 503. The Public Housing Administration would be directed to transfer farm labor camps without monetary consideration to local public housing agencies in the areas of the camps if requested within 12 months after enactment of the bill and the local public housing agency certifies as to the low-rent need for the project and that preferences will be given, first, to low-income

agricultural workers and, second, to other low-income persons and families.

Section 504 would authorize the sale under prescribed conditions of two Government-owned projects, the Chinquapin Village housing project in Alexandria, Va., and the Techwood Dormitory in Atlanta, Ga.

TITLE VI—FARM HOUSING

Section 601 amends title V of the Housing Act of 1949 to provide the following additional authorizations for loans and contributions to farm housing:

(1) $100 million in the amount of loan funds which can be obtained from the Treasury;

(2) $2 million per annum in the amount of annual contribution commitments for housing on potentially adequate farms; and

(3) $10 million in the amount of appropriations authorized for loans and grants for improvements and repairs of farm housing.

TITLE VII—COLLEGE HOUSING

Section 701 would increase loan funds for college housing by $250 million, bringing the total authorized for such purpose to to $750 million.

TITLE VIII—MILITARY HOUSING

Section 801 would extend and liberalize the title VIII military housing program by—

(1) Extending the program until September 1959 (under present law the program would expire September 30, 1956).

(2) Permitting an average cost per dwelling unit of $15,000 (presently $13,500) and up to $16,500 in high-cost areas as determined by the Secretary of Defense. The aggregate total of mortgage insurance authorized would be increased correspondingly.

(3) Permitting the FHA Commissioner to waive or reduce the FHA insurance premium.

(4) Perscribing maximum floor area limitations for various ranks and grades with a special allowance for quarters outside the United States and for the quarters of commanding officers.

(5) Extending eligibility for military housing insurance to the Canal Zone.

International Cooperation Administration Grants Permitting Foreign Scientists To Study in the United States

---

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 18, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Hands Across the Lab Bench," published in the April 16, 1956, issue of Chemical and Engineering News. The article deals with the International Cooperation Administration's program of grants permitting foreign scientists to study in the United States.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HANDS ACROSS THE LAB BENCH—SUCCESS OF ICA GRANTS PERMITTING FOREIGN SCIENTISTS TO STUDY IN UNITED STATES MAY LEAD TO PROGRAM EXPANSION

How to win friends and influence people at very little expense aptly describes the International Cooperation Administration's foreign research scientists program. An outstanding success in cementing the bonds of international friendship through the medium of basic science, the program has cost the American taxpayer very little.

So well has this program worked that prospects are bright that it will be extended for at least 2 years beyond the present expiration date of June 30, 1957. In fact, observers say that the only thing holding up ICA approval of the extension is the routine of working out a few administrative details with cooperating nations.

As for cost, the entire cost of the program from its inception in 1953 to the expiration date in 1957 has been less than $1.5 million. Viewed against the background of American expenditures for foreign aid during the period, this is a small sum indeed.

HOW IT WORKS

Participation in the foreign research scientists program is limited to nations who are members of the Organization for European Economic Cooperation (OEEC). Purpose of the program is to finance 2 years of advance study at American universities for scientists from the OEEC nations. Men selected for the program must have the Ph. D. degree or equivalent experience so that they are capable of doing independent work.

Although ICA provides the funds, actual administration of the program in this country and contacts abroad are handled by the National Academy of Sciences. On the other side of the ocean, selection of the men for the program is made by scientific societies, research councils, or university groups.

Quotas have been established for each country by the academy, and these quotas have been revised upward since the beginning of the program in 1953. Practically all fields of study are covered, but men studying in the fields of chemistry and biochemistry from a large portion of the group. Competition for the ICA grants is keen, and most foreign groups select likely candidates through a process of competitive examinations. Final selection is usually made on the basis of personal interviews. As a result of these elborate screening procedures, participants in the foreign research scientists program have been scientists of the highest caliber.

Here in this country the National Academy of Sciences has the task of matching the men to the institutions. Careful selection is necessary to place a man in a university with the strongest possible program in his special field. So far, scientists in the program have studied at schools located in almost every State in the Union.

PROGRAM GOALS

Of course the basic purpose of the program is to promote friendly relations between the United States and the member nations of OEEC using science as the medium of exchange. In addition, the intimate knowledge of American techniques and approaches to science gained during 2 years' residence in this country will have great influence on the attitudes of these men after they return to their own countries.

The scientists in the program are relatively young. All are under 40, and most are under 30. Some day these men will be the leaders of scientific thought in their individual countries. The personal contacts made and the friendships formed during their stay in the United States will continue through the years and form the foundation for a lasting bond of friendship.

Then, too, these young foreign scientists will learn at first hand how to deal with American scientists and with people in the United States in general. On their return home, these men can explain to their countrymen what normal life in America is like. Such factual information based on personal experience can go a long way toward clarifying mistaken ideas that so often arise about people in another land.

Not all the goals of this program are aimed at benefits for the United States alone. More rapid practical application of the discoveries of basic science could take place in many countries when these men take back with them attitudes toward industrial development learned in this country.

It is hard for Americans to understand the great gulf that exists in many European countries between basic science and practical applications. The close cooperation between fundamental research and industry in the United States, typified by the university industrial fellowship or foundation, is almost totally unknown in many parts of Europe. Such insulation of fundamental discoveries from the practical world tends to slow down the advance of applied technology.

At NAS they tell of an industrialist who established a fellowship at a leading European university to solve an industrial problem in metallurgy. Ten months later, when the industrialist inquired about progress on his problem, the professor told him that some thought had been given to the matter. However, in thinking of the industrial problem an interesting theoretical question in a related field had arisen. All of the professor's time had been devoted to the new problem and he was not able to say when he could return to the metallurgical problem.

After spending 2 years in an American university laboratory under the ICA program, a newly returned scientist would not be likely to assume the detached attitude of the professor toward practical problems.

IS IT A SUCCESS?

The answer to this question is an unqualified "yes." The people at the National Academy of Sciences who are responsible for guiding the foreign scientists during their stay here say that the program has been successful beyond their expectations. People at the International Cooperation Administration express the same sentiments.

Probably as a result of the care used in selecting candidates, the work done by these men in American laboratories has been of the highest quality. In fact, it has been so good that industrial laboratories would like to hire many of these men. But this would destroy the basic purpose of the program. Under terms of the agreement, all holders of grants must return to their native countries.

All the men have fit in well with their surroundings. By attending each year at least one national scientific meeting in specialized fields, the men have broadened their scientific contacts in the United States. Some men brought their families with them and in some instances have had an increase in size of the family during their stay. Some men have married American girls and when the time to go home arrived found that "in-law" problems are truly international. All are taking with them by absorption some part of the American way of life.

WHAT'S AHEAD

Extension of the present program will probably be for an additional 2-year period. However, there is a good chance that the foreign research scientists program may be established on a permanent basis. Such a move would tend to refute the oft-heard charge that the United States is interested only in short-term programs that benefit the United States. Putting the program on a permanent basis would be a firm indication of our desire to help other nations by helping their potential leaders.

Plans are underway to extend the program to other geographical areas in addition to the countries comprising OEEC. First area to be considered would be friendly non-Communist nations in the Far East that have a supply of properly qualified research men. Conditions are right, for example, in Japan and India. Other areas under consideration are South America and Africa. Expanding the foreign research scientist program to cover all friendly nations on a worldwide basis would be one way to help

cement our future international relationships.

One Thousand Years of Christianity in Ukraine

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. DODD. Mr. Speaker, recently there was celebrated in the United States by solemn observances, 1,000 years of Christianity in Ukraine. Ukraine is the largest non-Russian nation enslaved by communism behind the European Iron Curtain. Consequently, unusual importance attaches to this observance of 1,000 years of Christianity in that nation.

This occasion brings to memory the brilliant contribution to international thinking made by Don Luigi Sturzo in his famous work on Nationalism and Internationalism. Father Sturzo in this searching study of the forces which have shaped the destiny of the world points out that the forces which have had the most profound effect upon history are the ideas expressed by religion, national independence and liberty. Any one of these natural forces are capable of causing great and lasting changes in the affairs between nations and people. When all three of them are active and working in harmony the spirit of Amor Dei et Patriae becomes the driving force behind the nation so blessed.

That is the case of Ukraine down through history. Its sons and daughters have been imbued with that great spirit. They have lived and died for that cause. They have transferred that same rich spirit to America, as their adopted land, and America has been made better and stronger by it.

In the great State of Connecticut we are proud to count among our citizens many thousands who trace their ancestry back to Ukraine. We are also proud that Connecticut is the seat of a world known center of Ukrainian culture, education, and religion located at Stamford.

Today Ukraine is enslaved by communism, and therefore, is a colony of Moscow. All the national life of Ukraine is under attack. Religion is ruthlessly persecuted. The spirit of liberty is suppressed. There is great sadness throughout the entire Ukrainian nation over the tyranny which communism has visited upon the people. But the spirit of religion, liberty, and national independence are inseparable in Ukraine. They live on despite Communist occupation and tyranny just as they have endured and survived tyrannies of the past.

In connection with the observance of 1,000 years of Christianity in Ukraine, a large number of letters of encouragement were received by the Most Reverend Ambrose Senyshyn O. S. B. M., chairman of the committee in charge. I ask consent that some of the most significant of these letters be printed in the RECORD at this point:

MEMORANDUM

Christianity has been existing in Ukraine for more than 1,000 years. It has fostered a profound faith in God among the people, and has begotten abiding moral principles, and nourished a new culture and erudition.

In December 1917 Communist Russia invaded Ukraine and in 1919–20 occupied the eastern provinces of this country. The Soviets were bent on extirpating Christianity from these regions. In their coup d'etat they published aggressive antireligious propaganda and terriorized the people with threats of exile, torture, and death.

First, the Communists attacked the church in eastern Ukraine. Within 10 years, from 1921 to 1931, they unjustly arrested and ruthlessly murdered 34 Ukrainian Orthodox bishops and more than 3,000 priests. Hundreds of thousands of the faithful were inhumanly tortured in prisons or deported to concentration camps in Siberia; a greater part of these innocent people died martyrs to their faith; the remainder still endures the appalling trials and hardships of imprisonment.

The Reds destroyed 80 percent of the churches (many of these churches contained precious historical relics, as for example the Golden Domed Michalivsky Monastery in Kiev from the 12th century); other churches were despicably converted into warehouses, theaters, and convention halls; monasteries were outraged and cemeteries profaned.

By 1930 the Communists had completely liquidated the entire Ukrainian Orthodox Church, barring it from all public activity.

Though article 123 of the Soviet constitution, which is binding in Ukraine as well as the U.S.S.R., explicitly recognizes freedom of religion, yet, during the first Red occupation of western Ukraine (1939–41), the Communist regime overtly persecuted the church, arresting many Ukrainian priests and ruthlessly murdering 27 of them.

This anti-Christian terror adopted more hideous means of exterminating Christianity in the Ukraine during the second occupation of this country beginning in 1945. On April 11, 1945, the Soviets arrested the Metropolitan of Halych and Archbishop of Lviv, Joseph Slipyj, 80-year-old Bishop Gregory Khomyshyn, Bishop John Latyshevskyj, Bishop Nicholas Charnetskyj, C. SS. R., and Bishop Nykyta Budka. On June 25, 1946, Bishop Josaphat Kotsylovskyj, OSBM, and Bishop Gregory Lakota were imprisoned. All these bishops were condemned to forced labor for 8 to 10 years and even life; the imputation was lawfully unjust. Some of these bishops (for instance Bishop Gregory Khomyshyn and Bishop Josaphat Kotsylovskyj) later died from maltreatment in prison. Still more, when Archbishop Joseph Slipyj's or other bishops' terms expired, the Reds would not release them from prison.

In the autumn of 1947, the Communists murdered Bishop Theodore Romza, Uzhorod, Carpathian Ukraine, and in 1950, the Bishops Paul Gojdich, OSBM, and Basil Hopko, Pryashiv, Czechoslovakia, were imprisoned. On January 15, 1951, Bishop Paul Gojdich was tried and unjustly condemned to forced labor for life. Bishop Basil Hopko is now in a concentration camp.

Altogether, 10 Ukrainian Catholic bishops have been liquidated by the Reds.

In 1946, the Soviets enjoined the legal continuance of the Ukrainian Catholic Church in Ukraine. Thus, in our own 20th century, it has been reduced to the sorrowful plight of the "Church of the Catacombs," as was the primitive church during the Neronian persecution.

Two thousand secular priests and monks, for rightfully refusing to acknowledge the patriarch of the Russian Orthodox Church as their head—this church is now subservient to the Communists—were arrested and deported to slave labor camps. The Reds exterminated all five dioceses of the Ukrainian Catholic Church, desecrated 4,440 of its churches and chapels together with 195 religious houses. The Communists continue to oppress mercilessly the Ukrainian laity for remaining steadfast to its Christian heritage, church and faith.

NATIONAL CATHOLIC
WELFARE CONFERENCE,
Washington, D. C., August 18, 1955.

Most Rev. AMBROSE SENYSHYN, O. S. B. M.,
Auxiliary Bishop, Vicar General,
Ukrainian Catholic Exarchate,
U. S. A.,
Stamford, Conn.

MY DEAR BISHOP SENYSHYN: It is interesting and inspiring to learn from your letter that our brethren of the Ukrainian Catholic Exarchate of the United States will celebrate a millenium of St. Olga's conversion to Christianity at Kiev in the year 955. Surely this is a most significant event which should serve to revitalize the faith of many thousands who in a special sense are the beneficiaries of that blessed occasion.

We will rejoice with our brethren of the Byzantine Slavonic Rite that they have had the opportunity here in this country to practice their faith in freedom such as has been denied them in recent years in the land of their origin. We express our profound sympathy for the persecuted Ukrainian people and we join our prayers with their own, that in God's providence there may be a brighter future for the oppressed church in the land made sacred by the sufferings of so many bishops, priests, and devoted faithful.

Please convey my greetings on this occasion to your associates and to the Ukrainian Catholic people of the Byzantine Slavonic Rite, and assure them of our sentiments of high esteem and of our union in prayer with them.

Faithfully yours in Christ.

KARL J. ALTER,
Archbishop of Cincinnati, Chairman of the Board, N. C. W. C.

THE CATHOLIC UNIVERSITY OF AMERICA,
Washington, D. C., September 2, 1955.

His Excellency Most Reverend AMBROSE SENYSHYN, O. S. B. M.,
Auxiliary Bishop, Vicar General,
Ukrainian Catholic Exarchate,
Stamford, Conn.

YOUR EXCELLENCY: On my own behalf and on behalf of the Catholic University of America, please permit me to join with you in the celebration of this year of special jubilee for the whole Ukrainian people.

It is fitting indeed that due recognition should be given solemnly to the passing of a thousand years since that wonderful day when Saint Olga, ruling soverign of the State of Kiev, was baptized and became a member of the Catholic Church. So entered the Ukrainian people into the community of Christian nations.

Considering this event in the perspective of 10 centuries of Christian achievement, we are impelled to join in profound thanks to Almighty God for the many graces which He has bestowed upon the Ukrainian people.

While we thus offer our thanks, we know with sorrow that millions still on Ukrainian soil are prevented from observing this joyful event as they suffer persecution, bereft

of clergy and robbed of their God-given liberties.

It is my fervent prayer that this year of jubilee may see the beginning of a new era in which the Ukrainian people, firm in the Christian faith, will move toward a fuller and deeped Christian life in union with the church which St. Olga entered a thousand years ago. In that great hope I remain

Fraternally yours in Christ,

BRYAN J. MCENTIGART,
Rector of the University, Titular Bishop of Aradi.

ARCHBISHOP'S HOUSE,
Santa Fe, N. Mex., August 15, 1955.

Most Rev. AMBROSE SENYSHYN, OSBM, V. G.,
Chairman Anniversary Committee,
Stamford, Conn.

YOUR EXCELLENCY: When, on September 5, the Ukrainians of our Catholic exarchate will celebrate the 1000th anniversary of St. Olga's baptism, they will not only review a glorious past of sufferings and conquests, but also renew their faith in a miracle for which all of us are praying: That the land of Olga and Vladimir may be freed from the present diabolical slavery and that its churches may again see the splendor of the Byzantine-Slavonic rite.

At the very beginning of your religious history, the relics of Pope St. Clement were solemnly brought to Kiev by the newly baptized Vladimir, who then ordered that the idol of Perun be thrown into the Dnieper and a church be built in its place. This page might prove to have a prophetic significance. We shall probably see the day when another Pope will be the instrument of the Divine Providence in destroying the throne of Satan and in rebuilding the martyr church of Ukraine.

St. Olga and her grandson, Vladimir, had a great devotion to the Assumption of the blessed virgin Mary, so much so, that Vladimir erected a Church of the Assumption. I am writing this message on August 15, and I pray that Our Lady of the Assumption may again reign, as queen and mother, over her land which an evil power has desecrated.

May this message of hope and prayer tell the Ukrainians of America that, in truly Catholic charity, we are close to them and that with them we pray for a brighter future.

EDWIN V. BYRNE,
Archbishop of Santa Fe, N. Mex.

ARCHBISHOP'S HOUSE,
Baltimore, Md., August 26, 1955.

Most Rev. AMBROSE SENYSHYN, OSBM,
Auxiliary Bishop, Vicar General, Ukrainian Catholic Exarchate, U. S. A.
Chairman, Anniversary Committee,
Stamford, Conn.

YOUR EXCELLENCY: It has come to my attention that on September 5 the people of Ukrainian ancestry in the United States will commemorate the conversion of St. Olga, Princess of Ukraine, whose baptism in the Catholic faith was the fountainhead of their glorious Christian tradition.

No greater testimony to the courageous constancy in the faith of our beloved Ukrainian people could be given than the record of their fidelity to Christ and His vicar upon earth, not only here in the United States but especially in the Ukraine where they still undergo most vicious persecution. The reports of their adherence to Catholic christianity despite every efforts of the persecutor to destroy their faith, are a source of holy pride and of great encouragement to the Christian world.

It will be my appreciated privilege on September 5 to join with Archbishop Bohachevsky, Your Excellency, and the people in the United States of Ukrainian ancestry in happy commemoration of their nation's conversion. At this time I shall implore the Holy Spirit to send forth in ever greater measure His divine spirit of fortitude into the hearts of the Ukrainian people and in the adorable disposition of His divine providence to bring speedily that peace which will enable them once more to practice their holy faith openly and without fear.

With expression of every good wish, I am,

Sincerely yours in Christ,

FRANCIS P. KEOUGH,
Archbishop of Baltimore.

BROOKLYN, N. Y., *August 13, 1955.*

His Excellency Most Reverend
AMBROSE SENYSHYN, O. S. B. M.,
Auxiliary Bishop and Vicar General,
Stamford, Conn.

YOUR EXCELLENCY: Permit me to acknowledge receipt of your esteemed favor of August 12, 1955, in which you bring to my notice the very sacred and significant observance to be sponsored by a group of faithful Ukrainian members of our church to commemorate in an appropriate and blessedly fruitful manner the holy life of St. Olga, Princess of Ukraine, who embraced the Cross of Christain 955 at Kiev, the present capitol of Ukraine, and immediately sponsored and promoted the spread of Catholic Christianity among her subjects.

I understand that the group above referred to, as sponsors of this holy observance, are people of Ukraine nationality or descent, of whom about 400,000 reside in the United States.

I readily recognize that this commemorative observance will exert a blessedly inspirational influence and stimulate most opportune spiritual consolation and provide encouragement and hope to Ukrainians everywhere, particularly in those sections of our contemporary world where so many have been imprisoned or called upon even to endure death in their fidelity to their Christian faith.

It will be a precious privilege for the clergy, religious, people, and children of the Diocese of Brooklyn to join with your Exarch, the Most Reverend Archbishop Constantine Bohachevsky, D. D., yourself, and the members of the Ukraine clergy, people, and children throughout our contemporary world in offering glory to God, reverential honor to St. Olga, and to express the prayerful hope that through the providential care and mercy of our Divine Savior the Ukrainian clergy and people throughout the world will be soon favored with an opportunity to worship God and to sanctify their souls in peace and in assurance of their own sanctification and salvation.

With sentiments of sincere personal esteem, regard, and prayerful good wishes, I am

Faithfully yours,

THOMAS E. MOLLOY,
Bishop of Brooklyn.

Protect America's Future Through Patriotic Education

EXTENSION OF REMARKS
OF
HON. SAMUEL J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 18, 1956

Mr. ERVIN. Mr. President, one of our greatest patriotic organizations, the National Society of Daughters of the American Revolution, is now holding its 65th continental congress at Constitution Hall in Washington City. On Monday evening, April 16, the Daughters heard the able address of their president general, Miss Gertrude S. Carraway, one of North Carolina's most charming, eloquent, intelligent, and patriotic daughters. The address merits the thoughtful consideration of all Americans who wish to preserve the way of life bequeathed to us by our Revolutionary forebears. For this reason, I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PROTECT AMERICA'S FUTURE THROUGH PATRIOTIC EDUCATION

(Address of Miss Gertrude S. Carraway, president general, National Society, Daughters of the American Revolution, 65th Continental Congress, April 16, 1956)

America's future is in danger.

Our freedoms are at stake.

The American way of life is jeopardized.

From within and from without our borders are serious threats to constitutional provisions and liberties which have made our representative Republic the freest and finest Government in the annals of mankind.

Unless our citizens become more vigilant and assume more zealously our responsibility to preserve our priceless heritage, we may lose the rights and privileges for which our ancestors risked their lives and fortunes.

Our United States is at a crucial crossroads. Will it veer to the left, or to the right? Will it go backward, or move forward on its long-traveled highway of free enterprise and national independence? Will it succumb to those who would barter away our sovereignty, or will it retain the sound principles on which it was founded and which have made it so strong and so great?

This is an era of vital decision. Steps taken today will have marked effects on future trends.

Through the centuries there have been many critical cycles. This age is perhaps the most dangerous, or the most promising, depending on how we answer current questions and solve pressing problems.

ERA OF WORLD RECONSTRUCTION

It is a world reconstruction period. All around the globe are trouble spots, powder kegs, which at any moment might violently explode. Numerous areas are seething in unrest and turmoil. There are choices between slavery or freedom, darkness or light, disorder or order, war or peace, atheistic totalitarianism or self-rule under God.

Times of confusion, such as this, have often resulted in constructive and progressive movements, because of the unselfish efforts of exemplary leaders and loyal followers. The same could happen now, if we had citizens of earnest endeavor and ardent patriotism in each and every community of America.

When the night is darkest, we need our staunchest courage, our clearest vision, our most implicit faith. Today, as never before, we need the courage, vision and faith of our forefathers and predecessors, their integrity, devotion to duty, and self-sacrifice for the general welfare.

In his first inaugural address in 1789 President Washington declared:

"The preservation of the sacred fire of liberty and the destiny of the republican model of government are justly considered as deeply, perhaps as finally, staked on the experiment entrusted to the hands of the American people * * *

"Our national policy will be laid in the pure and immutable principles of private morality; and the preeminence of free government exemplified by all the attributes

which can win the affections of its citizens and the respect of the world."

AMERACA MUST BE SAVED

Is our Nation worth saving? All of us here would undoubtedly answer, "Yes. It must be saved."

Our Government may have its faults and failings. It can be no better than the men and women who comprise it. And humans are not perfect. Nevertheless, it is the best political system so far devised, with more freedoms, unparalleled productivity and industrial expansion, the highest standards of living in history.

Let's count our manifold blessings, rather than our troubles and differences of minor opinions, in this most favored place on earth.

It is right to emphasize more and more our achievements, philosophies and potentialities, so that our younger generations will not grow up in despondency over uncertain conditions and tendencies but be proud of our great past and greater destiny, eager to carry on in the same spirit which brought us triumphantly through other perilous epochs.

During the past year our DAR theme has been "Protect America's Future through Patriotic Education." This summarizes all our major objectives: preservation of our constitutional Government and American way of life through historical appreciation of the past, patriotic service in the present, and educational training for the future.

The political and economic structure bequeathed to our safekeeping was erected on firm foundations. Any framework, however, no matter how well constructed, needs constant attention. If neglected, decay may set in, rendering it more vulnerable to time, storms, divisions or attacks.

PROVIDE FOR THE COMMON DEFENSE

Our Country needs alert defenders. It is the duty of all of us to help "provide for the common defense."

This includes military might.

Daughters of the American Revolution have always stood, and still stand, unflinchingly, for a strong national defense, adequate preparedness for any emergency.

So long as there are international gangsters, with stockpiles of nuclear weapons, we must be invincible on land, at sea and in the air. Our enemies most clearly understand the language of force. It is a deterrent to aggression, a power for peace.

But, it is not enough to make a house impregnable, lock its doors and guard it with armed soldiers, sailors and aviators. It can be lost by treachery on the interior, by a Trojan Horse slipped in stealthily from the outside, or by termites which may destroy before being discovered.

The common defense, accordingly, is also dependent upon a strong citizenry, with moral stamina and religious faith. On these qualities our Republic was founded. With them it must be preserved.

EDUCATE CITIZENS IN PATRIOTISM

To do our part in protecting America's future, a primary essential is to know its past. That is one reason why knowledge of American history is so important. In order to appreciate, we must first understand. This calls for intensive and extensive patriotic education—realizing how our land has become successful and why it should continue along the safe and sane paths which have brought it to the forefront.

If we are well informed, we will be more willing to help in every way possible, with determination to defend and to win. Then we will be good citizens and promote better citizenship among others.

In the new testament, is the verse: "He that looketh into the perfect law, the law of liberty, and so continueth, being not a hearer that forgetteth but a doer that worketh, this man shall be blessed in his doing."

Our political edifice on its spiritual base in this "Nation under God" with the motto, "In God We Trust," on our coins and in our hearts, can survive and succeed, if we know and publicize its values and advantages, with keen interest and active zeal to keep it as "The Land of the Free and the Home of the Brave."

Theodore Roosevelt wrote: "Patriotism * * * is merely another name for that quality of soul which makes a man, in peace or in war, by day or by night, think of his duty to his fellows and of his duty to the Nation."

SPREAD THE FIRE OF FREEDOM

Before the adoption of our Declaration of Independence, colonial patriots drafted similar declarations. Signers in Mecklenburg County, N. C., pledged: "Every member of this delegation shall henceforth be a civil officer * * * to preserve peace, and union, and harmony * * * and to use every exertion to spread the love of country and fire of freedom throughout America."

Such inspiring examples should be emulated, if we would protect America—its principles of human liberty, private enterprise, and national sovereignty; its illustrious background, unsurpassed present, and limitless future.

It is not sufficient merely to save the old foundations. They must be strengthened, materially and spiritually. This is an effective way to combat the insidious spread of foreign ideologies.

THE CONSTITUTION—OUR SUPREME LAW

Daughters of the American Revolution believe in cooperation with other nations, but not subordination, subservience, or surrender. We have approved the original concepts of the United Nations Organization of sovereign nations working together for world peace and understanding.

For 10 years, however, we have been consistently on record against any form of world government. Our Nation thereby would lose its independence.

In Galatians is the admonition: "With freedom did Christ set us free; stand fast therefore, and be not entangled again in a yoke of bondage."

Since 1951 our national society each year has sanctioned the principles of a new amendment to our Federal Constitution which would prevent treaties or international agreements with conflicting provisions from taking precedence over our domestic laws. The supreme law of our land should be our own Constitution.

Americans like to assist other peoples. This is proved by our record. But, we must not let our liberality strain our economy. Our Government must be kept solvent.

There is not enough money in the United States to assure plenty for all the world. As intriguing as it may appear to some unrealistic dreamers, it is impossible for human beings to create a utopia.

HELP OTHERS HELP THEMSELVES

Nor should we allow others to impose on our generosity. It is better for them to learn from us how to help themselves.

In aiding other nationalities with our tax dollars, we should not weaken our own strength, lower our own standards, neglect our own unfortunates, or permit our money to be spent for propaganda conflicting with American fundamentals.

To insure our future progress, we must be cautious and thrifty, abiding by the tenets of self-reliance and initiative which have made us secure and powerful.

Despite temporary lulls of sweetness and smiles, Communist conspirators still have the avowed intention, constant and unshakable, to ruin our economic and political systems. Despite current changes in practices and techniques, they have never swerved from their long-range goal of world conquest and domination.

Among our own residents, even in high positions, strange as it may seem, there have been found Communist sympathizers, fellow travelers, and others unwittingly falling into traps to follow the Communist line.

The Federal Bureau of Investigation is doing superb work. But, its mission is to investigate and collect facts, not to evaluate.

CONGRESSIONAL COMMITTEES PROTECT FREEDOM

That is why our national society has endorsed the purposes of congressional investigating committees. We think that freedom will be more likely guaranteed for more of us if subversion is studied and exposed by congressional committees. They need documentary evidence, so they may recommend pertinent legislation. We believe in continuing congressional investigations.

To some of those being examined for alleged disloyalty who demand their constitutional rights—and we concede to all this fortunate privilege in our free land—it might not be amiss to ask a few questions:

"Do you deserve these rights? Have you earned them? Do you accept their twin responsibilities? Are you willing to protect the Constitution which protects you? If you claim cover under one or more constitutional amendments, do you agree to support the entire Constitution?"

During these days of infiltration, we need to turn searchlights on those who would weaken or destroy the Constitution under which they take refuge.

As Emerson wrote: "For what avail the plow, or sail, or land, or life, if freedom fail?"

More than 900 million persons are now behind the Iron and Bamboo Curtains. A similar fate could befall us, if we are apathetic.

The outlook is not hopeless. More Americans are becoming more anxious and alert.

PEACE WITH FREEDOM

Everyone wants peace. But not peace at any price. Enslavement, imprisonment, or pacifism might mean some kind of pseudo-peace. We must strive for real peace, mental as well as physical, with freedom and honor. World peace cannot be attained until the desire and will for peace are in the minds and hearts of individuals and their rulers.

Napoleon asserted: "The sword will always be conquered by the spirit."

This proved true not only for the Little Corporal himself by also for other ambitious warriors who ended in defeat because of the undaunted spirit of those who would have been oppressed. Victories in many decisive battles have gone to those with fewer numbers but with greater courage and conviction.

"Not by might, nor by power, but my spirit, saith the Lord."

America was founded on His spirit. On His spirit it can be preserved.

Americanism is traditionally based on trust in God, with confidence that man, through divine guidance, is capable of self-government.

FAITH OF OUR FATHERS

This faith of our fathers in religion and patriotism must be cherished, maintained and extended, not only as our strongest bulwark but also as the best hope everywhere.

In all men there is an instictive craving for freedom. The torch of liberty can serve as a beacon of hope for those under the dark ages of dictatorship.

Let us here highly resolve to rededicate ourselves to the highest ideals of our country and our society and to do everything we can, singly and collectively, to see to it, in Lincoln's immortal words, that "This Nation, under God, shall have a new birth of freedom and that government of the people, by the people, for the people, shall not perish from the earth."

Through widespread patriotic education we can protect and will insure the future of the United States of America.

The Open Door to Jobs for the Handicapped

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. KELLEY of Pennsylvania. Mr. Speaker, one of the deterents of employing the physically handicapped has been the second injury. I have just concluded reading a very timely article on this subject by Paul E. Gurske, Director, Bureau of Labor Standards, United States Department of Labor. It is a constructive article and well worthy of the attention of all those interested in the physically handicapped.

Under permission to extend my remarks in the RECORD, I am happy to include The Open Door to Jobs for the Handicapped, by Mr. Gurske.

SECOND INJURY FUNDS—THE OPEN DOOR TO JOBS FOR THE HANDICAPPED

(By Paul E. Gurske)

To go to a job in the morning when other men are going to work. To return at the end of the day to a home that is free from financial insecurity. To have a sense of self-reliance and self-respect.

These are the things a handicapped worker wants. These are what he needs to be self-sufficient—to be a contributing member of his community, his town, his country.

But to achieve these basic and elemental human goals, the worker with a physical disability must have employment opportunities that are equal to those of his able-bodied friends. It is the purpose of second-injury fund statutes to give him that opportunity.

Perhaps no other single form of legislation has done so much to open the doors of the Nation's factories, stores, and workshops to handicapped workers than the second-injury fund provisions that are found today in the workmen's compensation laws of 43 States.

WHY SECOND INJURY FUNDS ARE NEEDED

Second-injury funds have evolved over the years—after much trial and error—as the answer to an obstacle which early workmen's compensation laws placed in the employment path of disabled workers. For undeniably, though workmen's compensation sprang from the most altruistic and humane of concepts, it caused employers to discriminate against handicapped workers. The seeds of this discrimination were found in the old common law rule of "no-apportionment." Many courts, in applying this rule to workmen's compensation cases, held that if a previously disabled worker were further disabled on the job, his employer was responsible for the entire resulting disability. In other words, if a one-armed or one-legged man lost another arm or leg in a job accident, he would be entitled to benefits for a permanent total (rather than, as in the case of a previously able-bodied worker, a permanent partial) disability.

This problem was foreseen even before the first State workmen's compensation law was enacted. But at first no one quite knew what to do about it. Those in favor of workmen's compensation did not want to abandon the entire idea because of the likelihood that some disabled workers would have difficulty in getting and keeping jobs, although, interestingly enough, the opponents of this new form of social legislation were not hesitant to use this argument against the adoption of workmen's compensation.

EMPLOYERS REFUSE TO HIRE HANDICAPPED WORKERS

Not long after the first laws were enacted, it became evident that workmen's compensation was, in actual fact, tending to bar handicapped workers from jobs. Some employers freely admitted that they would not hire or keep disabled workers because of the consequences flowing from workmen's compensation. For example, the spokesman of one company, less than a year after his State had enacted its workmen's compensation law, stated with unabashed candor that "[we were] quite willing to abide by the law and pay for an eye, ear, finger, arm, toe, foot, leg, etc., if we were responsible. However, we did not propose to pay our workmen for injuries received in places other than while in our employment."

This employer told how physical examinations had been required for old employees as well as new applicants in order that those with physical handicaps could be weeded out.

Thus, very early, the issue was joined. It was apparent that if employers were made responsible for the total disabilities of workers who had had prior handicaps they would, with some justice, refuse to hire them. On the other hand, if physically handicapped workers were permitted by law to "waive" their workmen's compensation rights, or were compensated only for the second injury they were likely to become a charge on the community in which they lived instead of, as was proper, the industry in which they had become disabled.

SECOND INJURY FUND IDEA IS DEVELOPED TO MEET THIS PROBLEM

Various legislative expedients and ideas were tried from State to State in the early years to meet the problem. Most were inadequate. But eventually there evolved the idea of setting up a special fund—generally known as a "Second Injury Fund"—which could be used to limit the employer's liability. This idea has gradually superseded previous expedients and has become the accepted way of dealing with the second injury problem.

Stated very simply, a "second-injury fund" law protects the rights of both the employers and the employees by providing that if a worker with a permanent physical impairment becomes further disabled because of his employment, the employer shall be liable only for a prescribed portion of the resulting disability. The employee, however, is compensated for the full disability; the difference being paid from the second-injury fund. Usually such funds are created and supported by special annual assessments on employers or their insurers, or by a specific charge on the employer or his insurance carrier when a worker has been killed and leaves no dependents to whom benefits are payable.

Second-injury funds were established in New York and Wisconsin as early as 1919, but the idea was slow to spread to other States. When the United States entered World War II, for example, only 14 States had enacted second-injury fund legislation. The big "break-through" came during the war. When State legislators became aware that disabled veterans would face job discrimination because of their physical handicaps, the second-injury fund idea spread quickly. Between August 1942 and August 1945, 18 States established second-injury funds. Since the war 11 more have done so. Today, only five States do not have a fund.

MOST PRESENT SECOND-INJURY FUND LAWS ARE LIMITED IN COVERAGE

In spite of the almost universal acceptance of the second-injury fund principle in this country, most of the present State laws are inadequate in that they extend protection only to workers with certain limited types of handicaps. For example, it is often provided that the second-injury fund shall be used only when the loss of an arm, leg, foot, hand, or eye is followed by the loss of another such specific member or organ. States having this type of limited coverage open few job opportunities to workers with polio, head or back injuries, a cardiac condition, epilepsy, or most of the other physical infirmities to which man is subject.

It is encouraging that in recent years some States have begun to move away from the concept of limited coverage. The New York law is particularly notable for its broad coverage of disabled workers. In 1945 the "Empire State" completely abandoned the "one arm, leg, foot, hand, or eye" approach and provided instead that if a physically impaired worker sustains a job accident or occupational disease which causes a physical handicap "substantially" greater than would have been caused by the second injury alone, the employer is liable only for the first 104 weeks of benefits. New York's idea of setting an arbitrary liability of 104 weeks for all cases is unique. It has the advantage of simplifying administration by eliminating the necessity for making a separate evaluation and determination of the degree of the previous disability for each case that arises. Any benefits payable for more than 104 weeks are paid, of course, from the second-injury fund.

The coverage of the New York law is limited only in that the prior impairment must be permanent and must be a condition which is likely to be a hindrance to employment. Thus the law does not cover latent or obscure impairments which the employer does not know about and which, therefore, he could not discriminate against.

Today, about a fourth of the States are joined with New York in covering second-injury cases which involve something more than the loss of specific members or organs. And the trend seems to be toward more liberal coverage. In 1955, for example, when Florida enacted a second-injury fund law for the first time, it followed the New York system of coverage. Ohio also liberalized its law last year to cover a number of disabilities that are normally excluded—disabilities such as diabetes, cardiac disease, arthritis, polio, cerebral palsy, and epilepsy.

UNITED STATES DEPARTMENT OF LABOR PROJECT

For the past year or so a group of workmen's compensation specialists in the United States Department of Labor have been hard at work on a comprehensive reappraisal of workmen's compensation law. They have been trying to select and combine the best standards found in all the State workmen's compensation laws, bringing them together in "suggested language" for a bill which the States can, if they wish, use as a guide when they want to make improvements in their present laws. This draft of proposed standards draws on the most liberal of the provisions found in present State laws and attempts to remove as much of the employer's risk in hiring handicapped workers as is administratively possible. It provides that prior permanent impairment shall be deemed to include any permanent condition which is likely to be a hindrance or obstacle to employment. Like the New York law, it provides that the employer's liability, instead of being calculated separately for different kinds of injuries, be simply limited to a straight period of 104 weeks.

In past years objective studies by governmental agencies, academic institutions, and insurance companies have shattered many of the old shibboleths that surrounded the employment of handicapped workers. It has been shown, for example, that they are no more susceptible to job accidents than their more ablebodied coworkers. In fact, these studies have shown that when placed in proper jobs, physically handicapped workers not only have as good a record for safety as other workers, but one that is often better.

Another "superstitution" that has sometimes gained credence among unthinking employers is that their insurance rates will be raised if they hire handicapped workers. This myth has been refuted by both major associations of mutual and stock insurance companies. These groups, who have a direct economic interest in keeping their risks as low as possible, have stressed that the employment of physically handicapped workers is consistent with sound insurance principles and does not affect an employer's workmen's compensation rates.

FUTURE HOLDS NEW HOPE FOR THE HANDICAPPED

As more States liberalize their second-injury fund laws, more job opportunities will inevitably open up for handicapped workers. Though full coverage in every State will not come immediately, the trend is in the right direction.

Handicapped workers can look with hope toward the day when the post polio patient as well as the one-armed worker, the cardiac case as well as the one-legged man, and the epileptic as well as the employee with one eye will be considered as good a workmen's compensation risk as any other worker.

Then the handicapped worker will be fully accepted for what he can do.

With the help of liberal second-injury fund laws, he will make an even greater contribution to the industrial greatness that is America's.

Israel and the Middle East

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1956

Mr. MULTER. Mr. Speaker, permit me to direct to the attention of our colleagues the following article on the Middle East situation which appeared in the February 27, 1956, issue of the Value Line Investment Survey:

THE PARTITION OF ISRAEL AND LOSS OF THE MIDDLE EAST

The interests of the United States of America in the Middle East are vital. The Middle East for one thing is the world's richest source of oil, still the major fuel of industry, our own as well as Europe's, and it is the place where hundreds of millions of dollars of American capital have been invested. The Near East is also the crossroads of world trade by sea, air, and land. Militarily it is an area of the highest strategic significance; and it is also Russia's bridge to Africa.

The policies of our State Department with respect to this vital area are hard to understand. The official explanation, such as the wish to avoid any arms race between Israel and the Arab governments, and the determination to preserve peace through the moral authority of the United Nations do not jibe well with the heavy shipments of offensive weapons to Egypt, Saudi Arabia, Syria, Transjordan, and other Arab States by both the United States and Great Britain during the past year. Nor does the haste to bring censure upon Israel in the United Nations for border violations, while ignoring the open blockade of Israel carried on by Egypt in direct violation of two United Nations orders quite square with the alleged objective of enforcing peace in the area through international law and authority. Also disturbing is the heavy veil of secrecy that has been drawn over the shipments of arms from Britain and the United States to the Arab nations at the very time that strong and widely-publicized accusations were being leveled against the Russians for doing the same thing, only openly.

What can the ordinary citizen get out of this maze of apparent contradictions? That it will somehow affect his welfare, the value of his investments, and the peace of his nation is perhaps the only obvious truth in the matter. One can however, look into the confusing pattern of events and find certain trends that have been consistent and deliberately advanced over a period of years. Such trends by their persistence point to a plan. They are the only even partially reliable evidence of what is actually being undertaken.

There are three main trends in the joint American-British policy on the Middle East which are clearly discernible and which have been consistently followed over a period of years. Unless reversed by some dramatic new development, the three policies point to the partition and crippling of Israel as a state and to the eventual loss of the Middle East to communism. Were the Middle East lost, Africa would be easy picking within a decade. And this desolate projection is the happy probability. There is a less happy one too, and it also appears to be possible: the massacre of the Israeli population and the outbreak of atomic war.

THE THREE MAIN DISCERNIBLE TRENDS

What are the discernible trends of American and British policy with respect to Israel and the Arab States? First, is the persisting effort to isolate Israel morally in world opinion. Second, is the policy of shipping offensive weapons to the Arabs while refusing defensive weapons to Israel. Third, is the repeated offer by the British Foreign Office to act as mediator in the "dispute" over the existence of Israel. The British mediation plan would offer territorial concessions to the Arab States which would add an insignificant percentage of land to the large territory already claimed by them, but enough of the tiny parcel that now belongs to Israel to cripple that new nation as a political economy. If Israel's territory were so reduced by partition, the assumption is that a compromise could be worked out that would permit the remnant of Israel to survive, if not as a nation, at least as a kind of cultural center in a tolerant Arab world.

THE IMPLEMENTATION OF THE THREE POLICIES

The moral isolation of Israel has been very largely achieved. In the recent United Nations vote of censure against Israel there was not a single dissenting voice. (This was the censure against Israel for silencing the Syrian artillery that fired across the border upon her citizens. The Israeli retaliation was deemed by the United Nations to be out of proportion to the Syrian provocation.) Israel drew censure and was threatened with economic sanctions as well if she again attempted to defend herself in such a manner. But there was no censure of Syria for opening artillery fire on civilians. No voice was raised to censure Egypt for its long continued and open blockade, carried out deliberately, uninterruptedly and openly for years in the face of two United Nations orders to desist. Indeed the blockade was further implemented only a few months ago by a shipment of British gunboats to Egypt. No voice was raised to protest the hundreds of raids across the open borders of Israel nor the Egyptian radio propaganda preparing the Egyptian people for a second invasion effort.

What with one twist or another, the propaganda drums have succeeded in beating out the tune that Israel with its 2 million people and 8,000 square miles of territory is entertaining aggressive designs against the 40 million Arabs in their 2 million square miles of territory. Israel therefore is now the moral pariah, and peace-loving Arab neighbors have been given to understand that Britain and the United States are their friends who stand for them in the councils of the United Nations.

The second discernible trend is the shipment of offensive weapons to the Arabs and the withholding of all but token shipments to Israel. Even before the Russians sent jet planes and tanks and submarines to Egypt, Israel had protested the shipment of British planes, tanks, and gunboats as well as American weapons to the Arabs on the ground that these created a dangerous imbalance in the Middle Eastern power alinement. Israel requested aid to redress the situation created by the shipment of our arms, even before the massive shipment of Russian weapons was under way. The request was taken under consideration, but nothing has yet been done, except to explain that the United States does not wish to encourage an arms race in the Middle East. While this explanation was being offered and at the very time that vigorous accusations were being broadcast against the Russians for shipping weapons to Egypt, the United States and Britain were secretly sending offensive armor to the Arabs, too. Significantly the refusal to ship defensive weapons to Israel and the assurance that its request for defensive weapons was "under consideration," was accompanied by a standing offer to "mediate" the dispute through the good offices of Sir Anthony Eden and the British Foreign Office. Apparently, the opinion was entertained that if the lower portion of Israel could be cut off and given to the Arab States, the British and Americans could then persuade the Arabs to accept what was left as a peaceful neighbor. The one quarter of Israel's territory that would be given over to the Arab States would not be of any significant territorial advantage to them, for 25 percent of Israel's territory would not add 1 percent to that of the Arabs. But such a partition would weaken Israel economically and militarily to the point where the neighboring Arab States would have no need to fear her rapid economic development. Then, too, there was the possibility that oil might be found in the lower part of Israel which was to be partitioned off under the Eden plan, and this, too, may have sharpened the appetite for partition.

So, the scheme looks like this:

First, isolate Israel as a moral pariah. Second, mount another invasion, this time making sure that Arab power is overwhelming. Third, step in to "mediate" the deplorable dispute, calling upon both sides, under God, to accept a peaceful adjudication, which would turn out to be the Eden plan or something like it.

In general, the scheme seems to be well on its way to accomplishment. Israel has indeed been morally isolated. The Arab armies poised on her open borders have been massively armed and in a few months will have been trained in the use of their new arms. The mediation offer (the partition plan) already rejected by Israel, is kept ready for presentation after the second, and this time successful, invasion. When accomplished, the Arabs will have peace of mind again and they will know us for their friends, who have aided them not only to achieve the political security they wish, but who also stand ready to provide the material aid they need to develop their economies.

IS ANYTHING WRONG?

A few things, however, are not going as well as might have been hoped. We have lost our posture of chief friend of the Arab nations in the United Nations' councils. When the British and Americans led the condemnation of Israel for silencing the Syrian artillery that had been firing across her borders, the Russians went farther: they not only condemned Israel, but moved for punishment as well. Thus, the Russian position was even more favorable to the Arabs than Britain's and ours. We were outbid.

The same annoying slip seems to have occurred in the matter of arming of the sec-

ond invasion. When British planes, gunboats, and tanks had been sent in such quantity to Egypt as to draw open protests from Israel, the Russians merely offered the Egyptians an even larger quantity of arms. They also sent technicians in large numbers to train the Egyptian army in the use of the Russian-made weapons and they offered training facilities for Egyptian pilots in Czechoslovakia, where, according to the Hearst press, there are now 2,000 under instruction. Again, our posture of friendship was rendered ineffectual because we were outbid.

The United States and Britain will probably offer to mediate the settlement of the next war of invasion by advising both sides to use restraint and by bringing forward the partition plan as a mediation effort. It is quite obvious, though, in view of what has been happening on the United Nations' front and on the arms front, that the effort to appear as the friend of the Arabs in the partition plan is also doomed to failure. For when Britain and the United States offer one-quarter or one-third of Israel's territory to the Arab States, the Russians will surely offer one-half or three-quarters. And again we will be outbid.

Thus, the main objective, which seems to be to establish ourselves and our British allies as the great friend and protector of Arab nations, is already doomed, for it appears that the Arabs can find a greater friend elsewhere, as their moral defender in the United Nations' councils, as a weapons supplier, and in due course, as a mediator.

That leaves the United States with only one other way to bid for the friendship of the Arab States: to offer large loans for capital improvements like the dam project in Egypt. But here, too, we seem to be on dangerous, if not treacherous, ground. The Governments of Arab States whose friendship we court are not representative governments. They are technical governments—under feudal sheiks or army juntas. Such governments can easily be taken over by well-trained conspirators at the right time, and in Egypt today, there are already 3,000 Russian "technicians." If these technicians have no political errand to perform in addition to their military one, it will be the first time that Russia has sent such a multitude into any backward country for such a limited purpose. The 3,000 "technicians" go with the planes and the tanks; and when the right day comes along, they will find it no trick at all to bump off a couple of colonels and a few sheiks, and only a handful of people in all Arabia would know or care.

In the Middle East there is desperate need to reclaim the desert and improve the living standards of the people. Their poverty is pitiable. They are the backward people who are the most fruitful soil for Communist indoctrination. With the rapid development of the State of Israel as an example, the rest of the Middle East would be prodded into developing itself politically as well as economically and along democratic lines. But with Israel crippled or destroyed, the economic development of the area would be retarded. The spur of example, competition and trade, would be gone. Communist agents would have established their bridgehead and the United States would hesitate to make the large investments in the capital goods so badly needed by the Arab people but now so easily convertible into Communist assets. Because progress would be retarded, the revolution would be assured.

Our policy is to win the friendship of the sheiks and colonels, on the theory apparently that these are the people of the Middle East. But the people of the Middle East will be prone, if they are like other people, to trade a handful of feudal overlords any day for such promises as the Communists will give; and with the sheiks and colonels removed, we would find ourselves without government allies in lands where the masses of the people had been conditioned to anti-democratic beliefs. The value of the Arab rulers now lies only in their ability to inflame nationalist sentiment. But in the long run they will stand or fall on what happens to the standard of living of their people; and in Saudi-Arabia, Syria, and Transjordan very little improvement has occurred under the traditional form of government. The longer the economic development of the Near East is retarded, the greater is the danger that it will fall to the Communists, who if they have little capital to offer, can at least through political sophistication and high aptitude for organizing illiterate masses, hold a great advantage over us whose desperate effort it is to retain the friendship of a few topply rulers.

Once the Near East fell under Communist domination, the smouldering resentment of the Africans farther south and west would flame out into full revolution in short order. For the Communist revolution, as has been proved time and time again, can run like wildfire through territories and nations that are without representative government, without a decent standard of living, and without national self-respect. Our own South American dictatorships would then be next in line for attention.

The stakes in the Middle East are high, yet if the policies which have been in effect fro so long persist into the future, it appears that we have already lost. We might have a hope in the State of Israel as a bridgehead of democracy and as an example of something better than communism, if Israel were a strong and vigorous nation. But our policy, clearly, defined in the trends, is to scuttle Israel.

It is not altogether improbable that the sell-out of Israel will result in an even more shocking end-result than that implied by the British partition plan. It is quite possible with the arms imbalance as great as it is today, and the Israelis practically defenseless in the face of this situation, that nearly the whole of the population of Israel will be massacred. The incitement to war here is of a fanatical nature—a jihad. Civilization in this part of the world has not progressed as far as we like to think it has elsewhere. Such an outcome could hardly fail to bring about some loss of faith in the United Nations' integrity and especially in those moral virtues which we of the West like to think of as our special field of excellence. And in a world of desperate dangers, the loss of faith in the integrity of the United Nations could be a lethal blow.

More immediate is the risk that the United States and Britain, in furtherance of what seems to be the partition scheme, might step into the middle of the Arab-Israeli war, as we stepped suddenly into the middle of the Korean war—if anything so one-sided as this could be called a war—and in so doing find ourselves lined up against Russian forces. The Russian Foreign Office has already announced that it regards the Near East as an area of legitimate concern and that it would resist any attempt by the United States, Britain and France to violate the sovereignty of the nations of that area. This is plain notice that to intervene when the invasion gets underway unless the intervention is shared by the Russians, who in that case would also share in the bid for the favor of the Arabs in any "mediation" scheme that would later be proferred.

Unless we are willing to fight communist armies in Arabia, the Russian camel already has his nose and forequarters in the Near-East tent. In case we do decide to fight, we have just had the word of Marshall Zhukov for it that in a war between Russia and the West, atomic weapons would be used against American and European cities. Our cities are less widely dispersed and our industries less skillfully concealed than those in the Russian and Communist areas. Our vulnerability to atomic bombing appears therefore to be greater.

America could use a brand new foreign policy for the Middle East.

President Eisenhower's Restatement of His Philosophy

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1956

Mr. HESELTON. Mr. Speaker, those of us who had the privilege of listening to President Eisenhower last evening were fortunate.

His summary of the traditions and philosophy of the Republican Party richly merits the careful reading and most serious consideration of every voter in this country. The millions of Americans who shared in electing him our President in 1952 have the rare opportunity now of guaranteeing his reelection in November. We can all start now with an immediate and continued effort to make his full statement available to every possible friend and neighbor.

In my opinion, certain portions of that statement are of such striking importance and in such marked contrast to a great deal we all are reading and hearing from certain sources that I want to take this means of making these excerpts available now to as many of my friends and constituents as I can.

The President said:

The mission of our party is to help 167 million Americans build a Nation stronger spiritually and materially, a Nation whose every citizen has reason for bold hope, where effort is rewarded and prosperity shared, where freedom expands and peace is secured.

The President also said:

As a Republican I share my party's deeplying trust in what free men can do—a fundamental trust in the nature and capability of individual human beings.

People are made in the image of God—

He stated.

They are divinely endowed with aspirations and talents. Their destiny reflects their divine origin. Therefore, the Republican Party must be inspired by a concern that comprehends every American; that sets up no walls of birth or creed or party; that ranks all men and women of decency and good will equal in their dignity.

Speaking of the difference between the Republican and the Democrat Parties, President Eisenhower said:

We are all Americans, but in the practical pursuit of national objectives we differ in our methods, in our traditions, in our philosophy of Government's responsibilities.

I believe the Republican Party, in its methods and traditions and broad philosophy:

1. Offers the best hope of preserving the self-reliance and vigorous independence of individual Americans.

2. Best serves the Nation in the search for peace with justice and freedom.

3. Best fosters a competitive enterprise economy whose purpose is a wider prosperity fairly shared.

4. Best keeps economic decision-making in the hands of the people and out of the hands of government.

5. Best answers the concerns of people for the meeting of their human needs.

6. Best assures our children, and their children's children the heritage of an America rich in all the resources of nature, dynamic in great traditions and ideals and purposes.

The President referred to the record established by this Republican administration and suggested that the Republican Party platform for 1956 should include the following basic principles:

1. The individual is of supreme importance * * *people everywhere—every American of every race and creed should enjoy equally the rights and privileges of free citizens in a free nation.

2. The spirit of our people is the strength of our Nation. The ultimate values of mankind are spiritual. These values include liberty, human dignity, opportunity, and equal rights and justice. These are our heritage and our birthright.

3. America does not prosper unless all Americans prosper. More jobs and better jobs, and happier living for every family * * * call for a strong, growing, private-enterprise economy.

4. Government must have a heart as well as a head * * * Government should increase and strengthen personal and family security without impairing the self-respect, initiative, and incentive of the individual.

5. Courage in principle, cooperation in practice make freedom positive * * * all parts of our American community deserve the concern and support of Government in making their contribution to our well-being.

6. The purpose of Government is to serve, never to dominate.

He quoted Abraham Lincoln, "In all that the people can individually do as well for themselves, Government ought not to interfere."

7. To stay free, we must stay strong. We must gird ourselves with sufficient military strength to discourage resort to war and protect our Nation's vital interests; we must help to strengthen the collective defense of free nations against those who would seek their ends through aggression. Our own and our allied strength must be spiritual, intellectual, scientific, material.

8. Under God, we espouse the cause of freedom and justice and peace for all peoples. The peace we want will be the product of understanding and agreement and law among Nations * * *. It will foster the concentration of human energy for the advancement of human standards in all the areas of mankind's material, intellectual, and spiritual life.

Hon. Jonah J. Goldstein 70 Years Young

EXTENSION OF REMARKS

OF

HON. IRWIN D. DAVIDSON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 11, 1956

Mr. DAVIDSON. Mr. Speaker, I should like to place in the Appendix of the RECORD the partial story of a great man and a useful life. Judge Jonah J. Goldstein, of the Court of General Sessions of the City of New York, is this month celebrating his 70th birthday. He is still in every way a young man and a vibrant personality. Through the years, he has dedicated himself to the service of his community and the well-being of others.

At the age of 16, he took charge of a group of youngsters from the lower East Side, accompanying them each summer to Surprise Lake Camp at Storm King on the Hudson. This institution is now known as the Eddie Cantor Camp. For this service, Jonah received a little vacation himself—a free ride to and from camp, lunch, and 5 hours in the country. He was the first group boy in the Educational Alliance to serve as a group leader. The group he led was known as the Young Americans. Shortly after this, he helped to organize the Jewish Big Brother movement and served as its volunteer secretary. The Jewish Big Brother movement soon proved its value. Court records showed that 60 percent of youngsters who got into trouble and who had no big brothers, returned to the criminal courts and ended up in adult penal institutions. On the other hand, of those who did have big brothers to guide them, less than 3 percent found difficulty later on. In the course of his big brother work, Jonah acted as a lay rabbi on the high holy days, conducting religious services at the House of Refuge on Randalls Island.

As a young man, he was a resident worker at the University Settlement. A resident worker usually served at least 2 nights a week at the settlement, but Jonah did not limit himself to the 2 nights; more often he served 6 nights a week and all day Sunday.

Shortly after the infamous Becker case and the Rosenthal murder, he helped to organize the East Side Neighborhood Association for the purpose of combating vice and other evil conditions on the lower East Side. Of this association, Dr. Henry Moskowitz was chairman, Miss Lillian Wald was vice chairman, and Jonah was executive director without salary. In 1911, the late lamented Alfred E. Smith was majority leader of the Assembly of the State of New York. He took Jonah to Albany as his secretary and as clerk to the all important ways and means committee of the State legislature. While at the State capitol, Jonah helped draft a bill requiring that children, appearing in the children's court, should receive both physical and psychiatric examination before sentence. It took 3 years before this bill became law. For 2 years the State legislature passed the bill only to have it vetoed by the then governor. Upon the third try, Jonah succeeeded.

Al Smith was extremely fond of his indefatigable coworker and his affection for Jonah was returned in full measure. During this time, Al Smith was chairman of the annual fund raising affair for the Holy Name Centre for homeless men. Jonah assisted him. Upon Al Smith's passing, Jonah was asked to step into Al Smith's role as chairman and as director of the Holy Name Centre.

In 1920 he met Harriet B. Lowenstein, who was extremely active as a social-service worker and intimately connected with the federation, the joint distribution committee, as well as being philanthropic advisor to the late Felix M. Warburg. Harriet and Jonah were married in July of 1920. Ever since, she has been his partner, loyal and loving companion, and the inspiration for all of his many activities. Harriet was for 13 years the comptroller of federation. When she retired, Jonah was elected a trustee at large. He now is, and for the past 15 years has been, the chairman of federation's council of fraternal organizations.

In 1929, as representatives of the Jewish agency and the joint distribution committee, Jonah and Harriet were asked, on 48 hours notice, to go to Palestine to inaugurate a relief program and investigate the causes of interracial riots in that land.

In 1931, Mayor Walker appointed him a city magistrate. He served as chairman of the committee on reorganization of the magistrate's court, introducing such reforms as the consolidated bail bond, health examinations in the women's court before admission to bail, and the stagger system in traffic court. He was responsible for the organization of the adolescent term of the magistrate's court, over which he presided after regular hours, and he successfully fought for the removal of the criminal stigma theretofore given by the magistrate's court in all family nonsupport cases by turning them over to the newly created domestic relations court. He is the author of many articles on social service and the law, as well as the book entitled "The Family in Court," which is used as a textbook by social service students.

In 1936 Judge Otto A. Rosalsky died. In his place, Gov. Herbert Lehman appointed Jonah a judge of the court of general sessions. He was elected to that court in 1939 and has been serving there ever since.

In 1945 Jonah tried, but did not succeed in taking on the bigger job of mayor of the city of New York.

He was one of the organizers of the United Jewish Appeal for Greater New York, created to avoid a multiplicity of campaigns and has served as a member of the board since its inception. He was president for 5 years of the Central Bureau for Jewish Aged and Infirm. For 14 years, he was chairman of the New York Jewish committee of the Boy Scouts of America and, for 7 years, he served as president of the Jewish Club. He is still active in support of the Harlem branch of the Young Men's Christian Association, but the major portion of his spare time after these many and varied activities is engaged in working for the organization which is closest to his heart—the Grand Street Boys' Association, of which he is now serving his 21st year as president. As a corollary and cumulation to his work at Grand Street, his greatest pride is the Grand Street Boys' Foundation to which he has dedicated himself wholeheartedly.

Jonah has been one the most useful members that our community of New York has ever had. His service has always been effective, unstinted, and given without distinction to race, creed, or national origin.

Mr. Speaker, I have given but a few of the highlights of Jonah's useful life. There are many people who played an important part therein. None, however, bore a greater influence than his dear wife Harriet, whose sacrifices and guid-

ance in large measure made possible Jonah's many accomplishments.

Jonah J. Goldstein, 70 years young, still leading a crowded, busy, useful life, rich in experience, wise, compassionate and eager to help his fellow man—he stands as a tower of strength, whose contributions to society are, in his own words "only my way of paying back for the privilege of living in a great democracy."

Straightening the Record on Postal Policy

EXTENSION OF REMARKS
OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 18, 1956

Mr. LANGER. Mr. President, in his crusade for higher postal rates the Postmaster General has created the impression that Congress has been derelict in its duty in regard to the postal balance sheet. I am glad to say that someone at last has come up with the facts and figures that will put this whole problem in a truer perspective, giving the Congress credit for the care and statesmanship that have been exercised in the setting of postal rates. Although the statement which I shall ask to have placed in the RECORD that all may read it was made officially on behalf of a particular class of mail users, I can say that it truly represents the best interests of the American people.

A few days ago, witnesses appeared before the House Commitee on Post Office and Civil Service in connection with postal rates. At that time testimony was given by an expert. I hold that testimony in my hand. I am informed by the Government Printing Office that it is estimated that the printing of the statement will cost $267. It is very material testimony, and I ask unanimous consent that, notwithstanding the cost, it be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF HARRY J. MAGINNIS, EXECUTIVE MANAGER, ASSOCIATED THIRD CLASS MAIL USERS, WASHINGTON, D. C., BEFORE THE HOUSE POST OFFICE AND CIVIL SERVICE COMMITTEE RE H. R. 9228, MARCH 20, 1956

Mr. Chairman, members of the committee, I am Harry J. Maginnis, executive manager of Associated Third Class Mail Users, located at 1406 G Street NW., Washington, D. C. The Association consists of approximately 400 members who either use third class mail in their business or who supply users of third class mail.

As committee members are aware, H. R. 9228 provides for increases in third class rates. If enacted, the users of third class mail would be called upon to pay an additional $77 million in postage. That is a large sum of money. We believe that the $272 million third class mail users now pay annually in postage fees is more than adequate. We oppose, therefore, the enactment of H. R. 9228.

Now this opposition will come as no surprise. This is the week for hearing opponents. Yet it is not enough simply to say we are opposed. You have a right to expect convincing arguments from the opposition witnesses. If you will bear with me, I believe I have some to make. A great industry is depending to a large degree on what I say here today and how you react to the evidence presented. We believe we are correct in our convictions. We believe that the Postmaster General's proposal is both inequitable and fraught with danger.

I have sat through most of the testimony so far. I have viewed carefully the testimony of Mr. Summerfield and his aides. I am not unmindful that they have presented what appears on the surface to be a good case for H. R. 9228. Nevertheless Mr. Summerfield has advanced claims which simply are not correct. Moreover, he has failed to present data which must be placed on the table for all to see before this committee can decide whether or not the adoption of H. R. 9228 is the wise course to follow.

Before getting into the case for third-class mail, I should like to point out some of the gaping holes in the Department's case and then place in the record some important facts which have not yet been advanced.

The Postmaster General opened his case by repeating the statement he has so often made that postal deficits in the past 10 years total $4,600,000,000. He sought to dramatize this figure by charts which showed how many destroyers, how many miles of road, how many libraries, how many schools, etc., could be constructed with that amount of money.

That kind of testimony affects not only congressional but public opinion as well.

But is the portrait painted by the Postmaster General an accurate one? I say "No." Mr. Summerfield failed to explain that there are many purely public service items contained in the $4.6 billion figure. Without such a listing, the picture is grotesquely distorted.

What are the facts? Members of this committee know that for 8 of the 10 years referred to there is contained in the $4.6 billion figure an airmail subsidy of about $80 million annually and the frank and penalty mail items of about $36 million annually. These happily have been transferred to other agencies of Government.

What else is included in the $4.6 million figure? Well, there's the small item of the congressionally approved second-class subsidy of approximately $200 million annually. That comes to $2 billion in a 10-year period.

What else? We have the admission of Department witnesses that there are free items in the deficit. I happen to believe their cost is greater than the $30 million figure announced by Department witnesses, but, for the sake of argument, let us just suppose that the Department's figure is correct. The total for 10 years would be $300 million.

I believe it would be fair to include some other items. We may disagree regarding some of them but, I, for one, believe they should be included. I remember vividly the discussion here when it was proposed to raise post and postal cards from 1 to 2 cents. The testimony of Postmaster General Donaldson was that it cost the Department 2.8 cents to handle a first-class card. These cards have never paid their way. They do not now. The cost of handling each card at present is close to 3.3 cents. And if Mr. Stans program of differential pricing is valid the price of each card should be 4 cents.

Now I am not objecting to providing to the public for 2 cents a card which it costs between 3 and 4 cents to handle. If the Congress desires to create that kind of subsidy for users of post and postal cards, I am all for it, but I think the public is entitled to know just what the 10-year loss on the handling of these cards has been; what future losses will be.

I do know that the present volume of such cards is about 3,300,000,000. If the loss on each of them is 1.3 cents, we are forced to admit that the users of post cards are now subsidized to the tune of $35,800,000 annually.

While we are on the post-card item, it is interesting to note that their volume in fiscal 1950 was 4,400,000,000. The rate then was 1 cent. In 1955, at the 2-cent rate, the volume was only 3,300,000,000. This 25-percent reduction in volume should raise a few eyebrows. If I am not mistaken the Department's estimate of $406 million additional revenue from rate increases via H. R. 9228 is based on the assumption that total mail volume will remain constant. This is far from being a realistic concept and should be examined by the committee.

Later on, when I get into the discussion of the question whether or not the post office is a business or a service, I will comment on the Department's admission that the cost of not handling parcels of a certain weight and size is $73 million annually. I don't want to get into the argument whether or not the post office competes with the Railway Express Agency, but the very existence of Public Law 199 proves better than any other fact that the post office cannot be operated as a business. You can imagine what the response of the president of Republic Steel would be had he been asked: "Do you refuse to manufacture steel beams because Bethlehem Steel says it is producing the same item?"

The gentleman from Pennsylvania, Mr. CORBETT, interrogated the representatives of the Rural Letter Carriers Association when they appeared here as witnesses. He was trying to develop the fact that rural free delivery does not pay its way. I don't believe that this particular service begins to approach the break-even point or that it was ever intended to operate at a profit. We have testimony from the Senate side that RFD suffers an annual loss of $150 million. Here again there probably will be disagreement. Nevertheless, the committee should try to develop the facts on this particular item for if, as I believe, such a large sum is spent in a purely public service venture the users of the mail should not be called upon to pick up the tab.

It will be apparent, therefore, from the data I have presented that Mr. Summerfield's figure of $4.6 billion is suspect. When the facts are placed on the table, his charts are not so dramatic.

The regrettable outcome of stressing the staggering figure of $4.6 billion is the fostering of the suspicion among our people that somehow or other the Congress has been derelict in its duty. Nothing could be further from the truth. The Congress has acted very wisely in its constitutionally authorized handling of postal policy. A lot of credit is due this committee for proceeding as carefully and judiciously as it has on rate matters.

Public opinion is what the press chooses to make it. The witnesses from various newspapers who appeared here on behalf of the bill were able in only a few instances to answer intelligently the questions of committee members. As Mr. DOWDY pointed out, one editorial writer was so out of touch with postal problems that he still is asserting that franked and penalty mail are part of the postal deficit. Counsel for the Washington newspapers endorsed the bill, but was unable to answer Mr. Moss' question as to whether the News, Post, and Star were really willing that second class be charged the total of its allocated costs. It is all right to endorse a policy of paying your way, but the newspapers have a duty to inform the public that this would require a 500-percent boost in

second-class rates and result in the destruction of our free press.

While I am on this point of slanted editorials, I would like to give a little credit where credit is due, namely, to this committee. Mr. CEDERBERG inserted in the CONGRESSIONAL RECORD on March 12 an editorial from the Flint (Mich.) Daily Journal. The editor appeared here as a witness on Friday. It contains this statement: "The Post Office Department's deficit for the fiscal year 1952 was an astronomical $727 million. Changes instituted by Mr. Summerfield after he became Postmaster General January 20, 1953, reduced that deficit to $362,700,000." This is a statement that has often been made. If believed, it places a mantle of efficiency on Mr. Summerfield and deprives this committee and the Congress of its just deserts. What are the facts regarding this significant drop in the deficit? By action of the Congress, franked and penalty mail totaling $36.4 million annually was transferred to other Government agencies, as was the $70.3 million annual airmail subsidy. In addition, the Congress raised rates just prior to Mr. Summerfield's tenure. These raises, coupled with the raises on parcel post granted by virtue of a petition filed by the previous Postmaster General, totaled $272 million, or a grand total reduction in the deficit of $379 million.

No wonder the Postmaster General can show that his deficit was substantially reduced.

But let no one misunderstand. It was the Congress of the United States that accomplished the feat.

Let us examine another claim of the Department. In executive session some weeks ago Mr. Summerfield presented to the members of this committee as expensive-looking booklet which contained pictures and text. In it he says that third-class postage is "essentially the same today as in 1932."

That statement has been repeated by other witnesses. It is not a factual assertion. It denies that this committee has had legislation enacted increasing postal rates.

The minimum piece rate on bulk mail was raised from 1 cent to 1½ cents in the last rate bill, enacted in 1952. Eighty percent of third-class mail is sent under bulk permit. Since the present volume is about 16 billion pieces annually, that means that bulk permit holders today are paying about $64 million more annually than they did 3 years ago. If that is not a substantial increase, I will cease and desist. That is more than the total receipts from second-class mail.

So we can throw that claim out the window.

In his testimony last week, the Postmaster General used the common law pleading device known as the anticipatory replication. He sought to anticipate the claims of opposition witnesses and to answer them in advance. At one point he states:

"The importance of identifying and providing reimbursement for so-called public-welfare services is further emphasized by the misapplication of this term by opponents of rate increases. In seeking to adapt the public-welfare concept to their own ends, they allege that no private business could operate so many units and offer such broad services as does the Post Office and still break even. They reason from this that smaller post offices and rural routes are operated in the public welfare and that the costs should be paid by the taxpayer. This is specious reasoning."

I think Mr. Summerfield's claim of specious reasoning is worth a few paragraphs. I suspect, and hope, that Mr. Moss will, as he has other witnesses, interrogate me on this phase of the postal problem.

Before stating my facts on this public service against business issue, I shall first suggest a conclusion. It is this: "Whenever the Post Office Department breaks even somebody is being charged too much postage."

One gathers the impression from these hearings that certain members do not feel that first-class rates should be increased. We all know that Mr. Moss is of a mind, and I agree with him, to find out once and for all what the true deficit is and then go about hiking rates on the various categories to make up that true deficit. He is on sound ground.

I do not know the answer regarding first class but I have some suspicions regarding that category. I believe they warrant study. It is not sufficient to ask, "Everything else has gone up in price, why not first-class mail?" Is it not possible that first-class mail since 1932 has been paying more than enough; that only now it is beginning to reach the break-even point? Mr. Alexander at one point asked what the cost of handling the average first-class letter was. Mr. Stans responded by stating 3.3 cents. Unfortunately, no one went the one step further necessary to get the real fact established. Someone should have asked what the revenue is from the average first-class piece of mail. The last I heard it was 3.6 cents.

And why is this so? The answer is fairly simple. When one mails a 1½-ounce letter, it costs 6 cents; a 2½-ounce letter costs 9 cents; and so on up the scale. I believe I emphasized this fact in my testimony of 3 years ago. In substance, the mailer of a letter weighing more than 1 ounce is charged an unconscionable fee. Postmaster General Donaldson used to gloat over the heavy first-class pieces he had to handle. He admitted that this business was pure gravy.

If $406 million is raised through this bill, the deficit will be but $94 million. Since all of the free services and subsidized services I have listed total well over $300 million, the users of first class will be picking up the tab for the others.

And therein lies the paradox. Mr. Summerfield does not want a bill without a 4-cent first-class rate. Yet it is the only place where he can get substantial revenues. Certainly the $17 million sought from second class is not going to dent his deficit very much.

I may be flying in the face of public opinion, but it seems as certain to me that, as the night follows day, the Post Office Department, like all other agencies of Government, is going to have to operate at a deficit.

I have prepared for the information of the committee a chart which shows the deficits incurred by other agencies of Government. You will note that the Post Office Department, the agency of Government closest to the people and probably doing more good than all the others, is the only one approaching the break-even point. Yet these agencies do charge fees of a sort. If, for instance, all of us who are not inventors, wished to complain we would take a dim view of the insignificant fee charged inventors for filing patents. In like vein those who avoid litigation would oppose the filing fee of $15 which permits a plaintiff the use of a $100,000 Federal court room, a 12-man jury, a bailiff, a United States Marshall, a $25,000 judge and all the trimmings of a Federal case.

I would like to submit at a later time a study of free services performed for the American people by various Government agencies. It is a hefty document prepared by the Legislative Reference Service of the Library of Congress. Without knowing why, we use the term "appropriation" when referring to other Government agencies. In the case of the post office only do we use the evil-sounding term "deficit."

Congressman TABER was asked whether or not he knew of any business which operated so many outlets as the Post Office Department. He responded by stating that all large businesses had to operate profitless units, taking the bitter with the better.

Let us examine that statement. The largest corporation in America is General Motors. They sell a lot of cars every year. Can any member of this committee tell me where they keep open a service unit in the remote areas of America where a profit cannot be realized? I seem to recall testimony 3 years ago pointing out that the corporation with the most outlets was A. & P. stores. They had but 4,300 units.

I have read some history of the post office. The Colonial Postmaster at Philadelphia was Benjamin Franklin. The British Crown had operated it for some time, charging fees so high that very few people could take advantage of the service. Franklin had a different concept—more volume and lower fees.

A few days ago Senator DIRKSEN appeared before this committee. He sought to prove that history supports the Postmaster General's request that the Post Office Department be run as a business. Unfortunately, the Senator's story was not complete. It is true that the Congress in establishing the Post Office in the act of February 20, 1792, provided that the Postmaster General was authorized to carry the mails and that "he shall defray the expense thereof, together with all other expenses arising on the collection and management of the revenues or their operation." However, modifications of this balanced-budget theory were enacted into law starting in 1797, just 5 years after the initial pronouncement. In 1814 further restraints were removed and Congress exempted from the self-supporting requirement "all post roads necessary to furnish mail communication to country towns which have no mail." In 1822 President Monroe told the Congress in a message that "post offices were made for the country and not the country for them." In 1836 Congress sidestepped the question of budget balancing by simply providing that all postal receipts should be paid to the Treasury and the Congress should appropriate to cover its expenses.

Finally, in 1844, Congress met the issue squarely and appointed a United States Postal Commission to report to the Congress as to the real purpose and value of the postal service.

I should like to quote a paragraph from this report. "The United States postal service was created to render the citizen worthy, by proper knowledge and enlightenment, of his important privileges as a sovereign constituent of his government; to diffuse enlightenment and social improvement and national fellowship; elevating our people in the scale of civilization and bringing them together in patriotic affection."

Nowhere is there an indication that this is a business establishment. Less than a year after the report had been made, Congress enacted substantial rate reductions despite the current postal deficit. The wisdom of this move was dramatized by the greatest percentage volume gain in postal history.

Over the years Postmasters General have been troubled by the issue of service versus business. The present Postmaster General is probably unequaled in his devotion to the business principle. Exposure to the actual management of the Postal Establishment in the past has generally been sufficient to convert any businessman to the theory that the primary purpose of the Post Office was to serve the people.

It is an interesting history, the story of the postal service, but in essence the Founding Fathers and their successors considered it a tool with which to tie together a vast nation, to spread information, to educate and to permit the transaction of business. That goal has not changed. A great many of our people are still located in the lonely reaches of this broad land. I have seen some of the clerks' and postmasters' journals which carried pictures of remotely located post offices. Mail was gotten in by dog sled, kayak, heli-

copter, and horse. I know of no citizen who complains about this necessary but costly service. We cannot all be residents of cities although some of who are yearn for the lonely spot.

This committee has heard the president of the Burroughs Corp. and the president of Republic Steel. How many service units do they have in these isolated areas? There seems little sense arguing the point. I am convinced that the Department operates rural routes, second, third, and fourth class offices which no profit-minded businessman would keep open for a day.

I suppose the second-class representatives will present their own case at these hearings. I hesitate saying a word on their behalf but I share a view held by many people that the low rates established for second-class material have had a most salutary effect in the development of the Republic. For good, sound reasons the Congress has provided subsidies in many areas. To mention only a few—merchant marine, farm, airline, and railroad. On the Senate floor a few days ago two Senators, who, it seemed to me, were the most unlikely to take such a stand, expressed approval of the second-class subsidy—Senators HUMPHREY and MORSE. I should add, of course, that they expressed the wish that certain newspapers and magazines would not chastize in editorials those who happened to favor rigid farm price supports. That is a dilemma the publishers face, but it does not detract from the validity of the policy which permits the distribution of the printed word to all Americans at low postage rates.

It will be said that the Department is not seeking to overload the publishers. Only $17 million is sought, they say.

If I understand the figures, that leaves a deficit in second class of about $230 million. Who is to pick up the check for that amount? The first-class users of the mail? Third-class users? I know of no logical reason why that should be so. As surely as county agents' salaries are paid for out of general taxation and not by an assessment or fee placed on the farmer, so should the second-class subsidy be paid.

Let's earmark it as a subsidy and remove it from the postal deficit. The Congress cannot legislate intelligently on a postal rate bill until all subsidies have been acknowledged and the true deficit determined.

On this public service question, I have mentioned my belief that the rural delivery service is far from paying its way. I suppose this is a touchy subject, but from the best information I can get the demand for rural carrier positions is very great. Now there must be a reason for this. I am told they are well paid and that the hours worked by many rural carriers are extremely short—sometimes as little as 5 hours a day. I am not charging that this is so but I would like some member of this committee to develop the facts. If I am wrong, I am open to conviction. But if I am right, the fact reinforces my point that the Department cannot be run as a business.

Another witness appeared here—Congressman GARY, of Virginia. I should like to read into the record an answer he got from Assistant Postmaster General Abrams regarding the closing down of unneeded post offices. Mr. Abrams stated:

"We have closed 3,048 post offices. I can say without fear of contradiction that if I had closed all of those which were recommended for closing there would have been probably over 5,000 closed. There have been many we have not closed. Many of those were continued on the basis of complaints of the people of the community. That is the type of appeal which has been used very effectively."

It will be obvious that the Department is subject to pressures which prevent it from acting in a fully businesslike way. I remember another occasion last year when it was decided to keep a profitless post office open on the appealing ground that the former great ballplayer Cy Young got his mail there.

No steely-eyed chairman of a corporate board ever decides issues for such reasons. I am sure the hard-pressed small-business man is never moved by this kind of appeal.

Getting, finally, to the case for third class and why I do not think the rate should be increased. First off let me say that the rate structure for various third class items is somewhat confusing to the uninitiated. There is an individual piece rate presently of 2 cents for the first 2 ounces, 1 cent for each additional ounce. This kind of letter can be dropped in the corner mailbox, unsealed. It may not carry any personal message. It is subject to inspection and it is handled by clerks only after first- and second-class mail are out of the way.

Here again we have a paradox in public opinion. This particular rate emphasizes my point. It has been claimed that few people care about or read third-class mail. Yet half the Christmas cards sent by Americans through the postal service go out under this third-class rate. The Department never makes cost ascertainment studies at Christmas time, but we have the word of the greeting card manufacturers that 1 billion Christmas cards—1 billion—go at the 2-cent third-class rate.

In a way this is Congress' Christmas present to the American people because the only time the principle of deferred service for third-class mail cannot operate is during the Christmas rush. It matters not, if you place a 2-cent or a 3-cent stamp on your Christmas card. It will get the same attention by postal clerks. The greatest confusion would exist if clerks had to separate such cards into first and third class. So, as I say, Christmas card senders are the recipients of a $10 million gift at Christmas time.

You might ask, "Is this not true of business third-class mail"? The answer is "No." From Thanksgiving through Christmas, the business users of third-class mail get out of the postal service. It is the one time of the year that they cannot get readership. People are just too concerned with other things at yuletide.

Next there comes the pound rate. On books and catalogs the bulk rate is 10 cents a pound. The weight limit is 8 ounces. An 8-ounce catalog is charged half of 10 cents or 5 cents. This particular rate has not been changed since 1949. H. R. 9228 proposes to increase this rate from 10 cents to 12 cents, or a hike of 20 percent.

Then there is a 14 cents a pound rate. This applies to heavy pieces of advertising material other than books and catalogs. An 8-ounce piece is charged 7 cents. It is proposed to increase this rate to 16 cents. I might say that about 5 years ago this rate was raised from 12 cents to 14 cents.

There is a minimum piece rate of 1 cent on nonprofit mail sent out by certain charitable, educational, fraternal, religious, and veterans' organizations. Until the last rate act both profit and nonprofit organizations paid the same rate of 1 cent. When the business rate was increased 50 percent to 1½ cents, the nonprofit rate remained at 1 cent. H. R. 9228 does not propose to change the nonprofit rate. I assume the deficit incurred on this type of mail is charged to all third class mail bulk. That, of course, should not be done. The cost ascertainment figures give no clue as to the volume of such mail. The fact should be developed.

We come now to the rate in which my membership has the most interest—the minimum piece bulk rate on letter mail. As I indicated earlier, this rate was hiked just 3 years ago from 1 cent to 1½ cents, or a boost of 50 percent. The present bill proposes to make the increase 100 percent over the original figure, or a minimum piece rate of 2 cents.

The largest volume of third class mail falls within this category—62 percent, I believe.

There are several misconceptions regarding this category of mail which I should like to clear up here and now. Before any mailer can qualify for 1½ cent rate he must purchase a bulk permit at a cost of $10. The present bill proposes to increase the permit fee to $20.

After he purchases the bulk permit, the mailer must perform certain manual handlings of third-class mail which, in the case of first class, the Department performs. They are as follows: The mailer must sort the mail into State and city bundles, he must face the letters on either side of the bundle, he must tie the bundles, he must use printed indicia or precanceled stamps so that the post office is relieved of the canceling burden, he must place it in mailbags and deliver it right to the post office where no handling is required save to put the sacks on the next outgoing train.

Now it will be obvious to all that if the mailer undertakes to do these expensive manual handlings, the cost to the Department is going to be much less for bulk third class than it is for first-class mail. The fact that this is so knocks into a cocked hat the claim that third class should bear 98 percent of its allocated cost and casts serious doubt on the fairness of a 75-percent formula.

If the Congress were to apply the 98-percent formula, the proper rate would be the same as that for first class. Congressman HARRISON of Virginia in his bill, H. R. 8801, has proposed that this very thing be done, namely, the charging of first-class rates for third-class mail.

Imagine if you can what would happen to the postal establishment if direct-mail advertisers were forced to pay first-class rates and dumped into corner mail boxes 12 or more billion pieces of unsorted, untied, uncanceled, unfaced pieces of mail. We once estimated that if you multiplied the 12 billion pieces by the 7 manual handlings and required the Department to do the job, 50,000 new clerks would be needed to process the mail.

But it isn't only the fact that the mailer performs so many manual handlings of third-class mail which warrants the lower rate. There is another economic principle involved. It is a principle used by business after business. The principle was valid when third-class mail was created. It is just as valid today.

I have reproduced a chart issued by the Washington postmaster which shows the volume, hour by hour, in a typical post office. You will note that the greatest rush of mail comes at about 5 or 6 p. m. This is so because businesses hold their mail until day's end and drop it in the mailbox at the late afternoon hour. This situation has plagued the Department for some time. Anyone who can devise a system to achieve an even flow of mail at all hours will have his name carved on some enduring monument.

Committee members might well ask: "How do we keep these valuable clerks profitably occupied during slack periods? Their wages go on. They are there, willing to work." It was just that kind of question which prompted the inauguration of third-class mail—a fill-in mail to be handled during slack periods.

Mr. Stans in his testimony put the problem this way: "The same pricing principle explains why night letters are cheaper than day telegrams and why crushed rock is transported by the railroads at lower rates than machinery."

I am glad Mr. Stans used the night-day telegram analogy. Members of this Committee will be interested to learn that the charge for a fifty-word telegram at straight rates from Washington to San Francisco is

$3.45. The same fifty words at night rates, which received deferred service, cost only $1.30. It makes our 1-1/2¢ rate look very favorable in relation to the 3¢ first class rate. The only difference—and a significant one—is that the mailer himself does a lot of the work.

It was Mr. Moss in 1953 who mentioned that gas rates are contracted for at prices based on peak and non-peak periods. Here again we have a good analogy.

Why is it that movie house owners charge less for admission in the afternoon than at night? Their overhead for both periods is the same. Again we have the simple answer: It is better to attract some customers than none at all during slack periods.

So too we find the National Theater charging $5.50 for orchestra seats for a musical and $2.20 for the second balcony.

There is a reverse to this principle often used by barbers. Barbers are flooded with adult customers on Saturday afternoons and evenings. At these times they do not want to handle the youngsters. Accordingly, they raise the price for minors during Saturdays. The children have plenty time to come in during the week when the barber is begging for customers.

What has been the result of Congress' creating the third class category of mail? One would never know it from the constant attacks made on third class mail, but this single decision by a wise Congress has had such favorable effects that today direct mail advertising stands as the second largest advertising medium in the United States, accounting for the sale of goods and services well beyond $15 billion.

Yes, members of the committee, I said $15 billion. Just kick that figure around a little bit. Compare it with the total production of oil in the United States, which, last year, amounted to $5½ billion.

I remember 2 or 3 years ago visiting the Commerce Department with a friend. One of the division heads there was curious about direct mail. When I mentioned that our postage bill alone was $250 million annually and that the mailers spent well over one billion and half dollars just creating their advertising material, the Government employee was astounded. He said, "Why we have no figures in the Commerce Department about this industry. Get something over to us." We did.

It seems to me that this committee would perform a real service if it would invite the comments of the Commerce Department regarding this legislation. Since all testimony shows that 75 percent of the Post Office Department's revenue comes from businessmen, the Commerce Department's advice should be sought.

There are those who sneer at advertising, those who believe that there is too much of it. I can make one comment in that regard and it is this—in America we can produce as much as we want of everything but it is not going to do us much good if we can't prompt the public to buy it. We are all familiar with the plight of the Chrysler Corp. just 2 short years ago. General Motors and Ford were gobbling up most of the car market. Chrysler retooled, restyled its cars. They went on an all-out advertising campaign. As a result, Chrysler is solidly back in the ranks of major automobile producers. I do not want to leave the impression that direct mail did the job. The colored ads in magazines; newspaper, radio, and television advertising did the major part.

Well, you will ask, if everybody is so successful, why not a rate increase? There is the issue. There is the great responsibility. Therein lies the need for careful judgment. How delicate is the balance? You must ask. Third-class mail is unusual in another respect. It is the tool mainly of small business concerns.

There are 230,000 bulk permit holders. These firms are big business only in the aggregate. And the Lord knows, and this Congress knows that if the small-business man goes under there will be difficult days ahead.

There will be a series of witnesses after me to tell you how this vital advertising sales tool is used. I urge you to give them the closest attention.

In closing I should like to say that you, the Congress, have created a great and important industry. Had the Congress of 1926 imposed a 2-cent rate instead of 1 cent it might not have come into being. Wisdom prevailed, however, and the fruits of that congressional decision are evident.

Because the fruits of congressional wisdom have been so abundant, I can sum up in a few words my views about that part of H. R. 9228 which provides for the creation of an independent ratemaking commission. There is a line in the Mikado which refers to playing the game with elliptical balls and a spiral cue. If Congress should ever divest itself of its constitutional job of setting postal policy and the establishment of postal rates, that is how the game will be played.

Texas and the Cotton Problem

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 17, 1956

Mr. TEAGUE of Texas. The magazine Texas Bankers' Record for February 1956 contained a very interesting article entitled "Cotton Farmers and Bankers Share Many a Common Problem." This article was an excerpt from a speech made before the meeting of the Fifth District Texas Bankers Association by Mr. Oliver Clift. Mr. Clift is the executive vice president of the Citizens National Bank of Waxahachie, Tex., located in my congressional district, the heart of the old historic cotton-producing area.

I think the article clearly demonstrates the problems of Texas in the cotton industry and its interrelation with the banking industry in that area.

COTTON FARMERS AND BANKERS SHARE MANY A COMMON PROBLEM

(Excerpts from an address before meeting of Fifth District Texas Bankers Association, in Dallas, February 6, by O. E. Clift, executive vice president, Citizens National Bank, Waxahachie)

In dealing with cotton farmers I have never found one of their problems that did not pertain to some banker. The banker has his investment in the outcome of the cotton farmer's operations; therefore, the cotton farmer's problems are the banker's problems, too. The sad part is many of the cotton farmer's problems are those over which he has no control; such as, no rain, too much rain, hailstorms, sandstorms, late freezes, etc. For 20 years I managed 8,000 acres of cultivated farm land. These farms were rented to third and fourth tenants. Back when we rented the number of acres per team, 50 acres was considered a one-team crop; 100 acres a two-team crop, etc. I have watched the farmers operate on a trial and error basis. After several years the farmer would find by trying various crops on certain parts of his land that one crop would do better than another. This was costly practice. I have seen farmers get in debt when cotton was 18 to 20 cents per pound and repay that money when selling cotton for 5 to 8 cents per pound, on the same farm and with the same number of acres in cotton. I do not know the answer. I have seen plowups, layouts, certificates, subsidies, parities, red cards, white cards, green cards, and now alloted acres that bring us down to the shifting of acres from one part of the country to the other. (See table below.)

Shifting of cotton acres, 1929–53

State	1929	1953	Increase (+) or decrease (−)
Texas	18,229,000	9,568,000	−8,661,000
New Mexico	132,000	323,000	+191,000
Arizona	227,000	401,000	+174,000
Missouri	348,000	561,000	+213,000
California	319,000	1,348,000	+1,029,000

Allotted acres by States

	1938	1956	Increase (+) or decrease (−)
Arizona	197,595	343,640	+146,045
California	402,472	782,405	+379,933
New Mexico	112,151	179,378	+67,227
Texas	10,019,639	7,410,893	−2,608,746

Now let's take from 1938 to 1956. This information is from the United States Department of Agriculture release, November 3, 1955, and USDA representative L. Beaty.

This information brings out the fact that Texas and the other older cotton-producing States are losing cotton acreage through USDA politics, and at the same time the Department is allowing new land from other States to be planted in cotton. This procedure increases the stockpile cotton carryover, since in most cases these new lands are in the irrigated districts and the yields are greater per acre. This does not make sense.

The same thing has taken place within our own State in the blacklands of north central, central, and east Texas. The State committee has seen fit to allow shifting of allotted acres to new western lands at the expense of the old cotton producing parts of the State.

Our part of the State has been a one-crop area, cotton being the only money crop. Our whole economy was built around cotton. The biggest business in our country is cotton farming, with a payroll of around $12 million a year. I have presented these facts to illustrate what is happening to the cotton farmer in our area. Take a farmer working 100 acres in cultivation. He is allowed to plant in cotton the coming year 38 acres—average yield would be half a bale, but grant he will make 20 bales; he pays one-quarter to the landlord leaving 15 bales for his part. Say the loan is 32 cents, that is $160 per bale, total, $2,400. His picking has cost $45 per bale; labor, gasoline, repairs, etc., $250. This small-cotton farmer is unable to qualify for a crop loan. He cannot show his banker how he can feed his family and have money left to repay even a small amount, taking for granted he makes a good crop.

The small cotton farmer faced with this problem has one of three courses: first, to take on a diversified program such as raising turkeys, chickens or feeding cattle; second, he can rent twice as much land to increase his allotted cotton acres; third, to quit the farm.

The banker has a big responsibility, and also a big opportunity to render service to the

cotton farmer. Every bank should have on its staff an agriculturist with banking experience who is quallified to analyze the farmer's operations, to determine and to work out a diversified program best suited to the man and take into consideration the type of farm land. Also, he should work with the local county agent and Soil Conservation Service to encourage practices that will increase revenue for the farmer. Every bank should contribute to the Texas Research Foundation, Renner, Tex. This fine organization is doing a wonderful job and deserves support. The cotton farmer problem will have to be worked out by a closer relationship between banker and farmer and not by the United States Department of Agriculture nor in the Halls of Congress.

Address by the Governor General of Ceylon Broadcast on the Occasion of Independence Commemoration Day

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

TEXT OF HIS EXCELLENCY THE GOVERNOR-GENERAL'S BROADCAST TO THE NATION ON INDEPENDENCE COMMEMORATION DAY, FEBRUARY 4, 1956

Eight years ago, when Ceylon regained her freedom, there were some who had lingering doubts about the reality of our independence. I am sure that, by now, these doubts have been fully dispelled. Just 2 months ago, our independence received the seal of international recognition when Ceylon took her rightful place in the United Nations Organization. But even before Ceylon entered the portals of this world assembly our international stature had been growing from year to year. Barely 2 years after the country regained her independence, a historic meeting of Commonwealth Foreign Ministers was held in Ceylon. From this meeting emerged the now-famous "Colombo Plan," which has contributed so much to the economic development of southern Asia, and which is so splendid an example of international cooperation between countries at widely differing levels of economic development. Its extension for a further period of 6 years was one of the most heartening international decisions of the last 12 months.

The Colombo plan aims at international cooperation in the economic sphere. Much bolder and wider in its concept was the plan for political cooperation between the nations of the Afro-Asian region, which emerged from the Conference of Asian Prime Ministers convened in Colombo in April 1954 by our own Prime Minister. This plan, which was a vague and distant dream in 1954, became a reality when the first conference of Afro-Asian nations was convened in Bandung last year. The tremendous importance of this conference has just begun to dawn on the world's consciousness. Half the human race is on the move again. It is as if a mighty giant has bestirred himself after centuries of repose. We in Ceylon have played an important part in translating the dream of Afro-Asian cooperation into reality. The notable contribution which our prime minister made at the Bandung Conference has received worldwide acclaim. The part he has played and the contributions he has made to the cause of Afro-Asian unity will forever be writ large in the pages of our island's story.

While Ceylon's prestige abroad has grown tremendously since she attained independence, her internal development—economic and social—has not lagged far behind. In our agriculture and our industry alike, in our health and social services, we have made spectacular advances to which we can look back with legitimate pride and satisfaction.

All over the island's dry zone, where for centuries wild animals have roamed undisturbed in their jungle lairs, buzzing hives of activity have sprung up. Huge tractors are busily at work felling the mighty forests. In dozens of land development schemes all over the dry zone, thousands of neat little cottages are springing up—cottages to which peasant families from all over Ceylon will be moved to begin a new and brighter life. Gal Oya is already a household word throughout the length and breadth of Ceylon. Less well known, perhaps, but collectively as important in the agricultural development of the island are the other major colonization schemes which, like Gal Oya, have been started after we achieved independence. Allai, Kantalai, Huruluwewa, Padawiya, and Vavunikulam are all major schemes begun in the last 8 years and now completed, or nearing completion. One hundred and fifty thousand acres of new land have been opened up under these major colonization schemes, over two-thirds of this total being paddy land under irrigated cultivation. The total irrigable area under major irrigation schemes has increased by over 60 percent—from about 170,000 acres to over 280,000 acres. In other words, in 8 short years, the Government of independent Ceylon has brought two-thirds as much land under irrigated cultivation in the dry zone as was done in the previous 150 years.

Food production constitutes one main strand in the pattern of Ceylon's agriculture: The other main strand is, of course, the cultivation of plantation crops for export. While the battle on the food front has forged steadily ahead, our great plantation industries have not stood still. Here, the tea industry has the brightest record. The island's production of tea has mounted steadily since independence, from 298 million pounds in 1948 to over 360 million pounds last year. This spectacular increase in so short a period has been achieved with no significant change in the area under cultivation. When we recall how closely intertwined Ceylon's trade and prosperity are with the fortunes of her tea industry, we realize how deep is the debt of gratitude we owe to those who have maintained the efficiency of this industry and made the steady expansion of its production possible. Rubber and coconut have, unfortunately, not registered a similar expansion. But their turn will soon come. Fifty thousand acres of worn-out rubber land have already been replanted with high-yielding clones under the Government-sponsored rubber rehabilitation program. A further 100,000 acres will be replanted in the next 4 years. When this area comes into bearing, Ceylon's total production of rubber will increase by nearly 50 percent. A parallel program for the development of the island's coconut industry has just been announced and will be brought into effect very shortly.

While agricultural extension and improvement are Ceylon's most pressing requirements, no balanced development of her economy will be possible unless there is a simultaneous advance in the industrial field. Here, the leeway to be made up is much greater and the progress made since independence is perhaps less spectacular. But the foundations for the future development of our manufacturing industries have been well and truly laid. The essential prerequisites of industrial advances are power, capital, and technical skills. In each of these fields we have made notable advances. In 1947, the year immediately preceding the attainment of independent, Ceylon's total production of electric power was barely 55 million units. Last year it had increased to over three times this figure. The first stage of the Laxapana hydroelectric project was completed in 1951, and the second stage is already well under way. To meet the two other requirements of industrial advance, the Ceylon government has recently set up two new organs. The Development Finance Corporation will remedy the serious shortage of finance capital for industrial development. The Council for Scientific and Industrial Research will meet the pressing need for fuller technical knowledge regarding the potentialities of local industries, and supply the skills needed to adapt modern industrial techniques to local conditions.

It will profit us little if we develop the country's economic wealth, agricultural and industrial, while we neglect our vast human resources. Ceylon is not, and will not be, an unhappy land where wealth accumulates and men decay. Our welfare services, our health and education services in particular, are held out as models for the rest of Asia. The death rate, the infant mortality rate, and the maternal mortality rate are universally recognized as among the most sensitive indices of the general health and well-being of a people. These rates have all dropped by 30 percent or more in the 8 years since we attained independence. The death rate has dropped from over 14 per 1,000 in 1947 to approximately 10 last year. Infant mortality has dropped from over a hundred to approximately 70, while maternal mortality has fallen correspondingly, from almost 8 to under 5 per 1,000 births, in the same period. These rates are now lower than those in any other Asian country, with the possible exception of Japan, and compare favorably with the rates prevailing in many advanced countries of the West. The progress made in the field of education, since independence, has been equally spectacular. We are spending today twice as much on education as we did in 1947. We have been able to accommodate in our schools 1,600,000 children. Increased attention is being given to a more practical approach in education, not only in the form of the acquirement of skills, but in the approach to the acquisition of knowledge.

In the progress of any land, the position of its public finance is the controlling factor. In Ceylon, our finances have never been better. At the end of 1953 our net public debt stood at 993 million rupees. At the end of 1955 it was 898 million rupees. In December 1953 Government had to pay 2.48 percent on 3-month treasury bills; but in December 1955, Government was able to borrow at .75 percent. At the end of 1953 the external assets of Ceylon were 607 million rupees and at the end of 1955 they were 1,154 million rupees. There is no inflation in Ceylon. Consumer goods are in plentiful supply.

I have given you these facts to prove that the overall picture is most encouraging. The carefully conceived 6-year plan has started auspiciously, but the final picture will be bright only if everyone in the nation does his best to produce the desired results. It is necessary that those responsible for the execution of the 6-year plan should realize that in a democratic country like ours, it is not a question of being ordered to do something, but of carrying out a task, willingly, as a duty and a pleasure. I appeal to every member of the public service to give of his best as a demonstration to the people whom they serve, and to the world, that our love of country can take a very practical form. The great tasks which lie before us cannot be brought to fruition except through this single-minded devotion to

whatever type of work each one of us is called upon to perform.

I have been repeatedly appealing during the last 18 months for continued and increased financial support to the various voluntary and religious organizations that daily minister to the underprivileged in this land. In this connection the people of Ceylon will never forget the magnificent gift by our Prime Minister, to the underprivileged orphans of Ceylon, of his grand Kandawala residence, with its housing estate of 100 acres, with 25 beautiful bungalows already on it. There are many corporations, and individuals, in Ceylon, who can well afford to emulate our Prime Minister's example.

The leadership of a country is in the hands of one or a few individuals. These provide the inspiring example and given the direction in which to advance. The responsibility of implementing this leadership, however, belong to all grades of the peoples of Ceylon—to every home—and in the final analysis to every single individual. It is to them I make my submission today. There has never been in the long history of this land a period when the oportunities for a real advance in the happiness of our people have been greater, or more real. It must never be said of any of us that, in such a period, by failure to put first things first, by disunity, by overemphasis of matters that are not fundamental, by exaggerated fears and baseless suspicions in regard to each other, we have lost opportunities of great service to our country. I firmly believe that the ties that unite us as a nation will in the end prove stronger than the differences which divide us. I wish independent Ceylon and her peoples another year of great happiness.

Israel's Eighth Birthday

EXTENSION OF REMARKS
OF
HON. IRWIN D. DAVIDSON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. DAVIDSON. Mr. Speaker, it is a privilege to join with my distinguished colleagues and say a word with regard to the observation of the eighth anniversary of the State of Israel. I am unable to say "happy birthday" for this is not a happy day for the little democracy which is surrounded on all sides by hostile, aggressive, and threatening neighbors.

I wonder how long the State of Israel will have to stand on guard. I wonder for what period of time she will have to continue to spend practically all of her substance on armament and a military establishment. This is the state which cheerfully burdened itself with a program of immigration for distressed and homeless people and sought to work out an economy amidst most inhosptiable surroundings. From a harsh, cruel, and unyielding desert of sand, Israel's people have brought forth a citrus industry. They have worked the farms so that now her people are self-sufficient insofar as vegetables are concerned.

Israel has worked and has accomplished much to educate and give medical ministrations to the people of the Middle East. She has given dignity and self-respect to people who have heretofore despaired of any further whatsoever. All the while she has had to stand guard. Farming, with a rifle ready at hand. Teaching children with a lookout on the hill. Nursing the sick with an armed guard on the roof of the hospital.

Israel has endeavored and succeeded in making a great humanitarian contribution to a benighted and backward part of the world. She is entitled to a happier birthday than the one she celebrates today.

I wish merely to say, Mr. Speaker, that if Israel's requests for defensive arms are granted by this country, Israel will have a happy birthday because war will be averted. There will be no conflagration in the Middle East with the fearsome possibility of its spreading throughout the world. Stability will take the place of impending chaos. There will be no need for foreign intervention. And I must here repeat, Israel is not asking that the United States send its soldiers to fight her battle. Israel wants to defend itself, or better yet, ward off and avert Nasser's threatened aggression.

President Eisenhower and Secretary Dulles, you, gentlemen, can make this a happy birthday for Israel, and at the same time, you can serve the cause of world peace, democracy, and fair play. As Winston Churchill has recently put it, you can discharge an obligation which this country owes to the democracy of Israel as a matter of honor.

The Need for the Housing Congress

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mrs. FRANCES P. BOLTON. Mr. Speaker, there seems to be an effort in progress to make political capital of the fact that a group of women will gather in Washington next week to exercise the important force of public opinion about consumer preferences in homes.

Mr. Albert M. Cole, Administrator of the Housing and Home Finance Agency, recently asked the women of the United States to tell him what type of home they as homemakers would like to live in. From some 3,000 replies, he chose about 100 that seemed to show the keenest interest, the most insight into this problem and the most fruitful ideas. With some regard to geographical location, 100 women were invited to attend the Housing Conference that will meet in the Nation's Capital on April 23, 24, and 25.

It is an example of truly representative government that the Housing and Home Finance Agency should draw upon the collective knowledge and wishes of women in the home to help the Agency in its necessary functions. Mr. Cole's Agency has, among other functions, supervision of the Federal Housing Administration. The statutes and regulations governing the FHA require that in the insurance of mortgages in its regular and most often used programs it should consider the economic soundness of the dwelling with relation to the housing market. Homes that do not meet modern standards and tastes are not economically sound. Who can be more helpful than a panel of 100 women who have demonstrated their interest in this matter, and who represent all segments of our diversified Nation?

As a Member of Congress who has sponsored and supported housing legislation in the past several years, I object to those who say it is silly and useless to ask for this very pertinent information from homemakers. I would remind those who question the need for women's opinions that the latest figures available to me show that women hold 40 percent of the titles of America's 30 million homes and that they pay 40 percent of all property taxes. It is generally agreed by those who have made studies of home buying habits of the American people that women are in the main the final arbiters about whether a home should be purchased and—once bought—what should go into it.

It has been contended also that the recent publication of a book entitled "What People Want When They Buy a House," makes this Housing Congress unnecessary. In checking the facts I learn that although this volume was published last year, it was based upon a sample survey made 6 years ago. The Agency tells me that there was no money available to provide for the publication of the book in the time intervening. The book, I am informed, is an excellent study, but reflects none of the modern developments in housing, nor does it give the woman's point of view which is so important to sound home building.

Those who have the greatest stake in adequate homes for America's families are strongly endorsing the aims of this Housing Conference. Supporters include the General Federation of Women's Clubs, the National Association of Real Estate Boards, the National Association of Home Builders and the American Institute of Architects.

I would like to add my congratulations to Mr. Cole for originating this project that will attempt to improve homes by going to the people most directly concerned: the women of America.

Letter From Dr. Frank S. Wong, President, the American University Club of Hong Kong

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. BYRD. Mr. Speaker, under previous leave to extend my remarks, I wish to include a letter which I have just received from Dr. Frank S. Wong, president, the American University Club of Hong Kong. Doctor Wong's correspondence emphasizes the importance of trade to the Communists, and he

also emphasizes that it is imperative that the United States not relax its opposition to trade with the Communists. He says that supplies such as machinery, gasoline, diesel oil, and various metals are being smuggled into the mainland of China where they are exchanged for narcotics. He also stresses the effect with which the Communists are using beguiling smiles, and he explains how stage and screen and press are employed as media through and by which the insidious propaganda of communism is being disseminated and spread. I commend Doctor Wong's letter to the attention of my colleagues.

The letter follows:

THE AMERICAN UNIVERSITY CLUB
OF HONG KONG,
April 7, 1956.

Hon. ROBERT C. BYRD,
New House Office Building,
Washington, D. C.

DEAR MR. BYRD: I must apologize for my long delay in answering your kind letter of February 22, 1956. I had a recurrence of rheumatism in my limbs and attended to the sickness of my life. We are now much better, so I am able to write you. I am now giving you some news and views about the situation in this part of the world.

The embargoes against Red China are hitting the Communists hard. The scarcity of materials can be seen everywhere in Red China. The 5-year plan especially that relating to heavy industries suffers delay owing to the lack of capital goods.

The Communists are doing everything to defeat the embargoes by proposing a resumption of through train service between Hong Kong and Canton and direct sailings of ships between these two ports. If such transportation facilities were available, considerable strategic goods in large quantities could be moved up to Communist China. This would mean that its war preparations and plans will be completed sooner and cost less.

At present small quantities of much needed supplies such as machinery and automobile spare parts, metals, gasoline, kerosene, and diesel oil are smuggled into the Communist mainland via Shea Kou (meaning snake mouth), a coastal village in Kwangtung Province about 25 miles northeast of Hong Kong. They are paid in farm products or with narcotic drugs, which are cheap in Red China and sold at high profits outside of it.

The prices of the smuggled goods at Shea Kou are generally 50 percent higher than those in Hong Kong, but machinery like certain generators which is priced here at HK$60,000 each is paid HK$270,000 by the Canton authorities in Canton. The price of a motion picture sound reproduction machine is HK$30,000, here but is sold at HK$120,000 in Canton. Small objects could flit through the eyes of the preventive services, but the heavier objects draw attention and are therefore more costly.

What I say here is a cross section of the violations of the embargo. There are shipments direct by vessels to Communist ports such as Foochow, Chuanchow, Shanghai, Tsingtao, Tientsin, etc.

More serious is the smiling offensive launched by the Reds with newsmen and players on the stage and screen, intellectuals and merchants as targets. The primary aim is to lessen their anti-Communist stand. Later on the victims will be forced to play Communist tunes. Newspapermen and writers are asked to write for the four local Communist publications or given outright subsidies, while workers receive aid in foodstuffs, schooling for their children, and medical attendance in case of need.

I want to draw you and your colleagues' attention to the imminent resumption of through train and direct sailing service, as it will enable heavy goods to get into Canton at quicker, cheaper, and convenient means. Unless democratic nations exert diplomatic pressure to prevent such new transportation facilities this plan will be materialized sometime this summer.

At the same time the United States Government should give more ships and planes to the National Government in Formosa to enforce the closing of Communist ports. This would block the continuous shipments of rubber, fuel oil, metals and other strategic goods consigned from Europe and points in southeast Asia to Red China.

One way to raise money to finance the purchase of smuggled goods and the smile offensive is to allow the Chinese in Hong Kong to visit their relatives and friends in China without the necessity of waiting for months for entry permits. Since last October, about 120,000 residents have visited their native districts in Kwangtung province. Each spent an equivalent of US$25 to US$40. Hence the Reds are netting an equivalent of about US$3,500,000.

Neither the United States nor Taiwan has any plan to check the Communist inroads in Hong Kong. I understand the United States Information Service has no resources or plans to cope with this Red offensive. I believe Washington should appropriate money—not necessarily large sums—to checkmate the Communist move and to go on the offensive. Some of the countermeasures may be best done by Chinese as if they were on their own, otherwise any trace of American participation would defeat its purpose.

I could give some concrete ideas on how to debunk the Red smiles as I am watching their maneuvers and methods. This matter is becoming more serious. Unless the United States is taking steps to stem the Communist tide in time, the entire world will be overwhelmed.

I shall be very glad to hear from you again and to know what is the reactions of the American people and Government toward this new and powerful menace.

Sincerely yours,

FRANK S. WONG.

Independence of the Ukraine

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1956

Mr. FLOOD. Mr. Speaker, the just cause of the independence of Ukraine, the largest captive non-Russian nation in the slave half of Europe, is well known to most Members of Congress. In the recent celebration of the 38th anniversary of Ukrainian independence numerous Congressmen and Senators paid tribute to the undying patriotism of the Ukrainian people and their stubborn resistance to Russian Communist domination. In many States and cities official observances of this occasion were held. In both the House and Senate invocations were given by representative Ukrainian clerics, and in this city a most outstanding banquet was held on the occasion, which many Members, Senators, and representatives of the executive departments, as well as other distinguished guests, attended.

The State of Pennsylvania proudly participated in these nationwide observances. I have received from Dr. Lev E. Dobriansky, professor of Soviet economics at the graduate school of Georgetown University and also national chairman of the Ukrainian Congress Committee of America, a short address delivered by the Honorable Roy E. Furman, Lieutenant Governor of Pennsylvania, commemorating Ukrainian Independence Day at McKees Rocks, Pa. This address clearly expresses the feelings and sentiments of the people of Pennsylvania toward the people of Ukraine in their courageous struggle for national independence and free government. I request that Lieutenant Governor Furman's address be printed in the Appendix of the RECORD:

ADDRESS OF ROY E. FURMAN, LIEUTENANT GOVERNOR OF PENNSYLVANIA, AT UKRAINIAN INDEPENDENCE DAY CELEBRATION HELD BY PITTSBURGHERS IN MCKEES ROCKS, PA.

It is befitting the people of the State of Pennsylvania to join today with the many other loyal Americans of Ukrainian descent in commemorating Ukrainian independence and in expressing sympathy and hope for the liberation of the people of Ukrainia; for Pennsylvania, more specifically Philadelphia, is the cradle of American independence. Furthermore, it is in the very nature of us Americans to sympathize with and encourage all nations in their aspiration and struggle for freedom and independence.

Unfortunately, today we find Ukrainia without her independence. Today there are no four freedoms for her—the freedoms for which the true democracies of the world struggled so long and so patiently during the last war. Instead, we read with distress of mass deportations of Ukrainians, of arrests in the night, of swift trials, of executions, of suppression of both the Catholic and Orthodox Churches, and of the other tragic symptoms of systematic extermination. These unhappy events can give us little cause for rejoicing on a day which commemorates a country's independence—an independence embezzled by Russian treachery and betrayal.

The cause of Ukrainian independence must be supported by our country, because it is based upon principles of representative government. The peoples of Europe who respect these principles and ideals should be given the opportunity to embrace them and shape their own way of life and choose their own form of government. Let us, at the very least, lend strong moral courage to those who through ties of family, friendship, and tradition, look to us as a powerful stronghold of moral and civil liberty, for a word of encouragement and hope in these troubled times. If we revere our American traditions, our country must take the moral leadership which is ours by virtue of our strength and moral heritage. We must work toward the goal of a world in which free governments are freely chosen by free men.

This is a moral ideal, but it is an ideal which will make for the greatest security for our country.

To be sure, the world outlook at the present time is not a happy one and the objectives of freedom and independence for all peoples may seen sometimes remote and elusive. But we Americans are gratified to know that the Ukrainian people continue to struggle for independence, for in reality, they constitute America's first line of defense. As long as Ukrainians and other East European peoples resist communism, russification, and consolidation, so long will Russia hesitate to start a major war. So I urge all Americans of Ukrainian descent, who would help to bring freedom and independence to their friends and kindred in Ukraine, to be of strong heart, firm in their purpose, patient in their determination, and unyielding in their

endeavor. I urge you to make known to the world the present sufferings of the Ukrainian people and their just and sacred efforts in the struggle for freedom. Today more than ever before when the fate of world civilization is at stake, we need organizations whose faith in the principles of freedom and justice inspire and encourage those who are still fighting for freedom.

America has profited from the fact that people from many lands have contributed to her strength. And we Americans, regardless of where our forefathers came from, should not hesitate to observe the significant anniversaries in the history of the people who have made our country what it is. The Ukrainian people, like other Slav peoples, brought to America love of freedom and devotion to God. And it is good that this is so, because America now faces stern challenges which will test to the utmost the character of her people. It is my sincere hope that the principles of liberty and justice, which are basic to both the American and Ukrainian character, will triumph, and that future Ukranian Independence Days will be occasions for happier celebrations.

Retirement of George P. Teel as Personnel Manager

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in the Tamaqua (Pa.) Evening Courier which pays tribute to Mr. George P. Teel on the occasion of his retirement, effective April 1, as personnel manager of the Atlas Co.'s Reynolds plant. Mr. Speaker, Mr. Teel was held in high esteem by both union representatives and representatives of management, which is an ideal situation. He has retired to White Haven, Pa., which is located in my district, and I wish him a long and happy retirement.

The editorial follows:

A HIGH TRIBUTE

The farewell party given by the joint negotiating committee of the District 50, United Mine Workers of America, Union of the Atlas Powder Co. for Mr. George P. Teel, who is retiring as personnel manager, is not only unique but is a high tribute to Mr. Teel and to the members of the union committee.

Seldom does any union honor or recognize a management representative and the fact that it has been done in this instance bespeaks well of the cordial relations among the negotiators on both sides of the issue.

It is particularly pleasing to the Tamaqua area because it offers one more proof to the skeptical that labor-management relations can be of the best in our area and discredits those who consider this a troublesome area insofar as employer-employee relations are concerned.

Every credit must be given to the Atlas local unions for displaying their respect for a man on the management side of the firm. They have thus demonstrated that above all else and despite differences of opinion, they recognize that we are all neighbors and neighborliness goes a long way to make good will.

Our congratulations to Mr. Teel on his long period of successful service to the Atlac Co. and to the Atlas firm for having such a man as Mr. Teel on their staff.

And congratulations to the union committee for their broadmindedness and the fine neighborly spirit in which they have recognized the true American way of life.

No Time To Relax

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 17, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Daily Evening Item, Lynn, Mass., which should be commended for its straightforward remarks in the issue of Saturday, April 14, 1956. It should have the thoughtful and studious attention of all Americans seeking to keep this Nation fully prepared to defend its freedom and liberty:

NO TIME TO RELAX

It should be carefully observed that while the present Kremlin rulers are busy reviling Josef Stalin and all his works, they still are dedicating themselves wholly to Leninism as the basic Russian Communist faith.

This is the key fact underlying the behavior of Soviet leaders today. For, in the view of experts who know Russians well, there is no fundamental difference in purpose between Stalinism and Leninism.

Stalinism was crude, brutal in the extreme, blunt, and unsubtle. But the record shows plainly that Leninism has been no less ruthless and cruel, though not so obvious in the applications of tyranny.

And with both forms of totalitarianism the great and unchanging goal has been world conquest.

In other words, the objectives of the Soviet regime have been basically the same from the moment the Communists came to power until now. Only, in some periods the ugly face has appeared undisguised, and at others it has been deceptively masked.

Currently we are in one of the latter periods, with Russian chieftains striving hard to put an attractive countenance on their single-minded efforts to seize the globe.

Unhappily, at such times they always seem able to count upon the gullible assistance of many intellectuals in Europe and elsewhere. No matter how often the mask is torn away, once the Kremlin has put it back in place these groups show a puzzling readiness to accept it as the true face of Soviet communism.

Unluckily, too, many others in the free world, given a freshly prettified and perfumed image of communism, show a disheartening tendency to push the ugly reality into the back of their minds. Thus falsely reassured, they seize the cheerful interlude to relax and let down their guard.

It is at these very moments when the Communist menace is perhaps most remote to many millions, that it is in fact most dangerous.

Today, while the Kremlin smiles, sends out good-will emissaries, and tries to disavow Stalin as an ogre, Soviet communism is pressing hard its already great advantages in the Far East, is fomenting trouble in the explosive Middle East, and is endeavoring to win Europe by economic devices and the quiet warfare of "political cooperation."

No one should be fooled. The Soviet Union is having altogether too much success with its newest and in some ways boldest masquerade. We have little to cheer about as we survey the state of our free-world friends. We have no reason whatsoever to let down our guard.

Aid on an effective scale still must go to those who can be helped to help themselves. Our military alliances must be kept intact and reinforced. And we must push ahead in the forefront of military science, knowing that our safety and the free world's depend largely upon our having at all times a command of force so superior that the Communists dare not ever translate their drive for conquest into annihilating war.

President Eisenhower's Speech, April 17, 1956

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. HESELTON. Mr. Speaker, the following editorial from the Washington Daily News of this afternoon is most significant and appropriate in terms of the action taken by the House today in sustaining President Eisenhower's forthright and courageous veto of the farm bill. It is clear already that the overwhelming majority of Americans, irrespective of party affiliation, and, to a considerable degree, regardless of their personal opinion of the wisdom of the farm bill, respect and admire the President for the action he has taken in this instance, which was entirely characteristic of his entire conduct of the office of the Presidency.

The editorial is as follows:

President Eisenhower kicked off his campaign for re-election last night with a speech to the Republican National Committee here in Washington.

It was billed as a strictly political speech—but it was not much of that in the usual sense. It was more a reiteration of the man's philosophy.

Basically, it is the philosophy on which this country was built, a philosophy which glories the individual and affords him the utmost in liberty and opportunity. It is a philosophy which rejects the theory of a paternalistic, all-knowing, all-doing Government.

In the more than 3 years the Eisenhower administration has been in office, it has not always been so clearcut in the practice of this philosophy as the President was in his 1952 campaign speeches. And as Ike restated it last night.

But the trend of preceding years, which was rushing the country headlong toward the welfare state, on a Papa-knows-best-and-does-best basis, has been checked and in some respects reversed.

Here then is an issue which surely can be put to the test in the coming campaign. Those now in the running as possible opponents of Mr. Eisenhower all, in slightly varying degree, are advocates of the ever-expanding government.

Despite some of the performances of the Eisenhower administration, we think Ike passionately believes in the principles of self-reliance, competitive enterprises, restrained

government and administration based on the general good rather than the influence of pressure blocs.

We think American people are ripe for a decision on this issue. We can go to bat on it in 1956.

Fresno County, Calif., Celebrates Its Centennial and 100 Years of Progress

EXTENSION OF REMARKS

OF

HON. B. F. SISK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1956

Mr. SISK. Mr. Speaker, I am honored to rise on the floor of this House today as the Representative whose district includes Fresno County, Calif., to call the attention of the Members to a most significant event in the history of that county.

Tomorrow will mark the 100th anniversary of the enactment on April 19, 1856 by the legislature of the State of California of an act creating Fresno County. All this week the people of the county are celebrating this event and are pausing to pay tribute to the pioneers whose vision and courage, hard work and sacrifice, have contributed to the county's foremost position in our country. I am most happy to add my word to theirs and to ask that the Members join with me in marking this hundredth anniversary and recognizing its importance to the San Joaquin Valley, the State of California, and the Nation.

The people of Fresno County are rightly proud that their industry, vision, and hard work have carved an agricultural empire out of semi-desert and have won for the county for at least the past seven years an official classification as the richest county of the Nation in value of agricultural production.

Land that once was arid and nonproductive today nurtures the roots of farm crops valued at more than $300 million annually and forms the foundation for the steel and concrete and homes of 15 thriving, growing cities. The bounty of this 5,985 square miles of area comes from its fertile farm lands, its beautiful and valuable forests and its mineral-producing formations.

The key that opened the door to this phenomenal growth was water—water in the hands of farmers willing to couple their toil with a farsighted realization of the possibilities for making Fresno County a modern Garden of Eden.

From a sparsely cultivated, dry farming economy, with limited cattle and sheep raising, these farmers have successfully progressed through one-crop dependency on grapes and raisins to today's versatile production of some 86 different species of field, horticultural and seed crops. The 1954 total crop value represents an increase of almost 10 times the value of crops raised in the county in 1935, while acreage planted has increased from 450,000 to 1,329,210 in 1954.

In addition to its agricultural production, Fresno County is noted for its beautiful forests which provide both valuable timber and recreation for thousands of people, including visitors from all parts of the world who enjoy with us the scenic grandeur of the Sierra Nevada and its great national parks.

Concentrated in the county's western area is some $116 million in annual production of minerals such as natural gas, petroleum, and quicksilver, while the mountains to the east are mined for tungsten, gold, silver, and other minerals.

Its great attraction of climate and location have resulted in a constantly increasing industrial growth for Fresno County. Twenty years ago there were only 4,000 manufacturing employees in the county, while in 1954, 14,600 workers in industrial plants earned more than $94 million.

Fresno City, seat of the county, is the trading center and metropolis for the entire central section of the San Joaquin Valley, and is growing by leaps and bounds. A recent census disclosed more than 200,000 persons in this metropolitan area.

From its small beginnings as a sleepy frontier community a hundred years ago, Fresno County has achieved miracles of development and it can confidently look forward to equal miracles of progress in the future, which I know all of us want to see directed toward greater happiness, stability and finer achievements for all of the people of this great county. Tomorrow I am flying out to join with the people of my county in their centennial celebration and from the expressions of many of the Members here, I know that I can take with me the congratulations and best wishes of this House to the people of Fresno County.

How Surplus Watches Were Handled

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1956

Mr. GROSS. Mr. Speaker, the following letter written by an Iowa farmer and published in a recent issue of Wallaces' Farmer and Iowa Homestead throws an interesting sidelight on how military men take care of surpluses and, incidentally, protect industry:

To the EDITOR:

During World War II, I was stationed in Europe. And after the conclusion of hostilities, I had reason to visit the large Army Air Corps supply depot located at Burtonwood, England.

There, I saw an amazing sight. In one of the larger hangars, I witnessed the destruction of hundreds of pilots' and navigators' watches. The watches were laid out on mess tables by the hundreds. And two privates were systematically smashing them in the face with hammers while a second lieutenant checked them off, by the numbers, on a clip board.

Those watches were manufactured by Elgin, Bulova, and Waltham, and were contracted for by the Government—with the promise that they would never be brought back to depress the manufacturers' future production and prices. The entire Nation, therefore, bore part of the cost of overproduction.

Under flexible price supports, the farmers and the farm communities alone will stand the cost of reducing the wartime surpluses that rightly should be divided among all the taxpayers.

Punishing the farmers through lower and lower prices will only add to our surpluses. Farmers will be forced to work harder and do a better job of management in an attempt to make a living. When a farmer does fall by the wayside, his farm will be taken over by a more efficient man who has survived thus far, and who will produce more on the same land and therefore add to the problem.

DARRAH L. ROBERTS.

HARDIN COUNTY, IOWA.

World Trade: Highway to World Peace and Prosperity

EXTENSION OF REMARKS

OF

HON. IRWIN D. DAVIDSON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 11, 1956

Mr. DAVIDSON. Mr. Speaker, I have today, with pride and high hopes, introduced a joint resolution authorizing the President to invite the States of the Union and foreign countries to participate in the United States World Trade Fair to be held at the New York City Coliseum from April 14 to April 27, 1957. The personal satisfaction and pleasure I have in offering this resolution is twofold: I am honored to take this small part in the World Trade Fair for it is a step toward better international understanding, economic advancement and good will; and because the New York Coliseum is part of a vast new development in my district on Manhattan's west side. From the Coliseum at 58th Street, north to the Lincoln Square dramatic arts center, we are witnessing a vast rebuilding and redevelopment of a too long neglected area. As a result, the entire west side is being revitalized. The city of New York, the State and the Nation will benefit immeasurably.

The United States World Trade Fair will bolster and encourage the economies of our friends throughout the world.

The fair will be one of the first of important events to be held in the coliseum, and rightly so. It will be the most comprehensive of its kind ever to be held in the United States. Foreign nations will be given an opportunity to exhibit their products together under one roof, to offer them for sale to the buyers from all of North and South America at our principal port and the hub of our merchandising and marketing industry: New York City.

The well being of all of us depends upon the ability of each to produce products, goods or services which others need. Without trade we wither and die.

At the close of World War II we recognized this and in an effort to restore the devastated lands we established the Truman and Marshall plans. Point 4 aid enabled millions of people throughout the

world to start rebuilding. It is now as it has always been, the policy of the United States to assist others to achieve greater prosperity for themselves through freedom and trade. This is a continuing policy. The dole, the handout is no part of it. Necessity has at times required such measures, both at home and abroad, but it is a well known fact of life that a policy based on handouts is bankrupt and debilitating; the giver does not like it; the receiver detests it and in time comes to despise the benefactor. We all know this truth.

It is the same in international life as it is in family life. The brother-in-law who needs and gets monetary assistance to overcome temporary financial difficulties does not resent the help at first. But as it goes on, if he continues to accept a weekly gift, he begins to lose self-confidence and self-respect. The giver meanwhile deplores the lack of initiative he sees. How much better it is to help him find a job so that he might earn his own way. Then the formerly dependent in-law becomes a productive, happy, and proud member of the family.

The United States World Trade Fair presents a unique opportunity. At the Coliseum businessmen of all nations will assemble in the most modern exhibition hall in the world. Each will demonstrate what he produces and offer it for sale, proving again what we all know: Every dollar earned in trade is worth hundreds in aid.

The cold war is now being waged in the economic arena. I stressed this fact last June when we considered the foreign-aid bill. Russia has for the time forsaken bluster and force. Now she resorts to guile and economic penetration.

Russia is in reality trying to play our game. Let them play, for we will triumph. By a positive, continuing program in keeping with our historic aims, we can and shall help others to help themselves and to eliminate want and fear, disease and hunger, war and poverty.

The United States World Trade Fair is a tangible demonstration of our desire to work with and help peoples in all nations, through free and competitive enterprise. World trade, the mutual exchange in an international market place of goods and services, of arts, crafts, cultural and scientic ideas and advances is the high road to world peace and world prosperity. No greater goal can be desired. This is our aim.

On the other hand, pure or preponderantly military alliances, as history has demonstrated time and again, are highly perishable.

Economic ties are ties of strength and solidarity when based upon an awareness of common goals and common hopes and will result in the creation throughout the free world of indestructible alliances, freely and openly made, desired by all and impervious to Communist threats or guile.

Let us then join together, here and with our friends abroad, to stride forward with determination, and with hope and strength, confident in the knowledge that through efforts such as this trade fair, part of a continuing, morally forceful and responsible program of international trade, we shall as partners in the free world achieve that ultimate goal: peace, prosperity, and freedom.

Parity Prices and Farm Conditions

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 18, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a telegram I received from Robert M. Harris, of New York, as well as a letter I received from a farmer in Lisbon, N. Dak., dealing with the farm problem, enclosed with which was a notice of an auction sale.

There being no objection, the telegram, letter, and auction sale notice were ordered to be printed in the RECORD, as follows:

PALM BEACH, FLA., *April 16, 1956.*

Senator WILLIAM LANGER,
Washington, D. C.

Congratulations on the good fight you made for parity prices for the farmer and agriculture. I supported President Eisenhower in the 1952 election. May I suggest you bring to the President's attention that in the 1952 campaign the President stated the farmers were entitled not to 90 percent of parity but 100 percent. The farmers and rural population are the backbone of our country also the Republican Party and it is imperative that prompt action be taken to restore parity prices otherwise the Republican Party is certain to lose the November election. This can be quickly avoided by stockpiling one-half of our God-given surpluses that are our best weapon against combating world communism properly administered and selling the other one-half equally monthly over a period of years on long-term credits to friendly non-Communist countries. The selling must not be left at the discretion of any governmental agency as this will depress prices. In substantiation of the foregoing will you please read the U. S. News & World Report issue of April 13 on the analysis of the recent Wisconsin primary election and also their issue of April 13 on President Eisenhower's campaign promises.

Best wishes.

ROBERT M. HARRIS.

FOREST HILLS, N. Y.

LISBON, N. DAK., *April 16, 1956.*

Hon. WILLIAM LANGER,
United States Senator,
Washington, D. C.

DEAR SIR: Can you do anything to get that organization, the FHA to be somewhat reasonable in their dealings with these small farmers who have been hit by bad weather and rust the past 3 years. They are termed "disaster loans," and that is exactly what they are proving out to be. The Government has to have their money even if it works actual hardship on the family involved. I don't believe that is right or in any way reasonable.

I didn't ask you to pursue my case any further as it was too late to save me then and if I cause the FHA any trouble they will surely find some way to hang me for misuse of Government money or some darn thing.

You can congratulate Mr. Eisenhower and Mr. Benson on the wonderful job they are doing on the little farmer in this section of the country.

Between the administration's farm policy and the FHA regulations, I'm whipped. I'm selling out Friday the 20th in the hopes that I get enough so that I can get out of this section of the country.

I wish to thank you again in regard to my welfare and if you can help anyone else in this mess I know it would be greatly appreciated.

Thank you very much.

ALBERT C. LINDHOLM.

AUCTION SALE

I will sell the following property at my farm, located 8 miles south and 6 miles east of Lisbon, 2 miles east of Aliceton School, on Friday, April 20, at 1 p. m.:

Fourteen head of cattle: 6 purebred Holstein cows—two 8-year-old milking; one 5-year-old milking; two 5-year-old springing; one 4-year-old springing. Two milking Shorthorn cows—one 5-year-old, fresh soon; one 8-year-old, fresh soon; one 4-year-old Whiteface and Shorthorn cow; two 2-year-old Shorthorn Holstein heifers, springing; one 8-month-old purebred Holstein heifer; one 8-month-old Shorthorn Holstein cross heifer; one 3-month-old purebred Holstein heifer. All Bangs tested and vaccinated.

Machinery: One 51-mm. 12-foot press drill; one International washless cream separator; one 46 MMU, very good; one 40 Ford tractor; one 51-mm. 4- to 14-inch plow; one 40 Ford 2- to 14-inch plow; one 50 Ford 2-row cultivator; one 51 Woods Dearborn combine; one 4-wheel trailer, wood flange box; one 4-wheel trailer, straight box; one trailer on steel wheels; one 300-gallon gas barrel and hose; one hay rake; one Ford hay bucker, three rolls cribbing; two 50-gallon gas barrels; one 30-gallon gas barrel; hay forks, milk cans, grease guns, many other articles.

A. C. LINDHOLM,
Owner.
GAY LOVAS,
Mayville, Auctioneer.
FARMERS STATE BANK OF LISBON, *Clerk.*

Terms: Cash, or see clerk before sale. Zion Ladies Aid will serve lunch.

Auto Dealers Interested in the Federal Highway Program

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. MULTER. Mr. Speaker, I desire to direct to the attention of my colleagues the following letter, forwarded to me on April 10, 1956, by the Brooklyn and Long Island Automobile Dealers Association, Inc., expressing its interest in the passage of Federal interstate highway legislation this session:

BROOKLYN AND LONG ISLAND AUTOMOBILE DEALERS ASSOCIATION, INC.,
Brooklyn, N. Y., April 10, 1956.

Congressman ABRAHAM J. MULTER,
House Office Building,
Washington, D. C.

DEAR ABE: The 450 members of our association (Kings-Queens-Nassau and Suffolk) are enthusiastically in favor of and want Federal highway legislation enacted. We all feel that highway legislation is a must for

this session of Congress. The exact form of legislation or the precise method of paying for it are secondary considerations to the urgent necessity for more and better highways.

It is vital to national defense, to the national economy, the preservation of life and property, and to our business.

We urge your support for the early passage of such legislation.

Yours very truly,

HENRY EISENHAUER,
Executive Vice President.

Civil-Rights Legislation

EXTENSION OF REMARKS
OF
HON. EARL CHUDOFF
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. CHUDOFF. Mr. Speaker, a program of civil-rights legislation can and must be enacted in this session of Congress.

There is nothing before this Congress more vital to our national conscience and to our international self-respect than assuring all citizens of this great Nation freedom and security in the exercise of their constitutional civil and human rights.

We all know that the suppression of and infringement on those rights is still a threat. We cannot expect to continue to lead a strong free world successfully as long as our enemies can exploit this as a defect in our national character.

Our forefathers had the courage to recognize and declare the equality of men before God and the law. Can we do less than enforce this equality?

Mr. Speaker, we cannot, we must not, let down the people of the world now. We must not fail to do what we know is right, just, and necessary. We must wipe out every vestige of the suppression of the civil rights of millions of our fellow countrymen.

On April 9 the Attorney General sent to the Congress a so-called civil-rights program of the present administration. Unfortunately, this is a weak and inadequate program. Evidently strong leadership in this vital field does not grow on the golfing greens of Georgia.

The administration's program does not go nearly as far toward the protection of civil rights as do bills introduced by myself and by other Members of Congress. I am sure the administration's program does not go as far as Congress is ready to go right now.

Mr. Speaker, the great interests of the Nation and of the free world require that we in Congress take the lead and enact a good civil-rights program immediately. We must put an end to lynching; we must strengthen our election laws and abolish the poll tax; we must guarantee to all citizens full protection and enforcement of each and every constitutional right; we must wipe out discrimination in interstate travel. A vigorous commission with authority to study all types of economic, social, legal, and other developments affecting civil rights and with a duty to present its findings to the President, to Congress, and to the country must be established. A regular joint committee of Congress should be set up with the protection of civil rights as its main concern. The civil-rights activities of the Justice Department must be strengthened and made effective.

These measures will be a definite step in the right direction. They will do much to redeem our national conscience and to restore our place in the minds and hearts of oppressed and hopeful people everywhere.

Future Use of Anthracite Coal

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial of the United Mine Workers Journal of April 1, 1956, which outlines the future and extensive use of anthracite coal with relation to the steel industry:

ANTHRACITE FOR BLAST FURNACES CAN MEET STEEL'S NEED FOR FUEL

The public is not generally aware of it but there is one type of coal that is in short supply in the United States. Outside of the industry the average person thinks of coal as coal and is vaguely aware that this country has virtually unlimited supplies.

But the basic steel industry, now in a period of major expansion, has urgent need for ever-increasing amounts of blast furnace fuel. We agree with the anthracite industry that steel producers have only to look in their back yard to find large and readily available reserves of hard coal that well may be the steel industry's answer to the need for metallurgical coal.

The steel industry will add 15 million tons to its capacity in the next 3 years, compared to an average annual increase in capacity of 3.5 million tons over the past 10 years. On the average it takes a ton of coal to make a ton of steel.

The anthracite industry believes that it has the answer to the metallurgical fuel problem. Tests conducted by the United States Steel Corp. and the United States Bureal of Mines show experimental blast furnace operation to be successful with anthracite substitutions for coke up to and including 60 percent of the total fuel. These tests do not provide the final answer because that can come only from actual operation. But there is every indication that some percentage of anthracite may be used satisfactorily above 10 percent.

This is not a new idea, by any means. Anthracite was the No. 1 metallurgical fuel in this country from 1854 to 1874. As late as 1890, 173 of the Nation's 551 blast furnaces were using anthracite, the Anthracite Industry Bulletin notes.

The shift to coke came not because coke is a superior fuel—anthracite and coke have virtually the same carbon content—but because the steel industry moved westward to the Mesabi Range to obtain its ores.

Without scrapping or redesigning a single blast furnace, a minimum of 10 to 15 percent of the steel industry's fuel requirements can be met by the partial use of anthracite.

If the steel industry uses anthracite as a substitute for coke in from 10 to 15 percent of its total blast furnace requirements, the demand on the anthracite industry might reach from 8 to 12 million tons annually. Reserves of hard coal are such that the steel industry could expect such requirements to be met for 150 years.

Editor Fights Prejudice

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. DINGELL. Mr. Speaker, I rise today to insert into the RECORD a tribute to a good friend of mine, Mr. Charles Wartman, of the Michigan Chronicle, which appeared in the Detroit (Mich.) News of Wednesday, April 11, 1956.

Mr. Wartman has served his country, his people, and the city of Detroit with distinction for many years, as executive editor of the Michigan Chronicle, a fine newspaper which is dedicated to the principle that all of our citizens should share the equality which the Constitution of our beloved country guarantees.

I hope that all who read this editorial on Mr. Wartman and the Chronicle will join in my pleasure not only at the splendid job which the Chronicle is doing for our people, but at the strong and constantly anti-Communist stand which it has taken at all times:

EDITOR FIGHTS PREJUDICE

(By William T. Noble)

Charles J. Wartman is a history professor who 11 years ago decided his future depended more on the present than affairs of the past. He gave up teaching for a career in journalism. Recently he took a few hours out of a hurried schedule to review the accomplishments or failures of his decision.

Wartman, executive editor of the Michigan Chronicle, one of the country's leading Negro newspapers, concluded the change of careers had been a wise move. He looked pridefully on the growth of his paper and scanned a series of temperate, informative articles he had written about the sad and sometimes crushing problems of his people.

WITHOUT RANCOR

"A classroom never could be as satisfying," smiled the 40-year-old editor.

For the last 11 years Wartman and his staff of college-trained men and women have been chipping away at ancient prejudices through the columns of the 20-year-old weekly newspaper.

But theirs has been a quiet, persistent voice. They survey the scene without rancor or rebellion. Often the age-old color question is discussed with a sense of humor not found in many such publications. But more often they chide those people who want to maintain the invisible line separating their people.

"The Negro today is a powerful economic factor," said Wartman. "It would be foolish to ignore us, and most sensible businessmen realize it."

CIRCULATION 38,000

Detroit feels the Virginia-born Virginia State College and Atlanta University graduate, is making slow but positive strides toward what he calls an "integrated," society. But the goal of leading Negroes, said Wartman, is to eliminate race consciousness in America. He admits it will be a long struggle.

But it is a challenge. And that is what is making his career so interesting.

Wartman and the executive council of the weekly paper that boasts an audited circulation of 38,000, take particular pride in the many issues tackled in the past 20 years.

The newspaper, with offices in a converted residence at 268 Eliot, was established by Louis E. Martin, now editor-in-chief of the Chicago Defender. Martin, still publisher of the Chronicle, felt his people needed guidance during the period of labor organization in the city.

"They didn't know which way to turn," said Wartman. "They were just beginning to get jobs in industry, and some feared alinement with a union would jeopardize their chance. Martin plugged hammer and tongs for unions. The Chronicle made many friends through his wisdom and built a firm foundation."

RIDICULED REDS

The Chronicle kept a sensitive eye out for Communist-front groups that tried to burrow into the Detroit Negro society and denounced them with scathing words and ridicule.

"The Chronicle staff probably is high on the Communist purge list," smiled Wartman. "We want to be recognized as first class citizens, but only under the framework of our present Government."

The award-winning paper also has taken a few editorial stands not popular with all Negroes. But these things are quickly forgotten when subscribers review the paper's basic unswerving policy of equal civil rights.

ASKS STATE JOBS

It asks for State and city appointments for Negroes, "but only for qualified Negroes, and not merely because they are Negro," Wartman pointed out. In this field the paper has succeeded quite notably. Wartman is a member of the Michigan State Fair board, and managing editor William Matney is secretary of the Michigan Board of Athletic Control.

Management of the paper is divided between Wartman, Longworth, Quinn, general manager; Matney, Clarence Jackson, advertising manager, and Martin, who only occasionally confers from Chicago.

Wartman, a slight man who dresses conservatively, and frequently prefaces or emphasizes his remarks with quotations from the great poets or historians, visions the day when a Negro will be able to sit with a group and never attract attention simply because he happens to be dark-skinned.

"This race consciousness is America's greatest battle," he said. "How can a white man intelligently solve the problems of Negro education, etc., when he sits in his office worrying about whether a Negro will move next door. He can't.

Dissolution of Cominform Means Nothing

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. HILLINGS. Mr. Speaker, Russia's announcement that the Cominform has been dissolved actually means very little. The Communist information bureau which was established in Warsaw 9 years ago actually has been inactive since 1949.

The significant point to keep in mind is that abolishing the Cominform has not changed in any way the complete and total loyalty of the Communist Parties in various countries throughout the world to the Soviet Union. The Red organizations in other countries blindly follow every twist and turn of the Soviet line and owe their first loyalty to Russia. The men in the Kremlin despite their change in tactics have not given up their hopes of world domination.

Recent events as well as observations made on my trip to the Soviet Union and five satellite countries last fall convince me that we are enterihg into one of the most dangerous and demanding periods in world history. It was much easier to keep our guard up when the Russian-led Communist movement was engaging in aggression and obvious subversion to destroy human freedom. The snarling Red tiger is often less dangerous than the smiling Red tiger.

It is imperative that we keep in mind that the Communist conspiracy continues to follow the Soviet objectives in all political problems and aids and abets Russian intelligence services throughout the world.

We must now recognize that the new Russian approach will be much more palatable to nations in the West, including our own, than previous Soviet policy. We must now prepare ourselves to accept a greater responsibility than ever in leading the free world in this more relaxed and at the same time more dangerous Russian approach. We must accept this new challenge by the Communists to compete with us more readily in diplomatic and economic fields.

Yes; Nursing Career Is Glorious

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mrs. FRANCES P. BOLTON. Mr. Speaker, every now and then I am asked: "Why have you always been so deeply interested in nursing and nurses?" Several weeks ago the Cleveland News printed an article by Severino P. Severino, their medical news writer. He wrote the article as a memo to his daughter, Pat, a young girl, 16 years old, who had asked her father his ideas about a nursing career.

Mr. Severino's answer to Pat so beautifully illustrates what a nurse means to one who is ill that I want my colleagues in the House to read it. Under unanimous consent to revise and extend, I include in my remarks Mr. Severino's article:

YES; NURSING CAREER IS GLORIOUS

To Pat—my 16-year-old daughter who asked me today about a career as a nurse:

I'm happy you are considering a career as a nurse. It is a proud profession that adds glory and dignity to all womanhood.

A nurse is sunshine in the bleakest hours of human life. She brings charm to a house of antiseptics and detergents. She makes a small cloth cape twinkle like a costly mink.

She is an angel of the gentle word and soothing touch. She is the strong hand that moves a 200-pound patient in one deft turn.

She moves softly and swiftly, and the swish of her uniform in the corridor gladdens the heart of the ill. She is everybody's leaning post.

She shields herself with calm against the rude patient, the whiner, the cantankerous, the bossy. Her face is a mask in the depths of stress and strain. She is a mother, a bully, a friend. She is kind, scolding, and flattering. Her smile is equal to a mountain of medicine.

She is a veteran of human joy and tragedy. She is an authority on pain. She has witnessed death when it is cruel and when it is merciful. She has clasped the hand of life to the threshold of death.

She is the one whose heart is broken a million times. She melts to the pleading eyes of every ailing child. She keeps a vigil when he is sinking. And she sobs herself to sleep when he is taken away.

She is a woman of sacrifice, of hidden emotion, of gallant selflessness. She is a buck private in a hierarchy of discipline. She is a beautiful queen to a curly headed boy.

She is the one who shares the torture of every patient's crisis. And then she rides home on a pink cloud when he makes it.

She is the one who teaches good diet and she herself nourishes on quick peanut-butter sandwiches.

She is the one who watches romance pass by and yields to the duties of her ironing board.

She is a girl in white whose labors rank with the noblest of human effort. Her pay is not great.

Her biggest reward shines through the eyes of those she serves. She was born with a passion for nursing.

Her career started when she lavished her love on her sick doll. Very much, Pat, like you used to do with your doll, Penny.

Farm Legislation

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. PELLY. Mr. Speaker, rigid farm price supports in the 1956 farm bill vetoed by President Eisenhower would have kept the farmers' incomes high in an election year, it is true, but it encouraged costly overproduction for increased storage at the expense of all the people. As usual, the President did the right thing.

After all, the domestic parity plan for wheat alone would have cost consumers in increased grocery bills almost $350 million. All food products containing wheat would have gone up in price. Bread would have gone up about 2 cents a loaf. Also, under the two-price plan for rice, its retail price would have increased at least 2 cents a pound. Low income city families would be doubly subsidizing the farmer.

The results of rigid supports have been high food prices plus high taxes for payments and cost of loans and cost of storage of surpluses.

The farmer, like any other group, has a right to expect protection from all-out

distress, but farmers should not expect their Government to return to a barren program which created and was responsible for the basic trouble.

It seems to me, Mr. Speaker, the administration's soil-bank plan would cut surpluses and yet boost farm income. The delay in enacting this program into law in time for this year's planting is not the administration's fault. But the President's suggestion of advance payments to the farmers to alleviate their distress should help to overcome part of the effects of the delay of this Democrat-controlled Congress.

The farm bill as voted by Congress as President Eisenhower said was a bad bill for all the people of the country. In the interests of my constituents and consumers generally, that is why I voted against it.

By the same reasoning, I am voting to sustain the President's veto.

But I will vote to help the farmer because that is what the soil-bank plan will do, but not by adding the cost to the consumer's food bill.

I urge immediate action on the soil-bank plan recommended by the President to reduce surpluses and prevent distress prices.

USAFE-Sponsored Youth Activities Plan Embraces 10,519 Service Children

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. GAVIN. Mr. Speaker, I want to take this opportunity to compliment the United States Air Force in Europe on their splendid program of youth activities. Lt. Gen. W. H. Tunner, his staff, and the members of the USAFE have earned and deserve our hearty commendations for the excellence of this youth activity program in Europe.

I include as a part of my remarks an article from the April 7, 1956, issue of the Army-Navy-Air Force Journal:

WIESBADEN, GERMANY.—The United States Air Forces in Europe boast one of the strongest youth activities program in the Air Force with more than two-thirds of the command's dependent children between the ages of 6 and 18 participating in some form of youth activity.

A recent report revealed that 10,519 youth participated in the USAFE youth activities program during the last quarter of 1955. Teen age clubs alone added 800 members since the previous quarterly report.

Maj. Gen. Mark E. Bradley, Jr., USAFE's vice commander in chief, emphasized the importance of the command's youth activities program when he said:

"The scope of our efforts must be governed by the valid premise that our young people constitute our greatest national treasure. The grasp of basic values and development of moral character which we impart to them will in great measure influence their life upon reaching maturity. Our country, one day, will be what they make it. They are our future. No effort should be spared to assure them an environment for development which will be conducive to great strength of character on their part."

OVERSEAS NEED GREATER

The need for a youth program in overseas areas is greater than at home because normal recreation activities such as movies, TV, parks and playgrounds may not be available. Likewise, normal neighborhood and community interest in youth activities is lacking in overseas areas. For these reasons a strong youth program becomes a necessity.

USAFE leaders considered the program important enough to establish a special Youth Activities Branch in the Personnel Services Division at USAFE headquarters to guide and direct youth activities throughout the command.

The responsibility for youth activities at installation level was given to the base commander. However, the base commander, in most instances, appointed a youth activities council to aid him in carrying out the program.

A typical council consists of a chairman, project officer, personnel services officer, chaplain, parents, youth representatives, and other specialists in youth work such as teachers.

The USAFE program is financed from nonappropriated funds distributed to installations on a strength basis. Each base usually gets additional financing through local fund raising drives.

VOLUNTEERS ARE KEY

"Success of the program hinges directly on participation of volunteer instructors at base level who must support activities with their time and effort," said Maj. Donald J. Tyler, Chief of the USAFE Youth Activities Branch. More than 1,300 adult volunteers and assigned military leaders are now working in the youth program.

One of the big problems attached to parental participation is lack of training among parents in conducting a youth program. To help alleviate this problem, the Youth Activities Branch at USAFE headquarters periodically distributes appropriate literature to parents concerned with conducting the program. In this connection, the branch published a 79-page Dependent Youth Activities Manual that provides the basic framework for carrying out a youth program at installation level.

Arrangements have been made with the National Recreation Association to provide this command with a professional instructor for 1 month to train volunteers in program planning and operation. The first series of these training courses will be held this May in Germany, France, the United Kingdom, and French Morocco.

Of all the various youth activities in the command, the scouting program is the best organized and has the largest participation. About 4,000 boys and 3,000 girls participate in Boy Scout and Girl Scout activities through a joint Army-Air Force program under the direction of the Transatlantic Council, Boy Scouts of America, and the North Atlantic Girl Scouts of America. Both councils have their headquarters in Heidelberg, Germany, where a staff of professional personnel from the two organizations direct scouting activities in this area.

TEEN-AGE CLUBS TOPS

Junior and senior teen-age clubs are a favorite of the older children. In all, the USAFE program encompasses more than 50 different types of clubs, sports, and hobby activities from archery to woodwork.

One of the primary aims of USAFE's youth program is the development of better community relations between American dependent youth and the youth of countries where Air Force personnel are stationed.

USAFE Commander in Chief Lt. Gen. William H. Tunner wholeheartedly endorsed this aspect of youth activity when he said of German-American relations:

"I believe that the true spirit of friendship, and also most lasting, can be developed by close association of German and American children during their early years of life. The individual friendships and common understanding developed by our youths of today, many of whom will be the leaders of tomorrow, will endure through the years and have a vital and far-reaching effect on our future American-German relationships."

GOOD-WILL AMBASSADORS

An example of how individual friendship and common understanding between German and American youth can be fostered was the organization of a "small fry" soccer league in Wiesbaden, Germany. Half of the team was composed of German youth and the other half made up of American youngsters. The teams were coached by Germans and Americans.

"The small fry soccer league proved unusually successful," said Major Tyler, "and it will be adopted at other localities in the future."

The big problem of overcoming the language barrier in such countries as France and Germany is accomplished by conducting mandatory language courses for USAFE dependent children in Air Force operated schools.

"We feel we have an excellent youth activities program now, but we know we can make it even better. Our goal is to provide a diversified program that will offer some type of recreational activity for every boy and girl in the command between the ages of 6 and 18," Tyler said.

"Emphasis will be placed on constructive activities in which children can learn by doing; activities that develop the mind as well as the body; activities that encourage mass participation rather than mass spectators," he said.

Pat Casey and the American Theater

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein a very interesting article concerning an old friend of mine, Pat Casey, now residing at Springfield, Mass., formerly head labor relations representative for the movie picture industry.

The article historically portrays the great development of the American theater and the movies and the significant part which Mr. Casey played in the entertainment world of his time.

The article is as follows:

REPORTER'S NOTEBOOK
(By Frank B. Murray)

Pat Casey, a native son of Springfield, can look back on a theatrical career spanning more than 60 years—a career that took him from the managership of the old Gilmore Theater here to the bright lights of Broadway and then on to the glittering center of the entertainment world, Hollywood.

Mr. Casey, who retired in 1948 after 21 strike-free years as labor relations chief of the Motion Picture Producers Association in Hollywood, is more than 80 years old now, but he recalls the early days of the theater and the very beginning of motion pictures with remarkable clarity.

Resting in his home in Bellevue Avenue, attired in a blue silk dressing gown, this large, powerfully built man with well-groomed white hair and twinkling light blue eyes that peer out from a cheerful pink face, told of his career with the ease and color of an old sea captain spinning a yarn of sailing around the tempestuous Horn.

His career began in 1894, when he was manager of the Parlor Theater in Bridge Street, located about where the side entrance to Steiger's store is now. This was the Gay Nineties period, the days of bustles and flowing gowns, of bowler hats and flowing moustaches, when you could get a schooner of beer for a nickel, along with a free lunch, and it only cost a dime to see a good show.

"The town was a good theater town in those days," he remarked. "The Parlor Theater ran two shows a day and they were always packed. But Colonel Getting, who owned the building, sold out to the telephone company, so we moved to the Gilmore, where the Capitol Theater now stands. People had to walk up two flights to get to the theater, but it was always packed just the same."

Mr. Casey recalled that the late George M. Cohan, one of Broadway's all-time greats, worked at the Gilmore in those days in the team of Cohan, Woods, and Harris. But they played melodrama and it was some time before George reached his peak. He remembered, too, the start of another great career.

"The first time Mary Pickford ever played before the public," he said, "was in a show that appeared on the Gilmore stage. She was just a kid then."

* * * * *

In 1898 the Nelson Theater, which was later to become the Fox Theater and now is the Art, was built.

"This Nelson was from out west," Mr. Casey recalled. "One of the Vinton girls put up the money. It was a beautiful theater. They spent a fortune on it. So we closed at the Gilmore and moved up to the Nelson."

Mr. Casey recalled one of the first performers there, a little girl about 5 years old, named Elsie Bierbower, from Columbus, Ohio. It was her first stage performance. But the little girl later became internationally famous as the beloved Elsie Janis.

Business, ironically enough, was not as good at the sumptuous Nelson as it had been at the old Gilmore, despite the glittering surroundings, he said. Pat couldn't figure it out, so he asked one young fellow, a devoted patron of the Gilmore, why he didn't like the Nelson. The answer was that he didn't feel at home, at ease, in the new palace of gold.

"You see," Mr. Casey explained, "in those days going to the Gilmore was like going to church. It was a habit. Young fellows would come home from work, eat their supper and drop down to the Gilmore. When the Nelson came along, they figured they'd have to dress up to fit in with the new showplace and they didn't care at all for it."

Just about that time the first movies entered the theatrical picture.

"The Pathe people from France took a machine to New York," he said, "and in a short while the city went mad with the movies. Then the Biograph Company was formed. They put a machine into Keith's Union Square Theater in New York and the crowds were standing in the streets waiting to get in.

"Wally McCutcheon, who was manager of Biograph at the time, was a friend of mine and I tried to get the films for Springfield, but they asked $750 a week for four weeks and the figure scared me. I finally raised $2,000, all I had in the world, and asked him if I could get the films. He told me to come back when I had $3,000. I finally dug up the $3,000 and took the first movies back to Springfield."

Pat showed them at the Gilmore charging 10 and 20 cents admission.

"I never saw such crowds," he said. "They were coming from all over in horses and carriages; whole families, bringing their kids to see the first moving pictures."

Things technically were not nearly as good as they are today. The cameras had to be cranked by hand, he said, and frequently the film would snap, which required that a small card, asking patience while the film was repaired, be flashed on the screen. Biograph at that time was working with film about an inch and a half square and they couldn't keep up with the demand. The Pathe people, he added, and other foreign concerns, came out with film about three-quarters of an inch in size, which is now called 35-millimeter, and which could be used on all screens. This first big technical development put Biograph out of business.

Studios were operating in Jersey City, Brooklyn, Philadelphia, Chicago and other places by this time, and the first great stars were making history; stars such as the Gish girls, John Bunny and Francis X. Bushman, the Clark Gable of the early 1900's. D. W. Griffith was top director of the day and the western films were cast with names such as Bronco Billy, Tom Mix and his horse Tony, and the grim-faced gun slinger, William S. Hart.

Pat had another specialty. While he was running the theater here, his brother had a horse auction. Pat was the auctioneer.

It was this horse auctioneering that brought him face to face with another great figure, Will Rogers. It was at an auction Pat ran in Madison Square Garden. A western outfit brought in some draft horses and some cowhands along with them.

"These cowhands used to do tricks with ropes and other little acts to entertain the audience. At one of these shows, in comes the gawkiest guy I ever saw. All he had was a horse and a rope and all he would do was chew gum and twirl the rope. I thought he had something to offer. I had some friends who ran theaters in New Jersey so we made a deal with this cowhand to show his rope twirling acts from the stage. He agreed, just to pick up a little money. Soon after this we got him to the old Hammerstein theater in New York.

"One night, while he was twirling his rope, chewing his gum and remaining absolutely silent, something went wrong and he made some wise crack. The audience roared and the manager came rushing to me to make sure that he made the same wise crack in the next performance. He did and the audience roared again. After that he wasn't silent any more. He kept making wise cracks in his drawling way and Will Rogers was on his way."

As a vaudeville booking agent in New York after the turn of the century, Mr. Casey rubbed elbows with other greats. He ran a show on a roof garden in a Pennsylvania city for F. W. Woolworth, the 5-and-10-cent-store magnate, and Woolworth offered to build him a theater. Unfortunately, Pat couldn't find a site on any of Woolworth's extensive property holdings in New York that he thought would be suitable for a theater.

He was in at the start of the career of another man who was destined to make a great mark in the theater, particularly the movies, William Fox. The latter twice offered Pat a partnership with him, Johnny White and Bill Long, in his budding enterprise. Pat rejected both offers. Fox, he said, started off with two theaters that everybody figured were all done. Pat made a deal with him to supply talent and even worked out a program of putting on little-known acts from the West. The shows caught on and Mr. Fox, instead of being ruined, was in business for good.

At that time the Academy of Music in 14th Street, which was built by Tompkins of Boston and Ed Gilmore, brother of Dwight Gilmore of this city, was New York's biggest theater. "The Old Homestead," its first big success, had a 2- or 3-year run which virtually paid for the building. Tompkins died, and after Gilmore passed away the building went to his nephews, the Gardners. Schubert offered $65,000 a year for the building and Fox finally got it for $100,000.

"Nobody figured Fox could raise the money at the time, but I was in the lawyer's office when he came in and peeled off 100 thousand-dollar bills and laid them on the table. The banks were closed and nobody dared take the cash, so he had to take it home with him overnight," Pat said.

Fox started a stock company in the Academy and Pat recalled that one of his first stars was Theda Bara, the slinky vamp of the first celluloids. After that Fox went into movies and became one of the top producers of his day.

After working for the B. F. Keith vaudeville circuit throughout the East, and the Orpheum circuit covering the western half of the Nation, Pat went to Hollywood at the invitation of Sidney Kent, then head of Fox Films, and Nicholas Schenk, president of the Loew Co., to handle labor problems for the fast-growing movie industry.

From the outset he took a leaf from the book of Franklin D. Roosevelt. F. D. R. was then Secretary of the Navy, and in Mr. Casey's opinion the labor agreement he wrote with the shipbuilding workers during World War I was the greatest labor contract ever written. He applied its arbitration provisions to his own dealings with the carpenters, electricians, truckers, and others who make film productions possible.

All disputes came to him first. If he couldn't settle them, they went to a union representative, and then to a committee, if necessary. But this man, who sat on the powder keg between the Nation's movie producers and the 38,000 trades union people for 21 years, ruled well. Disputes never went beyond him and there wasn't a single strike in his 21-year tenure.

"I wouldn't back down on anything," he said. "They used to tell me, 'Pat don't yell at us any more, please.' But everything went along all right."

In Hollywood the atmosphere was entirely different than in his old world of vaudeville and anyone listening to Pat might detect a slight note of nostalgia for the good old days. Hollywood, when he first arrived, and the Hollywood of today are vastly different, he said. Along with great technical improvements, there has been a great change in actors, he said.

"In the old days they'd throw a script at an actor and he played it well. Today everybody's got to be typed. There were some great actors then. Lewis Stone, there was an actor. That Swanson girl was very clever, too. Another girl who handled herself very well was Eleanor Powell from here. She refused to be pushed around. Old Louis Mayer thought the world of her. She kept her head. Wendell Corey is doing pretty well, too."

What Hollywood had done to other actors, such as Walter Hampden, they greatest Shakesperian actor, causes Pat's blood pressure to rise dangerously high. He doesn't pull his punches when talking about Hollywood.

He numbered among his close friends, William S. Hart, Lionel Barrymore, Marie Dressler, and Cecil B. DeMille. He was also very close to the late Irving Thalberg, the producer, and felt that Johnny Considine was a young fellow with a brilliant future as a director before he succumbed to the Hollywood life.

Pat's connections with the theatrical world are somewhat limited now, but frequently he is consulted by the bigtimers on some question or another. Highly regarded

on both sides of the labor-management picture. Pat's greatest tribute came from Eric Johnston, president of the Motion Picture Association. Johnston said:

"Pat Casey's retirement as MPA labor relations chief will be a great loss to the industry. Casey grew up in the show business. He has friends everywhere. All admire and respect him—for the warmth of his heart, for his unflagging energy, for his wisdom, his vision, his leadership. Casey leaves behind him 21 years of the most outstanding labor relations service any industry ever had."

And that is the story of the little boy who grew up on William Street, became a major figure in the theatrical world and who today is as untarnished by the glittering glamor of Hollywood as the day he entered it.

First Anniversary of the African-Asian Conference

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. POWELL. Mr. Speaker, today marks the first anniversary of the African-Asian Conference held in Bandung, Indonesia. I was privileged to be present. I rise today to commemorate that occasion by addressing myself to the problem of how we can win the uncommitted nations.

The uncommitted nations are centralized in southeast Asia. Southeast Asia is important because of its geographical location athwart communication lines and its enormous wealth in natural resources. Its manpower is capable of contributing significantly to world peace and prosperity.

Today all shipping between Europe and the Orient via the Indian Ocean must pass through either the Strait of Malacca or the Strait of Sunda. Control of these two southeast Asian straits gives dominance over a sea route that is comparable in importance to the Panama Canal route.

Furthermore, all intercontinental airways in the Far East traverse the southeast Asian area.

The successful advance of communism through China and well into northern Vietnam threatens the remaining southeast Asian countries with a more deadly form of colonialism than any the world has ever known. Extension of Communist control over the remainder of Vietnam, Laos, Cambodia, Thailand, and Burma, which together form Asia's rice bowl, would place most of the independent Asian nations in mortal danger. India, Ceylon, Japan, and Malaya, which are dependent upon that rice bowl for life itself, would have access to it only on Communist terms.

It was because of this that despite the attempts of the Department of State to dissuade me that I went to the Bandung Conference, April 18, 1955.

Now, as regards the Bandung Conference, let me be very specific and point out that the United States of America per se did not come out on top. The idea of democracy most definitely did. For the first time in the history of the world the Asian and African countries had an opportunity to go on record as to whether they wanted democracy or communism and they voted overwhelmingly for democracy. Because the United States has been the foremost exponent of democracy through all the years we naturally basked in the reflected glory.

Now, democracy does not of necessity have to win again in Cairo in 1956. On a significant question such as the admission of Red China to the United Nations, I believe that the Bandung conferees would have voted 17 to 12 against Red China. On this basis, I would say that 17 out of the 29 nations were committed to the idea of democracy. The 17 nations will not of necessity continue on the side of democracy. Very definitely, at the Conference, Cambodia and Laos were wooed close to the neutralists' camp. The future of South Vietnam is in danger. It is just possible that when the Conference meets again the forces against democracy plus the forces that are uncommitted to democracy might be in the majority.

Never, therefore, has any nation in the history of the world been confronted with such a great problem and with so little time in which to solve it as ours. And yet the very suddenness of this impact upon our Western World might greatly assist us in making the idea of democracy globally triumphant. Forces in Asia are compelling us to accelerate the timetable of democracy. An outstanding American paper cabled one of their correspondents in the midst of the Bandung Conference asking this correspondent to find out what were the opinions of the delegates from Asia and Africa concerning the Supreme Court's implementation of the decree to bring about integration in the public school system. This would be equivalent of asking an eastern Asian journalist in the United States to find out what the United States reaction was to the abolition of the untouchables in India or the signing of the agreement on dual citizenship of the Chinese and Indonesians. We know that these two questions were not explored in the slightest by correspondents here in the United States, but Bandung was of such importance that the American press wanted to know what was the attitude of the Chiefs of State of Asia and Africa on our own problem of racialism within our borders.

And so we come to this breathtaking moment when the United States of America, a modern colossus, stands astride western civilization with one foot at Oak Ridge, Tenn., and the other foot at Fort Knox, Ky., holding in our hands more gold than any other nation owns and more atomic energy than any other nation controls. We feel that we are all powerful. We sense that we are invincible. The voice of conscience has died. Where is there the still small voice to tell us that no man has ever lived by bread alone?

Congressman WALTER JUDD, distinguished missionary to China for many years, told me this story when I came back from Bandung. A very great Chinese leader said to him one day, "Yes, we need gold from the United States but we also want the roses." We are not going to be able to buy friends even though we have all the gold at Fort Knox at our disposal. We are not going to be able to frighten people into being our friends even though we possess the A-bomb and the H-bomb.

What does gold mean to vast sections of Asia and Africa where for thousands of years hundreds of millions of people have never even seen a piece of silver?

The possession of nuclear weapons did not help us. The specter of the H-bomb haunted the halls of Bandung. No single thing has done more to destroy trust in us than the explosion of the A-bomb at Hiroshima and the continuing experiments in the South Pacific. In other words, the very things upon which we place all of our pride and all of our faith in the future—gold and atomic power—these are utterly meaningless in the Far East and when misused are actually Trojan horses within our camp.

The time is getting short. The caravan of democracy will succeed there only to the degree that it comes with roses; with complete equality and with complete dignity for all men.

Matthew Arnold stood on the beach of Dover one day when the hordes of nazism were poised on the other side of the English Channel ready to destroy that fair isle and penned these words:

> We stand between 2 worlds, 1 world is dead and the other world has not yet been born.

Bandung was the womb from which the other world sprang. The President of Indonesia in his opening address called his address, Let a New Asia and a New Africa Be Born. And they were born: A potential for peace was unleashed by the peoples of the Far East. Now we have suddenly thrust upon us full and certain knowledge that the old World is unmistakably dead, irretrievably gone. The shaping of the New World and the giving of content to it will no longer be monopolized by western powers.

More than anything else our Christianity is on trial, too. The Asian-African Conference was a great parliament of the world's religions. The concept of brotherhood was stressed repeatedly. One speaker said:

> If our religion, whatever it may be, does not allow us to get along with our brothers, regardless of what his religion may be, then our religion cannot be of much value.

Here in the United States, the forces of organized religion are still operating in a 19th century fashion in a 20th century world.

The powers of Caesar—the Supreme Court of the United States—have contributed much more effectively to the cause of brotherhood and to the cause of the recognition of the individual's worth than has the Christian church. Where the Supreme Court on one hand has abolished segregation in the public-school system, the United States of America still continues to practice segregation in

its churches. The eminent Dr. Wade McKinney, of Cleveland, Ohio, said one day:

> There is more segregation practiced in the United States of America at 11 a. m. on Sundays in our Protestant churches than at any other time in our Nation.

This then is the time for a great positive moral witness on each of us. We have lost this individual personal witness. We gave it over to the politicians in the field of civil rights. We abdicated our responsibility as churchmen to the paid professionals. Even though we go to church in droves, contributing as never before, we say "that paid professionals will take care of our religious responsibilities during the week," and we return to our ancient ruts of intolerance and prejudice.

The hour has been struck at Bandung for us to recapture our individual witness. The mantle of world leadership cannot become sheep's clothing. We must rise up and accept the responsibility regardless of the agonizing soul searching that must precede it.

We are a privileged people, privileged to live at one of the great crossroads that every now and then the force of history thrusts upon an unwilling world. Which way we should take depends entirely upon the individual choices made by American people up and down the main streets of our villages and hamlets and in our towns and cities. Capitol Hill cannot do it for us. The Supreme Court cannot be our personal witness. Individual, personal, moral witness must be made. The faith of our forefathers is not enough but the ferment of our forefathers is a deadly necessity.

And so, in far-off Indonesia on April 18, 1955, maybe America was brought back to the kind of arena that our forefathers lived in and died in. The men who stood at the rude arching bridge at Lexington and Concord were men dedicated to the idea of an individual witness. Black Crispus Attucks, striding across Boston Commons, refusing to bow his head to British colonialism and dying—the first American to die for freedom—was a dedicated revolutionary.

Bandung sent us forth on our way to a new world. As we journey as pilgrims to these new meccas, we cannot journey blithely as tourists but we must walk with the full weight of destiny on our shoulders. We must walk with the awesome knowledge that we have become the appointed prophets of democracy, that if communism shall envelope the earth it will be because we failed in these testing years to give a bold and free and untrammeled witness to the idea and ideals of democracy.

Across the broad earth's surging breast there comes a cry of 1,400 million people, why cry, in the language of Donald Grant, for "admission to the front door of modern mankind." We are the guardians of that front door. The marks of the fraternity of modern mankind are decent clothes, minimum creature comforts, abolition of disease, no illiteracy and above all, no patronizing condescensions. This, the entire world, all humanity, is determined to have. If the United States of America, meaning you and I, do not let them in, they are going around to the back door where Soviet Russia with blandishments and enticements is urging them to come. They do not want to go in the back door unless we refuse to open the front door.

The weakest spots in our democratic offensive is the Department of State. Our Asian-African foreign policy is being given to us second-hand through the foreign offices of the English, French, Dutch and other colonial powers. In other words, we, the foremost exponent of democracy in the free world, are evaluating Asia and Africa through the eyes and ears of powers which are being pushed out of Asia and Africa as fast as the natives can do it. This is why we have been behind the eight ball in so many places such as Indochina and the same tragedy is being repeated in North Africa as we follow this 19th century policy.

On Monday, May 9, I met at a top level off-the-record meeting with the key people of our Department of State. I will not be breaking any security rule by saying that one of those present insisted that Bandung was an anti-white conference. I spent quite a little time disputing his point. When I saw the President of the United States, Dwight David Eisenhower, on Wednesday, May 11, I mentioned this to him. It is not permissible to quote the President of the United States; nevertheless, I can state that he pointed out that this State Department position could not be true because we had so many friends at Bandung standing up and fighting for the United States. This is an obvious fact to anyone.

How could Bandung be antiwhite when democracy came out on top and the majority of the delegates were praising the United Nations and the United States? And yet, after the Bandung Conference it was still the considered opinion of one of our top career men that Bandung was a conference against the white people. I do not discount the possibility that Bandung can develop through the years into an antiwhite conference. If it does it will be because we of the western Anglo-Saxon world refused to give them the equality and the dignity which they and God demand that all people should have.

Another great mistake in the operation of our Foreign Service is the steadfast refusal of the Department of State, under Democratic and Republican administrations, to utilize colored Americans in embassy posts. When Mr. Eisenhower first became President of the United States I got hold of a confidential analysis of the Negro in the Foreign Service from the Department of State files. This is not marked "classified" nor "security" and I am going to release portions of it for the first time because I hope that by doing so American public opinion will be goaded into action to do some good. Page 7 of that analysis is as follows:

> The above report represents considerable progress after much diligent work by the Office of Personnel. However, it is admitted that there is much to be done before it can be said that the Department of State has hired nonwhites fully and fairly and has utilized them to best effect in various parts of the world. There are only 55 Negroes among the 8,231 persons employed abroad in the Foreign Service. There are only 15 Negroes with upper-grade classifications among the approximately 6,700 departmental employees grade 7 and above who are in Washington, D. C. Small progress has been made in the hiring of Americans of Asian descent. Only 7 are known to be employed both at home and abroad. Present outlook for employment opportunities in the Department of State is not good.

Now it is important to realize that I am quoting from a State Department document so there can be no arguments about any discussion later. I would like to continue now:

> Some further idea of the importance of such employment (nonwhites) can be seen in the experience of United States delegations to the United Nations. The presence of Negro members in recent delegations to the General Assembly of the United Nations has been a source of good will and stimulated confidence in the United States. Moreover, the division of opinion on many issues in the United Nations Assembly, especially in relation to human rights has sometimes tended to follow a color line, white against non-white, with Russia seeking to be recognized as the champion of the nonwhites. In such situations, the assurance that Negro citizens of this country may be found among the employees and representatives of the Department is a source of strength to the United States in the presentation of its foreign policy and achievement of its objectives.

After almost a year and a half had gone by, Mr. George F. Wilson, Deputy Assistant Secretary for Personnel, wrote me from the Department of State:

> I have your letter of April 8, 1954, regarding the employment of Negroes by the Department of State. I cannot make any observation on the accuracy of your figures as to the number of our Negro employees.

I was unable up until then and I have been unable since to find out what the picture is in the Department of State but I do know that if an analysis could have been made by the Department of State in the early days of the Eisenhower administration, there is no reason why such an analysis could not be made now. In my White House conference with the President on May 11, I brought up this issue and I am happy to say that immediately he say the psychological value of colored people serving in our embassies. After President Eisenhower instructed Mr. Maxwell Rabb, Secretary of the United States Cabinet, to confer with the State Department, an appointment was arranged. Mr. Rabb and I met with Mr. Loy Henderson, Under Secretary of State in Charge of Personnel, and although a year has passed, absolutely nothing has been done. This, I consider, open defiance of the President's orders.

Bandung has placed a time limit on indecision. It is absolutely impossible for the United States to continue to hope for any more support from the people of Asia and Africa if we continue to abstain on the question of colonialism before the United Nations. Congress on June 6, 1955, by record vote in the House of Representatives and Senate, established the following as a part of our foreign policy:

[84th Cong., 1st sess. H. Con. Res. 153]

Whereas Communist imperialism and other forms of colonialism constitute a denial of the inalienable rights of man; and

Whereas the people of the United States have traditionally supported other peoples in their aspirations to achieve self-government or independence and in their struggle against tyranny or domination: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress that the United States should administer its foreign policies and programs and exercise its influence through its membership in the United Nations and in other international organizations so as to support other peoples in their efforts to achieve self-government or independence under circumstances which will enable them to assume an equal station among the free nations of the world.

Despite the fact that the foregoing resolution on colonialism was passed by both Houses of the Congress and thus became the law of the land, our delegates to the United Nations completely ignored this as indicated by the following votes:

Issues	For	Against	Abstained	Vote of United States
Cyprus—U. N. Assembly consideration of self-determination, Sept. 23, 1955.	28	22	10	Against.
Algeria—Question of U. N. considering French administration, Sept. 30, 1955.	28	27	5	Do.
West New Guinea—Placing the question of West New Guinea on U. N. agenda, Oct. 3, 1955.	31	18	10	Abstained.
South Africa—On the question to continue a special commission on the racial situation in South Africa and proposal to continue consideration of the subject, Dec. 6, 1955.	41	6	8	Do.

I am, therefore, requesting the Foreign Affairs Committees of the House and Senate to sharply question the appropriate officials as to why.

I recognize that Britain and France and other western powers have for centuries stood at our side and fought with us, even though the fighting has ofttimes been our men fighting with them to protect their national sovereignty and integrity. I do not believe that for 1 minute we should turn our back upon these ancient allies. We should very vigorously and emphatically state that in Europe they are our allies and we can always be counted upon to give them the fullest measure of every kind of support.

I do believe that a historic break must be made and that we must just emphatically tell them that we can no longer support either with aid or with arms any form of imperialism sponsored by these nations in Asia and Africa. The cold stark fact confronts us that whether we take this stand or not, imperialism is finished. The natives, country by country are going to drive out the colonial powers and if we continue to stand with these powers on the question of colonialism then we are going to suffer diplomatic defeats. The full force of freedom is now sweeping over the earth and there is no powers that can stop it—short of a complete war of annihilation. This I don't believe the most rabid isolationist or warmonger would dare to suggest. From here on in the Western powers can no longer decide the fate of Asians and Africans without their leaders being present. There is a new group of powers in the world; the Eastern powers, and this group of powers wants to work in complete cooperation with us.

It is true that the United States has no colonies in Africa; yet we have a great responsibility as a permanent member of the Trusteeship Council, for the Trust Territories of the United Nations in Africa. The total population of these territories, excluding southwest Africa, is 15,433,339. The land area of these territories would be roughly comparable to all of New England and the Middle Atlantic States.

Since the establishment of the trusteeship system and the recognition of international responsibility for the freedom of dependent peoples, the United Nations has become the center of a struggle between the colonial powers, principally England, France, and Belgium, and the ex-colonial countries, principally India, Iraq, Egypt, Pakistan, and Indonesia. The colonial powers constantly seek to limit the scope of international responsibility under the charter and the ex-colonial powers ceaselessly attempt to broaden it. Probably no other subject has consumed more time or claimed more items on the agenda in the various meetings of the United Nations. The ex-colonial countries are highly responsive to any evidence that the colonial powers are not expediting the maturation of self-government within their colonies and trust territories. They feel a natural kinship with those people still in bondage.

The United States is one of the six administering powers in the Trusteeship Council. However, its territories are not as extensive and it is not traditionally a colonial power. Thus, in this power struggle, the United States has officially sought to take a middle moderating position between the colonial and ex-colonial points of view.

On the surface this seems like a correct policy. However, in practice, the weight of the United States has been preponderantly behind the colonial powers. The result has been that the ex-colonial countries have come to the conclusion that since the United States is generally found to be supporting the colonial power position where it really counts, that it, too, is a colonial power. The Russians have never lost an opportunity to make this point, for they are only too happy to drive a wedge between Asian and African countries and the United States.

A very important issue that has come up several times in Trusteeship Council and the General Assembly is that of target dates for self-government for trust territories. In two cases of Italian territories, Libya and Italian Somaliland, the General Assembly set actual dates for independence. As Italy was a defeated nation, her opposition to this was not taken seriously.

The suggestion that target dates be set for the other trust territories has been strenuously resisted by the colonial powers. In 1952 the General Assembly invited the administering authorities to give reports on measures taken to lead their trusts toward self-government and the period of time regarded as necessary to reach this goal. This request was repeated again in 1953, over the opposition of the administering powers, who opposed the recommendation on the grounds that it was impossible to foretell the date of independence. The United States abstained from this particular debate.

The issue was raised again in the 1955 report of the U. N. mission to Tanganyika which recommended that assurances be given to the people of Tanganyika that they would have their freedom within 20 to 25 years. The United States was a member of this mission and the United States representative initially supported this highly controversial recommendation. Under great pressure from the colonial powers, however, the United States reversed its support for such a target date. Clearly United States officials in principle support this policy of establishing target dates but find themselves overruled by the State Department, which regards this as a secondary issue but is under strong pressures from the colonial powers who regard it as a primary issue.

The United Nations Charter provisions on trusteeship did not make provisions for visiting missions. These missions have often been criticized by the administering powers for their inability to make profound judgments on the basis of a 6- to 8-week tour of a territory. The Trusteeship Council should, therefore, establish advisory councils in each trust territory. This would enable the Trusteeship Council to play a more direct role in the supervision of the trust territories.

If the United States were to support the establishment of such advisory councils, the other administering powers would be hard put to refuse. This would be a highly strategic step for the United States to take at this time in expediting the movement toward self-government.

In the second place, racialism everywhere in the world must be speedily eradicated. This means that we must clean up our own house in the United States everywhere. The hard core of resistance based in the South must be dissolved. All Americans must become law-abiding citizens living according to the edicts of the Supreme Court, the orders of the President and the laws of our land. No Federal funds should go to any defiant State. In other words, stop subversion in our hearts and homes.

We must consider immediately the problem of South Africa and in the consideration of that problem we cannot afford, directly or indirectly, to allow the

people there to think that we are in any way condoning the policies of segregation. If the rule of reason and order does not prevail, we should consider economic sanctions against the Boers. If the whole force of the United Nations is unanimously dedicated to eradicating racialism in the Union of South Africa, it will go. We need to realize that the Union of South Africa does not intend to stay within the British Commonwealth of Nations. They are anti-British and already they have announced that by 1958 they will withdraw and set up their own separate nation.

Thirdly, a thoroughgoing drastic reorganization of our Department of State, its Foreign Service, and all related activities should immediately take place. This is the showcase of America. Regardless of what we do within our borders, regardless of how we think, regardless of what public opinion may be unless the Department of State is actively projecting these things into the full arena of international diplomacy, international relationships, and international propaganda and education, then all we do here is nothing but sounding brass. The full impact of the American way of life in all its vast and progressively advancing fields is not being sold to the people of Asia and Africa. It is not being sold because there is a roadblock at the highest peak—and that roadblock is in the Department of State. The men in the Department of State are undoubtedly able and dedicated, but they are operating under the archaic 19th century system of evaluations and they are letting minor matters of protocol stand in the way of America giving the leadership the world so desperately and hungrily is demanding.

Mr. Dulles is our greatest deterrent. I suggest Stassen, Nelson Rockefeller, or Chester Bowles.

Fourthly, the Madison Avenue technique of selling is one of the great innovations of American life. This is the kind of technique that we need in the international field—bold, daring, new, fresh, vigorous, bringing a new impact each day, using every channel, every resource, every bit of our strength. Being fully conscious of our weaknesses and fighting the idea of communism with our greatest strength: the greatest idea—the idea of democracy. The Western World should not condemn what it does not understand. India and Burma's neutralism should be approached by the West in a new light. These countries are primarily interested in economic development and secondarily in strong military defenses.

Russia has taken the initiative away from the United States in southeast Asia. They make every punch count. Russia has a propaganda policy. The United States has none. It is time for a change. We must keep up our good work in an area of economic aid, but we need to appropriate a certain amount of money to strategically placed things. For example, to use an extreme point of view, Billy Graham advocates giving a white Cadillac to Nehru for its sheer propaganda and news value.

In order for the United States to wage effective propaganda war in Asia we must have one on the home front. We must make our people ready to accept new concepts of neutralist nations. Instead of scorning Burma and India we should let the American people know that neutralism is not an enemy—it should not be regarded as an enemy, but friendly action. Home-front plans of propaganda should be followed by a plan of action which is well coordinated. We need a bipartisan foreign policy that really works to make it effective at home and abroad—we do not have this policy today. Dulles and his aides seem to have no understanding of those problems. Too often our foreign policy is geared for the home front and is totally unrealistic. We must prepare the United States before we can go to southeast Asia.

Whenever we give aid to southeast Asia, whenever possible it should be administered through Asians themselves because we must recognize the sensitivity of these peoples to colonialism. We must help them build themselves up to resist communism; we must find unobtrusive ways to get credit for what we do. We might give a million dollars in aid but we should appropriate a share for administration by Asians and some for show purposes. We must coordinate our aid to these countries with their own plans. There should be no strings to our help. Those not wanting aid could be given low interest loans if they want them.

We should contemplate long-range aid, not sporadic aid. We have failed to convey the idealism of America to these people. We have become satisfied. We, not Russia, were the revolutionaries which these countries hoped to model themselves after. Our callous feelings toward them have resulted in our failure to convey our idealism to them. We are a young country and have more anti-colonialism than any other power in the world. Russia is a colonial power—her satellites prove this. The United States holds the torch of liberty but we do not let these people see it. We do not sell our ideas properly.

Fifthly, we must recognize as we go out to fight communism in the East that it is not sufficient to have military alliances. Even if communism were completely destroyed the ancient problems of the East would still haunt them as fearsome specters—colonialism, disease, hunger, and illiteracy. What value the complete destruction of communism in Indonesia when the average income of an Indonesian for an entire year, in the year of our Lord and Bandung was only $25?

What does it matter if communism is completely destroyed when the life expectancy for a man or a woman in India is only 32 years?

A foreign policy founded upon defeating communism alone may be of great value in the West but it is of very little value in the East. Yes, we must continue our fight against communism but we must expand our fight against the ancient problems of the East on all fronts.

Sixth, Africa is the No. 1 problem of our world. That dark, vast continent stretching for 5,000 miles is shaped like a question mark and it is. For there in Africa will be won or lost the world battle for freedom. This our Foreign Office is not aware of or, if so, is doing nothing about it. Communism is the West under the leadership of Soviet Russia and in the East under Red China is supposedly waving the flag of peace even if it is a little dirty and blood-stained. While they are doing this, north Africa and south Africa represent soft spots to establish new beachheads of subversion by Communist agents. We went to Africa centuries ago carrying a cross. It is time to go back to Africa again carrying an offer of full equality, dignity, mutual respect and direct and adequate assistance for social change. This is the only way to stop the wave of communism in Africa.

We need to channel as much of the aid that we give in Asia and Africa through international organizations. We know that the United Nations has a limited role but we should seek to build its strength through concrete demonstrations of our belief in its principles.

And lastly, with the full facts that I have presented indicating that the United States has no Far Eastern foreign policy except one founded on military alliances, let us for the first time in the history of the world sit down with the leaders of the people of Asia and Africa and work out an adequate Far Eastern policy.

This the last thought that I left with President Eisenhower—why not be bold and daring and call an eight-power meeting in Manila in the Philippines. This would, in my own words to Mr. Eisenhower, "just about annihilate the propaganda of Red China." What a day it would be for the forces of democracy and of peace for the President of the United States to sit down with the leaders of Pakistan, India, Ceylon, Burma, Indonesia, Thailand, and the Philippines. This has never been done in all our history before. This alone proves the inadequacies of our foreign policy. The Presidents of the United States have been holding historically for years Big Four, Big Five, and Big Six meetings all over Europe but never have they held a meeting with the leaders of Asia and Africa. Bandung was an invitation for this. I and members of the press talked to chiefs of these states and they indicated that they would be extremely well disposed to meet for a summit talk in the East. Gen. Carlos Romulo on Meet the Press on Sunday, May 8, said:

> The President of the United States should come to the East and talk to the Asian leaders.

There is not much time left to do this. The world is moving with a startling rapidity that transcends not only the visual but even the imaginative. With our Yankee courage, our Madison Avenue know-how, our Christian heritage and the bulwark of the Bill of Rights, in back of us, using our 25 million colored citizens as a spearhead, we can launch a drive for peace and for full equality now in the Far East. Only through such a bold maneuver can we win. History will pass us by if we do not.

Ike Asked for It

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. TUCK. Mr. Speaker, under leave heretofore granted to extend my remarks, I include the following editorial which was published on April 3, 1956, in the Standard-Times, of New Bedford, Mass. The editorial, in my opinion, contains some very appropriate statements on the problem which has been created by the United States Supreme Court in its decision affecting our public schools.

The editorial follows:

IKE ASKED FOR IT

In two recent press conferences President Eisenhower discussed the school segregation issue in the South, saying this is "a time when we must be patient" and try to avoid "a tremendous fight that is going to separate Americans and get ourselves into a nasty mess."

Unfortunately, the mess which the President deprecates, already exists and should have been foreseen, when, under White House pressure, the Supreme Court reversed the law of 60 years' standing with reference to school segregation in the South.

Several cases involving alleged discrimination against Negroes in southern schools were pending in the Supreme Court when former Governor Warren became the new Chief Justice. Tht views of the President against segregation were well known, as may have been those of Chief Justice Warren. But, to make doubly sure the Supreme Court made the "right" decision, the President instructed Attorney General Brownell to appear in the case, as a "friend of the court," urging desegregation.

Two important provisions of the Federal Constitution are involved in the desegregation decision. The 14th amendment, approved in 1868, forbids any State to "deny to any person within its jurisdiction the equal protection of the laws."

The other provision of the Constitution directly affecting the desegregation problem is that one which specifically says, "The powers not delegated to the United States, by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people."

Under the former provision of the 14th amendment, no State could discriminate between Negro citizens and whites with reference to schools or otherwise. Under the second provision, the 10th amendment, control of the schools was specifically reserved to the States, as not having been delegated to the Federal Government.

Obviously, under the 10th amendment the South had the undisputed right to control its schools, unless its policies violated the 14th amendment forbidding discrimination between Negroes and whites. For 60 years the Supreme Court had ruled the 14th amendment requires equal school and other facilities, but not identical; in other words, schools and other facilities may be separate, but must be equal.

The Warren decision, which the President now faces with pleas for patience, destroyed the school formula of the South, a formula under which admittedly the Negroes of the South and the South had made steady and peaceful progress for more than half a century.

In a windy decision by Chief Justice Warren himself, the Chief Justice said in effect, "The very fact of segregation constitutes discrimination, gives the Negro a sense of inferiority, etc."

That this is untrue is evidenced by the fact many of the leaders of the Negroes in the South and the North, including many of the Negro schoolteachers of the South, not only feel no inferiority as a result of segregation, but object to attempts to force desegregation upon either Negroes or whites.

Though the President may not himself have been influenced by political considerations, the Warren decision was heavily weighted with politics.

Leaders close to the President undoubtedly told the President desegregation, if accomplished during his administration, would go a long way toward winning back the Negro vote of the North. This vote had been lost to the New Deal of the Roosevelt-Truman era.

Not only was such a purpose highly improper, but it has not and it will not work. For one thing, there is no segregation problem in the North—for there is no segregation. For another thing, the Negro vote, to whatever extent it was and is Democratic, is influenced by the New Deal philosophy, which only can be cured, if at all, by the process of education, a process which has been rudely struck down in the South by the recent Supreme Court decision.

Another equally improper consideration which is thought to have been influential in the Supreme Court's political decision is that there was thinking emanating from the State Department that desegregation would eliminate Communist-inspired criticism of the United States in India and others of the countries of the dark races.

Here again the administration did not see beyond its own nose. The antipathy of India does not spring from segregation in southern schools, etc. It springs from the fact that India, while recipient of our generous bounty, is basically Communist in its sympathy and is interested in the segregation issue of this country only because it suits its own propaganda purposes.

We're sorry for the southern whites.

Address of Vice President Nixon Before Brand Names Day Dinner

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. HILLINGS. Mr. Speaker, Vice President NIXON today delivered a most interesting and inspiring address before the Brand Names Day dinner at the Waldorf-Astoria Hotel in New York City. I urge all my colleagues to read the Vice President's excellent and careful analysis of the leadership of President Eisenhower and his administration.

The address follows:

TEXT OF ADDRESS OF THE VICE PRESIDENT OF THE UNITED STATES BEFORE THE BRAND NAMES DAY DINNER, THE WALDORF ASTORIA HOTEL, NEW YORK CITY, APRIL 18, 1956

May I first join with you in congratulating the Brand Name Retailer-of-the-Year Awards winners. Before the evening is over, I hope to have the opportunity to meet and congratulate each one of you personally for the achievement so justifiably recognized this evening.

I must admit at the outset that I have had some difficulty in selecting an appropriate subject for this gathering.

A speaker should usually direct his remarks to a subject of particular interest to the organization which he is addressing. Unfortunately, my knowledge of the businesses and other organizations represented at this dinner is limited to that of the millions of Americans to whom brand names are household words.

It is true that I have had experience on both sides of the counter in that respect, having grown up in a family which operated one of these old-fashioned general merchandise stores.

And, as one who has sold products, as well as purchased them, I know you can't sell something unless you know what you are talking about.

That's why well-advertised, brand-name products were easier to sell. I knew about them, my customers usually did also, and less sales talk was necessary.

That's why I have tonight selected a subject I know something about—the record and philosophy of the Eisenhower administration.

I want to admit at the outset that my views will necessarily be biased by the fact that I am a member of the administration.

But I don't believe I am being partisan or prejudiced when I say that most Americans, regardless of party affiliations, are grateful to the man whose leadership has brought peace and unparalleled prosperity to America, and honesty, dignity, and integrity to Government in Washington, D. C.

In fact, the problem I was confronted with tonight, as always, was to select which field of accomplishment to discuss in the limited time I have.

With your permission, I should like to direct my remarks to the economic policies of this administration in terms of what they are, what they have accomplished, and what we can expect for the future.

We immediately are confronted with a problem with which you are far more familiar than I—what to call this policy—its brand name if you please. Because the Eisenhower economic policies which have been in effect for the past 3 years have been called from time to time both conservative and liberal, both Republican and Democrat, both Old Deal and New Deal, both moderate and radical.

As you know, better than I, in the final analysis, it isn't the name but the product that counts.

No better proof of the application of this truth in the field of politics could be found than an event that occurred last week.

Thomas Jefferson's birthday was celebrated on Friday, April 13. Democratic orators all over the country hailed him as a member of their party. But a study of history reveals that Thomas Jefferson was elected President in 1800 as the candidate of the Republican Party.

And when we consider his devotion to the rights of individuals and of the States, and his opposition to too much power in the Federal Government, I do not believe I am overstepping the bounds of objectivity when I say that if Jefferson were alive today he would probably be an Eisenhower Republican.

Therefore, before we can brand this policy we must examine the programs which have been executed under it, the results of those programs, and the philosophies behind them.

In January 1953 the President and his Cabinet were confronted with a basic and difficult decision in the field of economic policy. Here is what we found when we came into office:

Taxes and spending were at record peacetime rates.

Controls shackled the economy and more were being advocated.

Various messages to Congress by the President's predecessor had urged the adoption of

new programs in the fields of education, health, housing, agriculture, and power which would have carried the national economy further down the road to nationalization, federalization, and, in some instances, socialization of basic American institutions.

The decision we had to make was this—should we drift with what seemed to be the wave of the future or should we turn to more conservative policies?

Purely apart from the principle involved, there were strong political arguments for allowing things to go on as they were. Because, whether we like it or not, we must recognize that millions of Americans lost faith in conservative economic policies as a result of the great depression of the thirties.

They were convinced that those policies had brought on the depression. And they feared that a return to those policies might bring on another depression.

The problem was thoroughly debated in the Cabinet, and, finally, a basic decision was made.

In essence, we decided to give the free American economic system a chance to work. We based that decision on our faith that conservative policies were right in principle, and that if they were right in principle they would, in the end, prove right politically.

To implement that decision—

We removed controls from the economy.

We got the Government out of business, rather than putting it in.

We cut spending.

We cut taxes.

We adopted fiscal policies designed to encourage the initiative, the dynamism, and the ingenuity of the American people.

It will be many years before an accurate and objective appraisal of the major accomplishments of this administration can be made.

But I submit that when the history of this administration is finally written, no accomplishment will have been more significant, or more in the interests of the great majority of the American people than this: The danger of America following some of our friends abroad down the road which leads inevitably to socialization or nationalization of our institutions has been averted and the faith of the American people in businesslike, conservative conduct of Government economic policies has been restored.

Statistics are invariably dull. But, just for a moment, let us look at the record in terms of what has been accomplished.

Gross national product, personal income, labor income, savings deposits, retail sales are at all time highs. For the first time in recent history, the United States has enjoyed over 3 consecutive years of high prosperity, and records are being broken almost as fast as they are made.

Furthermore, we are not using rubber dollars as our measuring rods. When President Eisenhower took office in 1953, the index of living costs compiled by the Department of Labor stood at the level of 113.4. Three years later, the level was 114.6, a rise of 1 percent. Compare this if you will with the record of the 4 years preceding this administration when the rise was over 11 percent.

This means that today when wages go up, the profits increase, there is a real gain, not merely a money rise that is canceled out by higher prices. The tremendous increase in almost every sector of economic life is sound and well-grounded.

I realize that sometimes our political opponents charge that this is a business administration. If they mean by this that government is running efficiently and well, we plead guilty to the charge.

We have done our best to give the country a good example of economy, industry, and integrity in the handling of Government affairs.

But, if the charge means that we favor the interests of business to the exclusion of other groups of the economy, we suggest that all Americans look at the record.

In 1952, there were those who said, "You have never had it so good." But let us make some comparisons between 1952 and 1955, not in terms of the economy as a whole, but in terms of the 65 million American wage earners.

In 1952, the average gross weekly earnings of a factory worker was $67. At present, it is $78.

In 1952, the take-home pay of the average factory worker with three dependents was $56. Today it is $62.

In 1950, 20 million persons owned their home. Today, 24 million homes are owner-occupied—an increase from 53 percent in 1950 to 58 percent in 1955.

The average life insurance policy in force per family has increased from $5,300 in 1952 to $6,300 in 1955.

What these figures mean is that wage earners today are better off than at any time in the entire history of the Nation.

How did this unprecedented prosperity come about?

From a political standpoint I would like to be able to claim all the credit for my party and the Government policies this administration has instituted during the past 3 years.

But to do so would not only be historically inaccurate; it would miss the great secret of America's economic progress from the time of our foundation.

What we must recognize is that under our system governments do not create wealth—people do.

We know that, in all fairness, the credit for America's great prosperity today must be shared among Democrats and Republicans, labor leaders and business executives, farmers and city folk, alike. Together they have brought about the changes that have made our economic system the model that it is today. In a real sense the achieving of the American dream has been the combined work of all Americans.

Yet, without in any way detracting from the other factors I have mentioned, I think I can state without fear of contradiction that the philosophy of government that has prevailed in Washington for the last 3 years has been the most important single factor in producing the good times we enjoy today.

That philosophy is not easy to describe.

There are many who ask what the difference is between the Eisenhower economic policies and those of the administrations which preceded this one.

The difference is not in goals. All Americans, regardless of their political affiliations, want better schools, housing, jobs, medical care, and more progress for all our citizens.

The difference is in means—how we achieve these goals.

And, as far as the difference in means is concerned, the difference is in where we start.

The administrations which immediately preceded the Eisenhower administration in Washington assumed in virtually every instance that Federal Government action was the answer to all social and economic problems. If more jobs were needed, the Government should create them. If better medical care was desired, the Government should provide it, and so on down the line.

In other words, they believed that if there was a social or economic problem to meet, the way to meet it was to begin with the Federal Government and work down.

We, in this administration, have exactly the opposite point of view. We say that the most effective way to meet social and economic goals is to begin with the individual and work up. We believe the Federal Government should step in only where individual action or State and local action is inadequate to do the job.

We hold to this view not only because we believe that individual action should always be encouraged rather than repressed under our system of government, but for the very practical reason that we know that in the long run this is the best way to meet social and economic goals.

Because, though whenever something needs to be done it always sounds easy to suggest that the Federal Government will do it, the difficulty generally with such programs is that they won't work.

For example, over the next 10 years, it is estimated that to keep pace with our growing population and insure continued progress and prosperity, we shall have to spend approximately $180 billion for schools, hospitals, power installations, roads, and slum clearance.

To meet these goals we must tap all the resources of America. If the Federal Government were to step in and assume full responsibility, State, local and individual action would shrivel up.

That is why the Eisenhower Federal partnership program, which encourages State and individual action, will succeed where a program of Federal paternalism would fail.

We now come to a problem which I am sure will intrigue those in attendance at this brand names dinner: What do we call the economic philosophy of this administration which I have been describing?

I have used the word "conservative" tonight in describing it, but I realize that "conservative" during the early days of the Republic referred to those who advocated more power in the Federal Government. Now it tends to mean almost the opposite.

"Capitalism" is another word which is often used to describe the economic philosophy of this administration, but certainly the capitalism we have in the United States today is very unlike the capitalism we knew 50 years ago, or that which still prevails in some other parts of the world.

If it is capitalism, the term "consumers' capitalism" or "people's capitalism" would be perhaps more appropriate.

Ours in a capitalism in which owners, management, workers, the general public, and consumers participate and share.

We have witnessed a dispersal of economic power in the United States on a truly democratic scale. Main Street has displaced Wall Street as the controlling and dynamic force behind American capitalism.

The terms "middle of the road" and "moderation" have often been used to describe the administration's philosophy.

Does this mean, as the extremists contend, lack of firm principles in dealing with economic and social problems?

Certainly not. Because when we speak of "moderation" and "middle of the road" we are not speaking merely of a compromise between the left and the right.

Ours is a new approach to political economy.

Extreme individualism has rendered a great service in developing the Nation, but, in the process, it has rendered itself obsolete.

On the other hand, exclusive emphasis on Government action to meet social and economic needs, we find, inevitably leads to loss of freedom.

What then is the alternative?

What we have sought and what we believe we have found is not a compromise, but a living and dynamic synthesis.

In the past, private initiative had been primarily confined to the economic field and selfish ends.

But the mistake of those who opposed it was that they tried to liquidate private initiative, rather than to redirect its ends.

Social goals are of utmost importance, but the individual must remain the agent of his own destiny.

The middle way is to expand private initiative for social goals. We believe that private initiative is the dominant social force in a free society.

That is why in finding solutions to social and economic problems we always begin by exploring whether the problem can be handled by private intiative.

The role of government is to help the individual—not to make decisions for him.

Russell Davenport in his penetrating analysis of the American economic scene, "The Dignity of Man," which he left unfinished at his death, summarized this philosophy in these words: "No solution of any problem in a free way of life should be provided by calling upon the State to undertake tasks which under proper circumstances of education and encouragement citizens themselves can do."

In summary, what this little excursion into philosophy means to me is simply this. America is a great Nation today because our Founding Fathers recognized the supreme importance of the individual dignity of men and women. And, any administration which bases its policies on that fundamental precept, whether it be Democrat or Republican, whether it be called liberal or conservative, will help to make the American dream come true.

Less than 2 years ago President Eisenhower predicted that within 10 years economic production would reach a level of $500 billion in dollars of constant value. Many persons thought he was too optimistic when he made that prediction. But now it appears that we may attain this goal several years sooner.

This is not a wild prediction. I am simply projecting the rate of growth that we have recently been enjoying.

For all this, I repeat, the Eisenhower economic program deserves an important share of the credit.

The idea that government is the servant of the people is not a new idea, but the way that it has been applied in the last 3 years is new, and we are all better for it.

We have seen something rare in American political history—a government that is really dedicated to helping all the people—a government that rises above political considerations and class interests, and judges all its programs by one, and only one, norm—does this benefit all Americans, does it recognize, conserve, and protect the inherent dignity of every man, woman, and child in America?

As long as this is our goal and our philosophy, we can look forward with confidence to a fuller, richer, and brighter future for all Americans.

Growth of Natural Gas Industry

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1956

Mr. HESELTON. Mr. Speaker, when the bill to exempt producers of natural gas was before Congress those of us who opposed it were warned of the dire consequences if the bill did not become law.

On Monday an article was published in the New York Journal of Commerce which is well worth noting and filing for future reference.

The headline was "Natural Gas Demand Spurs Overall Industry Sales Rise."

The article was as follows:

Total sales of the gas utility and pipeline industry during February rose 6.9 percent over the same month of 1955, the American Gas Association reported at the weekend.

Gas sales to industrial consumers was up about 5.7 percent during the same period.

The total February 1956, utility and pipeline sales were 8,113 million terms, against 7,591 million for the same month of last year.

Natural gas sales by utilities and pipelines to ultimate consumers totaled 7,676 million therms in February, up 7.2 percent over last year. Total manufactured and mixed gas sales rose 4.8 percent to 436.8 million therms, despite a decline of 13.8 percent in the manufactured gas category. Mixed was up 7.7 percent.

During the 12 months ending February 29, 1956, total utility and pipeline sales of gas was 68,451 million therms, for a rise of 8.7 percent over the 62,971 million in the 12 months, ending February 28, 1955, due mainly to higher natural gas sales.

Local Ties to Israel Strong

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. KEATING. Mr. Speaker, Monday marked the eighth anniversary of the founding of the free State of Israel. This birthday is an occasion for joy and thanksgiving among all men of good faith. Through all the storms and tribulations which have beset that brave little nation, it has continued strong and true toward its goal of achieving independence and freedom from outside interference.

In their courageous struggle to retain their autonomy, the friendship between the United States and Israel has played a great part. The bond between our country and the noble new homeland of the Jewish people is one of the key partnerships of the free world.

In addition to Government support for Israel, gifts of money and time from thousands in this country have played an important role in bolstering the material and spiritual strength of the people of Israel. The city of Rochester, N. Y., has perhaps responded as vigorously to the needs of Israel as any community of this Nation. Under leave to extend my remarks, I am inserting an article by Cliff Carpenter from the Rochester Democrat and Chronicle of April 16, which describes the close ties between Rochester and the State of Israel:

LOCAL TIES TO ISRAEL STRONG

(By Cliff Carpenter)

War can be a remote kind of a horror; or it can be an intensely personal one when it touches a husband or the boy next door or a cherished ideal. Rochester learned that in World War II, again in Korea and now the principle is being demonstrated again in the case of war-threatened Israel, the splinter-like country which clings to the eastern edge of the Mediterranean.

For there are surprisingly powerful spiritual, physical, financial and sentimental ties stretching from Rochester, in this greatest of democracies, to that newest and smallest of democracies, which celebrates its eighth birthday this week.

Ringed by hostile Arab states, bloody about the border, Israel will celebrate its birthday with the same two ingredients which are synonymous with its existence—work and war. Literally thousands of Rochesterians have a stake in the outcome. They have been there, or they have friends and relatives there. Some Rochesterians have even emigrated to Israel and are working there.

An effort to document those ties between Rochester and Israel unfolds a long and strong tale of dedication.

For in gifts and in investment funds, this city's contributions are well in the millions. And by simply substituting hours for dollars, one might strike a fair estimate of the time given by Rochester Jewry to supporting this tiny state.

An attempt at documentation might go this way—and it can be only an attempt:

Rochesterians have bought $1¼ million worth of State of Israel bonds, handled through a permanent Rochester committee, headed this year by Joseph E. Silverstein. The investors—for this is an investment in the development of Israeli economy—are in effect gambling that the civilized world, which created Israel, will not let it be destroyed. Bond headquarters is active now; further sales will be inspired by the visit to Rochester this week of the famed Zionist, Dr. Abba Hillel Silver, fresh from scenes of fighting on Israel-Arab borders.

Meanwhile, the United Jewish Welfare Fund of Rochester is well into an emergency drive called the UJA Special Survival Fund. It will raise $200,000 toward a national goal of $25 million to finance resettlement in Israel of 45,000 Jews from strife-torn North Africa.

This fund conducts an annual campaign in behalf of some 30 Jewish agencies and institutions here and abroad. But the major beneficiary is the United Jewish Appeal which has for years financed the movement of Jewish refugees and displaced persons to Israel from Europe, North Africa, and Moslem lands. Officials estimate that the Jewish Welfare Fund in Rochester has averaged sending $600,000 a year to the United Jewish Appeal since 1948, os close to $5 million from this city alone. The peak year was 1948, the year Israel was born, when the fund allocated $1,100,000 to the United Jewish Appeal.

But the documentation of help does not stop there.

Segments of the Rochester Jewish community contribute about $20,000 annually to the Jewish National Fund. This organization buys and owns land in Israel, in perpetuity, and leases to tenants for long terms for their own farming use; also it is a key figure in reforestation, which is imperative in Israel's drive to reclaim deserts and wastelands.

Hadassah, the women's Zionist organization, raises about $28,000 in Rochester annually toward maintenance of buildings and staff of the Hadassah hospital system in Israel. And Hadassah along with the Pioneer Women raises another $25,000 annually which becomes part of a larger national fund devoted exclusively to children—bringing them to Israel from underdeveloped areas, and financing their resettlement, maintenance, and education.

Why this outpouring of funds, this tight tie to a new little nation?

Leaders of Rochester Jewry will tell the questioner that the plight of their peoples through the world has been so critical in recent years, that there must be an Israel to which Jews can go in safety and in protection.

Rochester's Rabbi Philip S. Bernstein, now chairman of the American Zionist Commit-

tee for Public Affairs, is in a position to sketch this picture eloquently.

He was adviser on Jewish affairs to the United States military commanders in Germany at the close of World War II. He saw the survivors of Hitler's purges—about a quarter of a million of them—gathered in German and Austrian camps under United States care. He was a leader in a tragic and fruitless effort to persuade some other lands to take in those Jews for resettlement. Recalling the strong role the United States ultimately played in the resettlement of those refugees, he says:

"The fact that compounded their tragedy was that nobody wanted them. We beat frantically on doors everywhere, but they were closed against these Jews. It was only when a United Nations committee recommended the partition of Palestine into Jewish and Arab states, only when the United Nations gave its approval of this plan, only when Israel came into existence as a state, that the diplaced persons camps were liquidated as with a magic wand. I saw these people in the camps caught, as they put it, like rats in a trap. Then later I saw them arrive in Israel, free human beings, with their fate at last in their own hands."

Rabbi Bernstein, incidentally, is an example of the physical and sentimental, as well as spiritual, ties mentioned earlier. For he is a friend of David Ben-Gurion, Israel's Prime Minister, and a close personal friend of Moshe Sharrett, former Acting Prime Minister and Foreign Minister of Israel. Sharrett and Rabbi Bernstein met in 1926 when the latter was a student in the first class at the Hebrew University in Jerusalem.

They met again in 1937, a year of terror. That year Rabbi Bernstein, on sabbatical leave, took his wife and two children to Tel Aviv. With Sharrett, he toured Palestine in a bullet-proof sedan inspecting new Jewish settlements. They drove through rains of rocks hurled by dissatisfied Arabs. He recalls Sharrett's utter calm, for this was a period known to Jews as Havlagah, or self restraint, in which Jewish residents of Palestine sought to placate the Arabs by no strife of any sort except in extreme self-defense.

They met again in 1951, when Rabbi Bernstein was president of the Central Council of American Rabbis.

Dozens of other Rochesterians know Israeli officials by their first names. Another notable example is Mrs. Julia Berlove, national Hadassah executive, who even now is in Israel on Hadassah business.

Another bit of evidence on the close bond of feeling between Rochesterians and Israel is simply the number of Rochesterians who have made the long and expensive trip—nearly half way around the world—in the last 3 years or so. Asked to make a random guess at the number, 2 leaders of the Jewish community ad libbed 55 names for the writer without reference to notes. So there must be many more. And to this they added offhand the names of 18 Rochesterians whose dedication to Israel is so deep they have gone there to live.

There is hope in Rochester's Jewry that Israel's eighth birthday will be less tragic than other days of the last few months. And there is gloom, but not despair, that the West will not take a stronger stand in behalf of the little nation. As another spokesman put it:

"Israel has no quarrel with Arab peoples. She has repeatedly offered to conclude nonaggression pacts, write permanent peace treaties, resume normal trade relations, but these overtures are always spurned. She is strongly prowestern, a democratic oasis ringed by Communist-influenced countries, a stubborn block to the spread of totalitarianism. She rightfully looks to democracies for moral and material support."

But in war or in peace, those ties to Israel will remain powerful. So say the Rochester supporters, for they feel that they are being rewarded regularly. They have seen Israel grow in 8 years from a population of 650,000 to 1,789,000, have seen it give refuge to Jews in trouble from many parts of the world, have seen it pioneer in industry, agriculture, medicine, health, and education. They see Israel as a potential benefit to the entire Middle East given only peace and tolerance.

Protection of Animals

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 18, 1956

Mr. LANGER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a letter which I received from a person in Washington, D. C., dealing with the Peoples Lobby.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WASHINGTON, D. C., *April 18, 1956.*
Senator WILLIAM LANGER,
Senate Office Building,
Washington, D. C.

DEAR SENATOR LANGER: S. 2015 and H. R. 6680 protect dogs in the District of Columbia. It may be said that this is but a crumb but will Congress deny us even that crumb? Surely, dogs, the beloved of mankind should have sanctuary some place, sometime, and where better than the Nation's Capital, now. Can one look into his pet's eyes, the one utterly devoted to him in loyalty, and say "you must be ruthlessly used as a tortured instrument of student practice." Christianity teaches benevolence and surely that extends to man's best friend. He is an unyielding friend even in dire necessity. Is it enough that he lay down his life for us, must he be also tortured.

Throughout our land self-sacrificing men and women strive unceasingly to better the lot of these defenseless ones. They devote their time and substance to this praiseworthy work, this Christian endeavor. And their accomplishments redound to their credit.

They educate the populace in humane endeavor, they provide animal shelters, they rescue stray animals and return them to their owners or find new havens for them. They, in a word, instill into our Christian consciousness an appreciation of God's handiwork.

However, when it comes to the point of reducing concern for animals to protective legislation there is an evident record of lack of accomplishment. The failure may be attributed to two patent defects. First, the lack of unity. There is a wide diversity of opinion amongst the various groups as to which action should be taken.

There is no united front of all the friends of animals. This, despite the fact that they are all humanitarians and should consider the enactment of any measure of protective legislation as a step forward even though it is not the actual legislation they favored. Second, public opinion has had no voice. The humanitarian groups, after all, are but a segment of our population and as such do not have sufficient impact in the matter of persuading legislators to their viewpoint.

Many of the leaders of movements for animal protective legislation in the past are today discouraged and disheartened. They state that attainment of such legislation is impossible. They state that this is not the psychological moment and that the bulk of the people are antagonistic to any corrective legislation.

We sharply disagree with these defeatists. Public opinion is overwhelmingly opposed to the torture of animals. If ours is a Christian Nation, and it is, can any follower of the all-loving Christ fail to display a benevolent, kindly attitude toward God's lesser creatures? It remains for this public sentiment to be vividly portrayed for the benefit of legislators. This is the most persuasive factor in the consideration of any legislation.

Peoples Lobby, Inc., Washington, D. C., is a nonprofit organization chartered for the sole purpose of procurement of protective legislation for animals. It provides a common ground for unity of legislative action by all society members and other humanitarians, combined with the impact of public opinion.

Sincerely yours,
THERESA H. RUSSELL.

We Must Protect American Labor and Industry From Unfair Foreign Competition

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. PATTERSON. Mr. Speaker, the OTC legislation, represented by H. R. 5550 and reported out by the Committee on Ways and Means, strikes me as extremely important. H. R. 5550 is not just another bill. It is one of those crucial proposals that would change radically the lines of our constitutional division of powers.

The State Department seeks through this legislation to obtain the consent of Congress to its own abject demotion to the sidelines in the matter of regulating foreign commerce. If this seems presumptuous it is in keeping with that Department's action in this field during the past 10 years. By one scheme or another it has aimed at obtaining and keeping control over our tariff and related aspects of trade. H. R. 5550, the OTC proposal, is only the last in a series of steps.

Why does this interest me as a Member of Congress?

It interests and concerns me for several reasons. In the first place, as a Member of Congress, I am bound to carry out my obligations and responsibilities as a Congressman; and this clearly does not involve resignation to the State Department or the abdication of powers that the Constitution has placed upon us, whether on the grounds of expediency, following the path of least resistance, or anything else.

Second, I have definite obligations to the people who elected me. It has become something of a stigma to acknowledge this fact. We hear of bowing to "local selfish interests" when we pay attention to the electorate back home.

In this particular instance I am speaking for such local selfish interests as the

owners of and workers in various industries in my district. They have a real stake in this legislation. Their interests, that is, their economic welfare, the wage levels, the employment opportunities and the very value of investments in plants, mills and manufacturing enterprises in my district are affected by and stand to benefit or lose by what Congress does or does not do in its action on this bill. We are not legislating in a vacuum.

If the employment opportunities of men and women in the manufacture of watches and clocks is a local, selfish concern then I am guilty of catering to local selfish interests in seeking to preserve and to promote such employment. If continuity or increase of employment at good wages in rubber-soled-footwear plants, or in factories producing bicycles and parts, or in those making wood screws and metal fasteners or in textile plants in my district is a matter of local selfish interest, then again I am guilty of upholding such narrow interests; and I may say that I am proud to do it.

At the same time I will challenge anyone to say that it is against the national interest for a Member of Congress to speak for those who elected him, to seek to preserve their jobs and their earnings against influences that might upset them or even take them away.

For these several reasons I support the resolution introduced on both sides of the aisle, by the gentleman from Maine and by the gentleman from West Virginia. The OTC bill leaves too much in the dark. It presents us with a handle to a pan but says nothing of what is to be cooked in the pan, or how. We are simply to agree to hand over the pan to cooks in Geneva, Switzerland, who will want to use it as they see fit, to cook what they please.

Looking back over the last 10 or 20 years of State Department activity, I am convinced that American industry, American producers, including some important parts of our agriculture, would be asked to supply the goose to be cooked, and if the past is any guide to the future that goose would be cooked in short order. I am afraid that Congress' own goose would be cooked at the same time. We are here, among many other things, to regulate foreign commerce. Evidently that means what it says.

I am not willing to give the pan and its handle away; and I do not believe that any reservations about the use of the pan will do us much good so long as we leave it to others to decide what is to be cooked in it.

To be plain about it, amendments to the OTC, such as those adopted by the Ways and Means Committee, can do little good so long as GATT itself remains free to operate under the power of self-amendment without reference to Congress.

In H. R. 5550 we are addressing ourselves only to the OTC, that is, to the pan and its handle. What goes into the pan and how it is to be cooked; that is, the real substance of the issue, corresponds to GATT and GATT is not brought before us in H. R. 5550. GATT would be left free to work out its own destiny beyond the reach of Congress. It could by a two-thirds vote extend its own powers without consultation of Congress in any way. GATT has amended itself in the past; and there is nothing in H. R. 5550 or in the OTC agreement or in the amendments adopted by the Ways and Means Committee that would prevent its doing so in the future.

What good could I do then in behalf of the many producers in my district who would be injured by action taken in Geneva? Neither I nor any other Member of Congress would be able to reach the decision-making spot in Geneva, or if we could the delegates from the 35 countries congregated there behind closed doors would be under no obligation either to see us or pay us the least attention.

Is that the goal to which we want to move? Is that the way we want to dispose of our responsibility to regulate the foreign commerce of this country?

There are those who deny that membership in the OTC would have that effect. I say the burden of proof is on them. We have observed for 10 years or more the direction of State Department activities in this field. It has moved ever farther away from congressional control directly toward international control of our foreign trade. The ban on import quotas written into GATT is only one example.

It would require a complete reversal of State Department policy to prevent loss by Congress of its authority to an international organization in this field if Congress should approve OTC membership on behalf of the United States. The burden of proof to the contrary is indeed upon those who deny this.

Let them bring GATT before us for a thorough examination. If they balk at this, they will demonstrate the duplicity of their position. If they have nothing to hide, if they are not bent on wresting powers from Congress and lodging them in Geneva, they will gladly come forward and place before Congress the full record of the State Department in its GATT negotiations. Then Congress can determine for itself what is what.

In my opinion the resolution should be adopted forthwith.

What Others Think—Extend Canal South From St. Marks

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. SIKES. Mr. Speaker, under permission to extend my own remarks and to include extraneous material, I insert in the CONGRESSIONAL RECORD the following reprint from the Tampa Times, Tampa, Fla., which appeared in the April 15, 1956, issue of the Tallahassee Democrat, Tallahassee, Fla., under the heading "What Others Think" and entitled "Extend Canal South From St. Marks." The near tragic incident referred to in this article points up an addition to the many other important reasons why it is imperative that the Intracoastal Waterway development between Tampa and St. Marks, Fla., be completed as soon as possible.

The matter is as follows:

WHAT OTHERS THINK—EXTEND CANAL SOUTH FROM ST. MARKS

Thanks to the vigilance of the Coast Guard, six seamen were rescued yesterday from a barge which broke up in the raging waters of the gulf some 80 miles northwest of Tampa.

The accident is another reminder of the need for suitable Intracoastal Waterway development between Tampa and St. Marks. At present a protected waterway exists from the Mexican border, along the gulf to Apalachee Bay in Florida. But this is of no use to the heavy barge traffic between Tampa and other gulf ports. It must brave the open seas in heavy oceangoing barges and tugs, risking rough weather and high seas.

In the interest of better transportation facilities it is clear that the Intracoastal Waterway between St. Marks and Tampa Bay should be completed. While the Federal Government contracts to finance dams in Egypt and Afghanistan and spends millions in aid to India, this vital development needed by United States transportation facilities is neglected.

It was good luck yesterday that a helicopter could make the long trip into the Gulf to save the six seamen on the sinking barge. The next time the story might have a different and more tragic ending. But until the Intracoastal Waterway is completed, these needless risks of men and equipment must be made, increasing the cost of transportation in this area and reducing the efficiency of barge traffic.

Social Security and Railway Pensions

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. VURSELL. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD an article which appeared in the Voice of the People column of the Chicago Tribune, under date of April 15, 1956, discussing relative social-security payments and benefits as compared with benefits under the Railroad Retirement Act:

SOCIAL SECURITY AND RAILWAY PENSIONS

Although the Government has administered both social security and the railroad retirement fund since 1937 when both systems started, rail employees have paid an average of three times more taxes.

The present cockeyed disparity between both systems has caused endless confusion among rail employees and to both Houses of Congress. To wit:

One industrial worker pays a tax rate of 2 percent on the first $350 per month earnings into social security. Maximum cost per month—$7.

One rail employee pays a tax rate of 6¼ percent on the first $350 per month earnings into railroad retirement. Maximum cost per month—$21.88.

One rail employee pays three times more taxes or as much as the combined tax paid by three industrial workers.

Three industrial workers therefore, may receive a social-security retirement (and spouse) benefit in return for the same

amount of taxes paid by one rail employee.

The present social-security maximum retirement benefit is $108.50 plus one-half ($54.30) for a spouse, or a total of $162.80 per month.

Three industrial workers and their spouses may receive a total of $488.40 per month in return for the same amount of taxes paid by 1 rail employee.

One rail employee and his spouse, therefore, should (but doesn't) receive $488.40 per month.

To receive the present maximum railroad retirement annuity of $166 plus one-half up to $54.30 for a spouse, or a total of $220.30 per month, the employee must have earned $300 per month from 1926 through June 1954, and $350 per month thereafter. During the last 30 years less than 1 percent of employees had such earnings.

To receive the present maximum social-security retirement and spouse annuity of $162.80, the industrial worker retiring this year at age of 65 needs "only" 6 quarters of coverage (18 months—1½ years—not 30 years) if he earned $350 per month (regardless of prior earnings less than $350 per month) since January 1, 1955.

Why should a rail employee require 20 times as many months (30 years, 360 months) of service to receive less than twice as much in benefits, for which he has paid 3 times more in taxes?

WALT SANDS,
Editor, Rail Pension News.

The Farm Bill Veto

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. BOSCH. Mr. Speaker, on April 11, I voted against the passage of H. R. 12, the Agricultural Act of 1956. I want my colleagues to know that I intend to vote to sustain the President's veto.

The President, in my opinion, is absolutely correct in his decision to veto this legislation since the same is fraught with much inequity and the result of a strictly political maneuver. The consumers of the United States can be proud of the action of the President which means a very definite saving to their pocketbooks.

Under leave to extend my remarks, I include an editorial from the New York News of April 17, 1956:

THE GUY'S GOT GUTS

"Only after thorough consideration and searching my mind and my conscience," President Eisenhower yesterday vetoed the farm bill.

This was the catch-all measure put together by Senate-House conferees in a near panic over declining farm-product prices in a presidential election year.

What the President and Secretary of Agriculture Ezra Taft Benson chiefly couldn't stomach was the restoration of rigid, 90 percent of parity price supports for 1 year on wheat, corn, cotton, rice, and peanuts. It was these that piled up the present mountains of stored surplus foodstuffs.

There is nothing dictatorial about this veto. General Eisenhower goes on to say in his no-soap message that he will do what he can for the farmers under existing law.

Price supports on the 5 products above named are to be lifted to at least 82.5 percent of parity. The support price on milk used for butter, ice cream, etc., is to go up to $3.25 per 100 pounds. All this will mean $600 million more for farmers this year. In addition, the Agriculture Department will spend $400 million to bolster prices of perishable farm products.

This won't satisfy extremists, who think the world, or at any rate the United States taxpayer, owes the farmer a living. But it should help ease the troubles of some farmers.

It may hurt General Eisenhower politically; but, on the other hand, it may help him. Time and again in our history acts of courage and conscience on the part of public men have paid off in increased popularity and respect.

This Eisenhower veto of the farm bill was 100 percent an act of courage and of conscience.

Independence of Israel

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. POWELL. Mr. Speaker, on April 16, 1956, by the Jewish calendar, Israel was 8 years old and its people can well take pride in that fact. I wish to extend my sincere felicitations to the people of Israel, President Ben-Gurion, and His Excellency Abba Eban, Ambassador of Israel, upon the occasion of the celebration of Independence Day.

The Republic of Israel emerged fully clothed with the problems and realities of political statehood on May 14, 1948. During these short years of independence the two main preoccupations of Israel have been economic development of the country and the establishment by diplomatic and military means of the security of the country within the boundaries set by the armistice agreement.

The State of Israel is a product of an ancient dream, of suffering, courage, faith, and sacrifice of a people striving to create a new democracy and to live in peace. There are few historic parallels for the present resurgence of faith in democratic values witnessed in Israel. Israel's faith is everywhere in evidence in the energy of its manifold activities and in a rapidly accumulating array of solid achievements along social, economic, political, and spiritual lines. The triumph of the human spirit in Israel over seemingly endless and overwhelming obstacles is a constant beacon light of faith to all men.

Because Israel is small and poor in natural resources it faces towering economic problems. The economy of Israel is still in the process of building healthy foundations for a normal existence. The economic policy of the government is characterized by the encouragement of healthy economic enterprise in all its beneficial forms. In economic matters Israel has steered a middle and nondoctrinaire course between the totalitarian economics of the slave states and the typical laissez faire of the 19th century. It is developing an indigenous blend of free enterprise and free government suited to its own particular problems.

The Middle East is the crossroads of the Old World, the bridge between Europe, Asia, and Africa, straddling global air and sea routes, the Dardenelles and the Suez Canal. Within the Middle East the state of Israel is clearly the heartland of the crossroads. The present masters of the Kremlin, following the lead of past military conquerors, covet this position. The deeply disputatious question of peace with the Arab States leaves the political future clouded. Yet within Israel there is energy and optimism, for here at last a dream of centuries for a homeland has become a political reality.

The avowed aim of the United States is to promote the political and economic stability of the entire region of the Middle East with a course of action based on neither favoritism nor on prejudice, but on the principle of safeguarding the best interests of the United States and the free world. The United States has given increasing attention to ways of reducing tension along the troubled frontiers of the Middle East. The most serious threat of this continued strife, from the free-world point of view, is the danger it presents to the Middle East as a whole. Seeking new directions for further Communist exploitation, the masters of the Kremlin already are looking upon the troubled waters of Palestine as a good spot for launching their next dangerous activities.

If our world-wide position is to be secure, we must recognize the potentialities of Israel as an outpost for western civilization. The whole Arab world is in a state of underdevelopment and extreme poverty. Its populations are restive and if practical solution to the miseries of millions of people do not come, Communists will certainly make the most of their opportunity.

If we in the Western World ignore the Middle East and its unsolved human problems, we shall not only have failed a large section of humanity, but we shall have mortally weakened our own defenses of the West and its message of freedom. We can strike no more effective blow in defense of our way of life on a global basis than to do everything possible to make Israel a strong bastion of freedom in the Middle East and through it to reach the rest of the region in the true spirit of our freedom. And, further, we must cooperate in all wholesome economic endeavors of the entire Middle East.

Federal Employees Need and Deserve Basic Guaranties Provided in Union Recognition and Arbitration Bill

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, I would like to call attention

to H. R. 10237, a bill to provide for the recognition of Federal employee unions and the establishment of arbitration machinery for the settlement of grievances. I am pleased to note that the Senate Post Office and Civil Service Committee has scheduled hearings next month on an identical bill, S. 3593, introduced by Senator OLIN JOHNSTON. Because of the demonstrated need for this type of legislation, I am hopeful that hearings may also be scheduled by the House Post Office and Civil Service Committee in the near future.

Mr. Speaker, under leave to extend my remarks, I include the following guest article on this subject, which appeared in the April 13, 1956, issue of the Government Standard, the newspaper of the American Federation of Government Employees:

ON CAPITOL HILL

(By GEORGE M. RHODES)

Employees of the Federal Government enjoy the unique distinction of having 166 million employers, since it is their duty to provide a necessary assortment of scientific, technical, clerical, and administrative services to all our citizens.

As our Government has grown, both in complexity and the scope of its activities, it has become clear that those Americans who serve their fellow-citizens need, and have a right to expect basic guaranties affecting their conditions of employment. Tens of millions of employees in private industry have long since been granted certain well-defined rights in the field of labor-management relations. The labor-management relations law, established by act of Congress, makes this significant statement in its findings and declaration of policy:

"Experience has proved that protection by law of the right of employees to organize and bargain collectively safeguards commerce from injury, impairment, or interruption, and promotes the flow of commerce by removing certain recognized sources of industrial strife and unrest, by encouraging practices fundamental to the friendly adjustment of industrial disputes arising out of differences as to wages, hours, or other working conditions, and by restoring equality of bargaining power between employers and employees."

But unfortunately, our Government has not chosen to legally apply a similar set of rules to dealings with its own employees. A beginning was made in 1912 with the passage of the Lloyd-La Follette Act, which guaranteed Federal employees the right to join unions of their choice—provided such unions did not impose an obligation to strike against the Government. However, there was no requirement that the executive branch of the Government recognize or deal with such unions as the spokesmen for Federal employees.

Thus, effective labor-management relations having any degree of bargaining rights binding upon executive branch "employees," are nonexistent in the Federal service. The injustices of this situation have long been recognized by many responsible authorities.

The 1955 report of the American Bar Association's Committee on Labor Relations of Governmental Employees said:

"A government which imposes upon other employers certain obligations in dealing with their employees may not in good faith refuse to deal with its own public servants on a reasonably similar favorable basis, modified, of course, to meet the exigencies of the public service. It should set the example for industry by being perhaps more considerate than the law requires of private enterprise."

It is obvious that some practical machinery for dealing adequately and fairly with the labor-management problems arising between the Federal Government and its employees is badly needed. I have introduced such remedial legislation in the past several Congresses.

Recently I introduced H. R. 10237, a strengthened version of my previous bill, H. R. 697. The chief difference is that the new bill provides for arbitration of disputes as a final recourse. It would give Government employee unions official recognition in the Government and require executive agencies and departments to deal with them on personnel policy matters and employee grievances.

A similar bill, though without the arbitration feature, was favorably reported by the House Post Office and Civil Service Committee in 1952 by a vote of 14 to 1. Unfortunately, the action came too late in the session for floor debate to be scheduled. It was placed on the Consent Calendar but chances for enactment were killed by the objection of a single Member.

In the past, established unions representing Government employees have discussed personnel problems and presented grievances to various administrative officers of the Government; but this action is a matter of sufferance rather than a right. If the Government administrator or his subordinates should refuse to meet or discuss the problem with union representatives, or should fail to take the necessary remedial action, the aggrieved parties have no appeal short of Congress.

As the American Bar Association pointed out in its report:

"Government which denies to its employees the right to strike against the people, no matter how just might be the grievances, owes to its public servants an obligation to provide working conditions and standards of management-employee relationships which would make unnecessary and unwarranted any need for such employees to resort to stoppage of public business. * * *"

I regret that no action on my bills has been forthcoming in the present Congress, despite the clearly demonstrated need for some type of remedial legislation to provide basic rights for Federal employees. Not one of the executive agencies or Departments of the present administration has even submitted a report to the committee stating their views on the proposed legislation—in favor or in opposition. They have chosen to ignore the existence of the bills, which is to deny that any problem or need exists. This "head in the sand" policy of the administration is shortsighted and unfair to the millions of loyal and devoted public servants who are entitled to workable standards of conduct affecting their hours and conditions of employment, vacations, and sick leave, as well as the expeditious settling of grievances which necessarily arise.

This present administration policy is also unfair to the citizens of our Nation because the present adherence to outmoded employee-management practices is contrary to sound and enlightened public personnel administration. It is arbitrary, unjust and undemocratic. It destroys the morale of efficient and hard-working Government employees through the pyramiding of resentment, misunderstandings, and irritation because of the failure to provide necessary grievance machinery and other sound principles of employee-management relations which have been in effect in private industry for many years.

I feel that the principles and objectives of this legislation are reasonable and just. I feel that the need for enactment of such legislation is urgent. It is the duty of both the administration and the Congress to recognize this need and act accordingly, without further delay.

Hon. Lyndon Johnson

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1956

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert an editorial which appeared in the Sunday, April 8, edition of the Hillsboro Evening Mirror, Hillsboro, Tex., regarding our esteemed colleague, the Hon. LYNDON JOHNSON, majority leader of the Senate. He is truly a fine and great leader as the article demonstrates.

The editorial follows:

SAY "YES," LYNDON

Like many Texas citizens, we are anxiously awaiting the answer to one of the big questions in national politics. The question: Will the Honorable LYNDON B. JOHNSON, Democratic majority leader of the United States Senate and senior Senator from Texas, consent to be this State's favorite son candidate for the Democratic nomination for President.

Senator JOHNSON, we do not know what your answer will be, but we wish to add our plea to those of countless other Texans. Our plea is: Say "Yes," Lyndon. Say "Yes."

We have long known that you have the ability to perform the duties of the presidency, and we have long been aware of your conscientious, unselfish and untiring devotion to the performance of your duties in public office.

Your personal popularity was attested to in our county last November 21, when 1,500 central Texas citizens gathered in your honor at Whitney. The long and continued standing ovation those people gave you when you were introduced has never been surpassed in our section of the State.

The many standing ovations that interrupted your speech prove that your views on, and solutions to, our many national problems coincide with the views and wishes of a great majority of the Texas citizens.

Senator, you are a great Texan, and a man who dwell deserves the title of favorite son.

However, we do not wish to see your candidacy limited to the role of favorite son. We hope to see you as an active candidate for the office of President of the United States of America. We feel that the people of Texas and of the United States should make you the Democratic nominee and then elect you President.

The dignified, yet thorough and efficient, manner which you have maintained while performing your duties as senior Senator from Texas and as Democratic majority leader of the United States Senate has endeared you to millions of American in every walk of life.

Your election as Democratic majority leader before completing your first term in the United States Senate was a tremendous tribute to an outstanding American. It was an even greater tribute to the citizens of Texas for having sent you to Washington. Those persons who do not know you, undoubtedly are still trying to determine how you accomplished such a victory in the United States Senate. They must still be wondering how you, as a first-term Senator, could gain the respect and devotion of Democrats many years your senior. So much respect, in fact, that they unhesitatingly call you their leader.

We know the reason, Senator. And we believe that one of your recent statements very aptly reflects that reason. The statement you made was: "I will not consent to lead

a group composed of delegates from any single faction of the Texas Democratic Party to the National Convention in Chicago." How proud we were when we read that statement.

This is a time for unity and harmony among the members of the Democratic Party. The social and economic unrest, both at home and abroad, will not permit us to waste time bickering among ourselves. It is for that reason that we are willing to share our favorite son with the rest of the Nation, and propose that you, the Honorable LYNDON B. JOHNSON of Texas, be the next Democratic nominee to the office of President of the United States.

Syria Celebrates Evacuation Day

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. POWELL. Mr. Speaker, I wish to salute the people of Syria, His Excellency Shukri al-Quwwatli, President of the Republic of Syria, and His Excellency Dr. Farid Zeineddine, the Ambassador of Syria, on the occasion of the celebration of the 10th anniversary of Evacuation Day, April 17, 1956.

Before 1920 the Republic of Syria in its present boundaries had no separate history of its own. Despite centuries of subjugation to the Ottoman Empire, Syria, like other Arab countries, played a notable part in the shaping of modern Arab history. From the middle of the 19th century to the second decade of the 20th century—the period of the "Arab awakening" and the struggle against the Ottomans—Syria played a leading role in determining the aims and objects of the rise of nationalism in the Arab world.

Syrian proclamation of independence on March 18, 1920, announced to the whole world her determination to remain a free and independent country. This act, although short-lived, marked the climax of the Arab national movement and the farthest point of success reached in the partial realization of Arab national aims. The strangling of Syria's first period of independence was engendered by the conflicting interests of the so-called big powers of the era. High hopes of the period of independence dimmed and the fight against the twofold foreign domination of the Arab countries initiated a struggle which is continued today in some parts of the Arab world.

Syrian history from 1920 to 1946 is that of a desperate and bitter national struggle. The changes in the international scene influenced the crisis in Syria. Making full use of the special circumstances of the Second World War, Syria succeeded in obtaining recognition of her complete independence and in achieving the evacuation of all foreign troops from the country. The increased pressure of the Syrian nationalists forced the mandate authorities to restore constitutional life to the country. In July 1943 elections were held and Syria's second nationalist regime was established. His Excellency Shukri al-Quwwatli became President of the Republic of Syria. During the period of this regime evacuation took place—one of the outstanding events in Syria's history after the achievement of independence. Force was met with force and the Army of the mandate power was expelled from the country. The death knell of imperialism in Syria was tolled when finally on April 17, 1946, the United Nations approved by a large majority of votes the evacuation of all foreign troops from Syria.

Other Syrian successes in this period included her participation in the field of international politics. The Syrian Government in 1945 joined the Allied cause. Following this, Syria was invited to participate in the San Francisco conference where she signed the charter of the United Nations as one of the first members of the organization, achieving thereby the status of a free and fully sovereign state.

Syria has made notable contributions to culture and civilization. In the course of many centuries, Arab Syria has produced eminent poets, men of letters, jurists, historians, scientists, and journalists who made great contributions to world culture. Syria has also transmitted to the West the philosophy and sciences of the ancient world, serving thereby as a bridge over which the cultures of the ancient Greeks, Persians, Romans, and Indians passed to Europe and America.

Syrians today are eager to keep step with the progress of modern civilization. Education is being fostered, books are being translated, and the ancient heritage of Arabic culture is being recovered. Syria's institutions of higher learning, for example Syrian University and the Arab Academy of Damascus, proceed along Western patterns. Through these and other channels the learning of the West is being translated, digested, and introduced to the country. Valuable research projects and studies are being conducted on a scale that promises well for the cultural future of Syria.

The Syrian struggle for liberty served as a symbol to other oppressed peoples in the world. In the words of today's Syrian leaders:

> The people of Syria are content and gratified that their struggle for political independence has been accompanied by a parallel fight for the liberation of the country from feudal and reactionary forces and for the achievement of a social, economic, and cultural revival which, it is hoped, will ultimately bring great good to all Arabs, will strengthen the people's social consciousness and will secure for the country the benefits of a true democratic rule, based on the great principle of government by the people and for the interest of the people.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Appendix

Hon. Horace Seely-Brown, Jr., Tells Hi-Y Youth Legislators More Politicians Mean Better Government

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. SADLAK. Mr. Speaker, I have asked for unanimous consent to extend my remarks, and wish to do so by inserting in the RECORD an address which was delivered during the recent recess of the Congress by my colleague from Connecticut, the Representative of the Second Congressional District, and as such my own Congressman, the Honorable HORACE SEELY-BROWN, JR.

The Members of this House know that Mr. SEELY-BROWN does not take up much of the time of the House with speeches, but when he does speak, we have observed that invariably it is briefly and to the point, and his remarks always are a cogent contribution to the business before the House.

The address which I am about to place in the RECORD was delivered at the Hotel Bond, in Hartford, Conn., where Mr. SEELY-BROWN was asked to be the guest of honor at a dinner which marked the close of a 2-day session of the general assembly of the Hi-Y youth in government project. There were about 175 young men present, all juniors and seniors in high school, who had been elected by their Hi-Y Clubs at the Young Men's Christian Associations in their home communities, to serve as senators or as representatives in the youth general assembly. They performed all of the steps involved in carrying into effect a law of the State of Connecticut.

As always, my colleague was brief in his remarks, but the advice which he gave to the youth legislators and the other guests present was so well thought out, and it is of so much interest, not only to parents, but to all citizens of all ages, that I am inserting at this point in the RECORD the text of his address:

HON. HORACE SEELEY-BROWN, JR., TELLS HI-Y YOUTH LEGISLATORS MORE POLITICIANS MEAN BETTER GOVERNMENT

Mr. Chairman, I consider it an honor and a privilege to be given the opportunity of sharing in this program with you. The invitation so graciously tendered by your chairman to address this closing session of the Youth General Assembly was one which I was pleased indeed at being able to accept.

During these past 2 days, you as members of the Youth and Government Assembly have completed an arduous program. I am sure that in your "stand in" capacity you have had a real look at some of the problems faced by the duly elected executive and legislative officers of our State government. I trust that you have passed all the bills that needed to be "passed," and perhaps repealed a few acts that needed repealing. At any rate when you finished, it was unnecessary for the Secretary of State to proclaim, "God save the State of Connecticut." I wonder if any of you are already making plans for calling a special session.

I have been pleased to examine the Handbook of Instructions so carefully prepared by the Youth and Government Committee of the Connecticut State YMCA. I congratulate those who worked in its preparation. This manual could well serve as an effective "do it yourself" manual for your prototypes, the elected Senators and Representatives, especially those coming to Hartford for their first term of service in the General Assembly.

I have not yet received any specific report as to the "laws" which you have enacted during this session of the Youth and Government Assembly. I am sure there are many which rightly can be counted as an index to your alert civic responsibility and sound thinking.

I would not be at all surprised, nor would I blame you, if there were no bills passed under the general entitlement of "juvenile delinquency." I am sure that many of you are sick of the term and for much of the loose talk for which this term serve as a label.

I promise not to belabor the point, but it does seem to me that even those of us who are adults have become quite confused about juvenile delinquency, including alike what it is, and what to do about it.

"Juvenile delinquency" is a term which we do not find in the annals of the past. It does not appear as such in our literature of other centuries, or in the jurisprudence of distant times. No doubt, mother's knee and father's knee were important administratively as well as anatomically in preventing the need for such a term.

The Scriptures, the lawgivers, the ancient and modern philosophers, the poets of the Golden Age do not give us anything about "juvenile deliquency." Instead, they have handed down to use much that is well worth remembering about youth and its qualities and virtues.

Fame Is the Thirst of Youth. Youth is on the march to fame and will not be stopped. It has been so in every generation. Age could not stop this, nor would it. In our present day, there would be perhaps less confusion if we elders, we parents, spent more effort in undertaking to understand youth, and more time and energy in working with youth.

Young people are not the only ones who seem to be confused. One State, Georgia, already says that persons are mature enough to vote when they reach the age of 18. In fact, a proposal is presently before the Congress for the same voting age in all States in electing Federal officials. On the other hand, all States but 6 say a man cannot get married without his parents' permission until he is 21 years of age. At 18½ you are old enough to be drafted into the military service, and, if necessary, to fight for your country; but you are not old enough to buy anything on the installment plan, except by your parents' authority, until you are 21.

Here in the State of Connecticut we hope that willful damage and acts of vandalism will be reduced, as the result of a law which was passed last year, making parents responsible, up to $250, for any willful damage to property by their children up to the age of 21 years. In New York, however, Governor Harriman has just vetoed a similar bill, I am informed, saying that young people would use the threat of causing damage, for which their parents would be liable to pay, as a club over the heads of their parents to make them give them the things they wanted. And so I say, who is confused?

Whether or not the legislation you have adopted at your youth-government assembly deals with any of these matters, I am sure that you can help, by your studies, by your interests, and by your influence and example, to clear up much of the confusion that prevails on these and many other important subjects.

I have been examining the list of the members of the youth and government committee of the Connecticut State YMCA, the committee responsible for this program. It is an impressive list.

Do you know that the chairman, Judge Maltbie, served as chief justice of Connecticut for 20 years—a longer period than any other man in that office since our State's present constitution was adopted in 1818? I believe that he was the youngest man to be appointed to the superior court bench, either before or since, when he was nominated to that high judicial office by Gov. Marcus Holcomb. And already, at that early age, he had served his town of Granby as representative in the general assembly, he had served Hartford County as assistant State's attorney, and he had served as executive secretary to Governor Holcomb. His distinguished career has comprehended public service in the legislative, executive, and judicial branches of our government.

The honorary chairman of your committee, Justice Raymond E. Baldwin, of the supreme court of errors, was one of our State's most beloved governors, and a member of the United States Senate from Connecticut; and, before he was elected governor, he sat in one of the very seats that you youth legislators sat in, in the House of Representatives at the Capitol, where he represented the town of Stratford for 2 terms, during 1 of which he was the majority leader of the House.

I would like to point out to you that both Judge Maltbie and Justice Baldwin were politicians. I look over the names of the other members of the distinguished committee, and I find among them many personal friends of mine from my own congressional district of eastern Connecticut. They are politicians, too.

"Politician," according to the distorted usage of today's world, has become an ignominious word. There is no reason why this should be so. One of the things of greatest value that you could carry back home from this session is that there is nothing wrong with being a politician; in fact, that you should aspire to be one, to the extent that your time and talents permit.

Politicians are an essential part of our system of government. The dictionary says that politics is the science or art of government. Politicians are men and women who have had sufficient interest in public service, sufficient care about the kind of government we have, to take the time and trouble to become experts, to a greater or lesser degree, in the science or art of government.

Most politicians do not conform at all to the cartoon conception of what a politician is, and what he does, and how he operates.

You who have just served in the general assembly of the youth and government program no doubt are aware that in our official general assembly there are 36 Senators and 279 Representatives, and all they receive by way of compensation for their services to the State, at home and in Hartford, for their entire term of 2 years, is $600. They are barred by law from accepting appointment to a public-service job with a salary while they are members of the General Assembly.

There are about 750 men and women, serving on more than 100 boards, commissions, and committees that constitute part of the government of the State of Connecticut, who are responsible for important decisions of policy, and the direction of thousands of employees, and the spending of millions of dollars in State appropriations. They receive nothing for their services—not a penny! They are politicians.

In your own community back home, and in every community, there are other citizens, men and women by the dozens, by the scores, in the larger cities even by the hundreds, who are serving as aldermen, councilmen, commissioners, and as members of boards of education, boards of finance, etc. They are paid nothing for their services. They are politicians.

Also, in your own community, and in every other community in Connecticut, there are men and women who serve on the town committee of the political party of their choice, or they serve on the State central committee, or they serve on a ward or precinct or district committee. They do not receive anything for their services, and they do not expect to; but they care enough about the principles and about the candidates of their party to devote much energy, many hours, and, yes, a lot of their own money, to working for the attainment of their objectives. They are politicians.

In the assembly sessions which you have attended I am sure that you have learned much. As true representatives of your respective clubs, it will now be your responsibility to report back to those whom you represent. You have had an opportunity to see our government from the inside actually.

Take back home the message that the government of Connecticut is well conducted, and that it is conducted as the people want it to be, as expressed in their mandate to parties and to candidates every election.

Take back the message that the science and art of government demand skilled and talented practitioners, just as every other science, art, or craft demands, and that these are politicians. Groom yourself, and influence your fellow club members at home, to take an eager interest in government—local, State, and Federal—even at your present age, and continue and develop it when you are able to become voters.

Do not be afraid or ashamed to be a politician. Being a politician is also being a patriot; and the more politicians we have—the more sincere, interested, and experienced men and women in politics—the better our politics will be, which is just another way of saying the better our government will be.

Welfare and Pension Funds

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, April 19, 1956

Mr. DOUGLAS. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a statement issued by AFL–CIO President George Meany with reference to an investigation by the Subcommittee on Welfare and Pension Funds, in which he gives general support to the recommendations for disclosure, although making reservations on some minor points.

I think this is a very interesting and commendable statement, in view of the fact that the subcommittee took evidence indicating that there were some union plans which had been managed corruptly and others which had been managed inefficiently. I think this is an indication that the AFL–CIO will clean house, and also that it will push for constructive legislation.

Now that the AFL–CIO has taken action, I hope the insurance industry and the representatives of business and the banking interests, which were also subject to some criticism in the report, will take similar action, and that it will be possible to move speedily in the direction of sunlight in an area which badly needs sunlight.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY AFL-CIO PRESIDENT GEORGE MEANY

The Senate Subcommittee on Welfare and Pension Funds, under the chairmanship of Senator PAUL DOUGLAS, deserves commendation for the impartial and objective manner in which it has conducted its investigation of problems arising out of the administration of welfare and pension plans, and for the fair, constructive, and informative character of its final report.

The information and material contained in the report will be a valuable aid to efforts, such as those of the AFL–CIO and its affiliated unions, to assure that the funds involved in these plans are conserved and employed in the most effective manner for the sole benefit of employees and their families.

While strongly condemning the acts of corrupt individuals, the Douglas subcommittee's report goes deeper and points to some of the underlying conditions, such as certain practices of the commercial insurance industry and the laxity of State regulatory bodies in supervising ommercial carriers and agents, which have opened the way for the development of abuses. This represents a constructive approach which has been largely lacking in previous investigations. Punitive action against corrupt individuals, while necessary and desirable, is not likely to serve as a permanent deterrent unless these underlying conditions are also corrected.

While certain of the conclusions and recommendations, and particularly the suggestion of the Securities and Exchange Commission as the appropriate agency for the administration of a disclosure law of the type proposed, are subject to serious question, we are in agreement with the main features of the report. The AFL-CIO strongly advocates and will strongly support legislation designed to bring about full disclosure of the financial operations and transactions of all types of welfare and pension plans, whether administered jointly or unilaterally. With the aforementioned exception, the standards for such legislation recommended in the subcommittee's report appear to meet the criteria spelled out by the AFL-CIO merger convention, though final judgment must be withheld pending the introduction of an actual bill to give effect to the recommendations.

The bill (S. 3051) introduced on behalf of the administration earlier this year, on the other hand, falls short of our objectives, in that it would give the Secretary of Labor excessive discretion to exempt favored corporations or groups, and to otherwise weaken or water down the reporting and disclosure requirement.

We strongly urge the Congress to act promptly upon the recommendations of the Douglas subcommittee, and to enact an adequate disclosure law during the present session.

Statistical Record of the Passport Office

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. BOW. Mr. Speaker, the Passport Office has just released some impressive statistics which support the contention of many Members of Congress that it is one of the hardest working and most effective services in the Federal Government.

It is less than a year since Miss Frances G. Knight took office as the Director of the Passport Office and appeared before the House Appropriations Committee to request funds to refurbish, reorganize, and modernize an office which for years had been sadly neglected.

Miss Knight managed to cut through bureaucratic redtape and interference, and, with the support of Congress, moved the Passport Office from an antiquated building to new, modern quarters. It is now housed in an air-conditioned building with adequate space for its files, records, and equipment. Miss Knight established a Washington Passport Agency which handles applications from the Washington area in the same manner in which applications are handled by the Passport Agencies maintained in New York, Chicago, Boston, San Francisco, and New Orleans.

With the assistance of the General Services Administration, the Civil Service Commission and the General Accounting Office, Miss Knight was able to revise filing procedures, establish modern records management, improve the format of instructions to the field, simplify brochures, application blanks and revise even the passport itself. This week, a new format for the United States passport has been issued. The description of the bearer is arranged in such a manner that there will be but 1 impression of the Department of State seal instead of 2. This, in addition to the fact that the number of pages in the passport has been reduced to make it possible to type passports on standard typewriters rather than the cumbersome flatbed machines heretofore used in this work, will reduce processing time.

With her determination to serve congressional offices, Miss Knight has persisted in her quest for more adequate telephone service and at long last, has been able to secure two lines set aside for congressional calls. The telephone congestion has been alleviated to some degree. Congressional offices calling on passports should ask for extensions 2228 or 2229.

Miss Knight promised to provide statistics on travel and other information in this field of interest to the travel

industry and to Members of Congress. In the midst of all the moving and reorganization, the battle for recognition, for funds, for understanding, the Passport Office has been industriously compiling statistics. They found that the volume of passports issued and renewed in the United States increased 240.3 percent in the past decade. In 1912 the Passport Office issued or renewed 21,719 passports; in 1922 this number increased to 137,551. In 1932 there were 153,218 passports issued or renewed; and in 1942, 129,985; in 1952, 395,337; and in 1955, a total of 528,009 passports were processed for use by American citizens leaving the United States.

I hope Miss Knight will long serve as Director of the Passport Office, and with the support of Congress, continue to improve and expand the services of that office.

I wish to include as part of my remarks the statistical record of the Passport Office:

PASSPORT OFFICE,
UNITED STATES DEPARTMENT OF STATE,
Washington, D. C.

Statistics compiled by the Passport Office of the Department of State relative to passports issued and renewed indicate the following increases for periods in 1956 over 1955:

	Percent
First calendar quarter	8.8
January	6.7
February	11.2
March	8.4

Applications for passports received by the Passport Office indicate the following increases for periods in 1956 over 1955:

	Percent
First calendar quarter	13.3
January	19.5
February	22.9
March	3.5

The 4.5 percent difference between the first quarter percentage increase of 13.3 percent of passport applications received and the 8.8 percent first quarter increase in passports issued and renewed is largely due to persons submitting incomplete information on their applications.

The following statistics pertain to passports actually issued or renewed during January, February, and March 1956 according to (1) State of residence, (2) occupation, (3) citizenship, (4) destination, (5) object of travel, (6) mode of travel, (7) age of traveler, and (8) number of travelers.

The last item has been added because more than one person in a family can travel on a passport. It is subdivided into (a) number of military travelers, (b) number of military dependent travelers, (c) number of civilian Government tavelers, (d) number of all other travelers, and (e) total number of travelers. These statistics reflect the total number of persons traveling on passports issued and renewed for both official and unofficial purposes.

These statistics are based on information made available through passport applications. No adjustments have been made for persons changing their travel plans after receiving their passports.

The Role of Agriculture in National Defense

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, April 19, 1956

Mr. HUMPHREY. Mr. President, Mr. C. H. Russell, the editor of the Mankato Free Press, of Mankato, Minn., on April 10, 1956, contributed a column concerning the tremendous role of agriculture in the perspective of our national-defense effort. I ask unanimous consent to insert this editorial in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Sometimes it seems to us that the farmer himself, the farm bloc in Congress, the several nationwide organizations which represent the farmer, all have done a poor job in selling the rest of the Nation on the simply magnificent job that the farmer has done in making agriculture the efficient, productive, modern industry that it is today. Also of the tremendously important part that particular industry plays in our national defense.

These thoughts are prompted by the comment of an eastern journalist the other day, that the proposed soil bank program now before Congress is "just another subsidy for the farmer."

The three words that are wholly wrong in that comment are "for the farmer." The soil bank, price supports, all of the other aids the farmer has received, to stabilize prices and keep his industry productive and efficient, have benefited the Nation at large far more than they have benefited the farmer personally.

As we said before, our agricultural industry is one of our strongest bulwarks for national defense. Other nations do not fear us nearly so much because of our strength in atomic weapons as they do because of our productive strength in the waging of prolonged warfare. That is the strength which has won the last two global conflicts—the productive capacity and the staying power of the United States.

We could not have furnished that power without our gigantic and efficient industrial plant. But we could not have manned and operated that industrial plant without an equally modern and efficient agricultural industry backing it up.

Back in 1850, 2 out of every 3 people in this Nation lived on farms. And from their operations they produced one-third of the Nation's total output of goods and services. Many backward nations today occupy a position comparable to ours in 1850. Russia has progressed somewhat beyond that stage, but she still has a long way to go. That is why neither she, nor most of her satellites, have the staying power to wage prolonged war. And they know it.

In this Nation today less than one-seventh of our population live on farms. That compares with two-thirds in 1850. Today the farmer's production accounts for only one-seventeenth of our gross national product, whereas back in 1850 it was one-third. So people are inclined to say, "Look how industry has progressed in this Nation." The point is, industry could not have progressed as it has, had not the farmer become so efficient in his production, that he released millions of workers to man factories and operate machines. The farm had to become efficient and highly productive before our gigantic industrial plant could be built.

Back in 1850 we used 12½ acres of land per capita of population to supply our agricultural needs. Of this 5 acres per capita was harvested cropland. Today we use 7 acres of farmland per capita, of which 2 acres is harvested cropland. Still we have more food and fiber than we can either consume or give away.

Our agricultural productivity and efficiency is the marvel and envy of the rest of the world—and it is, as we have said, one of the most vital bulwarks of our national defense.

Now to get back to our journalistic friend's jibe about subsidies: What has the farmer done with the income and the modest prosperity which he has enjoyed over the past decade and a half or so?

Drive out across our own county, or almost any other county in the Midwest, where the bulk of the Nation's foodstuffs is raised, and you will see. Our agricultural plant was never stronger or in better shape. Fields are heavily fertilized, tremendously productive. Lowlands have been tiled out; buildings are in good paint and repair; machinery in most instances is adequate and modern; farms are not only well stocked but herds have been planned so they will continue productive far into the future.

That is where the farmer's so-called subsidies have gone. They have gone into sound investments in an industry which is absolutely indispensable to all of the rest of us. It reminds us of a story that is told about the late William G. McAdoo when he was Secretary of the Treasury during World War I. Some of the eggheads and theorists of that era had needled McAdoo to draft wealth just as you are drafting manpower. The Treasury head was reported to be impressed. A Wall Street figure of the day by the name of Barron, who was also the publisher of a market review service, journeyed to Washington to argue with the Secretary on the point. Barron was a fabulous character, weighing some 300 pounds; so heavy he had a baggage car, with a broad side door, through which he could pass, built over as a private car in which he traveled. In this car he met and conferred with McAdoo.

"Look, Mr. Secretary," he is reported to have said. "Suppose Rockefeller makes 20 million a year. He can only sleep in 1 bed at night, wear 1 suit of clothes a day, eat 3 meals. At most he couldn't possibly spend a million a year, and much of that would go as wages to people who would be jobless otherwise. What does he do with the other 19 million? He invests it in oil wells, railroads, heavy industries, which will all add to the productivity of the Nation. Who do you think is better able to spend that 19 million for the good of the Nation—Rockefeller and his aids, or the Members of Congress?"

McAdoo was convinced—he did not attempt to draft wealth. That part of the argument, about where the money goes, applies to the farmer today, just as it did to Rockefeller. What the farmer gets as a soil bank subsidy, or any other form of subsidy, or added income, he pours right back into providing this Nation with a more productive, a more efficient, a stronger agricultural industry.

And these are investments which benefit all of us; which make our economy stronger and our defense potential infinitely greater.

Address by Hon. Herbert H. Lehman Before the Albert Einstein College of Medicine

EXTENSION OF REMARKS
OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, April 19, 1956

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered at the award dinner of the Albert Einstein College of Medicine, in New York City, on April 17, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR HERBERT H. LEHMAN AT AWARD DINNER OF THE ALBERT EINSTEIN COLLEGE OF MEDICINE, APRIL 17, 1956, WALDORF-ASTORIA, NEW YORK

I am grateful for your award. I am honored, greatly honored, to be included in the company of Carl Sandburg, Dr. Stanley Cobb, and Dr. John von Neumann in receiving this recognition from the Albert Einstein College of Medicine.

Carl Sandburg and these two brilliant scientists have enriched mankind's heritage in a way and degree that no political figure possibly can. The contributions of these men will be remembered and utilized long after the political chronicles of these times have been relegated to the archives of oblivion.

To be honored in the name and in the memory of that towering figure of the ages, Albert Einstein, makes me feel humble, and thankful, indeed.

There is a man who lent luster not only to his adopted country, America, but to all humanity. Our entire epoch will one day cite Albert Einstein as one of its chief claims to immortality. There was a mind—and a soul—which soars above our time, like an eagle over the distant terrain below.

This College of Medicine of Yeshiva University, under whose auspices we meet tonight, is richly endowed with Albert Einstein's name alone. The finest hope I can express for this college is that it will never cease to be animated by the spirit and ideals of Albert Einstein. If that hope be realized—and I am confident it will—this college will repay in full measure all the efforts and sacrifices that have gone, and must continue to go, into its creation and growth.

What nobler enterprise is there, what finer way to carry on in the spirit of Albert Einstein, than to provide this facility, this college, for the training of young men and women in the twin pursuits of medical research and medical practice. And here, I am proud to note, under the aegis of the Jewish tradition, the scientific spirit is to be given free rein and scope, "on the principle," in Albert Einstein's words, "that the desire for truth must take precedence over all other desires."

In these words Albert Einstein wrote what could be the inscription on the foundation stone of this college.

The search for truth is a sacred quest whose inviolability must be recognized by any society which aspires to the ways of freedom. It is the hallmark of a mature society which has a true faith in freedom.

I accept your citizenship award, hoping that I have indeed contributed in some small measure to the struggle for freedom in our beloved country, against the encroachments of those men, to be found in every time, who view every unorthodoxy as heresy, and whose answer to heresy is repression.

Against these forces I have fought in these recent years, as during all the years of my life, with such strength as I have had. And if my efforts have served any purpose, it has been to help sound the alarm for the mobilization of those legions of Americans who, loving freedom, have been aroused to defend it.

We have had some measure of success. The worst assaults have been beaten off. The chief vigilante of them all, Senator MCCARTHY, has been, at least temporarily, unhorsed. The hobgoblins of fear with which he frightened the people and made America the object of ridicule throughout the world have been exposed for the penny-show effigies that they were.

The junior Senator from Wisconsin, for the moment, preaching to unhearing ears the doctrines of fear, danger, and hate which, only 2 years ago, commanded the breathless attention of the Nation and the world.

I have emphasized the phrase "for the moment." I have done so because I do not share the confidence of some that the danger of McCarthyism is past.

Indeed, I think it still hovers over us. It may take another form and pass under another name; while the sickness in our national soul which permitted McCarthyism to rage so violently has apparently been arrested, I doubt whether it has been completely cured.

I am reminded of the prophetic words of the late Huey Long, when asked whether the United States could be swept by facism. He was an intellectual cynic: he said it could happen, but in America it would be called antifascism. He was wrong only in terminology. In fact, when it came, it was falsely called anticommunism. Next time, if and when it comes, it will probably be called something else again.

No, the danger is not over and the damage has not yet been undone.

The stigmata of the basic illness remain with us. The climate of apprehension is much milder now but it still can be felt in the schools, in the Government service, and in the general body politic. The teacher, the public figure, or the Government servant must still think twice before he makes an appointment, writes a letter, buys a book, discusses an idea, or makes a speech or statement. He must weigh and consider how this activity could be made to look in its worst light, how it could be made to sound in the mouth of a McCarthy, or before a congressional investigating committee.

Public men must still take frequent public oaths of hatred for communism, as though such hatred required public affirmation in order to give assurance of loyalty to America.

And we still have the unedifying spectacle of congressional committees touring the country inquiring into the individual beliefs and long-past associations of private citizens.

It was only a few months ago that a most unfortunate attempt to intimidate a great newspaper, the New York Times, was to be discerned in one of the investigations conducted by the Senate Subcommittee on Internal Security.

The stage and screen have continued to be exposed to sporadic attacks, and the blacklist is still a reality in the entertainment world.

Finally, the Government security program, perhaps at a somewhat slower pace than before, continues to claim its innocent victims, although the numbers game, which Attorney General Brownell enjoyed so much at one time, is no longer as popular as it was.

No; freedom's banners can scarcely be said to fly at full mast in our country yet. We have much to do, much wreckage to repair, and many battles still to win, before we can claim that we are even at the point from which we came a scant few years ago.

Nor must we forget that the struggle for human freedom is one which must be continuously pressed forward to new victories and new advances. To do otherwise is to lose ground in a world which is in irresistible motion, where standing still results, in effect, in moving backward.

Albert Einstein said: "Laws alone cannot secure freedom of expression; in order that every man may present his views without penalty, there must be a spirit of toleration in the entire population. Such an ideal of external liberty can never be fully attained but must be sought unremittingly if scientific thought, and philosophical and creative thinking in general are to be advanced as far as possible."

Today, while facing the imperative duty of pressing onward to regain lost ground in the field of civil liberties we are presented with a fresh challenge in the field of civil rights.

I am proud and glad to take note that in this college, students are selected entirely on the basis of individual need and merit, without regard to race, creed or color.

The application of this rule to our entire society is the problem with which we must now grapple with all our might.

This problem weighs upon us today with the accumulated force of generations of injustice. Today we are being asked—no, we are directed—to eradicate the evil practices of the past and to make a prompt start upon this heavy task.

The immediate problem is legally enforced segregation in the public schools, but looming behind this one are others—the denial of the right to vote, the denial of equal opportunity in employment, and the denial of the equal protection of law against physical violence. And finally there is the overall, the basic, problem—the eradication of the assumption that race, creed, color, or place of national origin is per se a warrant of superiority for some and a badge of inferiority for others.

These problems demand, in one degree or another, our immediate concern, attention and action.

The denial of basic human rights to some, based on race, can no longer be tolerated. It will no longer be tolerated. The victims of discrimination, disenfranchisement and unequal justice are no longer content to wait for the gradual rusting away of their chains. And the conscience of America, in this respect, can no longer withstand the pitiless inspection of mankind two-thirds of which consists of peoples of colored races.

While the denial of basic rights and the repression of people on the basis of their race is concentrated in its most acute forms in some parts of the South, the larger problem is common to every part of our country.

We, in the North, while urging and requiring a forward movement on these fronts in the South, have our own movement to make, to eradicate the practices of discrimination in our own part of the country—and the existence of prejudice in our own hearts and minds, whether the victims of such discrimination and prejudice are Negroes or Puerto Ricans or Jews or Catholics or just foreigners.

We have our own backyards to clean up, even as we continue, as we must, to lend our force to the tide which is sweeping back the barriers of legal discrimination in the South.

Nor should we forget in this cleanup of discriminatory practices and prejudicial actions and attitudes, the McCarran-Walter Act. There is an area which falsely reflects and distorts the spirit of America. We cannot rest until the national origins quota system—that shameful codification

of the mythology of Nordic superiority—is expunged completely from the laws of our land.

The tasks confronting us are difficult, weighted with practical problems of the greatest complexity.

In every direction there is a new challenge, a tangled array of almost insuperable difficulties.

We must not seek to escape from this troubled prospect by passing the responsibility to others, or by contenting ourselves with the pious hope that time will bring easy solutions. There are no easy solutions.

This is the responsibility of every man. Each one of us shares in that responsibility. Each one of us has a part to play in the drama of these critical days.

We must catch up, in our human relationships, with the seven-league advances of science in the field of communication, movement and destruction.

We must do battle for freedom and justice now for everybody, or we will awake to find them gone for everybody.

I have faith. I have hope. I believe that the purposes we serve will prevail. God willing, we will not fail.

Washington Trends

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, April 19, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Washington Trends," published in Newsweek for April 23, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON TRENDS

A SOUTHERN BOLT?

Call it whistling in the dark or not, but Democratic leaders are saying the South won't bolt the ticket in 1956.

Party strategists, northern and southern, are convinced they can stop any dangerous Dixiecrat movement this year—and prevent a repeat of the 1948 split at their national convention.

CHICAGO FORECAST

This is what they think will happen at Chicago:

The platform committee will adopt a civil-rights plank defending the Supreme Court's school-desegregation decision and expressing the hope that it will be enforced with deliberate speed.

Southern representatives on the platform committee will file a minority report holding that the Supreme Court exceeded its authority in the school decision.

The majority plank will be adopted by the convention, and the southerners, having made their protest, will abide by the convention's decision.

THURMOND AGAIN?

The only Southern State in which there is any enthusiasm for another convention walkout and another third-party movement is South Carolina.

Senator Strom Thurmond, of South Carolina, was largely responsible for the pro-segregation manifesto signed by most southern Members of the House and Senate. However, he has lost his forum by retiring from the Senate.

At a recent meeting of the South Carolina State Democratic Committee, it was decided to sound out other Dixie States to find out how much third-party sentiment could be enlisted.

There has been no response to these feelers.

APPEAL FROM GEORGIA

In a little-noticed speech this month, Gov. Marvin Griffin, of Georgia, a Herman Talmadge man, definitely announced his opposition to a Dixiecrat splintering. He said: "Georgia's best hope lies within the Democratic Party."

This is the position also taken either positively or passively by party leaders in North Carolina, Florida, Mississippi, Arkansas, and Louisiana.

JOHNSON'S ROLE

Several southern delegations probably will back Senator LYNDON B. JOHNSON, of Texas, for the presidential nomination and accept his moderate leadership on the convention floor.

There seems to be slight doubt that JOHNSON, with the backing of Speaker SAM RAYBURN of the House, will become chairman of the big Texas delegation and the State's favorite-son presidential candidate.

All this could be upset by a bitter fight at the tag end of this congressional session over civil-rights legislation. But this isn't likely.

In fact, the odds are against any final action on the administration's civil-rights program. The House may pass it, but it won't get by the Senate.

THE POLL-TAX ISSUE

What the Senate probably will do is push through a proposed constitutional amendment outlawing the payment of poll taxes as a qualification for voting. If enacted, this would affect four Southern States.

The poll-tax amendment is not a fighting issue to most southern Representatives and Senators. In fact, Senator SPESSARD HOLLAND, of Florida, is one of the sponsors.

The fact is that administration Republicans aren't any more anxious than the Democrats to stir up any kind of a big civil-rights row in this election year.

The President is a moderate in this area and feels that the Republican Party shouldn't play politics with it.

Moreover, some of his political advisers, notably Fred Seaton and Howard Pyle of the White House staff, still think the President has a good chance of carrying several Southern States.

Winning Essay by Janice Johnson in 4–H Club Radio Public Speaking Contest

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, April 19, 1956

Mr. HUMPHREY. Mr. President, each year the Minnesota Jewish Council sponsors a 4–H Club radio public speaking contest. For its sponsorship of this contest in 1955, the council was awarded the George Washington Honor Medal by the Freedoms Foundation at Valley Forge, Pa., "for outstanding achievement in bringing about a better understanding of the American way of life."

This year 931 boys and girls participated in the contest. The first-place winner was Janice Johnson, of Roseau County, Minn., and the second-place winner was Julie Gerber, of Big Stone County, Minn. I ask unanimous consent to have these two State championship addresses inserted in the Appendix of the RECORD.

There being no objection, the essays were ordered to be printed in the RECORD, as follows:

WHAT CAN I DO TODAY TO MAKE THE WORLD BETTER TOMORROW?

(By Janice Johnson, Roseau County, Minn.)

A short time ago, I heard of a boy in our community who had quit high school and gone to a nearby city to work. He had been there only a short time when he was approached by a gang of older boys who were known juvenile delinquents. They wanted this boy to join them. That weekend he went home and confessed the problem to his parents and later his pastor. With their help he made the right decision. He decided to go back to school and take a trade course later so that he could get a good job.

This boy's decision is one we all must sometime face, in varied forms. It is the decision whether or not we are going to do our part to leave the world a better place than we found it, or do our part to add to the wrongs and suffering already present.

As youth, you and I have the best opportunity to shape tomorrow's world. We are the future planners, the voters, and the leaders of our country. The poet William Wordsworth once said, "The child is father of the man." By this he meant that the things we do, good and bad, as children will be the basis of our adult life. What we are as youth today will be what we are as adults tomorrow.

As young people, as teenagers, you and I must now start to build the foundation of tomorrow's world. It must be a strong foundation, and I see it as one having four cornerstones. These cornerstones are areas where we can all develop our citizenship. First of all, you and I must learn, secondly, we must teach others what we have learned, third, we must be willing to work, and fourth, we must believe. Never, in our country, have young people had a better chance to learn. The Government provides schools for everyone regardless of race or creed. There are good teachers and facilities to aid us in obtaining knowledge. Yet, some of us fail to take advantage of this. Many young people quit school or refuse to apply themselves while there. It is wrong to take an education for granted. Knowing about the world and its people is the only way that we can help solve its problems.

When I am in school, it is my duty to apply myself. I must study our country's Government, the responsibilities that I, as a citizen have, and the problems of the world in general. However, it is not only in school that I can learn. All the organizations that I join, such as our own 4–H clubs, all the things in which I participate, will teach me valuable lessons in getting along with people and accepting responsibilities. It is important, though, that we do not concentrate only on our community and country. The United States is a part of the world, and problems of the world will affect this country. It is also my job to combat prejudice by realizing that other people's ideology is just as good as mine. I can learn by study and observation, but my knowledge is worthless unless I put it to use by passing it on to others.

So we come to the second cornerstone of tomorrow's world's foundation. As young people learn they must be willing to teach others. If I learn the duties of a good citizen and practice them myself, I must also tell others about them. Too many Americans, young and old, take our democracy for

granted. How many people think how grand it is to be allowed to speak, to worship, and to act as we want? Do all of us remember the blood shed by our forefathers that gave us these rights? It is my duty, as it is everyone's duty, to teach youngsters the meaning of citizenship, and to teach it to anyone who may not know the import of being a freeman. As much as I can, it is my task to teach that prejudice of race and religion is wrong—to show that we live in an enlightened world where people of all classes and races have done great things for humanity. Teaching takes in such things as speaking publicly for what I believe is right. It means informing people of this and other countries the necessity of working together for world peace.

We have now reached the third cornerstone. You and I must be willing to work. Right now many young people are helping their communities by serving on councils, taking part in exchange programs, working in the churches, and serving as hospital aids. But remember this, it is not necessary to lead a group to be useful.

I can be very useful, for instance, in my own home. Obeying my parents, who have had much more experience than I, and cooperating at home to make my family more harmonious, is an example of how I, as a teenager, can work for world betterment. I realize that everyone cannot be a leader, but I think that everything one does to create harmony in his own group will help him in adult life. If everyone worked for the mutual good of everyone else, there would be no world problems.

At last we come to the fourth cornerstone of tomorrow's world. It is the stone of believing; believing in God and in our fellow men. The Pilgrims had belief and faith when they left England to brave this new land. Our forefathers had a belief in their hearts in 1776, and all through the years Americans have had a belief that freedom will triumph. I must have this same belief to further the belief of those around me. If I, as a person, and we all, as individuals, believe in the truths of freedom and cooperation, the world will become a better place.

When you and I, today's youth, have placed the cornerstones of learning, teaching, working, and believing, on the foundation of tomorrow's world, and I have done my part in helping, I will know that I have done my best to make the world of today a better place tomorrow.

What Can I Do Today To Make the World Better Tomorrow?

(By Julie Gerber, Big Stone County, Minn.)

Do you remember the story of the little boy who sat down on the steps of his cottage and looked across the valley each evening at sundown? He saw shining golden windows. They were so beautiful that he longed to touch them. One evening his longing became so great that he started to walk to the golden windows. It was cold and dark, and the way was strange but his dream of seeing the great splendor gave him courage to keep on. When the dawn came, he had crossed the valley. But the golden windows were not there. The houses that he saw there were as humble as his own. He sank down to rest, weary and disappointed. But then as he glanced across the valley, he saw the rising sun reflected on the windows of his own home. There were the golden windows.

Our golden windows—a better world tomorrow—can be found in our homes too. The world which we hope for, for the future must begin in our homes today.

I must assume in my home, the same responsibilities that I will need to have in adult society. I am learning to take care of myself and to share in the duties of family living. At one time, even my personal care was something for my mother to do. Now, I not only have health and good grooming habits, but I share in the cleaning, cooking, and gardening as well as the planning and entertaining my family does and the recreation we have. I think my sense of responsibility will grow until I am independent. I recognize the obligation I have to my parents and brothers and sisters in family living. In the world of tomorrow, I will be able to recognize and fulfill my obligations to society.

A successful family has to work together. When I have something to do at school I know that my chickens will be taken care of when I get home. We are always filling in for each other. It will not be hard in the world of tomorrow to cooperate with other people.

One of the sure things of family life is how they knock off the rough edges by teasing and finding fault. I don't suppose I'll ever be among people who are quite so frank as my family. Nor would I speak so frankly to someone besides those I love. This is the best way to learn to live with other people.

Duty, work, and responsibility are not all there is to a better world. There is also appreciation. When a family goes camping together, watches birds and enjoys the beauties of nature, they gain richer lives. I know that because I appreciate this beautiful world, I will always want it to be beautiful for those who come after me.

There is no limit to what a family can do to understand the world in which we live. You remember that before the little boy recognized the golden windows of his own home, he admired those across the valley. A few years ago, we shared our home, pleasures, and duties with Riitta, an IFYE delegate from Finland. Last year we entertained Henery, a high school exchange student from Germany for a while. We got to know Marie from Mexico. Henie, from Switzerland, a fellow student in my history class is an exchange student being sponsored by my hometown. This direct personal approach to someone different from one's self lessens differences and increases the understanding. I believe that the interest my home has in people from other lands will teach me tolerance and develop a feeling of oneness with those we often call strangers now.

A habit of public service is formed when a family works together by active participation in a 4–H club, in church work, or other organizations. I will be able to work with the organizations of government and society because it has become a habit as I am growing up.

A family that worships together gives the individual a lasting and unquestioning spiritual strength. With this I will have courage to stand by my convictions and to fight for the right as I see it.

The golden windows—A better world tomorrow is formed within my home today. I am learning to be independent and to share work and responsibilities with others.

I am cooperating with other people and living happily with them. By developing appreciation for this beautiful world I am increasing my determination to conserve it for others. I am increasing my understanding and enlarging my interest by associating with people "Across the valley." I am developing a habit of public service and a lasting, unquestioning spiritual strength.

The golden windows are not found by marching off across the valley all alone, but by clasping hands with those we love and so enlarging the circle of our concern until it embraces mankind. When we can enlarge our family living into world living with the same understanding, the world tomorrow will be better.

Financing Our Highway System

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 19, 1956

Mr. MARTIN of Pennsylvania. Mr. President, the question of financing our highway system is giving all three levels of government great concern.

We all know that our present road system is inadequate. In fact, the roads we have at the present time are what we should have had 10 years ago.

A very able editorial on the subject, entitled "Dividing the Responsibility," appeared in the Washington Reporter, of Washington, Pa., under date of Wednesday, April 11, and I ask unanimous consent the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DIVIDING THE RESPONSIBILITY

Governments—local, State, and Federal—ultimately decide how our highway needs should be met. One of the first questions about highway policy that has to be answered is how the responsibility for the Nation's highway system should be divided, particularly between the Federal Government on the one hand and State and local governments on the other.

Traditionally highway construction and financing have been very largely a State and local responsibility. The committee believes they should continue to be so. In general, smaller government units are better able than larger ones to measure the benefits from road improvements within their borders.

At the same time the committee believes that there is a place for Federal Government participation in highway policy. Many of the benefits of highway improvement are of a type which only the Federal Government can take account of. It would be too much, for example, to expect the States to take into account the benefits to national defense of a given road project and on these grounds to increase its highway expenditure. National defense is the concern of the Federal Government. So, under the Constitution, is the promotion of interstate commerce, and this is another important benefit of an adequate highway system.

Furthermore, there is a danger that States and local governments, planning their road construction, will give insufficient weight to the needs of interstate traffic. Unless a State can impose a toll, which is not usually the case, it may have difficulty in levying charges that will cover the costs of roads that are heavily used by motorists from outside of the State. This is particularly true of the high-speed, limited access, multiple lane-divided highways, which yield huge benefits in time and running costs saved and which reduce accidents, but which are expansive to construct.

Finally, there is a need to coordinate all the State and local highway programs so that they result in a logical national network. This function is performed by the Federal Bureau of Public Roads.

For the most part, these justifications for Federal participation in highway policy apply only to one segment of the highway system—to the Interstate System. But the

Interstate System, including as it does most major urban connections and bypasses, contains just the roads where improvements and new construction are most urgently needed. Secondary and rural roads, while still far less adequate than those who use these roads would like, are not suffering from congestion.

Of the $875 million which the Federal Government was authorized to spend in fiscal year 1955–56 on highways, only $175 million was earmarked for the Interstate System. With this money the Government may assume up to 60 percent of the costs of improvement projects on the Interstate System. The other $700 million is available on a 50–50 matching basis for improvements on the primary and secondary Federal-aid systems.

In view of the reasons which justify Federal participation in highway policy, and in view of the fact that the most serious deficiencies in our highway system are to be found on the Interstate System, the committee believes the present emphasis in Federal financing for highways is wrong and should be corrected. The committee recommends that any increase in Federal finance for highways should be applied exclusively to the Interstate System.

Furthermore, the committee recommends that the Federal Government be authorized to assume more than 60 percent of the costs of improvements on the Interstate System. A Federal share up to 80 percent would assure rapid improvement on the Interstate System.

The current $700 million in annual grants from the Federal Government for other roads and streets should at least not be increased.

Finally, Federal responsibility in highway policy should be confined strictly to financial aid, to collaboration with State highway departments on the location of interstate routes, to the establishment of minimum construction standards on Federal-aided roads, and to the testing and development of new road construction methods and materials. All actual construction, maintenance, and policing should continue as State functions.

Friends of the Farmer

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Thursday, April 19, 1956

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Friends of the Farmer," published in the Christian Science Monitor of April 18, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FRIENDS OF THE FARMER

Republicans and Democrats alike are making it difficult for the American farmer to determine who his friends are. When the Democratic leaders in Congress put through the farm bill they thought they had shown conclusively that their party wished to be more generous with farm aid. Some of them still feel that the President's veto will sharpen such an impression among many farmers.

But right now they are trying to get out from under the hot potato Mr. Eisenhower has tossel in their laps. Just how do they deal with his demand for early enactment of the soil-bank plan—which it is estimated could still put large sums in farmers' hands this year? Can they refuse the farmers this help simply because the President would not accept all the aid plans Congress put forward?

Congressional leaders may have thought they had got past the soil bank for this year—since few farmers could wait this long to see what Congress would do. Republicans have been pushing for action—fearing that this main feature of their aid program would be rendered useless by delay. But Mr. Eisenhower had an unexpected trump in his hand. He suggests now that under this plan "earnest money" (half the total soil-bank payment) could go to farmers this year who contract to take land out of production at their next planting period—fall or spring.

It is estimated that this ingenious plan for paying farmers before they begin "not to plant" could add $500 million to farm incomes this year. Combined with other big sums the administration can put in farmers' hands without any other new legislation, this amount could considerably blunt farm discontent. From a partisan standpoint it would be clever Democratic strategy to keep all discontents sharp. But can they afford to do so by withholding soil-bank aid? What kind of farmers' friends will that make them?

The Crazy Farm Bill

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Thursday, April 19, 1956

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Crazy Farm Bill," which appeared in the Washington Daily News of Friday, April 13, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE CRAZY FARM BILL

If ever a bill cried out for veto, it is the so-called farm bill Congress has sent to the President's desk.

One of the best sum-ups comes from the president of the largest farm organization—Charles B. Shuman of the American Farm Bureau Federation. He hit it on the button when he said:

"The bill abandons any semblance of sound economic principles for the illusion of political gain."

Mr. Shuman went on to point out what everybody knows, even the politicians who voted for this Rube Goldberg absurdity—that the bill is a return to the discredited programs which created the horrendous glut and caused the recent-year downturn in farm prices.

This is a bill to hypnotize farmers until after the November election. That's its sole purpose. Whether it will accomplish this in any respect, and if so whether it will benefit Democrats or Republicans, is open to broad question.

But there is little doubt of the disservice it will do, not only in the long run to the subsidized farmers themselves, but to the overwhelming majority of nonsubsidized farmers, taxpayers, and consumers.

The bill restores the 90 percent parity system for wheat, cotton, corn, and peanuts for 1956. The Government, because of the past performance of this same rigid parity system, now is spending $1 million a day just to store the stuff.

It is the bill's intent to hike the prices of these commodities. If so, who will pay? On feed grains, those who raise cattle, hogs, and poultry will be the first to pay. They get no subsidies, but they will have to buy subsidized feed, and they pay taxes.

Next year, the bill would impose on wheat what Mr. Shuman calls a "three-price domestic dumping plan" in such fashion that the price of bread inevitably would rise.

The bill boosts the Federal subsidy on dairy products, forerunner to higher prices there.

The much-advertised soil-bank plan, originally intended to cut surpluses, has been so rigged that some farmers could retire their whole farms and get paid for not raising anything.

While the bill will hurt more than half the farmers directly, in increased prices for feed, it will hit all taxpayers—because it adds about $2 billion to the Government's outlay.

If it is a bill, as its backers intend, aimed at cadging the votes of a relative few on November 6, it also is a bill to dismay and alienate the lop-sided majority who are nonsubsidized farmers, consumers, and taxpayers.

It is utterly bad legislation, as Mr. Shuman puts it. On political, economic, and moral grounds, it fully commends itself to the Presidential veto.

Now Life Is Easier at Alcatraz

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, April 19, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Now Life Is Easier at Alcatraz," written by Leonard Milliman, and published in the Bismarck Tribune. The article deals with some changes which have been made in Alcatraz prison.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHILE FAR FROM A BED OF ROSES, NOW LIFE IS EASIER AT ALCATRAZ

(By Leonard Milliman)

SAN FRANCISCO.—A cautious series of increased privileges for prisoners and stricter security measures has reduced violence on bloody Alcatraz. But there's no intention of abandoning the maximum security prison in the near future.

This was indicated to newsmen by Warden Paul J. Madigan in a rare mass tour of the Rock this week by reporters, photographers, and television cameramen. The Department of Justice invited them to make the visit in response to requests.

Although they live behind rose-colored bars only 1½ miles from San Francisco, life on the island in San Francisco Bay is no bed of roses for its 281 prisoners. They are the most dangerous, the most rebellious of convicts in all Federal prisons.

Major changes made over a period of 20 years include (1) permitting men to converse with their neighbors in cell blocks or at the dining table, (2) letting them see two movies a month, (3) letting them listen to the radio over earphones 3½ hours a night with a choice of 2 stations, and (4) reducing the workweek for those permitted industrial jobs from an 8-hour day 6 days a week to a 6½-hour day 5 days a week.

First of the changes, elimination of the silent system, followed the slugging of former Warden James A. Johnston as he walked through the dining room in a 1937 strike.

Security changes also followed waves of violence.

Since the 3-day battle of Alcatraz in May 1946, the most violent uprising on the island, mesh screens have protected the catwalks behind which gun guards watch the cell blocks in which inmates are locked at least 14 hours a day.

The battle was touched off when Bernard Paul Coy, a Louisville bank robber, scaled bars to the catwalk and pried them apart with a spreader made of stolen toilet connections. He slugged the guard and passed down his weapons to five companions. Before the battle was over, 5 men were killed and 15 wounded, mostly guards. Three convicts died in the battle and three later by execution.

The old model shop on the northwestern corner of the island has been turned into a storeroom. It was too easy to try to escape from there.

Among the new privileges, three safety razor blades are issued weekly to each inmate. Formerly he had a blade only long enough to shave; then it was taken away.

"If a man wants to kill himself," says the warden, "he'll kill himself."

Even after the changes, Madigan said, "discipline is strict, but not too rigid and not cruel. There are no trusties. Men are never out of sight of a guard. No one is allowed out of his cell at night. No one is paroled from Alcatraz.

But they do leave, normally after 5 years, by transfer to other prisons. This is contrary to the belief that the only way out of Alcatraz is in a coffin.

Alcatraz is a prison for troublemakers, all with long criminal and prison records, who couldn't get along in other Federal penitentiaries.

There's been a great deal of talk of abandoning it because of its location far away from the Nation's population center and the high cost of operation—$7.50 a day per man.

"We don't know whether we can get rid of Alcatraz, but we would like to," said G. Frederick Mullen, director of information of the Department of Justice.

Madigan added, "The need is still with us for a maximum security prison, as proved by the men we have here. So far as continuing Alcatraz as a prison, that is entirely up to Attorney General Brownell."

Mullen indicated its future would depend on the fate of a bill before Congress to appropriate $10½ million for a maximum security prison to be built somewhere in the Midwest.

Until another such prison is built, Madigan and Mullen agreed, there'll be Alcatraz, with a maximum of security and a minimum of privileges.

Recent Decisions of the Supreme Court

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 19, 1956

Mr. MARTIN of Pennsylvania. Mr. President, a few days ago a very able editorial appeared in the Pittsburgh Sun-Telegraph, entitled "We Dissent."

In order to keep the three branches of Government as intended by the Founding Fathers, it will be necessary for the legislative branch to give serious consideration to pressure from both of the other branches of our Government.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WE DISSENT

Twice in a week, the United States Supreme Court has handed down decisions that invade State's rights.

In both cases, the Court cited the Federal Constitution to nullify a basic principle of the Union—the principle that "powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

On April 2, the Court ruled that State penal laws against subversive activities are unenforceable because Congress has preempted the field with Federal legislation.

This decision adversely affects the police powers of the States, which under the Constitution are definitely reserved to them.

On April 9, the Court overturned a decision of New York State's distinguished court of appeals and virtually repealed a section of New York City's charter relating to municipal officials and employees.

This decision, involving a dismissed college professor, diminishes the right of States and local governments to hire and fire within the terms of State or local law.

The decision not only does violence to the constitutional doctrine of States' rights—it also invaded the domain of education, which has always been deemed a State and local function.

Both decisions unquestionably give aid and comfort to Communists and their fellow travelers. But that is perhaps not the main point at issue.

The main point is that the Supreme Court, as now composed, has labored to set up by tortuous reasoning new doctrines which 4 of its 9 members dispute.

In the school case, a Brooklyn college professor refused to answer questions about communism before a committee of the United States Senate, pleading the fifth amendment.

The New York charter requires the dismissal of "any employee of the city" who "utilizes the privilege against self-incrimination to avoid answering a question relating to his official conduct."

On advice of the city's corporation counsel, the professor was dismissed summarily and went to court.

The New York Court of Appeals held that the professor had a right to invoke the fifth amendment to avoid self-incrimination—and for no other reason—but that the city was thereby bound to discharge him under its charter, which was really a condition of employment.

The United States Supreme Court has reversed that ruling.

The Court, however, actually rested its majority decision not on the 5th amendment but on the "due process of law" clause, which is a very different thing, appearing in the 14th amendment, and which, the New York court had found, did not apply.

Better law, in our lay belief, is expressed in the two dissents.

Justices Reed, Minton, and Burton said:

"In reliance upon the due process clause of our Constitution the Court strikes deep into the authority of New York to protect its local governmental institutions."

Justice Harlan sustained the New York Court of Appeals in holding that "the assertion of the privilege against self-incrimination" by a New York City employee "is equivalent to resignation."

Justice Harlan likewise implied that the Supereme Court, to reach its majority opinion, went beyond its jurisdiction. Respecting the fifth amendment, he said:

"On the record, I would affirm the decision of the court of appeals.

"A different question would be presented under the privileges and immunities clause of the 14th amendment. But that question was not raised below and is therefore not open here."

Veto Sustained

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Thursday, April 19, 1956

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Veto Sustained," published in the New York Times of April 19, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VETO SUSTAINED

Since it had committed itself to the farm bill monstrosity that was to meet with a Presidential rejection, the House of Representatives had no choice yesterday but to go through the motions of trying to override the White House veto. The result, as it figured to be, was a touchingly depressing spectacle.

Many of the legislators who had voted for the bill originally in the belief that the President wouldn't dare risk a veto had had time to think things over and were in no mood to return to the fray. Also reversing their positions on the measure were those less than noble souls who had supported the bill knowing it to be a thoroughly vicious piece of legislation, in the expectation, or the hope, that the President would, to put it colloquially, "take them off the hook." The result was that in this recount the friends of what one of its critics has grimly described as the "ominous farm bill" not only didn't come within hailing distance of the two-thirds vote they needed; they failed to obtain even a majority, going down by the ignominious vote of 211 "against" to 202 "for."

The simple fact is that the political forces that had entered into a series of purely political alliances calculated to seize credit for rescuing the farmer from a plight that was partly of their own creation have not only been repulsed but now find themselves in a state of confusion. President Eisenhower has protested more than once that he isn't a politician. And we are sure that in the narrow meaning of that term is true. But too many people are inclined to forget that the present incumbent of the White House spent much of his life as a professional soldier and that he is a master of military strategy. And a military strategist can't afford to make many unconsidered moves. We would like to suggest that the recent clash over farm policy was an excellent example of what can happen when an assorted group of amateur strategists take on a professional.

If the President made any mistakes in basic strategy in this dramatic campaign over farm policy then we don't recall them. His position, in the first place, was impregnable from the standpoint of sound economic and social policy. Because he refused to be drawn into making bellicose gestures, the opposition mistook this as a sign of weakness. Before it realized it, perhaps, the opposition had become so intoxicated with this thought that it had concocted a bill so bad that the President not only had to veto it, but the public could clearly see why he had to veto it.

But in military strategy one must always have alternative plans prepared for any possible contingency. That is why Mr. Eisenhower not only was able to veto the farm bill and to make the public see why he had to do so, but to produce a program that he had prepared against just that possibility.

At the same time he has maneuvered Congress into the position where, if it is to justify all its fine talk about being the friend of the farmer, it must do its part by promptly passing the soil bank, which it has already advocated and voted for. Mr. Eisenhower has even stripped Congress of the feeble remonstrance that it is too late for the soil bank to be of use this year. He has proposed to insert a provision in the soil-bank bill under which the farmer who agrees to cooperate would receive half his payment as soon as he signed, or any time after July 1, this year.

Congress has continually harped on the importance of putting cash in the hands of the farmer this year (meaning before election). It is going to be a little difficult for it to explain its action if it refuses now to go along with this proposal of the President's, which could mean $500 million in additional purchasing power for the farmer in 1956.

Let's Stick to the Facts

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. KEATING. Mr. Speaker, when a man is elected to the post of governor of a State, the electorate expects him to hold the interests of his State above all else. We in New York State have a strange situation in this regard.

Governor Harriman stated early this week about the President's veto of the farm bill, that the veto marked a black day for the New York dairy farmer.

Actually, the facts of the matter point to a directly opposite conclusion. I am shocked that the governor of a great State like New York should make these intemperate remarks about an important segment of his State's population without looking into the facts of the matter and with complete disregard for the welfare of the farmers of his own State.

The figures illustrate plainly that the cost-price squeeze on New York farmers would have been greatly aggravated, had the crazy-quilt farm bill passed by this Congress been signed by the President. Under the terms of that bill, the dairy farmers of my State would have paid $32 million in increased feed costs to get approximately $2,650,000 in increased income from higher price supports on dairy products. If you subtract the $2,650,000 increased income from the threatened loss of $32 million, it is clear that the New York State farmer would be on the short end of the stick to the tune of nearly $30 million. Obviously, the President has done a great service to the farmers of my State by vetoing this bill.

The President has provided for increasing the income to New York farmers by the same $2,650,000 as in the vetoed bill by directing the Secretary of Agriculture to increase the support price on dairy products. But he has not saddled on them these added costs.

The facts of the matter are plain. The President has not only acted in the best interests of the whole country in vetoing the bill, but in particular his action has saved the farmers of my State a great deal of money.

Winning Essay by Miss Janet Bellin in Peace Essay Contest

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, April 19, 1956

Mr. NEUBERGER. Mr. President, I have recently received a copy of the award-winning essay in the Fifth National Lawrence S. Mayers Peace Essay Contest. The subject of the essay was the question: "During the Next 5 Years What Can I Do To Help Bring About Permanent World Peace?" The prize-winning essay was written by Miss Janet Bellin, of Stayton, Oreg. Miss Bellin was then a student at Stayton Union High School and subsequently entered the University of Oregon.

Mr. President, I think we can all be pleased and proud to see the kind of responsible and constructive thinking which the members of our younger generation are giving to the vital problems of peace and war. While we read much in the newspapers about more sensational juvenile activities, it is good to be reminded that other young people are giving thought to the problems of international relations which will continue to play a major role in forming their lives, as it does today.

I ask unanimous consent to have printed in the Appendix of the RECORD Miss Bellin's prize-winning essay on the question propounded by the Fifth National Lawrence S. Mayers Peace Essay Contest.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

THE SOLDIER'S QUESTION

My country said, "Go to war!"
I heard its cry.
I marched away and left my life behind—
I left to die.
Doubting Thomas, Denying Peter, that was I
But I didn't flee.
"Go to war!" my country said—
I went—to Gettysburg, to Iwo Jima and the rest.
I did not question what was best.
I went to war.

I had some boots, I had a gun, a ship, a tank, a plane.
I knew their strength—
Fighting in the frozen mud of Korea
I knew their strength.
In all ages past men have fought
Because they ought.
They fought for peace, for land, for rights.
I, too, for my country fought,
Because I ought.
His eyes were slanted, he did not know my face.
He and I make up the human race.
I killed him for my country said I must
He lay there, silent in the dust.
But still, I heard a cry that pierced and rent and tore,
"Why is there war?"
It reverberated from the hills,
Its echo roared—
"Why is there war?"
"Why is there war?"

—*Janet Bellin.*

MY QUESTION: DURING THE NEXT 5 YEARS, WHAT CAN I DO TO HELP BRING ABOUT PERMANENT WORLD PEACE?

I am an 18-year-old farm girl in a small town in Oregon. It is a logging community, and familiar to everyone's ear is the cry of "timber" and the sound of a powersaw snorting its way through the few remaining stands of second-growth fir and cottonwood. How hard it is for me to realize as I hoe in the warm sunshine and feel the firm, sandy soil beneath my feet that this tiny community is part of a clashing, struggling civilization that claws like a wild beast underneath while it clamors on the surface for world peace.

I have lived for 18 years on this earth. During that time my parents have provided me with food and shelter, love and affection; the opportunity to grow up and go to school in a free country. Teachers have taught me from books and opened new horizons of interest. Townspeople have invited me in for a cookie, attended school functions, and were interested in the fact that I was a child growing up. Now, after these years, the time has come for me to do what I can to make the world a better place for the children of tomorrow.

When I was in the fifth grade, Mrs. —— came to school one day. She had a flag with her. She stepped to the front of the room and as she unrolled the familiar Stars and Stripes, I wondered why she had saved this tattered, faded flag. "Boys and girls," she cleared her throat, her voice a bid unsteady as the room grew quiet, "Boys and girls, after my son was killed 4 years ago, I kept this flag which covered his grave. I'm leaving it here to fly above your school and I pray that none of you will ever have to be shiped home dead to your mother from a strange land where you died for your country. Take this flag * * *." She couldn't go on. She left the room crying. I had never seen Mrs. —— cry before. I'll never forget that moment. I have a twin brother, a boy friend, cousins, and friends. Mrs. ——'s son can only die once.

Next time, perhaps it will be me who stoops to remove a faded flag from a newly turned grave. In 18 years I have been taught to eat, to walk, to talk, to sing, to drive, and a thousand and one other things. But no one has ever taught me what to say in this moment when I ask myself, "What can I do during the next 5 years to promote permanent world peace?"

It does no good to look at the lives of famous people, living and dead, to see what they did to answer the question. They are not I and I am not they. This must be my own solution. However, the question is not mine alone. It belongs to every man, woman, and child everywhere. If each answered it not only in words, but in deeds, to the best of his ability there would be no such question for generations to come.

Next fall I plan to enter college. Surely there will I find an answer to my question. As a freshman, I haven't much choice of courses, but I ought to be able to squeeze in several hours a week for the study of international relations. Learning of the prob-

lems of coexistence is not the complete answer. A nationwide organization, the International Relations Club, might also help me to understand my question, even if it won't solve it. Perhaps if I major in political science, studying world politics, international law, European political theory, etc., and after finishing, find my place in one of today's international organizations, I will be doing my job.

It has been said that the people in countries across the sea have a strong dislike for the United States as a country. Part of these feelings are present through misunderstanding. By writing to a pen pal in Ireland, Japan, or another country, I would only be reaching one person, but at least I could tell that one person about this community where I live—so unlike the picture Communist countries paint of the extravagant, imperialistic United States of America.

Like most 18-year-old girls, I dream of some day having my own home and children—in some nice town, not too different from the place I live. If I were to be married next month how could I use my 5-year time allotment to help promote world peace? Instead of the garden club, and bridge club, and the numerous other societies which young wives of today find so attractive, I might join the town's United Nations Club, or if it didn't have one, start one. The American Association for the United Nations is very cooperative in helping such organizations to get on their feet. Such a group could study the U. N., raise money to help support its specialized agencies, provide milk and clothing for children in India and undertake countless other small projects. An even larger one could be sponsoring an exchange student or refugee.

By teaching my children to respect other people and their property, to control their tempers when in an argument, and to make every effort to get along with the other children of the neighborhood, I would be promoting peace—even if it were on a very small scale.

I hope to graduate from college and teach in Oregon schools. Here my peace promoting could operate on a slightly larger scale as I teach students the Golden Rule along with their other courses. In social studies classes, I could help them to explore the countries which make daily headlines in the American press. Here, though they were influenced by their parents' feelings, they could learn to broaden their opinions and their understanding through group discussion about these trouble spots. Sending pencils to Korean children, soap and washcloths to the children in Panama—these are projects that would help answer my question and would answer it for my students, too.

My question has been presented to me in another way. Jesus said, "Be ye kind one to another." As part of my Christian heritage I must do all that is in my power to promote world peace. Again, it is hard to find an answer to this question which is so overpowering. To what degree shall I give? How hard shall I try to answer it?

A missionary in the steamy jungles of Africa could promote permanent world peace. In 5 years I could complete missionary training and represent my church in a missionary field. I would have to provide not only spiritual help and translations of the teachings of Jesus Christ, but I would also have to be, in part, a medical adviser, a counselor, and a friend—an ambassador of the United States of America.

"More things are wrought by prayer than this world dreams of." Perhaps I am overlooking the closest, but most effective way of answering my question. How simple it would be for me to dedicate a few minutes a day to prayer for world peace. Who can tell what power those collected minutes could hold? In this way I would be fulfilling my Christian duty, my duty as a citizen of the United States, and my duty as a citizen of the world.

No one ever thinks he has enough money. No matter what he has, he always needs more. Although my future earnings will certainly never total a million dollars, a small percentage of them could help organizations that are the means by which the average citizen may contribute to possible peace. Agencies such as CARE, and specialized agencies of the U. N.—UNESCO and UNICEF, for example—spend dollars carefully, aiding the most people possible, helping them to become better educated, to be healthier and thus, enable them to better understand why world peace is the route to happier living for all mankind. Because I have visited the United Nations headquarters in New York and spent a week there studying its functions, I am convinced that promoting the U. N. is synonymous with promoting world peace.

I offer no solution for impressing upon people their duty to serve in this capacity. I have invented no secret weapon that will cause the world to "heel" at my command. All I have to offer is the minute bit of knowledge that I have acquired, plus my faith in God and the future.

It's up to me as an individual of this world, who has been lucky enough to attend school for 12 years, to send CARE packages, join the International Relations Club at college, study foreign affairs, write to a foreign pen pal, and be constantly on the lookout for new and more efficient ways to complete my task.

I pray that someday everyone will hear my question, answering it to the best of their ability, and, in some year to come, perhaps the soldier's question will be changed. As he puts aside his gun forever, he may look wonderingly at a comrade and ask in hushed tones, "Why is there peace?" The people who have answered my question will know.

The Real Betrayers

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Thursday, April 19, 1956

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Real Betrayers," published in the Wilmington Morning News of April 14, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE REAL BETRAYERS

Former President Truman, of late, has been elbowing his way into the political limelight almost as frequently and somewhat more brashly than the announced candidates for the Democratic presidential nomination. This week, at a Jackson Day dinner, he lashed out at Mr. Eisenhower as a "do-nothing President," called his stand on farm legislation "one of the most amazing records of political betrayal I have ever seen," and said that the farmers could count on a depression every time they made the mistake of putting the Republicans in power.

This is demagoguery in the authentic and colorful Truman style, so full of exaggerations and distortions that it hardly deserves an answer. However, we suggest that if the farmers want to know who their real betrayers are they will find them in the ranks of those who are playing politics with their distress.

These are the politicians who offer the lure of high, rigid price supports, although these will simply pile up more unmanageable surpluses and add to the farmers' future woes. They are the members of the Democratic majorities in Congress who have deliberately loaded up the new farm bill with contradictory provisions in the hope of making the bill so bad that President Eisenhower would be forced to veto it. These men, despite their crocodile tears, are not half so much interested in farm relief as they are in using the farmers' genuine distress as a means of advancing their own political fortunes.

The Army's Keystone

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. AVERY. Mr. Speaker, under leave to revise and extend my remarks, I would like to bring to the attention of the Members of Congress the anniversary of one of the leading military facilities of the world. On May 7, 1956, the Command and General Staff College of the United States Army located at Fort Leavenworth, Kans., will be 75 years old. The part this school has played in America's heritage would fill volumes. From its beginning as the "School of Application for Infantry and Cavalry" in 1881, to the present day, the Command and General Staff College has gained the unsullied reputation of affording officers training which has paid great dividends in command, administrative, and logistical efficiency for our Armed Forces.

The college occupies a crucial position at the center of the Army education system. It is the first and only combined-arms school attended by any officer in his military career. At the same time, it is the last and highest level tactical school that he will attend.

As the only combined-arms school, the college is entrusted with educating the officer in the organization and operation of the combined-arms team. Here he finds the place of his branch in the Army at large. It is his first schooling in a college designed to accommodate all branches.

In addition, the college occupies a key position in the Army combat developments system, as it is responsible for the preparation of doctrinal concepts of present and future wars at division, corps, and army levels.

It is upon these doctrinal concepts and the combat tactics of the combined arms, which are developed at the Command and General Staff College, that the successful implementation of our war plans and, hence, the security of our Nation, depend.

George Washington said, "To be prepared for war is one of the most effectual means of preserving peace."

I would like to quote the mission of the Command and General Staff College:

To prepare officers for duty as commanders and as general staff officers at division, corps, Army, and comparable levels in the communications zone.

To provide instruction in the light of war lessons and modern developments to ensure effective development and employment of

all field forces within the framework of the field Army and the communications zone; and the efficient administrative, intelligence, and logistical support of the fighting forces.

To review, formulate, and revise doctrine and provide for its incorporation in training literature and instructional material.

The Atchison Daily Globe, Atchison, Kans., on Monday, April 2, 1956, ably presents the thinking of the residents of Kansas toward this illustrious school. Mr. Al. Bennett is the editor of this outstanding newspaper. The Atchison Globe editorial merits the attention of all Members of Congress. The editorial follows:

THE ARMY'S KEYSTONE

The United States Army's Command and General Staff College at Fort Leavenworth will be 75 years old on May 7, and northeast Kansas is proud to be its home. It is the senior tactical school of the Army, and the only school that teaches the tactics of all the combined arms and services in combat.

The Command and General Staff College has operated under various names since it came into being in 1881 when William Tecumseh Sherman, a Leavenworth lawyer and onetime legal associate of Abraham Lincoln, was chief of staff of the United States Army. It was known then as the School of Application for Infantry and Cavalry with 42 senior lieutenants and captains enrolled for a 2-year course in reading, writing, grammar, and arithmetic, as well as advanced subjects in military science.

From this beginning and through many reorganizations of the physical facilities and curriculum, more than 5,000 officers were graduated from the school prior to World War II. It was known at various times also as the School of the Line, General Staff School, Command and General Staff School, and finally Command and General Staff College.

During World War II, 27 classes turned out more than 18,000 student officers. Since then an accelerated program of training officers from allied countries gradually increased the enrollment of foreigners until this year more than 125 officers from 40 countries have attended courses at the college.

Present-day instruction is at the postgraduate level. Each year more than 2,000 officers of our Army, together with some from the Navy, Marine Corps, and Air Force, and the armed forces of our allies, complete resident courses at the college. Another 11,500 students, most of whom are officers of the Army Reserve and National Guard, are enrolled in various phases of the nonresident program.

Winston Churchill once said: "One of the greatest miracles of this (World War II) conflict was the staff work of the worldwide forces of the United States. That so vast an undertaking could have been successfully prosecuted by so small a body of trained men is resounding tribute to the training of the United States military schools." The No. 1 military school in the United States is at Fort Leavenworth, worthy of high praise on its 75th anniversary.

Examination of National Banks

SPEECH

OF

HON. HENRY O. TALLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 1188) to amend section 5240 of the Revised Statutes, as amended, relating to the examination of national banks.

Mr. TALLE. Mr. Chairman, the distinguished chairman of the Committee on Banking and Currency, the gentleman from Kentucky [Mr. SPENCE], has correctly stated the facts relating to this legislation. I most assuredly agree with him that this is a simple bill. There is nothing in it that could be considered earthshaking. It might well have been put on the Consent Calendar, except for the fact that in committee a request was made that a rule be asked for, and that was done.

May I, Mr. Chairman, emphasize one point that is important in this bill. The Comptroller of the Currency has found that it is not easy to develop and to keep an efficient corps of examiners. In view of the fact that this bill proposes that over a 2-year period there may be 3 examinations of some banks instead of 4, the Comptroller will have some latitude and he will be able to make better use of his work force. That is a telling argument and a very strong one in support of the bill.

Mr. Chairman, I see no reason for my taking more time. I do, however, reserve the balance of my time.

The Right and Left of Immigration

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 19, 1956

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an exceptionally well prepared summary of the existing immigration and nationality laws and an appraisal of what some of the legislation designed to repeal or amend these laws would do to the citizens of this country.

The summary was prepared by Mrs. Kenneth Field, first vice president of the Allegheny County League of Women Voters of Pittsburgh, Pa. I have congratulated Mrs. Field on her brilliant analysis of a complex problem, and I believe that Members of the House should become acquainted with her work. It is an honest and intelligent presentation, refreshingly void of the usual name calling resorted to by so many people in discussing this problem:

THE RIGHT AND LEFT OF IMMIGRATION

We Americans have contributed over 54 billion of borrowed dollars to the rehabilitation of the war-damaged world; yet we are subject to a barrage of accusations that we are believers in the Anglo-Saxon myth of race superiority, that we are wrecking international good will and are all kinds of brutes for our selfish, repressive immigration policies.

LET US LOOK AT OUR SPLENDID RECORD

From 1820 to 1954, we have admitted 40,175,330 to permanent residence. While we still had vast unoccupied territory, we placed few restrictions: 1880–1890 saw over 5 million immigrants settled in the United States. From the early Nineteenth Century to 1930, we had taken 60 per cent of world immigration. Then we came to the end of free lands and went into a depression and finally the war; so from 1930 to 1945 immigration averaged less than 50,000 a year. Then from 1946, annual immigration rose above 100,000 a year. In the last 6 years it has averaged over 200,000.

From 1948 to 1952, we took one-third of all the displaced persons left in Europe by Hitler's reign of disaster. We took one-third; yet we have only 6 percent of the land area of the world. Let us remember we took one-third as we compare our population and land areas with that of three other nations who took fewer.

	Number of persons per square mile	Total land area (square miles)
United States	45	2,800,000
Brazil	15	3,300,000
Canada	3.5	3,800,000
Australia	2.5	3,000,000

THE QUOTA IS NOT THE WHOLE STORY

We also hear about the "pitifully small quota of 154,657" as if it represents total limits of immigration. It does not.

The following nonquota immigrants may also obtain visas for permanent residence:

1. All wives, all husbands, all children of United States citizens.

2. All persons born in the Western Hemisphere who are healthy, can make a living and are not criminals or subversives. This is part of our good neighbor policy. It is designed to build hemispheric solidarity.

UNITED STATES CAPACITY TO ABSORB IMMIGRANTS

All Americans, except those who wish to bring our sovereign Nation into subjection to communism or to some other form of world domination and see in unlimited immigration a means to our financial destruction, would agree that there are limits to the number of immigrants for whom we can find room. Our own population is growing at the rate of 3 million a year. Europe's unemployment problem is severe in many areas; yet her population also continues to increase at the rate of about 3 million a year. Then there are the 900,000 unfortunate Arabs in the Middle East and all of Asia's millions who are just above and often below starvation level. And there is another pathetic prospect of possible need which EMANUEL CELLER points out—I quote from a speech in which he discusses the changes in the Immigration and Nationality Act which Senator LEHMAN and he are advocating. He concludes, "It is not lightly that I make these proposals. I have this in mind: With the possible easing of tensions the time may not be too distant when the Iron Curtain countries may permit those of Jewish faith to emigrate. Therefore we must work now to bring about availability of quota numbers, even if in a limited degree, so that we shall not fail them at their moment of greatest need." America sympathizes with people in need—witness the Displaced Persons Act and the Refugee Act. Would it not be better to meet a special need with special legislation which could be regulated to fit both the need and our economic situation at the time, than to open the United States indefinitely to more people?

To learn how many more we can absorb, let us see what happens to the resident aliens who represent, to some degree, our most recent acquisitions. They must report their place of residence, and where do we find them? Seventy-one percent are to be found living in eight of our populous industrial States: New York, California, Texas, Illinois, Michigan, New Jersey, Massachussetts, and Pennsylvania. At the same time 24 of

the less industrialized States had fewer than 1,000 immigrants each.

HOW DO OUR NEW IMMIGRANTS MAKE A LIVING?

Of the 208,177 persons who came into the United States as permanent residents in 1954, 112,067 had no occupation. The majority of these would be wives, children, and aged parents—people to be suported by someone else's labor. Where will we find the 96,110 who list an occupation? Of all these, only 3,846 listed themselves as farmers or farm managers and 1,622 as farm laborers. These 5,468, together with their families, seem to be about the only ones whom we can expect not to gravitate to the cities. As you have seen, alien registration of addresses backs this statement.

From these facts we must deduce that the success of our present immigration program depends on the continued expansion of our industries, for the majority of our newcomers must find work in the cities. Immigrationwise we are United States Unlimited—only so long as we can remain on the crest. A nation with total obligations of $700 billion [1] can all too easily slide off that crest.

POINT OF CONTROVERSY

With this background of fact let us examine the Immigration and Nationality Act (McCarran-Walter Act to most of us) which became effective December 24, 1952. Though it was the result of some 5 years of study, research, and investigation, and though passed over a Truman veto by a vote of 57 to 26 in the Senate and of 278 to 113 in the House, it continues under ever-increasing attack.

What is this act which more than two-thirds of Congress considered so vital that they dared override a Presidential veto? What is this act that has been endorsed by the Central Intelligence Agency, the Department of Justice, the Visa and Passport Section of the State Department—all governmental agencies or departments that apply its provisions daily and are, therefore, aware of its very detail? And what is there in this act which has resisted, so far, the concerted effort of a vocal leftwing element in Congress? Above all, what is this act which continues to be vilified by Red controlled newspapers and magazines, by many Communist-front organizations, by minority pressure groups, the criminal underworld, and, unfortunately, by some well-meaning philanthropic and religious groups?

No other law under present attacks concerns our American way of life or our basic institutions more deeply. Step by step Americans are walking backward from our constitutional Republic. Our immigration policies can show or hasten this regression.

Whether you call the Immigration and Nationality Act police law or as its advocates, the most liberal law on the statutes of any nation in the Western Hemisphere, depends on what you want immigration to do to the United States.

THE QUOTAS

To understand the attack, it will be easiest to see the act compared with 1 of the nearly 100 bills for its revision that were introduced in the first session. We shall use S. 1206, the bill sponsored by the following powerful Senators: LEHMAN, GREEN, HUMPHREY, KEFAUVER, KENNEDY, LANGER, MAGNUSON, MCNAMARA, MORSE, MURRAY, NEUBERGER, PASTORE, and CHAVEZ. It is commonly called the Lehman bill. It would revolutionize our present policies.

QUOTA—M'CARRAN-WALTER ACT

One-sixth of 1 percent of 1920 population 154,675—according to proportion from each nation at the time.

1. Fifty percent—to immigrants whose high education, technical training, and specialized experience the Attorney General believes valuable to the United States.

2. Next 30 percent to parents of United States citizens over 21, plus any left over from 1.

3. The remaining 20 percent goes to wives of aliens in permanent residence, plus anything left over in 1 and 2.

4. What is left over up to 25 percent of total quota goes to brothers, sisters, sons, or daughters of citizens of the United States.

QUOTA—LEHMAN BILL

One-sixth of 1 percent of 1950 population 251,000—this total to be adjusted upward as each census indicates national increase.

Four preference groups:

Family unification preference: Not less than 25 percent nor over 35 percent.

Occupational preference: Not less than 5 percent or more than 10 percent.

Asylum preference: Not less than 15 percent or more than 25 percent.

National interest preference: Not less than 20 percent or more than 25 percent.

Newcomer group: A newcomer group is allotted not less than 20 percent of the total.

The act bases the quota on one-sixth of 1 percent of the 1920 population, or 154,675. The proportion assigned to each nation (save for Asiatic nations) is one-sixth of 1 percent of the number of American inhabitants attributable to a specific national origin in 1920. The total number of Asiatic or of 50 percent Asiatic origin allowed is 2,000. A person who is at least 50 percent Asiatic must be assigned to the Asiatic quota, no matter where he has been living. In no case can the unused quotas of one country be transferred to another.

PHILOSOPHY OF QUOTA

What is the philosophy back of this? Is it that north Europeans are better than south Europeans or than Asiatics? No. The House Committee on Immigration and Naturalization of the 68th Congress expressed it as follows:

"Since it is an axiom of political science that a government not imposed by external force is the visible expression of the ideals, standards, and social viewpoint of people over which it rules, it is obvious that a change in the character or composition of the population must inevitably result in the evolution of a form of government consonant with the base upon which it rests. If, therefore, the principles of individual liberty, guarded by a constitutional government created on this continent nearly a century and a half ago, are to endure, the basic strain of our population must be maintained and our economic standards preserved."

United States is not alone in this point of view. Canada and Australia—though less vocal about it—quietly maintain their north European majorities too. If one were to wish to break down our constitutional Republic and our basically Christian ideals, could there be an easier way than to flood the country with peoples who have a totalitarian concept of government (be it socialistic, Nazi, or Communist), to flood the country with peoples who regard our Bill of Rights as ridiculous, who consider rights as something granted or removed at the will of the government in power? Such men have no concept of inherent, inalienable, God-given rights with which government may never tamper. And are such views rare? Just remember that when our aliens reported their addresses in 1954, 116,735 were citizens of the U. S. S. R. Have we proved all of these to be anti-Soviet? Some of the nearly 100 proposals for the revision of the Immigration Act open the door so wide as almost to invite wholesale infiltration.

The present quota does limit the number of orientals, though by allowing all those in permanent residence at the time the Act was passed, to be naturalized, some 85,000 became citizens. Prominent members of oriental groups have were questioned and expressed themselves as satisfied with the provisions covering them.

CREED IS NOT ON QUOTA

Man is not excluded for creed. Some critics have claimed that the South European quotas were smaller because they were Catholic countries. If that were true, why would we have no quota at all for the Western Hemisphere with its Catholic Quebec and Catholic South America? Criticism has also been made that it distinguished against the Jew. That is totally untrue. Pat McCarran has marshaled these convincing statistics to deny it. "In no year were the Jews less than 3.3 percent of all immigrants; and after 1933, they rose from constituting 10.28 percent of all immigrants to 52.3 percent in 1939; 52 percent in 1940, 45 percent in 1941, 36 percent in 1942. Half of the world's Jews now live in the United States and Canada, with the overwhelming majority in the United States." The rise in Jewish immigration here parallels the Nazi reign of terror. It also shows that United States is not insensitive to human needs. At present the Immigration Service does not even keep a record of Jews, as such. They simply come in from the nation of which they are citizens. If you think a man's creed keeps him from this country, just study a big city newspaper section listing sects and places and times for worship.

No, the groups this act tries to prohibit are the Communists and Fascists and any form of totalitarianism. The authors want—justifiably—to preserve our constitutional Republic.

UNUSED QUOTA

Perhaps the portion of the act most sharply attacked is that which makes the unused portion nontransferable—either from year to year or from nation to nation. This is a law to be administered according to specific provisions. The State Department and the Justice Department who administer it are not given discretionary powers to do what they wish with visas.

THE LEHMAN FORMULA

Now let's see what Mr. Lehman's quota provides: one-sixth of 1 percent of the 1950 census would be, roughly, 250,000. But as population increased in the United States, so would the quota, for the one-sixth of 1 percent would be applied at the end of each decennial census. Thus, as we have less and less spare room, we get more and more immigrants.

Mr. Lehman's quota would ignore the present preference given to the Western Hemisphere. Is not our present immigration policy one of the best ways to develop our hemispheric solidarity and, therefore, defense?

FURTHER BASIC DIFFERENCES IN ACT AND LEHMAN BILL

The act provides that 50 percent of quota immigrants shall be trained people; the Lehman bill calls for from 5 to 10 percent. Our Nation desperately needs scientists and trained technicians. Our cold war is largely the battle of the laboratory and the experimental departments. Thus we see that the act attempts to meet this need. The bill does not. The act is concerned with what America needs. The bill is concerned with what Europe and the rest of the world want.

The act gives the next 50 percent to family unification; the bill gives 25 to 35 percent to family unification. So in the Lehman bill a minimum of 30 and a maximum of 40 percent of all quota immigration goes to the combination of family unification and well trained persons.

Now let's look at what the bill provides for the remaining 60 to 70 percent: 15 to 25 percent for asylum. That is presupposing a large number of European refugees still exist. Actually one of the problems of administering the Refugee Act passed in 1954 is that bona fidé refugees are scarce. Then the

[1] Hoover Commission: Lillian Wald Kay, assistant director, Citizens Committee for Hoover Report.

Lehman bill gives not less than 20 or more than 25 percent for national interest—whose national interest? It is here that the makers of foreign policy can use human beings as a bargaining point. A nation is afflicted with unemployment. We take so many of the unemployed off its hands in return for certain concessions to our interest in NATO or some other of our projects. Thus we have a permanent responsibility for what may prove to be an ephemeral advantage. The last 20 percent, in Mr. Lehman's bill, goes to newcomers. "Newcomers" seems to be a catchall for anyone that doesn't precisely fit any other designation.

WHO ARE THE ADMINISTRATORS?

In the McCarran-Walter Act the State Department and the Immigration Service, which is located in the Department of Justice, share responsibility of administering the act; and designations of powers and of limits of powers are clearly drawn. Here is government by law.

The Lehman bill transfers almost all responsibility for administering the act to a commission of five. This commission is given enormous discretionary powers which would make honest administration dependent on the integrity and efficiency of the Commission. This is government by man—not law.

To back this I quote from Francis Walter: "This proposal certainly has flexibility, if nothing else. In fact, it permits the politically appointed commissioners to exercise flexibility to the extent that, of the 250,000 quota numbers to be made available under the bill, only 250 numbers (visas) would be guaranteed to any one nation or quota area, leaving approximately 200,000 quota numbers to be dispensed by the commissioners at will, as political expediency may direct.

"There is no restriction to prevent commissioners to allot total visas to one nation or quota area."

WHOM DO WE EXCLUDE?

Now let's see whom our present law excludes. Put a check beside any one you would admit. Unless you are a Fascist or a Communist, I'm sure you will not have a single check. Here are the major provisions:

1. Excludes the feeble minded, insane (or those who have had an attack of insanity), the psychopathic personality, epileptic, drug addict, alcoholic.

2. Excludes those with tuberculosis, leprosy or any dangerous contagious disease.

3. Excludes beggars, paupers, vagrants, or other persons likely to be public charges, polygamists, prostitutes, procurers, persons supported by prostitution.

4. Excludes criminals (other than political), unless alien committed only one crime while under 18 and that is more than 5 years prior to date of application for a visa; or aliens who have committed two or more nonpolitical offenses with an aggregate sentence of 5 years.

5. Excludes laborers when the Secretary of Labor says United States has sufficient workers and such aliens would affect wages adversely.

6. Excludes stowaways, persons deported or excluded from admission who apply within the year for reentry.

7. Excludes those aliens who departed from the United States to avoid military service in time of war or national emergency; and those who have been convicted of illicit traffic with narcotics.

8. Excludes complete illiterates over 16 years, except in case of grandparents, parents, spouse or child of admissible alien.

9. Excludes all who seek to enter the United States to engage in activities prejudicial to interests of the United States, such as Anarchists, Communists, and Fascists.

10. Excludes aliens who have aided other aliens to enter United States illegally.

THE CASE OF ALIEN CREWMEN

Here also is the controversial section on alien crewmen. As the act went into effect on December 24, 1952, the alien crewmen's plight on Christmas Day—the bad relations the treatment of crewmen would produce in France and Norway, etc., were played up on the radio by such commentators as Eric Severide and in many newspapers. Do you consider the following vicious and totally unmanageable?

"Each non-immigrant shall present or surrender to the immigration officer at the port of entry such documents as may be by regulation required. In the case of an alien crewman not in possession of any individual documents, such alien crewman may be admitted, subject to the provisions of this title, if his name appears in the crew list of the vessel or aircraft on which he arrives and the crew list is visaed by a consular officer, but the consular officer shall have the right to exclude any alien crewman from the crew list visa."

Watching alien crewmen is no easy task, but it is an important one. In 1954, 52,878 vessels, 102,184 planes arrived with 1,143,386 alien crewmen. Of those that were granted shore leave, 1,963 deserted. Air and sea traffic has been increasing at the rate of 10 percent a year. Hence the crewman problem will increase rather than decrease. Here is where it has been common for Communists and underworld characters to slide into the United States.

Well, how many checks have you?

LATITUDE IN THE LEHMAN BILL

Now let us see what the Lehman bill does about excluding these undesirables. It lists much the same bases for exclusion but gives to the Commission discretionary power to override the law's provisions—for instance, chapter 5, section 341, C, "The Commission may, upon finding that (1) serious hardship would result from deportation, and (2) that continued residence of an alien in the United States would not be desirable, determine that an alien deportable under subsections (5), (6), or (7) of subsection (b) by reason of a single conviction, shall not be so deported."

What are these subsections?

"(5)" Is for the person sentenced and confined in a prison in the United States for a crime involving moral turpitude.

"(6)" Is for conviction for prostitution, soliciting, procuring or assisting a prostitute, or any other crime involving commercialized vice.

"(7)" Is for violation or conspiring to violate United States laws on narcotics.

Hence the Commission decides whether such unsavory characters are to be good for the United States. Personally, I'd rather trust the laws than political appointees.

WHAT RIGHTS SHOULD ALIENS HAVE?

We should add that the Lehman bill automatically freezes such unsavory characters into our Nation's population, if they have managed to elude the law long enough. I quote from section 342 (b), "No alien shall be deported (1) who was admitted into the United States for permanent residence before his 14th birthday; or who has lived in the United States for 20 years or more, other than as a nonimmigrant or as a fugitive from a criminal charge, the conviction on which would be a ground for deportation; or (3) for an act, or omission to act, or for a criminal conviction which occurred more than 10 years prior to the issuance of a warrant for his arrest in deportation proceedings." Why should an undesirable alien be given status in our land just because he has lived here for 20 years? This should be very popular with the criminal underworld. Why, for that matter, should an alien of questionable character have any status? How many of our people can he infect?

Perhaps the most startling concession made to the alien, in the Lehman bill, comes under section 304 of the bill, which reads, "No alien shall be excluded from the United States unless he is advised of the charges against him and accorded an opportunity for a hearing."

This is based on a philosophy that the rest of the world has a fundamental right to the United States. It would be a tremendous invitation to the hordes who look at United States with greedy eyes. Think of the expense. The act considers that the United States is a sovereign nation whose immigration policies are her sole business.

SECOND-CLASS CITIZENS

Now we come to one of the sharpest points of controversy on the bill: Should a naturalized citizen lose his naturalization? The slogan that the vilifiers of the McCarran-Walter Act use is "Let's not have any second-class citizens.

The Lehman bill provides that if a person secures naturalization by fraud or otherwise illegally "No such proceeding shall be instituted more than 10 years after the naturalization order was issued." This would make it impossible to deport some of our worst Communists and underworld characters. It also puts a premium on the smart ones who elude justice.

In the act, use of fraud in obtaining naturalization remains fraud—whether it is discovered 5 years or 15 years after. And in the act, if one affiliates with a subversive organization within 5 years after he is naturalized, it is assumed that he concealed the facts of his political beliefs. He likewise is denaturalized for refusal to testify on subversive activities before a congressional committee. The act is tough on Communists. Should it be?

If nations knew they would get back their criminals, there would be less likelihood of dumping them on us or inviting them to desert as alien crewmen. If an individual is a liar concerning his political affiliations or his criminal past, it is well for him to know that he will be returned, providing he is ever caught. Under the Lehman bill, a good gambler would take a chance. If he can freeze himself into citizenship for a few years, he is safe. Again the act, unlike the bill, is really tough on the Communist.

However, the act deports no one without that individual having full opportunity to take his case to a proper court. At the present moment eight such cases are in process in the Pittsburgh area. They include such persons as the notorious Steve Nelson. Isn't it fortunate that we still have a law with provisions to get rid of the dangerous and vicious? Good naturalized citizens should have no fear of propaganda slogans, such as second-class citizens. It is a trap to catch the unwary.

If we want to build our Nation into greatness, the more aliens of the Steve Nelson ilk we can clear from our shores, the fewer spots for deadly contagion we shall have.

Our native-born cannot completely escape false accusations for crimes. They must stand trial. Why should the naturalized citizen be given immunity from naturalization fraud which should be a crime? If a native-born tried to defraud the Government, in any of the ways possible to him, he would be in trouble. It just happens that being born in the United States of United States citizens, he cannot defraud the Government on one specific subject—that of his naturalization. The time is ripe for the United States to stop being abjectly afraid that someone will not like us. Naturally, another nation would prefer us to pay its jail bills, but it would respect us more if we refused.

Let us hold on to the main provisions of the McCarran-Walter Act. It is man-made; therefore, imperfect. Its authors recognized that imperfections would appear; and so set up, within the act, provisions for a continuing investigation of problems which arose. The committee has been requested to make proposals for change.

In the next League News issue President Eisenhower's suggestions will be discussed briefly together with other developments. The Eisenhower proposals will not make great change in the essential philosophy of the act.

Maurice H. Thatcher: Benefactor of Kentucky and the Isthmus of Panama

EXTENSION OF REMARKS
OF
HON. JOHN M. ROBSION, JR.
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. ROBSION of Kentucky. Mr. Speaker, in the Filson Club Quarterly, of Louisville, Ky., January 1956, volume 30, No. 1, there appears a very fine tribute in honor of an able and popular predecessor of mine in this body, Hon. Maurice H. Thatcher, of Louisville, Ky. The author of the article is Capt. Miles P. DuVal, United States Navy, retired. (See editorial note accompanying the article given below.)

Reference is made in this article to the luncheon held in the city of Washington by the Society of Mayflower Descendants, of Washington, D. C., on June 11, 1955, on which occasion he and I paid high tributes to Governor Thatcher. (See CONGRESSIONAL RECORD of June 29, 1955.)

The Filson Club, by the way, is one of the outstanding historical organizations in the entire country. It was founded in 1884, and named in honor of John Filson, Kentucky's first historian. It has collected and preserved most important historical matter pertaining to Kentucky and adjacent States, and is supported by those who are interested in the great work which the club is accomplishing in its chosen field. Its membership is national in character.

The managing editor of the quarterly and secretary of the club is Judge Richard H. Hill. Other officers are Judge Davis W. Edwards, president; Miss Mary Verhoeff, first vice president; Leo T. Wolford, second vice president; Dr. J. A. O. Brennan, third vice president; and Downey M. Gray, Sr., treasurer.

The board of directors is made up of the officers and Preston P. Joyes, J. Alexander Stewart, Mrs. Julian P. VanWinkle, Arthur H. Almstedt, Alexander G. Booth, Martin F. Schmidt, C. W. Stoll, John T. Metcalf, and William H. Kinnaird. The curator is Mrs. Dorothy Thomas Cullen and assistant curator is Miss Evelyn R. Dale.

These names are given because of the highly patriotic, important, and unselfish work that is being performed by these public spirited citizens in and about the compilation, appraisal, and preservation of the history of the great region of Kentucky and the border sections, including the vast Northwest Empire brought into the Union at the close of the Revolutionary War through the truly magnificent exploits of George Rogers Clark of Virginia and Kentucky.

The sketch in the quarterly is eminently just. Had space permitted, other important achievements could have been added, including Governor Thatcher's general work as a Member of Congress and of the House Committee on Appropriations.

I believe that the well-merited tribute thus paid him by Captain DuVal deserves a permanent place in the annals of the Congress. Therefore, under leave accorded, the text is made a part of these remarks:

MAURICE H. THATCHER: BENEFACTOR OF KENTUCKY AND ISTHMUS OF PANAMA

(By Capt. Miles P. DuVal,[1] U. S. Navy (retired))

Kentucky is rich in history extending back many years prior to its admission in 1792 as a State. Situated in the region between the North and South, it has long been the scene of political struggles that have served to develop eminent leaders. But few of their careers have been so filled with constructive achievement as that of the Honorable Maurice H. Thatcher, of Louisville.

What is the nature of his record and how did he attain such stature? The explanation traces back to the earlier part of his life when young Thatcher began his upward climb in the composing room of a Butler County newspaper in western Kentucky, where he learned the printer's art, and in the county offices, where he was first trained in civil government. Thus, in his teens he acquired the habits of close application, industry, and integrity, which have always characterized him.

Soon after reaching his majority, he was elected clerk of the circuit court of Butler County, and became known as one of the most efficient court clerks of the Commonwealth. Later, he served on the staff of the State auditor in Frankfort, studied law, and, in due course, was licensed to practice.

Appointment as an assistant attorney general of his State at an early age, his success was praiseworthy and led to his designation in 1901 as an assistant United States district attorney in Kentucky. In this post, he made an enviable record as an able and fearless prosecutor.

This service, in turn, resulted in his selection in 1908 as State inspector and examiner for Kentucky. In this office he obtained firsthand and intimate knowledge of State charitable and penal institutions, and revenue systems, as well as other governmental functions of the Commonwealth. His record in this position was outstanding.

Thus, in 1910, when President Taft, following the resignation of former Senator Joe C. S. Blackburn, of Kentucky, from the Isthmian Canal Commission, sought a well-qualified man to fill the vacancy. Mr. Thatcher was considered a natural. On April 12, 1910, the President appointed him as a member of the Commission with assignment as head of the Department of Civil Administration, who functioned as Governor of the Canal Zone.

With the building of the Panama Canal then at its peak, Governor Thatcher was on the Isthmus during the great period when the vast project was being rushed toward completion. Making frequent inspections along the line of the canal, he saw the Atlantic and Pacific locks take shape; observed Gatun and Pacific dams slowly form; arranged for needed lands in the Republic of Panama for lake purposes; watched Gatun Lake start from a body of water no larger than a fishpond; and saw it gradually rise, transforming mountains into islands and becoming, what was at that time, the largest artificial lake in the world. All of this together served to give him a deep insight into the meaning of the canal as an avenue of marine transportation for vessels of all nations on terms of equality as provided by treaty.

Governor Thatcher, who was not satisfied in performing mere routine tasks, undertook to effect needed reforms in the Canal Zone. For these, he was the—

1. First to recognize the evils of flogging prisoners and to abolish it.

2. First to institute a system of rewards and denials to prisoners as instruments for the enforcement of discipline, which reduced infractions by 50 percent in 6 months.

3. First to use prison labor in the Canal Zone for constructing highways, which became models for others areas in Latin America and some of which are still in use.

4. First to introduce the teaching of Spanish in Canal Zone high schools.

5. First to enforce the Mann Act in the Canal Zone and, by such enforcement, to send a number of notorious criminals to prison.

6. First to draft a comprehensive vehicular traffic code for the Canal Zone, which was enacted into law by the Isthmian Canal Commission.

7. First to supervise an adequate census of the Canal Zone, then approximately 75,000 of many races and nationalities.

An event of tremendous significance during Governor Thatcher's administration was the first non-stop transcontinental airplane flight—a seaplane from the Bay of Panama to the Atlantic entrance of the Canal on April 27, 1913. Witnessed by him, this historic flight was to bear important fruit in the future.

Following a change in the national administration in Washington, Governor Thatcher, on August 18, 1913, resigned his position after more than 3 years' effective service, for which he was warmly commended by Secretary of War Garrison, President Porras of Panama and members of his cabinet. At the time, he did not realize what an impact his Isthmian experiences had made on him, or what would eventually unfold from them.

Resuming the practice of law in Louisville, he also made a record of fine achievement as a member of the Board of Public Safety and as Department Counsel of the city.

Later on, in the Congress as a Representative from Kentucky and a member of the powerful House Committee on Appropriations, 1923–33, new opportunities opened. Lessons learned in Kentucky and on the isthmus qualified him to play important roles in handling State and National problems as well as isthmian and Latin American. His achievements in the Congress were unique.

Of special interest to Kentucky, he was the author of legislation for: the establishment of the Mammoth Cave National Park, improvement and maintenance of the Lincoln Birthplace Farm, creation of the Zachary Taylor National Cemetery and construction of the George Rogers Clark Memorial Bridge, and construction of a new Federal

[1] EDITOR'S NOTE.—Captain DuVal, a Virginian and graduate of the Naval Academy and Georgetown University, has had a distinguished career, features of which include service as Captain of the Port, Panama Canal, 1941–44, and participation in Pacific naval operations, 1944–46. He is also an outstanding historian of the Panama Canal, having written two volumes, And the Mountains Will Move and Cadiz to Cathay, both by Stanford University Press. A third volume to complete the trilogy is in preparation.

building, a new marine hospital and new Coast Guard station at Louisville, and a veterans' hospital at Lexington. Also he collaborated with two chiefs of staff of the Army, Generals Summerall and MacArthur, in bringing about the conversion of Camp Knox into the permanent military post of Fort Knox.

On the national scene, he was a leader for increased appropriations for printing braille books and manufacture of apparatus for schools for the blind throughout the country, the author of the action creating the Eastern National Park-to-Park Highway project, and a champion for the establishment of our system of domestic air mails, including the route from Cleveland via Louisville, Memphis, and Little Rock to the west coast.

In the international field, he was a principal in the establishment of the first air-mail routes from the United States to Latin America. One line extends down the west coast to Chile, and thence to the Argentine; another along the eastern seaboard to Buenos Aires. These developments were largely inspired by his observation in 1913 of the first transisthmian flight, when he visualized the need for such mail service by aircraft.

Another great international benefaction was his authorship of legislation for the establishment, operation, and maintenance of the Gorgas Memorial Laboratory in Panama City. This celebrated research institution developed much of the basic knowledge of the transmission of yellow fever, malaria, and other tropical ailments. Thus, to mention a single instance of gratifying results, it contributed greatly toward successful conduct of our Armed Forces operating in tropical regions in World War II.

Also, since he left Congress, he has served without compensation as vice president and general counsel of the Gorgas Memorial Institute of Tropical and Preventive Medicine, which supervises the work of the laboratory, the latter operating under Federal appropriations.

For the benefit of the Panama Canal and the isthmus, he aided in the authorization and appropriations for construction of the Madden Dam and power project at Alhajuela. Completed in 1935, this work has supplied more water for lockages, generated power, controlled floods, and improved navigation. It remains a monument to all who contributed to its success.

Another and constructive service was his authorship of legislation authorizing construction and operation of a free ferry across the Pacific entrance of the Panama Canal, and of a highway connecting the ferry with the road system of Panama. Opened to traffic in 1932 the Thatcher Ferry and highway, officially named for him and constituting essential links in the Inter-American Highway, have transported tens of millions of passengers and hundreds of thousands of vehicles, thus rendering indispensable service to the entire Isthmus in both peace and war.

These are only the highlights of an action-packed life. Most appropriately, on June 11, 1955, in the Nation's Capital, Governor Thatcher was signally honored by the Society of Mayflower Descendants in the District of Columbia, of which he had served many terms as governor; he is now serving as counsellor general and deputy governor general of the General Society of Mayflower Descendants, the national organization. Treated there in greater detail and published in remarks to the House of Representatives by Hon. CLARENCE CANNON, of Missouri,[2] Chairman of the House Committee on Appropriations, his record entitles him to high place in American achievement. It establishes him as an outstanding benefactor of Kentucky and the Isthmus of Panama.

Federal Assistance in Distressed Labor Areas

EXTENSION OF REMARKS
OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 19, 1956

Mr. KELLEY of Pennsylvania. Mr. Speaker, under permission given me to extend my remarks in the RECORD, I wish to insert the statement of Hon. Thomas Kennedy, vice president, United Mine Workers of America, before the House Committee on Banking and Currency, on April 18, dealing with Federal assistance to distressed labor areas.

For my part, I heartily concur in Mr. Kennedy's remarks and can recommend this article to all my colleagues:

STATEMENT OF THOMAS KENNEDY, VICE PRESIDENT, UNITED MINE WORKERS OF AMERICA, BEFORE THE HOUSE COMMITTEE ON BANKING AND CURRENCY, APRIL 18, 1956, IN RE H. R. 8555 AND SIMILAR BILLS ON FEDERAL ASSISTANCE IN DISTRESSED LABOR AREAS

The declaration of purpose, which is section 2 of this bill, is as follows:

"The Congress declares that, notwithstanding the prosperity enjoyed by the Nation as a whole, some of our communities are suffering substantial and persistent unemployment; that such unemployment causes hardship to many individuals and their families and detracts from the national welfare by wasting vital human resources; that to overcome this problem the Federal Government, in cooperation with the States, should help areas of substantial and persistent unemployment to take effective steps in planning and financing their economic development; that Federal assistance should enable communities to achieve lasting improvement and enhance the domestic prosperity by the establishment of stable and diversified local economies; and that new employment opportunities should be created rather than merely transferred from one community to another."

In a general sense this declaration points out the general principle of requirement which is essential in order to combat unemployment in distressed labor areas. Following up the bill, however, in succeeding sections and paragraphs, it is my opinion that something else must be added to benefit the distressed labor areas in the coal mining communities, where unemployment is the rule rather than the exception; and where this unemployment has lasted for a considerable length of time.

It is my conservative opinion that we have about 155,000 persons unemployed in the coal mining communities, including bituminous and anthracite. This unemployment is serious in such States as Pennsylvania, where it affects the bituminous and especially the anthracite regions, as well as other coal-producing States like West Virginia, Kentucky, Ohio, and Illinois.

I have appeared before various Senate committees dealing with this subject and also before the Joint Committee on the Economic Report in February of this year with reference to the problems referred to in this bill. The economic report properly points out in the matter of helping local communities to reduce unemployment that it is a "matter of national as well as local concern." The various suggestions such as are now bringing some relief to distressed labor areas through establishment of new industries, etc., are very commendable, but I doubt that they are sufficient to take care of the needs in the coal areas. My experience with respect to acquirement of new industries has been that it is only younger men who obtain employment. Ages in the mining industry run from 18 to 65 years and over. A great number of men beyond the age of 40 are affected by the present unemployment situation and they have very little chance of taking up employment in new industries. Although I submit that the average mine worker is a skilled man, we might as well face the fact that quite a few firms have an age limit for employment which does not contemplate employing men beyond the age of 40.

In many sections of the coal fields the payment of unemployment compensation has been exhausted, which further intensifies the problem and requires maintenance of the idle population on the basis of a subsistence level through surplus food commodities and in many cases on the basis of public assistance. In the economic report the suggestion is made "that unemployment compensation is the bulwark for sustaining purchasing power." These payments generally run to a maximum of from 26 to 30 weeks. To give a typical example of unemployment compensation benefits running out, I am taking a county in the anthracite coal fields to illustrate the problem. In Schuylkill County of Pennsylvania there is total unemployment of 13,450, of which 11,700 are males and 1,750 are females. Of this number 3,654 individuals are receiving unemployment compensation, while 1,328 receive partial unemployment compensation. These figures would fairly indicate the number of people receiving unemployment compensation in other coal districts; or relatively only one-third of the total number of unemployed are receiving unemployment compensation. All the others in the category of unemployment have exhausted the maximum number of weeks of unemployment compensation. While it is true that some of the slack of unemployment could be taken up through the acquirement of new industries and public works, the fact remains that it would only partially alleviate the situation and it would take considerable time to supply even a partial remedy.

Repeating the language of the Economic Report "that unemployment compensation is the bulwark for sustaining purchasing power," I might say that it would become a greater bulwark if these unemployment compensation payments were to be made for the duration of unemployment and I certainly would highly recommend this step to the Congress as the proper basis for the development of plans and policies for general rehabilitation of these distressed labor areas. I further submit that the cost would not be too great upon the Government nor upon the unemployment compensation funds.

The machinery is there to work out this matter and the whole general program could be implemented by the payment of unemployment compensation during the period of unemployment without difficulty. The mining industry is not a roving industry. It cannot be moved from place to place.

The Federal Government could do a great deal of work in bringing about increased productivity, if it would put its own house

in order, as for instance curbing the dumping of residual oil on the eastern seaboard.

In 1955 approximately 36 million tons of coal were displaced by the dumping of Venezuela waste oil, and as I indicated in previous statements to various congressional committees, this waste oil is coming not from a free country but from a country where a dictatorship form of Government is in existence. This Government operates much on the same plane as the dictatorship forms of government which prevail in Soviet Russia and other countries behind the Iron Curtain. For the first quarter of 1956 the figures indicate that the dumping of this residual oil has been increasing and, if kept up at this rate, it will displace approximately 40 million tons of coal this year.

The dumping of waste oil should be stopped, or be placed on a proper quota basis. The Federal Government could assist in bringing about stability and increased productivity by the creation of a national fuels policy, which would be protective of our natural resources and national defense and each fuel would be placed upon its proper competitive foundation. We should also give some consideration to the question of exporting coal to Europe and go into the matter of providing some basis for proper equitable ocean freight rates. It seems to me that we have a potential overseas market of approximately 50 million tons of coal per year.

An intensified research program for greater uses for coal should also be built up by the Government. Legislation on this particular subject is now pending in the Congress.

Last but not least, and more important at the moment because it can be made effective immediately, is the matter and necessity of payment of unemployment compensation by the Federal Government for a period beyond the 26 or 30 weeks now in effect for the duration of the unemployed period.

I have given a great deal of study to this entire matter and it is my judgment that the foregoing suggestions are the most practical and realistic that could be applied to relieve the distressed unemployment areas and to provide for the individuals and families affected. Assistance is necessary and requisite to carrying out the purpose of these various plans and the suggestions in the Economic Report, all of which would lead to stability and improvement of the economic situation in the distressed labor areas in the various coal-mining sections of the United States. I might also add that stability and increased productivity in the mining industry would not only affect the situation in the mining industry itself, but other collateral industries would likewise be benefited; and in an economic sense, general improvement for the people in industries directly and indirectly affected by coal production would result therefrom.

Examination of National Banks

SPEECH
OF
HON. HENRY O. TALLE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 1188) to amend section 5240 of the Revised Statutes, as amended, relating to the examination of national banks.

Mr. TALLE. Mr. Chairman, I rise in opposition to the pro forma amendment.

This matter of examination of national banks goes back to 1863. At that time it was agreed that some banks might need more examinations than two per year. So, if favoritism arises out of the number of examinations, the practice dates back to the origin of the National Bank Act because the provision was made then for special examinations. If there are classes of banks, they are classes which are made by the banks themselves because of the manner in which they manage their operations.

Years ago, a distinguished public servant who was Comptroller of the Currency or Deputy Comptroller for as long as 30 years wrote a book called "The Romance and Tragedy of Banking." Anyone who reads that book will find that the principal reason for the failure of banks is poor management. Human beings are not endowed with equal managerial talents. I doubt that those who oppose this bill would be able by law to guarantee the same class of management in every one of our banks. If they could do that, then there would be some point to the opposition argument. This bill does not establish any classification of banks whatever. What it does do is to conserve the time of the work force, the corps of examiners, so that they can be employed profitably where they should be employed, in the examination of some banks that need further examination because the management is less good than in other banks.

Opposition to Utility Provision in Federal Highway Bill

EXTENSION OF REMARKS
OF
HON. JOHN F. BALDWIN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. BALDWIN. Mr. Speaker, it is my opinion that the utility reimbursement section which has been approved by the House Public Works Committee for incorporation in the Federal highway bill, is an undesirable section. This section would allow reimbursement by the Federal Government of 90 percent of the cost of relocating utility lines on Federal interstate highways. In my opinion, the action is too liberal and should contain restrictions.

The Roads Subcommittee of the House Public Works Committee had previously established restrictions limiting such reimbursement to 50 percent of the cost of relocation, and providing that such reimbursement could not exceed 2 percent of the cost of the highway construction project. However, the full Public Works Committee, on a split vote, struck out these limitations and inserted the more liberal 90 percent provision in the bill. I voted against this provision for 90-percent reimbursement, and desire to point out that the provision contains no limitation whatsoever on the portion of the cost of a highway construction project which can be used for utility reimbursement, whereas the Roads Subcommittee had previously set a limitation of 2 percent of this cost.

I am concerned about the effect of this provision upon the States. As an example, the State of California now is authorized under State law to enter into agreements with the utilities for partial reimbursement of relocation costs, but these agreements normally limit reimbursement to 50 percent of these relocation costs. The insertion of a more liberal 90 percent reimbursement provision in the Federal highway bill will, in my opinion, be likely to cause pressure by the utilities on the California State Highway Department to increase utility relocation reimbursement payments on all State highway construction projects from 50 percent to 90 percent. The California State Highway Department is opposed to this 90 percent utility reimbursement provision.

Public Housing at Its Best

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. MUMMA. Mr. Speaker, on April 22, 1953, when public-housing legislation was under consideration in the House, I asked this question: "How long is it reasonable to allow a tenant to stay in this low-cost, subsidized, less-than-cost housing?" I think my remarks then are worthwhile repeating in part at this time. I quote:

I think this approach to the public-housing situation is very important. Some plan should be adopted whereby tenancy is limited to a certain period of time. This would help get out of these units some of the people who expect to make this a permanent thing and allow others to have a chance. It is reliably estimated that public housing can at best take care of only one-tenth of our people who are in the low-income group and need this help.

Another angle that should be studied, when the whole housing situation is reviewed, is the matter of incentive. It is claimed that Federal housing rehabilitates. If it is a matter of rehabilitation, there ought to be a period of so many years or months of occupancy provided to permit tenants to acquire a stake to be used in the purchase of homes of their own. I realize it is a much easier proposition for a veteran to get out of these low-cost housing units and have a little garden for his kids to run around in than for a widow with 2 or 3 children to support. This should be taken into consideration when this public-housing item is reviewed again next year by the Banking and Currency Committee.

In my community of Pennsylvania we have a very good housing authority. We have a very good manager in charge. We have 1,100 units and, in my opinion, those 1,100 units should form the basis for a turnover so that people who run into a streak of hard luck may be taken care of and perhaps save a little money. In my experience, it is not always the fellow who makes the most money who lives in the nicest or has the best home. I can show you cases of people, living more or less on a low-income wage, who get in there and pitch and own their

own homes. They look nice; they have a nice garden. It is mainly a matter of their will to lift themselves up rather than continuing to accept this subsidized housing.

Now read these interesting figures from an article in the Harrisburg (Pa.) Evening News of February 16, 1956:

MODERN UNITS FOR FAMILIES WITH LOW INCOME LAUDED

M. W. Smith, executive director of the Harrisburg Housing Authority, today released figures indicating the modern facilities of local public housing projects are encouraging thrift among low-income occupants.

Harrisburg has 1,080 modern housekeeping units in four public housing projects; George A. Hoverter Homes, William Howard Day Homes, John A. F. Hall Manor and Hillside Village.

In the last 3 years, Smith said 633 families moved out voluntarily, 169 of them, or 26.7 percent, going into homes they are buying.

"We are of the opinion," said Smith, "that if these 633 families had not enjoyed the benefits of modern public housing they would still be 'existing' in substandard dwellings."

The Housing Authority, the Harrisburg Redevelopment Authority and City Council are currently striving to obtain 330 more units of public housing to replace substandard dwellings.

Smith also disclosed figures of a recent housing survey showing that although 1,893 units of public and private housing were erected since April 1, 1950, the city, on February 1, still had 7,662 units of substandard dwellings. Of those, he said 6,337 are occupied by white families, 1,325 by Negroes. Dwellings demolished in extended Capitol Park since April 1, 1950, he said numbered 452.

I have always felt that we have a good Housing Authority in Harrisburg, with efficient, honest management. I believe you will agree with me, after noting the authority's approach to this housing problem as carried in the friendly, helpful and constructive news article mentioned above. It speaks well for public housing as it has been managed and developed in our community.

Qualifications of Directors of National Banking Associations

SPEECH
OF
HON. HENRY O. TALLE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 1736) to amend section 5146 of the Revised Statutes, as amended, relating to the qualifications of directors of national banking associations.

Mr. TALLE. Mr. Chairman, I yield myself such time as I may require.

Mr. Chairman, this bill, like the preceding bill which was just passed by the House, is a good one. It is simple; nothing earth-shaking about it. The distinguished chairman of the Committee on Banking and Currency, the gentleman from Kentucky [Mr. SPENCE] has stated the case correctly and well. It is an attempt to be realistic. A lot of improvement in communication and transportation has occurred since the National Bank Act was written near the middle of the last century. This bill is realistic in its outlook, and it will make for stronger bank boards of directors.

Mr. Chairman, there is great variation among the States as to residence requirements for directors of State bank boards. There are 18 States that do not have any residence requirements at all.

I think, Mr. Chairman, there is no point in my taking further time, and I reserve the balance of my time.

Wanted—A Candid United States Farm Policy

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. HOPE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article by Joseph C. Harsch entitled "Wanted—A Candid United States Farm Policy," which appeared in the March 30 issue of the Christian Science Monitor.

I think this article accurately describes the difference in viewpoint between a majority of the Members of Congress and the Secretary of Agriculture and his principal advisers. It also clearly points up the basic questions which must be decided in the way of national policy if there is to be any rational solution of our accumulating difficulties in agricultural production and distribution.

The article follows:

WANTED—A CANDID UNITED STATES FARM POLICY

(By Joseph C. Harsch)

WASHINGTON.—The farm bill as it stands today in Washington is, of course, a hodgepodge. It undoubtedly will continue to be a hodgepodge no matter what changes the conference of Senate and House delegates of the United States Congress does further to it before it is finally sent to the White House for a Presidential "yes" or "no."

But it would be well to consider why it is a hodgepodge rather than just dismiss it as another horrible example of election-year politicking.

The statement that we are living in a revolutionary age is trite, and also true. It is nowhere more true than in agriculture. Over the last half century the tractor, the combine, chemical fertilizer, and hybrid seeds have increased the man-hour productivity of the farmer at what can only be called a fabulous rate.

The simplest way to express the change is that one man now can plow, seed, and harvest as much land as a whole family with several sturdy boys, plus a couple of hired men, could barely manage 50 years ago. And the one man frequently can spend the winter in Florida—that is, if crop prices are right.

We have learned to produce more food with fewer men—more food than we can presently consume. Some day the growth of population may take up the slack, but we are in a transitional stage. Another way of expressing it is that 50 years ago in the United States it took 32 million farm dwellers to feed a total population of 92 million—and they just barely did it. Today 22 million farm dwellers feed 165 million people, and produce a mounting surplus which is the bane of Ezra Taft Benson's life.

If the United States practiced a classic free-enterprise economy, the situation would adjust itself. The farm population and the form of land cultivation would adjust themselves until production came into balance with demand.

Allow it to work, and what would happen? No one can be sure, particularly because Congress probably will never let it happen. But certainly if farm prices were turned loose by the Government the trend would be a rapid one toward decline of the farm population to perhaps half of its present size, and toward fewer and larger farm units, many of which might be run as corporate industries.

But a reorganization of this magnitude is a brutal process for people, whether it be done as a deliberate policy of Government in the shortest possible time, as it was done in the Soviet Union when Stalin set out to collectivize Soviet agriculture—as it could not possibly be done in the United States—or merely allowed to happen at its natural pace.

Some such natural reduction process is taking place in the United States. Farm population is declining, small units are merging into larger units to some degree, and the children migrate to the factories in town and city.

The argument over the farm bill this year was basically over the extent to which the Government will cushion the shock of the transition and manage its pace. In effect, Congress revolted against the speed which Mr. Benson would tolerate. Mr. Benson's flexible price supports aim at the ultimate removal of all supports. They could be a cushion for transition to bigger farms for fewer farmers.

Even 100 percent rigid price supports would not halt the trend. They would slow it down and provide a softer cushion. In effect, the Congress has declared that Mr. Benson's cushion is too thin. Congress will not, in fact it dare not, allow the change which is visible to take place so fast. It may not even dare allow it to go so far as it would go if the ultimate form of United States agriculture were to be determined only by the "interplay of the market." Too many human beings would be hurt too seriously in the process.

A Communist government can, and did in the Soviet Union, speed the collectivization of agriculture deliberately, even at the cost of millions of human lives. A democratic government cannot allow a trend toward bigness to take place even at a natural free-enterprise pace. There is a very serious question whether a democratic government should allow the process ever to reach its logical free-enterprise conclusion, for the ultimate big farm run as a privately owned factory is not sociologically very different from the big farm run as a government-owned factory. In either case the yeoman farmer and the one-family farm would disappear from the social structure.

What has got to be decided some day in the United States is the extent to which the one-family farm should be retained for its social structure and moral and political values. If and when that step is taken, it then will be possible to apply reason and wisdom to the transition process and shape farm legislation which will produce the desired end result by a humane and gradual but steady progression.

The United States has yet to resolve the basic question. There is no such thing as an agreed policy on the future form of United States agriculture, on the value of the family

farm, on the extent to which concentration of farm land into big units should be permitted to go.

Because there is no agreed policy there is an annual free-for-all battle in the Congress over the thickness of the cushion to be provided by the government for the farmer in transition.

The result inevitably is a hodgepodge bill which pleases few and which can scarcely contribute to an orderly arrival at an agreed objective.

Text of Address by New York Democratic National Committeeman Carmine G. De Sapio, Before the New York County Democratic Committee, April 12, 1956, New York City

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address given by the Honorable Carmine G. De Sapio, secretary of state of the State of New York. Mr. De Sapio is also the Democratic National Committeeman from New York, as well as the Democratic leader of the county of New York. The following address was given on the occasion of the annual dinner of the New York County Democratic Committee:

TEXT OF ADDRESS BY NEW YORK DEMOCRATIC NATIONAL COMMITTEEMAN CARMINE G. DE SAPIO BEFORE THE ANNUAL DINNER OF THE NEW YORK COUNTY DEMOCRATIC COMMITTEE, THURSDAY, APRIL 12, 1956, AT THE HOTEL COMMODORE, NEW YORK CITY

My good friends, my fellow Democrats, I say to you, from the bottom of my heart, it is you who deserve the applause. It is you who have earned the plaudits and the accolades of those who are privileged to serve your party as its spokesmen. It is you who have made possible the rebirth and the revitalization of dynamic, progressive government in our State under the leadership of Gov. Averell Harriman. And it is you who have created the compassionate, the humane, and the enlightened administration of Mayor Bob Wagner.

This dinner, with its enthusiasm, its spirit, its vibrant drive, and its unquestioned dedication, is a tribute to every man and woman in this room, and a testament to the inevitable victory which lies ahead. And I am proud to report that at similar events all over the country, which I have had the opportunity to attend during the past years, I have found the same spirit, the same determination, and the same understanding of our party's role in the Nation, and our Nation's role in the conduct of world affairs.

And just as real and alive and tangible as your presence here tonight, is the awareness of all Democrats that our party will be called upon to assume the responsibility of national leadership this November * * * to provide the leadership which is so painfully lacking now.

So, too, are the issues of the day—real and alive—and so, too, is the program of our party. So, too, is our history, our heritage and our record of accomplishment. And so, too, is our leadership.

And this real—this vigorously alive—democratic movement will replace the invisible—the phantom—government which today controls the lives and destinies of 165 million Americans and which haunts the future of all the people of the world.

America today is governed by a privy council which rules by hap and hazard. Leadership has been abdicated. Decision has been delegated. Responsibility has been forfeited. A country-club quartet—a small clique of self-appointed and self-annointed men who never exposed themselves to the mandate of a national election—now rules the White House and runs our Nation.

These men—Sherman Adams, Charles Wilson, George Humphrey, and John Foster Dulles—these men dominate the national and international scene. They are the Richelieus and Rasputins of 20th century America, differing from their historic counterparts only in their superlative ineptness, in their ingenious inability and in their extraordinary incompetence. But these men—these masters of pretense, perfidy and privilege—are possessed of one great talent. They can whip up a slogan and coin a phrase with unbelievable dispatch and alacrity. And their favorite contribution to present-day political literature is the clarion call, "Peace and prosperity."

My friends, let us here and now—once and for all—reject the unfounded and perverse claim that the Republican Party brought peace to our time. Their peace is as substantial as that which Neville Chamberlain proclaimed after the Munich Conference, a peace held together by a rope of sand.

They coldly cast aside an era of Democratic statesmanship which was broadened by a constructive bipartisan approach. The courageous and realistic foundations for world peace established by Democratic leadership is stricken from the revamped Republican version of history. They ignore the undeniable milestones of peace and security erected during the years of decision by leaders of our Nation—in both parties—who placed patriotism above partisanship.

They close their eyes to the Marshall plan, the mutual security program, the founding of the United Nations, and the decisive containment of communism. And these phantoms who now haunt the White House have the monumental audacity to tear out the credit pages of history's ledger, like crafty auditors doctoring a set of books.

Can we boast of peace in the light of the tension in the Middle East; the unrest in Formosa; the rumblings in Morocco, and the instability on the island of Cyprus?

Is there peace in the understanding which today exists between Russia and Yugoslavia? Or in the Red annexation of most of Indochina and in the loss of democratic influence in Asia?

Is there peace in India's accelerated approach toward the Communist orbit?

Indeed, is the shooting and bloodshed on the borders of Israel, the new, the modern American definition of peace?

As Russia gains greater and greater strength, absorbs millions and millions of more people and waxes more and more arrogant and influential, John Foster Dulles, talking out of both sides of his mouth, brashly proclaims a world at peace, at the same time that he admonishes us not to debate foreign policy.

As American scientists at their listening posts record more horrifying and more devastating Soviet nuclear explosions, Dulles cautions us to keep quite lest the voice of an enlightened people be heard above the din of international saber-rattling. And although Neville Chamberlain, the unbrella man of Munich, made one colossal blunder, Dulles has blundered in virtually every corner of the globe, earning for himself the dubious distinction as the umbrella man of our day and age.

The American people want to be told the truth. They are not afraid of the truth. They deserve and demand the truth. Yet, the Government of the United States supplies shadows and innuendoes instead of forthright declarations of policy, and through the expedient of diplomacy-by-magazine article, brings us one day to the brink-of-war; the next day to the brink of apathy; the third day to the brink of silence, and, inevitably, to the brink of disaster.

My good friends, we Democrats believe that the peace of the world and the security of its people stem not from the idle chatter of typewriter keys or from the competitive quest for headlines, but rather from a program of positive action and courageous leadership. Certainly world peace cannot be established on a foundation of diplomatic quicksand, nor secured through reckless promises on the one hand, and abject surrender on the other.

We believe that the hope for peace rests in America, and can be attained only when America regains its position of world leadership. We believe in strengthening the United Nations; in expanding the point 4 program; in helping the democracies to resist communism and aggression. And we believe that this can be achieved only if we have the complete and unquestioned confidence of the free nations—both large and small—who look to us for leadership.

We believe that every dollar sent abroad to bring economic independence to a country which is being tempted by the Communist Lorelei, will eventually save the life of an American boy. We believe that every gun shipped to a democracy for use in its defense will one day save the lives of American soldiers. We believe that the uniting of the free nations in a meaningful, mutual-aid program will one day save American cities.

We believe that it is far more important to establish maximum defense strength than it is to go through the empty pretense of balancing the budget and making false claims of economy in Government.

We believe that only by our united determination to resist the march of Red totalitarianism, can we, in fact, halt that march. And only thereby can we assure permanent peace.

Well, my friends, now we come to that other exclusive Republican property—prosperity. Let us look at this prosperity. Let us examine, if you will, just a few facts, a few figures.

Does the American small-business man enjoy prosperity? Any standard reference book or almanac provides the answer. Since the present administration took office, there have been 11,000 small business failures a year, a rise of 31 percent over 1952. Nor does this figure include the great number of small businesses which have been swallowed up in monopoly mergers, and it doesn't begin to spell out the heartache and despair of a half billion dollars lost by small business firms each year since 1953. Such are the clear-cut, unvarnished facts.

But even these facts cannot answer the plantive and discouraged question being asked by millions of Americans—the people to whom a pay envelope is the sum-total of income. And that question is: "What price prosperity?"

Does the American farmer enjoy prosperity? Farm mortgages have hit a new high since the depression of 1930. Farm income has dropped $3 billion, and farm employment has decreased by a quarter of a million people since the present administration heralded its great age of prosperity.

Do the American slum dwellers enjoy prosperity? Public housing has been cut from 135,000 units per year under the Truman administration, to 35,000 apartments under the Republican program.

Can we boast of prosperity to our children in overcrowded and obsolete schools in the face of a virtual standstill in the program of Federal aid to education.

Prosperity is a lovely word, but is meaningless unless it benefits all the people—the farmer, the laborer, the housewife, the small-business man, the consumer, and the homeowner as well. It cannot be a prosperity which filters down, strained and diluted by a small minority at the top.

The healthiest economy is one which has the broadest possible base of prosperity. Prosperity must be horizontal, not vertical. Prosperity must reach into every American home; into every American community.

Farm failures in one section of the country threaten the prosperity and well-being of our cities; and bankruptcies in the cities threaten the well-being of the entire Nation.

And while we may take heart in the unprecedented rate of employment and in the fact of economic attainment, let us not forget that when our party took over the helm of our National Government in 1933, we inherited an awesome depression, more frightful and destructive than mankind had ever before witnessed.

My good friends, we Democrats believe that prosperity can be built and sustained not through the irresponsible quest for votes, but rather as a result of the responsible advance of a sound economic program based on world stability. We believe that prosperity is the automatic result of the movement of machines and men and technical skill and farm products in increased world trade.

We believe that the building of schools and houses and dams and highways gives impetus to full employment and to fruitful social achievement. We believe in affording industrial opportunity and the chance to expand to small as well as to big business. And we believe in the enhancement and advancement of social security, old-age assistance and affirmative, constructive programs for our youth.

This is our faith as Americans and this is our challenge as Democrats. This, we know, can be done and this, we pledge, shall be done.

We do not delude ourselves that the task is simple. We believe it calls for strong, courageous, full-time national leadership. The American people will reject with indignation the callous suggestion by Republican National Chairman Leonard Hall, who said: "Even if he could only serve half-time, Eisenhower would make a better President than anybody the Democrats could put up."

The obligations of national and world leadership are tremendous and overwhelming. Every minute of every hour of every day the President of the United States is called upon to make decisions of momentous importance.

Upon these decisions rests the future of the world, and though they may be delegated or even forfeited, their consequences must remain the responsibility of the President. No one can be blamed for the failures of the administration, but the elected head of the administration. The abdication of presidential responsibility is more than a matter of personal conscience. It is a problem which affects the security of civilization.

This is the message which you, my good friends, must bring to the American voters between now and November 6.

We do not have the vast sums of money necessary to saturate television and radio with our message. We do not have the resources of corporate dynasties behind us. We do not have the cynical skill of supersalesmen who market government by hoaxism and hucksterism.

But we do have the program, we have the courage and the strength, and we have 20 historic years of progress, victory, security, and stability as the record upon which we stand.

And above all, we have with us the people—millions of men and women like yourselves—who will reach out to their neighbors, their families, and their friends, and who will interpret and expose the phantom Washington regency—the invisible government.

And with the help of God, we Democrats will lead our country and the free world toward a new era—a new future of real, of meaningful and of lasting peace and prosperity.

Thank you very much.

Northeast Assails Examiner's Charges

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following news release of Northeast Airlines:

WASHINGTON, D. C. April 18.—In a formal appeal from the recent recommendations of CAB Examiner Thomas L. Wrenn in the New York-Florida Air Route case, Northeast Airlines today filed with the Civil Aeronautics Board a document containing 24 pages of exceptions to the examiner's report.

The exceptions cited more than 60 claims of error by Wrenn. Copies of the Northeast document were also served upon all other parties in the proceeding.

George E. Gardner, president of Northeast, who was in Washington today, explained that this action by the New England-based airline was "the first step in the vigorous protest" he had promised as soon as he had learned of Wrenn's April 3 report.

The CAB examiner recommended Delta Airlines as the third carrier on the New York-Miami route. At the same time, he recommended denial of Northeast's application for route extension to Florida.

Filing of exception means that the case will now be heard in oral argument by the full membership of the Civil Aeronautics Board before a final decision can be reached. Briefs in support of the exceptions must be filed prior to May 14.

In sharply worded criticism, the Northeast document strongly assailed the examiner's charges with respect to certain control relationships involving Atlas Corp., Northeast's majority stockholder.

Northeast's exceptions termed these findings "contrary to facts of records with the Board of which Examiner Wrenn should have informed himself" and referred to the Board's action in three other proceedings "either approving all the control relationships mentioned in the report or determining that approval of such relationships was unnecessary."

According to Northeast, Wrenn was under a duty to take "full and not merely partial notice" of the official CAB records reflecting earlier Board action.

The choice of Delta, rather than Northeast, as the third New York-Florida carrier, also drew sharp attack in many of the New England airline's exceptions. Northeast charged that the examiner ignored Northeast's outstanding service record, indicating its complete adequacy to provide effective New York-Florida service, and also ignored the Board's "established criteria for carrier selection."

Northeast pointed out that the Board has recently held that a primary factor to be taken into account is the need for strengthening of the smaller carriers.

The exceptions further charged the examiner with error for not recommending Northeast in accordance with established Board policy and the recommendations of the Board's bureau counsel.

The document also pointed out that the route award would provide important New England and Florida communities with new one-carrier services which they urgently need and would also bring about significant expansion of New England's regional service.

The Bricker Amendment

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. BOW. Mr. Speaker, nationwide today there is renewed interest in the Bricker amendment and the alert citizens who are apprehensive of legislation through treatymaking are anxious for further consideration of Senator BRICKER's proposal.

As evidence of this interest and support, I include with my remarks an excellent editorial from the April issue of Town Journal, which I commend to your attention:

A CHANGE TO MAKE

The Washington reports shortly will be discussing the Bricker amendment to the Constitution. As usual many confusing and many inaccurate statements will appear. Some of these will be intentionally misleading.

The question raised by the Bricker amendment is this: Shall Americans be compelled to live under laws put in force by treaties or other international agreements even though they conflict with the Constitution?

In order to be adopted, an amendment has to win a two-thirds vote in each House of Congress and the approval of three-fourths of the States. The Bricker proposal will come up for a vote this month in the Senate and will then be presented before the House.

Two years ago 28 Democratic Senators voted for it and 16 against; 32 Republican Senators voted for and 14 against; 1 independent voted against. This division shows clearly that the amendment is not a party question. The total lacked 1 vote of the necessary two-thirds.

Passage this year will depend upon the vigor with which informed citizens indicate their support. The division may again be close in the Senate. A hard battle may be expected in the House.

The language of the amendment, slightly changed to meet former objections, is simple and clear: "A provision of a treaty or other international agreement which conflicts with any provision of the Constitution, shall not be of any force or effect."

The Constitution itself says that a treaty "shall be the supreme law of the land * * * anything in the Constitution or laws of any State to the contrary notwithstanding." That provision was written primarily to protect the treaties then in force which had been made prior to the Constitution. It was probably intended also to give the National Government full control in foreign affairs, which it should have. In those days treaties concerned boundaries, commerce, fishing rights, navigation, and such matters.

In recent years, however, wholly new circumstances have arisen. Through the United Nations and other new agencies, the United States is asked to participate in many new kinds of international agreements and trea-

ties. The practice of "executive agreements" between nations has grown up—deals between heads of nations which are not submitted to the United States Senate, as treaties have to be, for ratification.

Ways are thus opened by which Americans could be forced to accept as domestic law rulings which have not been passed upon by Congress and which could conflict with constitutional rights. It is this danger which the Bricker amendment will prevent.

The amendment, as revised, should be adopted. Americans will protect their freedom for the future by insisting that Congress submit it to the States.

Foreign Aid: A Tempting Target

EXTENSION OF REMARKS
OF
HON. PERKINS BASS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. BASS of New Hampshire. Mr. Speaker, under leave to extend my remarks, I am including below an editorial from the Milford Cabinet in Hilford, N. H., on the difficult foreign-aid problem. Editor William Rotch has here contributed a thoughtful, intelligent, and searching analysis of the issue.

FOREIGN AID: A TEMPTING TARGET

To New Hampshire's Senators and Congressmen.

GENTLEMEN: As the April 15 income-tax deadline approaches, many of us look to you, almost in desperation, for some means to ease the Federal tax burden. It is a time when we must rely heavily on your wisdom as to what is necessary and what is not. Yet, at the same time we plead for economy, we must urge you to be cautious, to weigh any immediate tax saving against the long-range effect on America.

Foreign aid is a tempting target to those who demand economy. Perhaps they are right. Certainly any saving here would seem to be relatively painless. And yet the subject is so complex, and the results of a mistaken policy could be so disastrous, that we hope you will proceed with caution.

The danger lies in listening to the advice of people who see foreign aid only as a gigantic giveaway program of doubtful benefit to this country. It seems only fair that you insist that those who tell you to "reduce foreign aid" should specify which particular expenditures they feel are extravagant.

For example, we are told that much—in fact, most—of what we term foreign aid is for military assistance to our allies. Certainly any reduction in this field should be made only after serious study.

We understand that much foreign aid is to enable other countries to buy goods from America. A foreign government seeking farm machinery, for example, to raise the standard of living of its people, may prefer to buy it from the United States. If we refuse the necessary aid we may give the other country no choice but to barter some of its strategic goods with Moscow. And it would be ironic to refuse aid to countries that would prefer to trade, but are prevented from exporting goods to us by our own tariffs.

It should be obvious that we cannot buy friendship. If we offer aid as bluntly as that we are certain to be disappointed. We can, however, offer to help "underdeveloped" countries to help themselves; the possibilities are endless. It was President Eisenhower who pointed out last week that a dollar spent intelligently to aid underleveloped countries now is worth five dollars in "just sheer defense." It is the strong and self-sufficient country that is best able, and most willing, to resist the advances of communism.

Above all, do not make the mistake of condemning foreign aid of the future because of mishandling in the past. That would be shortsighted in the extreme. For foreign aid is an integral part of the struggle between the free world and the communists. Its aim is to maintain allies and win sturdy neutrals. Perhaps the most important thing you can do is to insist that this country have a consistent policy, that it knows where it is going and why, and that it adjust its foreign aid to attain that purpose.

Give those requests for foreign aid appropriations a long, hard look. Demand to know why they are necessary. Take all possible measures to see that the money is used wisely. But do not yield to the election year temptation of "economy at any price," and upset a program that we believe keeps much of the free world in balance.

Opposition to H. R. 7089

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. SAYLOR. Mr. Speaker, out of the 435 complement of the House of Representatives, 6 Members were appointed during the 83d and 84th Congresses to a special group known as the Select Committee on Survivor Benefits. Under a special rule of the House which permitted no amendments except by the special committee, a significant piece of legislation, H. R. 7089, was introduced last year and passed the House of Representatives on July 13, 1955.

I concede the fact that some of the bill's provisions were good, however, the bad features far outweighed any merits. I, therefore, take this opportunity to indicate my reason for voting against this bill, because in all good conscience, I could not agree with the concept of basing death compensation on the attained rank and length of service of an individual as proposed in section 202 (a). This section contained one of the most radical changes in existing legislation and, in my opinion, has never been made in the history of our country.

I am convinced that a life given for one's country is a life, whether the individual be a general or a private. There is certainly a need to provide for the widow and children in either case, yet who is to say that a widow and children of a general should have more benefits than the widow and children of a private. Let us compare the pay of each. A general receives approximately $1,200 a month as opposed to $120 a month for a private. These figures alone immediately indicate that the chances of leaving a sizable estate are much better in the higher than in the lower ranks.

I do not object to increasing benefits to widows and children of men who make the supreme sacrifice, however, I strenuously object to any system that would create a wide disparity between benefits given families of high-ranking officers and next-of-kin of privates, airmen, and seamen.

The high military echelon voiced their approval of this bill, and well they should. This is an excellent proposal for the career military personnel, who in view of long service have a better opportunity to attain some degree in rank. But what of the civilian soldier called to serve his country for the duration of an emergency? The majority have little opportunity to rise above the E–3 to E–5 bracket where the great number of deaths occur. These individuals have been forced to leave their families, their homes and their jobs—in most instances, jobs which pay far more than the military.

For example, let us consider the case of a lieutenant colonel with a monthly income of approximately $525 and the newly inducted private, just out of basic training, who prior to induction was earning $125 a week either as a steelworker, glassworker or coal miner. The wives of both men enjoyed similar standards of living prior to the private's entry into service. Both men lose their lives, side by side, by the same enemy shell. The private's widow receives as her death compensation $122, while the wife of the liuetenant colonel would receive between $169 and $193, depending upon the length of service. I can see no equity in such a proposal—both faced the same hazards, both subjected themselves to the same dangers—yet the widow of one receives far greater benefits than the other.

The Federal Government has a direct obligation to the widows of men killed in service of their country. However, this obligation should be discharged in the historic manner of equality and not based on rank and length of service. I have long advocated an increase in compensation based on a flat sum. In lieu of the formula contained in section 202 (a) of H. R. 7089, I suggested a flat monthly rate of compensation to all widows in the amount of $140, since this appeared to me to be equitable in view of the loss of the servicemen's indemnity.

Other provisions of the bill calls for expansion of social-security benefits—depending on rank and longevity of the deceased serviceman—and a lump-sum gratuity of between $800 to $3,000—again depending on the deceased husband's rank and longevity. I could not look upon these features in favor and I voted against its final passage and endeavored to persuade by colleagues to do likewise. Even though the bill passed the House of Representatives over negative objections by many conscientious Members of Congress, I have been gravely concerned over its future, because of the injustice involved and the resulting effects upon the morale of a great majority of the men in service during an emergency.

I cannot endorse any proposal injecting the philosophy that rank, length of service or military pay should be considered as factors in discharging the

Federal Government's obligation to the widows and children of our servicemen who died as a result of service connected disabilities.

H. R. 7089 is now pending before the Senate Finance Committee, and I hope the committee will strike this rank philosophy from the bill.

A Tribute to a Great Hungarian-American—Michael de Kováts

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. CURTIS of Missouri. Mr. Speaker, 177 years ago, a great patriot of our country was killed in a battle waged in the fight for freedom and independence of the infant United States. Of foreign birth, Col. Michael de Kováts typified the many great European leaders who fought so valiantly for a cause they believed to be right and just.

Born in Karcag, Hungary, in 1724, little of his youth is known. His name does not appear in history until 1744 when he joined the Jasz-Nagy-Kun Huszar Regiment as a junior officer at the age of 20. He fought in the Second Silesian War as a member of Empress Maria Theresa's army. A document dated December 14, 1761 shows that he distinguished himself in this war and by the time of his discharge he had decided to enter upon a military career.

He took a very active part in the Seven Years' War in the service of Frederick the Great as a Prussian officer. His commander, Col. Michael Székely, led the First Prussian Hussar Regiment which took part in the battles of Pirna, Gotha, Lobosits, Prague, Torgau, and Leitmeritz. Kováts received very serious wounds in the battle of Gotha but recovered to become, in 1760, captain and commander of the so-called Gersdorf—free Hussars.

On March 12, 1761 he resigned his army commission, probably because he did not like his military assignment, which forced him to be the tax collector and oppressor of certain territories occupied by the armies of Frederick the Great.

In 1762 he returned to Hungary and Empress Maria Theresa appointed him a major in the Hussar Regiment. But with no major conflicts to claim his attention, he was restless for military action. In the new world the Colonists had signed the Declaration of Independence and, having followed with keen interest the activities in America, it was not surprising that Major Kováts decided to help the great cause of George Washington and the revolutionists.

Kováts was 53 years old when he wrote an historic letter to Benjamin Franklin, American Ambassador to France. He had been in military service for 33 years. This letter of application, written in classical Latin, is in Philadelphia at the Library of the American Philosophical Society among the papers of Benjamin Franklin. The letter, speaking for Kováts and his cultural standing, reads:

Golden freedom cannot be purchased with yellow gold. I who have the honor to present this letter to Your Excellency, am also following the call of the Fathers of the Land, as the pioneers of freedom always did. I am a free man and a Hungarian. I was trained in the Royal Prussian Army and raised from the lowest rank to the dignity of a captain of the hussars, not so much by luck and the mercy of chance, than by the most diligent self-discipline and the virtues of my arms. The dangers of the bloodshed of a great many campaigns taught me how to mold a soldier and, when made, how to arm him and let him defend the dearest of the lands with his best ability under any conditions and developments of the war.

I now am here of my own free will, having taken all the horrible hardships and bothers of this journey (refering to his trip from Budapest to Bordeau, France). I beg Your Excellency to grant me a passport and a letter of recommendation to the most benevolent Congress.

At last, awaiting your gracious answer, I have no wish greater than to leave soon, to be there where I am needed most, to serve and die in everlasting obedience.

When he received no reply from Franklin, he became impatient and set sail for the colonies without a letter of recommendation, probably sometime in the summer of 1777. Kováts was a professional soldier, a specialist in the branch of light cavalry and he had one purpose in coming to America: to organize hussars—cavalrymen—for Washington.

He knew that Washington had no cavalry in the professional sense. The four so-called mounted regiments, commanded by Colonels Moylan, Bland, Baylor, and Sheldon were mere mounted infantry without the least elementary training or organization in the true cavalry sense.

Kováts and his commanding officer, Count Casimir Pulaski, of Poland, faced an uphill fight to establish a true cavalry unit in the Revolutionary forces. And, in the strict sense of military history, they failed. Cavalry never became of any importance in the Revolutionary War. Washington's English military background included the scepticism of the value of cavalry in combat. With only a pitifully small army of men at his command, Washington felt he could ill afford to allocate the 400 to 500 men that Kováts and Pulaski requested. Forced to undertake their own recruitment program among a people already stripped of most of their eligible men, they were forced to accept into the ranks of the newly created Pulaski Legion many former prisoners, and deserters. With food and supplies in short supply, Kováts, as master of exercise, had great difficulty in keeping his troops disciplined and defections were an ever-pressing problem.

These conditions resulted in several clashes with some of the townspeople where Kováts' troops were billeted. Although he was careful not to resort to the classic custom of commandeering the supplies and housing needed for his troops, both he and Pulaski could not understand why disloyal tories should retain their wealth while soldiers and horses went hungry. In June 1778 matters came to a head. One of Kováts' men was arrested by a civil officer for confiscating some tory-owned supplies. The civilian officer was then abused by other members of the regiment and Congress, hearing of the incident, became aroused. Kováts strongly supported the actions of his men and Pulaski was obliged to explain the matter to Congress. This was something of a dilemma for Congress, but it finally solved the problem by supporting Pulaski while reminding him that civilian authorities must be obeyed in situations of this nature.

The legion was fully trained and ready for action by the summer of 1779. Congress delayed approving the new unit and the men, including Kováts, spent 6 idle weeks in Philadelphia. Orders finally arrived on September 29. The legion was to help counter a British offensive in south Jersey. As had been feared, some of the men proved unreliable. Treachery and desertion led to severe reverses in the first engagement. Again the legion's critics became active and Pulaski had to defend himself to Congress. Eager to redeem his reputation, Pulaski and Kováts hurried to their next assignment on the frontier in New York State. Disappointments followed again. Cavalry was ineffective in this wooded wilderness and Pulaski obtained permission to bring his legion back to Philadelphia.

Months passed with no action other than bickering with Congress over the finances and abuse of local citizens. Then, toward the end of 1778 the British invaded Georgia and threatened Charleston. Pulaski's Legion was among the forces ordered south to meet this new attack. Reaching Charleston on May 8, Pulaski and Kováts found the city on the point of surrender. The arrival of the Legion fired the spirits of the defenders and it was decided to resist. On May 12 the Legion swung into action against a much superior British force, and although it fought well, it was completely overwhelmed. Colonel Kováts, with most of his men, died in this battle.

Though hardly an American victory, the dash and bravery of Pulaski's force buoyed up the defending forces and strengthened the resistance immeasurably. It is impossible to assess the true importance of so small an engagement, but the sacrifice of the gallant Hungarian Michael de Kováts equals that of any hero of our Revolution and shines as a true example for all patriotic Americans today.

Qualifications of Directors of National Banking Associations

SPEECH
OF
HON. HENRY O. TALLE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 1736) to amend

section 5146 of the Revised Statutes, as amended, relating to the qualifications of directors of national banking associations.

Mr. TALLE. Mr. Chairman, I yield myself such time as I may require.

Mr. Chairman, under the law, boards of directors of national banks must consist of not less than 5 members nor more than 25, so this proposed change in the residence requirement is genuinely minor; but it does mean something to some banks. If we will take into account the changes that have taken place here in the Washington area within the last 15 or 20 years and consider how much farther away from the Capital Members live now than formerly, we can visualize very easily why we should not restrict a bank director from living as far away from the bank as say 100 miles. This bill is realistic and should be passed.

I have no further requests for time, Mr. Chairman.

Part-Time Presidency

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. QUIGLEY. Mr. Speaker, in view of the fact that President Eisenhower's ability to perform the necessary functions of his office have been made a matter of public concern by the President himself, the American people cannot be other than confused by the many conflicting opinions that almost daily make headlines.

We are assured by White House spokesmen—even by the President himself—that he has been devoting full time and attention to the necessary duties, eliminating only some allegedly nonessential, ceremonial functions.

On the other hand the President is classified as a part-time Chief Executive.

Strangely enough, Mr. Speaker, I agree that Mr. Eisenhower is a part-time President, but I also believe he, himself, is completely sincere when he tells us he is not shirking the necessary duties of this high office.

Why I cannot doubt the President's personal sincerity is ably pointed out in a column appearing in the Washington Post and Times Herald on Wednesday, April 18, written by Marquis Childs, a distinguished and veteran recorder of the facts of Washington life.

Mr. Childs discusses the President's military approach to the Presidency, and I think his comments are extremely pertinent. It would appear that we are the victims of the old Army game.

I include the column by Mr. Childs as a part of my remarks:

IKE'S FARM APPEAL SHOWS BAD TIMING
(By Marquis Childs)

In this political year, the charge of a part-time President is bound to grow in volume. It results, in part, from the extensive discussion of President Eisenhower's health and the debate over whether he would run again.

But a look at the record shows that the heart attack has made comparatively little difference in his approach to the most difficult and demanding office in the world. The Eisenhower concept of the office differs, markedly from that of his predecessors.

It is the chain-of-command concept under which broad authority is delegated to subordinates. They are responsible for success or failure in their separate departments. This is shown most clearly in the record of the President's public addresses during his first term.

His predecessors felt it was part of their duty to go directly to the public with policies which they wanted Congress and the public to accept. Again and again, to nationwide audiences on radio and after the war on television, Presidents Roosevelt and Truman explained, expounded and persuaded. This was outside the campaign periods when the speeches they made were strictly political.

But Mr. Eisenhower has rarely gone to the public. The record shows that aside from the 1954 campaign he has been on radio and/or television 40 times during his first term.

This includes brief recorded greetings to special groups. It includes remarks on the annual lighting of the White House Christmas tree and informal participation in the back-to-God rallies. It also includes some talks with an avowed political objective, although they were not given in a campaign.

Of the total 17 or 18 speeches can be said to deal with issues.

The appeal to public opinion by persuasion and exposition is raised acutely by 2 controversies, 1 domestic and 1 foreign, now confronting the administration.

The President's farm program has been brushed aside by Congress in favor of the old rigid price-support system. While several warnings against this action have come from the White House, the President never has taken his case to the public. Now he has explained to a nationwide audience what is wrong with the bill passed by Congress. But a forthright appeal earlier might have enlisted sufficient public support for his farm program.

On the issue of his foreign-aid program, again it is the President alone who can make the case. There is evidence of considerable public support for expanded foreign aid and for a commitment up to 10 years in some instances. A Presidential speech explaining the whys and wherefores might focus this support, although the President already may have waited too long.

Before he entered the White House, Mr. Eisenhower made many eloquent speeches. As the first Supreme Commander of the North Atlantic Alliance, he preached the cause of European unity with a vigor and a forcefulness that contributed a great deal to his reputation as a politico-military statesman. Those speeches helped to advance him on the road to the Presidency.

Yet once in the White House he seemed to suffer from all sorts of inhibitions.

For one thing, the caliber of his speechwriters has not been high. He has had few who have been willing or able to spark discussion of the great issues of the day.

And the mechanics of television may have had something to do with the President's lack of ease in his infrequent public speeches.

Given the proper setting and a theme close to his heart, the President has demonstrated that he can rise to an occasion.

The atoms-for-peace proposal, which captured the imagination of the country and the world, is one of the rare instances in which the President has gone outside the conventional mold to strike a new and dramatic note. Too often his speeches have consisted of well-intentioned platitudes.

One of the obligations of a President is to articulate the needs, the aspirations, the hopes, and the ideas of the people. In the words of Woodrow Wilson, he must be "the spokesman for the real sentiment and purpose of the country."

This President Eisenhower has not done. This phase of the Presidency is alien to his experience and background. In the chain of command, an order is an order and there is no need to persuade anyone to carry it out.

How the Miner Looks at Coal

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. SAYLOR. Mr. Speaker, one of the qualities that has played such an important part in our development as individuals and as a Nation is the faith of our working people. This characteristic has been vividly portrayed in a statement appearing in the Portage Dispatch, Portage, Pa., on February 16, 1956, by Mr. John Ghizzoni, president of District 2, United Mine Workers of America.

As spokesman for thousands of miners and their families in western Pennsylvania, he could justifiably express keen disappointment and discouragement as regards the economic outlook, in view of the troublesome road onto which the mining industry has been plunged the past years. After having experienced such depressed conditions despite the general high levels of prosperity, miners might very well be skeptical of what is in store for them in the immediate future.

Because of unparalleled determination and perseverance born of experience, however, miners refuse to lose faith regardless of hardship. I also believe that it is incumbent on the Congress to make certain that this faith has not been in vain, for only through an adjustment of policies detrimental to our people can they again be given the opportunities that are rightfully theirs.

The miners' spirit is commendable, Mr. Speaker, and one which can provide an incentive for all Americans. For the record, I should like to have Mr. Ghizzoni's statement inserted as part of my remarks:

HOW THE MINER LOOKS AT COAL
(By John Ghizzoni, president, district 2, UMWA)

Thousands of men who dedicate themselves to the mining of coal and therefore expect to earn an honest, decent livelihood therefrom would like to see a permanent improvement in the production and consumption of coal.

The production of coal for the year 1955 has improved to some extent in our area but it did not put an equivalent number of coal miners back to work. It has, however, given more working time to the miners who are employed in the mines.

During the past year, when the coal business was good, the railroads could not meet their railroad car requirements in furnishing sufficient railroad cars to maintain full running time at the mines. That was due to the neglect of the railroad and not maintaining their old stock and acquiring new

railroad cars sufficiently to carry our coal to its markets.

At the moment, this condition has alleviated itself because of the fact that the lake trade is now closed for the winter, but, coming spring it may become another irritating factor, and to which we look to the railroad for easement.

Thousands of miners in District No. 2 are still without jobs because of the closing of a large number of coal mines and because of a large number of coal mines curtailing their working force by laying off coal miners. The mechanization program carried forth in our coal mines has substantially reduced the cost of coal at the mines.

We, however, look forward to the future with optimism because of the expansion of our population and increased use of power made from coal. It is estimated that by 1960, we shall be using 100 million tons of coal, in addition to the coal now being mined.

Greater uses for coal are being found daily and with this we are hopeful that additional thousands of coal miners will eventually be put to work to satisfy the needs of our expanding economy.

So that, while at the moment the picture may not be a rosy one, there is sound hope for the future of coal mining and for coal miners to earn a living therefrom.

How the Pie Is Cut

EXTENSION OF REMARKS
OF
HON. DeWITT S. HYDE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. HYDE. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include an editorial which appeared in the April 16, 1956, issue of the Morning Herald, Hagerstown, Md.

HOW THE PIE IS CUT

The Democrats' favorite theme—that the "big guy" gets all the benefits of the Eisenhower Republican prosperity while the "little guy" is not getting his full share—is "baloney."

At the risk of mixing metaphores, when the pie is cut, labor receives a larger slice under Eisenhower than it did under Truman; the big corporations, on the other hand, have received smaller slices under Ike than under Harry.

Let's take the national income (total net income of persons and corporations) and see how it has been divided:

National income, for the Nation as a whole, has risen and so has labor's share. Under 7 Truman years, labor's share was about 65 percent; under Ike's first 3 years it has risen to about 69 percent.

Conversely, corporation incomes after taxes have accounted for only 6 percent of the national income under Ike as compared to 7.7 percent under Truman.

As for corporation dividend payments, they remain about the same under both Presidents; on a year-for-year basis they have been higher under Truman in a few instances.

Another important item is personal income which is, primarily, national income with corporation profits and business taxes excluded. Labor income has averaged about 75 percent of total personal income under Ike; under Truman it was about 71 percent.

Finally, there is per capita disposable personal income—the income of persons less taxes. This averaged $1,508 in 1952. It has risen to $1,630 under the Republican administration.

The Eisenhower administration has achieved unprecedented prosperity with peace. And more people are sharing in that prosperity than ever before. It is no wonder that Ike is leading all political popularity polls.

Japanese Protest Against Alabama and South Carolina Laws

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. DORN of South Carolina. Mr. Speaker, in the Japanese textile controversy, the State Department is not representing the best interests of America. They brought on the situation that necessitated South Carolina and Alabama taking action. I cannot blame Japan, but I do blame the State Department for not pointing out to Japan the utter ridiculousness of bringing Japanese textile goods into this country where we already have a surplus.

We who are fighting for fair trade policies appreciate the following press release by Mr. O. R. Strackbein, chairman of the Nationwide Committee of Industry, Agriculture, and Labor on Import-Export Policy:

JAPANESE PROTESTS AGAINST ALABAMA AND SOUTH CAROLINA LAWS

(Statement of O. R. Strackbein, chairman, the Nationwide Committee of Industry, Agriculture, and Labor on Import-Export Policy)

Official Japanese Government protest against State laws enacted in South Carolina and Alabama requiring merchants to display signs notifying the buying public that Japanese textiles are carried in stock for sale, comes as no surprise.

Japan claims that the South Carolina and Alabama practices violate the treaty of friendship, commerce, and navigation signed by the United States and Japan in 1953. Japan claims discrimination against the products of her export industries.

Here is a magnificent example of the fruits of executive efforts to regulate the foreign commerce of the United States. In its grasp for unlimited power over our foreign trade the State Department has sought subordination of all considerations of the domestic economy to its own particular objectives.

The Japanese protest is but the comeuppance to be expected. Should this succeed, foreign protests will soon be telling us how to run our factories and farms. The point is that protests of this character are the natural consequence of State Department policy. That policy acts as an open invitation to foreign interference in our domestic affairs. That is why the Japanese protest should cause no surprise. More protests of this character may be expected from other sources. If they do not come spontaneously we may be sure that the State Department will instigate them. The protests can then be used as a club over Congress or our States to beat them into submission to the State Department policies.

The implication of the Japanese protest and the immediate expression of anguish by the State Department over the efforts of South Carolina and Alabama to protect themselves against the results of the trade agreements policy of the State Department throws a revealing light on the OTC legislation that is now before Congress.

If further evidence were needed of the intent of the State Department to come into a position of cracking the whip over our industries and their efforts to defend themselves against destructive import competition, or to reach its tentacles into every town, village, or city to bend them to State Department policy, the Department's reply to Japan as voiced by Secretary of State, Mr. Dulles, admirably supplies it.

The Secretary of State seems to deplore the fact that because of our constitutional system he cannot order the signs torn down in South Carolina and Alabama. He is seemingly apologetic for what under the circumstances he pictures as a clumsy system of government. He overlooks the fact that it is the State Department's own doing or its own nonfeasance that places the Japanese in the position of having what might appear to be a legitimate grievance.

If the State Department had not usurped the constitutional powers of Congress and thus could not nullify all legitimate efforts of protection against destructive import competition, the States of South Carolina and Alabama would not have found it necessary to resort to the drastic steps they have taken. But the State Department has lost both the art and the will to listen to counsel that comes from American producers who are injured by excessive imports.

The doors are virtually closed against recourse. This drives the aggrieved areas to such self-help as they can legitimately muster.

Why cannot import quotas be established to regulate the imports of textiles and other products that offer a grave threat to American industries?

The answer is the State Department says "No," and has illegitimately written this "No" into the General Agreement on Tariffs and Trade or GATT. If there is to be a "yes" or a "no" to import quotas Congress is the only legitimate source under the Constitution that can give the answer. The State Department is only reaping what it has sown by way of violating the Constitution.

There will be more protests as a result of this violation; and there will be bitterness and misunderstanding both at home and abroad. Mr. Dulles would do well to lend his weight to getting the State Department on its legitimate track rather than standing in apologetic posture before the world, deploring our constitutional system.

The Late Leo R. Sack

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. BARRETT. Mr. Speaker, it is indeed a sad coincidence that Mr. Leo R. Sack, the distinguished soldier and diplomat and former member of the Capitol Press Galleries, died on Sunday in Los Angeles, Calif., on the eve of the observance of the eighth anniversary of the independence of the State of Israel, in the creation of which he played such a significant role.

As public relations counselor to Rabbi Abba Hillel Silver, then president of the Zionist Organization of America, Leo Sack rendered an incalculable service that will be long remembered by those who have the cause of democracy at heart.

As a patriotic American he saw the wisdom of the establishment of a bastion of the free world in the Middle East where comunism had long sought, and still seeks, a foothold. As a member of the Jewish faith whose brethren survivors of the Nazi holocaust sought a refuge in their traditional homeland he labored for the justice of their cause.

And as an experienced journalist and diplomat of wide experience and friendships he directed his efforts in the crucial days of the partition fight and the birth of the fledgling nation to the success of that cause.

I am sure I speak the sentiments of many other Americans, Jew and non-Jew alike, who knew and loved Leo Sack when I extend our sympathies to his wife, his daughter and grandchildren and other members of his family and add: "Well, done thou good and faithful servant."

Fewer Laws Needed

EXTENSION OF REMARKS
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. WHARTON. Mr. Speaker, as one of a helpful and congenial nature and by way of solace to those who have the responsibility of explaining away the charges of a do-nothing Congress, I respectfully submit an editorial from the Hudson Star which is an outstanding publication from the city of the same name in my district:

FEWER LAWS NEEDED

Legislators should realize that the voters are not clamoring for new laws. In fact it would be of real pleasure to the country at large if the lawmakers suddenly decided on placing a moratorium on hundreds of insignificant bills as introduced by politically-minded sponsors.

Laws are now too numerous. Every year many new ones are introduced but luckily the majority of them fail of passage or draw a veto. The only new law that the voters as a rule favor is one which has to do with reduction in taxes. Such a law would be popular.

Take for instance in the last session of the legislature. There were 7,460 bills which were introduced for consideration. Half of them were products of assemblymen. Of the record total 1,288 were passed but only half of them will become laws because of the governor's veto power.

Much wasted effort goes into these bills which are designed in many cases to satisfy constituents of a certain locality. Members of the assembly and senate should give careful consideration to each request for a bill before it is brought up for vote. The same is true of Congress.

But the wishes of the voters for fewer laws will continue to be ignored as long as there are lawmakers who have political ambitions to satisfy.

A Very Bad Bill

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include editorials relating to the farm program which appeared in the St. Louis Globe-Democrat:

[From the St. Louis Globe-Democrat of April 10, 1956]

BY ANY TEST, A BAD FARM BILL

Economically, agriculturally, even politically, the farm legislation congressional Democrats high-balled through Senate-House conference is a wretched measure.

Almost certainly, if it is passed in the present form, the President will be forced to veto. He should refuse to sign.

The bill could not be passed over his veto. Then Democrats and the Republicans in Congress who connived at this omnibus of political largesse will be on a spot.

Farmers will know their so-called friends on Capitol Hill balked all relief. Agriculture would not be so naive as to cast all the blame on the White House.

Millions of farmers understand the high, rigid parities the administration steadfastly opposes have been responsible for the huge surpluses that depress prices. Millions are not in favor of top, inelastic supports, as many in Congress seem to think.

While Congressmen are going hog-wild to bolster farm income by makeshift bounties, insuportable by long-range farm economics, they seem to have forgot the consuming public. The multimillion voters who will have to pay more for bread, meats and other products of agriculture will know whom to blame.

If the present measure is spiked by a veto, no doubt a new bill would be quickly drafted and an attempt made to rush it through the mill. But even if it were passed and signed, it would be too late for this year. Farmers would have no guide in planting or in "soil-banking" until too late for present crops. It is already late, as a result of the political wrestling in Congress.

The best procedure is for Congress to send the bill back to conference, as GOP leaders plan to do. The 90-percent rigid props must be knocked out and other changes effected.

The President has made it known he does not expect perfection and will go along with some compromise to obtain farm relief. But he is dead right in his temperate statement the present measure does not meet "the test of a good farm bill." It is, in fact, a legislative atrocity, even for an election year.

[From the St. Louis Globe-Democrat of April 13, 1956]

VETO THE FARM BILL

The President should veto the farm bill.

This measure is one of the most brazen political hoaxes ever hatched by a Congress. It is scarcely more than a boodle bill, designed to buy the votes of farmers next November.

Talk about giveaways. This proposal is bloated with public largesse.

It is a $3 billion bribe, designed by Democratic leadership of Capitol Hill—with connivance of a GOP minority—to lure ballots in an alection year.

The bill provides billions for farm blandishment, billions out of taxpayers' pockets. If you don't think so, take a hard look at the provisions of the legislation.

Crux of the battle has been over high, rigid parities. The Eisenhower administration has foughtt this system, under which agriculture's income has steadily dwindled for years, under which Government has built up $9 billion of idle and rotting farm surpluses.

Two years ago the Ike regime secured a sliding parity scale, from 75 to 90 percent. Now Congress has voted back inelastic parity props of 90 percent, in some cases rising to 100 percent.

It has not made this change because members believe top, compulsory supports are an answer to the serious farm problem. It seeks to restore fat, rigid parities as a political sop so agriculture can get a fast billion on the eve of a tough presidential campaign.

This bill provides high parities only during 1956. In 1957—when the elections are all over—the lower, sliding parity schedules will be returned.

What a cozening of an afflicted agriculture. What a blatant job of political trickery. Congress does not, obviously, believe rigid, top parities are realistic solution for slugged farm income.

But it votes to restore them for an election year, because some farmers—not the majority—want them. This smacks loudly of legislative looting, a prolix raid on the Federal till in the interests of political pandering.

Expediency dictated the farm hodgepodge that has come out of the congressional mill. Expediency and political ruthlessness.

The measure contains a $1,200,000,000 soil-bank provision, about which there is no controversy. It is eminently worth a trial. The plan would offer subsidies to farmers for retiring arable land, thus cutting down the pyramiding surpluses. High parities, however, would sabotage the soil-bank by encouraging more production, discouraging soil-banking.

In addition, this omnibus handout includes a dual-parity scheme which would raise subsidies, and two-price plans for wheat and rice, designed to bolster these crops to 100-percent parity. There are other gimmicks, decking the bill with glittering Federal cumshaw.

Congressmen, we are convinced, make a mistake if they imagine the farmers will be taken in. They make a mistake if they think the farm vote demands parities up to the ceiling. The smashing Eisenhower vote in southern Illinois should dispel such jump conclusions.

Congressmen also err if they consider this farm monstrosity will thrust the President into an acute political dilemma.

A veto of this act would still leave time for speedy adoption of a more sane measure. Mr. Eisenhower's veto would not be overridden. It could bring from Congress a rational compromise which would insure the soil-bank program.

If the Democratic Congress refuses to do anything further, both parties will suffer politically—not merely Republicans. Farmers will recognize the hoax contrived in this political bribe bill.

Veto of this unconscionable measure is urged in the national welfare and in the best interests of agriculture.

[From the St. Louis Globe-Democrat of April 14, 1956]

A VERY BAD BILL

The more one reads and studies the patchwork farm bill passed by a politically minded Congress, the more cynical one becomes on the workings of Government processes in an election year.

The bill is a bald attempt to bribe the farmer with short-term good and long-term ill.

The Democrats in the Senate and House who voted overwhelmingly for it, or those Republicans who were wooed to it on the specious theory that you can't go wrong with bread and circuses in an election year, are ignoring the best interests of the farmers whom they allegedly would aid.

The reason the overwhelming majority voted for General Eisenhower was because he represented integrity in America. Under his administration, at least a beginning has been made in the effort to cut down the glut of farm surpluses which costs the taxpayers huge sums, only to lie and rot in warehouses.

Flexible price supports are an attempt to solve the basically wrong system whereby the taxpayer has to pay high taxes to support farm subsidies (including those surpluses which so often become a complete waste), and then must turn about and pay higher prices at the grocery store when he buys the goods which his tax money has made more expensive.

Admittedly the farmers have not shared as they should in the gross national product. But they are poorly off not actually, but only when compared to the wages of some workers and the large profits of some, though not by any means all, corporations, or to the years of phenomenal prosperity which could not continue.

The best farmers, and all right-thinking ones, will see through the transparent scheme to toss them a bone just to get them past November 6 or to make a campaign issue for the Democratic Party. Even today the consensus among the stable element in the farm groups urges the President to veto a thoroughly bad bill, which would set back farm progress more than the possible temporary relief would help him.

The Globe-Democrat believes that the President will be turning his back on the element of character which, more than anything else, helped to elect him—integrity—if he signs this bad bill. We hope most sincerely that he will veto it.

The Farm Bill

EXTENSION OF REMARKS
OF

HON. MELVIN R. LAIRD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 19, 1956

Mr. LAIRD. Mr. Speaker, under unanimous consent, I include in today's CONGRESSIONAL RECORD a series of seven editorials from Wisconsin papers, commenting on H. R. 12, the so-called farm bill. These editorials are taken from six different newspapers in Wisconsin and I believe represent the thinking of Wisconsin citizens on this legislation.

[From the Marshfield (Wis.) News-Herald of April 10, 1956]

THE FARM BILL

President Eisenhower finds himself in an uncomfortable position with regard to the farm bill which has been revamped by a House-Senate conference committee after much discussion. The President has said that he is dissatisfied with the measure in its present form, while the Democratic chairmen of the Senate and House Agriculture Committees have insisted that it will be passed by both Houses on a take-it-or-leave-it basis. If Mr. Eisenhower decides to "leave it" he will be denounced by his critics as opposing help for the farmer.

At this stage it would be impolitic for the President to say that he will veto the measure if it comes to him in its present form, nor can he say that he will not, if he hopes to see it recommitted to the conference committee for revision. At the moment the bill serves as a test of confidence—will the country support Congress' claim that the bill is the best that can be adopted, or will it back the President if he vetoes it on the ground that it is worse than no bill at all?

Neither political party can claim infallibility in the matter, for there are Democrats and Republicans on both sides of the fence, some for rigid support prices and some against. Minority leader MARTIN has admitted that he knows of no way to swerve the 21 House Republicans who disagree with the President on this issue.

Headlines in Wisconsin newspapers emblazon the story, but the accounts from Washington generally fail to point out that passage of the bill as it now stands is hardly worthy of the consideration of the Badger State's great dairy industry. The rigid-price support provisions it would restore mean a 15-percent boost in subsidies for producers of corn, wheat, cotton and the other basic but offer the Wisconsin farmer no more than a 2 or 3 percent increase.

The recent Department of Agriculture decision to raise the Cheddar cheese support price to 34 cents will bring more money into the State than anything the current farm bill could do, and can be justified in view of the dairy market situation. But restoration of rigid high supports for the basics can only result in production of crop surpluses for storage in nonexistent warehouses and, for Wisconsin farmers, in higher milk production costs.

If Wisconsin farmers could grasp the full picture, we believe they would flood the White House and Congress with protests against the passage of the bill Congress and its conference committee have brought forth.

[From the Stevens Point (Wis.) Daily Journal of April 14, 1956]

FARM MEASURE WON'T REDUCE THE SURPLUSES

As President Eisenhower's decision is being awaited on the farm bill sent to him by Congress, the measure continues to be defended and attacked, depending upon political and other viewpoints. Even the major farm organizations are not in agreement as to its merits.

The bill contains provisions opposed by the President, including the return to farm price supports at 90 percent of parity, the system blamed in the past for the huge farm surpluses. The Democratic strategy is out in the open. In event of a veto, the Democrats will use this as a springboard for direct attacks on the President in the national political campaign.

The farm bill is called a disgrace and all bad by the Milwaukee Journal in an editorial declaring it is "a bald bid to buy farm votes by misspending $3 billion more of taxpayers' money, to the ultimate harm of the farmers and of practically everyone else." The editorial continued, in part:

"The bill is a disgrace to a Congress that completely forgets its responsibilities in the mad scramble for momentary political advantage.

"The bill is a gross steal from taxpayers and customers, rural as well as urban.

"It is an insult to American farmers, indicating a belief that they are so stupid that they won't see through this bag of tricks, and so greedy that they would sell their votes for a paltry price."

The editorial went on to say that Democrats and Republicans in Congress vied with each other for the "friend of the farmer role" by adding larger and larger giveaways.

The Wisconsin State Journal of Madison is equally critical, calling the measure a monstrosity. It says that so far as Wisconsin is concerned, the bill further heightens the discrimination shown against the dairyman in the Federal farm program. "Not only does it restore rigid 90 percent supports for another year to the cash grain crops while continuing dairy supports at a lower figure; it removes the safeguard on soil bank acres to pave the way for still greater milk production on land now devoted to grains," the Madison paper declares.

Walter H. Ebling, statistician for the State agriculture department, commented that the measure will not have much effect on Wisconsin agriculture, at least for the present. Wisconsin, he pointed out, was most concerned with two sections of the bill, those dealing with dairy price supports and the soil bank plan. The price support minimums in the bill for milk and butterfat, while higher than the minimums under existing law, are about the same as present supports. As to a reduction in the number of acres under the soil bank program, this would come too late for the 1956 planting season even if the bill is signed.

As for the return to high, rigid prices supports on the basic crops, not enough of these crops are grown in our State on a cash basis to make much difference in the State's economy, according to Ebling.

The controversial bill leaves much to be desired from the standpoint of a sound national economy for agriculture. It became so deeply involved in election strife as to lose track of numerous important considerations. Even the spending of $3 billions won't solve the surplus and other problems that exist. And surpluses may grow still bigger by encouraging the growing of still more basic crops for which there is no demand or need ,if the bill becomes law.

[From the Shawano (Wis.) Evening Leader of April 14, 1956]

IT DESERVES A VETO

It will be a long time before a more cluttered piece of legislation than the farm bill goes to a President for signature.

The bill passed by the House and the Senate and now awaiting Presidential signature or veto is an election-year monstrosity which ill graces the Congress.

It calls for a return to high rigid price supports for the basic crops such as wheat, corn, and cotton. It provides a price-support minimum of $3.25 per hundredweight for manufacturing milk and 58.6 cents a pound for butterfat.

The dairy minimums are higher than the minimums under the present law, but according to Wisconsin agricultural department statistician Walter H. Ebling, these minimums will make very little difference to the economy in Wisconsin. They are about the same as present supports.

The heart of the bill, which calls for the rigid supports for the basics, will likewise have little beneficial effect on Wisconsin, because the State raises only nominal quantities of these crops.

Representative BYRNES, Green Bay Republican who voted against the bill, contends that less than 1 percent of Wisconsin's production is in basic crops. He argues that it is unjust for the Wisconsin dairy farmer to remain on a flexible-support basis while the basic crops are placed under a 90-percent mandatory level.

The House passed the farm bill 237 to 181 and the Senate voted 50 to 35 in favor of passage. Voting on the bill represented fierce jumping of party lines and some inconsistencies which probably will never be explained. Wisconsin's Democrats in the House voted for the bill and were joined by Republican O'KONSKI; all the rest of Wisconsin's representation in the House is Republican and all voted against the bill; yet Republican Senators WILEY and MCCARTHY voted for the bill.

The bill is bad enough in that it discriminates against dairying in favor of the basic crops; what is worse is that it fails to protect dairymen against the use of land taken

out of other production from being put into grass to provide economical feed for cattle in other areas of the country. In effect, enactment of the bill would encourage others to compete against the dairy farmer.

Only in an election year could such a hodgepodge of legislation emanate from the Congress. The farm bill is a flagrant attempt by election-minded politicians in Congress to curry favor for the farm vote. It would reestablish high supports in areas where there are already overburdening surpluses—and high supports have been the prime cause of the surpluses in the first place.

The farm bill passed Congress purely because this is an election year. Its enactment would make worse the surplus situation in the United States. It discriminates against the dairy industry. It is a disgrace that politicians would bend so far to jam through such unsound legislation.

The farm bill deserves a Presidential veto.

[From the Marshfield (Wis.) News-Herald of April 14, 1956]

FARM BOOBY TRAP

Democrats leave no doubt that they think they have set a neat trap for President Eisenhower in the farm bill they pushed through Congress this week. They know that the President is convinced of the inadequacy of rigid price supports, but they believe that if he follows his inclination to veto the measure he will incur the anger of farmers throughout the Nation.

The President's decision will not be an easy one, for much more than the farm problem itself is involved. Even though he realizes that the restoration of rigid supports can only aggravate that problem, he cannot dodge the possibility that loss of the farm vote could return the executive as well as the legislative branch to Democratic control, which would spell the end of the constructive national program his administration has been carrying on for the past 3 years.

So the question that confronts Mr. Eisenhower is whether to take a chance, for the sake of principle, on ending the tenure and thereby wrecking the program, of his own administration. The choice is a hard one, and it is doubtful whether there is anyone in the Nation capable of advising the President of the effect a veto would have on agricultural opinion.

The situation in Wisconsin serves to demonstrate the complexity of the problem, for in this State where the bill offers agriculture nothing, politicians and the leaders of some farm groups are managing to convince many farmers that they would lose by a veto. If that is true here, how much easier it must be to build up farm support for the bill in States where the basic commodities, the beneficiaries of the bill, are the major sources of agricultural income.

Mr. Eisenhower's task, if he intends to stand by his convictions and veto the farm bill, will be to convince farmers that the return to rigid price supports will only build up new crop surpluses at public expense and eventually wreck the farm price structure completely. Some farmers are as well aware of that as he is, but the others will not easily be convinced that Congress has no authority to repeal the natural laws of economics.

[From the Wausau (Wis.) Daily Record-Herald of April 16, 1956]

A MONSTROSITY

The farm legislation just passed by Congress has been called a lot of things both good and bad, but the term which seems to fit it about as good as any is "monstrosity."

It is wildly contradictory, grossly discriminatory and confusing to the point of chaos, to name but a few of the glaring faults which have been pointed up in debate and discussion.

Worst of all as far as Wisconsin is concerned is that, instead of helping Wisconsin dairy farmers, it would actually do them serious damage.

Any piece of legislation that would have such a result is indeed a monstrosity.

Six of Wisconsin's 10 representatives, including Representative MELVIN R. LAIRD, of the State's Seventh Congressional District, have told just how it would harm instead of help Wisconsin dairy farmers in a message to President Eisenhower calling for a veto.

Wisconsin farmers would gain about $14 million from temporary increases in the milk support level, but they would lose $26 million through increased feed costs, the 6 Congressmen contend. And they have offered a convincing array of facts and figures to back up that contention.

Gov. Walter Kohler, for similar reasons, vigorously opposes the measure, as do Milo K. Swanton, executive secretary of the Wisconsin Council of Agriculture, and Curtis Hatch, president of the Wisconsin Farm Bureau Federation, largest farmer group in the State.

Legislation that seeks to help some American farmers at the heavy cost of seriously harming other American farmers who are already facing extreme difficulties—the Wisconsin dairy farmers—is not only poor legislation but is vicious legislation as well. The 6 Wisconsin Congressmen who fought to prevent that monstrosity from being inflicted upon Wisconsin farmers are the true friends of Wisconsin agriculture—Representatives LAIRD, BYRNES, DAVIS, SMITH, WITHROW, and VAN PELT—not the 2 Wisconsin Senators and 4 Representatives who voted for the bill—Senators WILEY and MCCARTHY and Representatives O'KONSKI, ZABLOCKI, REUSS, and JOHNSON.

[From the Milwaukee (Wis.) Journal of April 17, 1956]

FARM BILL VETO A GOOD THING

President Eisenhower deserves full credit for vetoing a thoroughly bad farm bill. He has given the American farmers and American people a persuasive explanation of why he did so.

He has proposed an alternative program to bring considerable needed help to farmers this year. Some of that can be carried out without congressional action. The expedited soil bank program that he urges would, however, require congressional approval. This is uncertain at best with the political pot boiling harder by the day and the farm bloc, including many Republicans, miffed by the Presidential veto.

The President's alternative program is far from perfect, as he has tacitly admitted. However, it isn't as positively bad for the country and the farmers as the hodgepodge political measure that finally came from Congress.

It will take time to determine what the ultimate effect of the veto will be—economic or political. That effect will differ according to regions and crops and climates, according to various farmers' land, markets, skills and attitudes.

Realizing those uncertainties, the President has done what commonsense, his farm advisers and his conscience dictated rather than what many—but not all—of his party political advisers wanted.

If he had signed the farm bill monstrosity under political persuasion, he certainly would have fallen in the estimation of many of his admirers.

[From the Milwaukee (Wis.) Sentinel, of April 17, 1956]

FARM VETO

In vetoing the politically loaded monstrosity which reached his desk in the highly publicized guise of a farm bill, President Eisenhower again acted in the interest of sincere and conscientious statesmanship, rather than endeavoring to meet political expediency with more political expediency.

The veto is particularly fortunate for Wisconsin's dairy farmers, and therefore for the entire State.

It is fortunate that 6 of this State's alert Republican Congressmen discovered the bill's built-in trap through which our Wisconsin dairy farmers would lose $12 million in 1956 because the $14 million that they would have gained from temporary election year milk increases would have been offset by $26 million in increased feed costs.

We congratulate these Congressmen for this outstanding statesmanlike service: BYRNES, DAVIS, LAIRD, SMITH, VAN PELT, and WITHROW.

For joining them in calling Mr. Eisenhower's attention to this bad bill's injurious features which would have brought havoc to our State and Nation, we also congratulate:

Gov. Walter Kohler; Curtis Hatch, president of the Wisconsin Farm Bureau Federation, and Milo Swanton, executive secretary of the Wisconsin Council for Agriculture.

All of these gentlemen have obviously acted in the interest of the public, not in the interest of trying to make political hay out of a very real farm problem.

Are We Losing India?

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1956

Mr. MULTER. Mr. Speaker, Mr. William Randolph Hearst, Jr., has just completed a 30-day trip through the Far East that took him into 10 nations. His observations are contained in a series of nine articles which are deserving of the attention of our colleagues. The first article was inserted in the RECORD of April 16, 1956—page A3007—by our distinguished colleague from Indiana, Hon. E. ROSS ADAIR. The other articles appear in the issues of the New York Journal-American for April 9 through 16, 1956. In the second article, which follows, Mr. Hearst makes the following remarks on India:

DANGER AHEAD—ASIA: AMERICA IS LOSING COLD WAR IN INDIA, W. R. HEARST FINDS

(By William Randolph Hearst, Jr.)

1. America is losing the cold war in India today.

2. That vast country, with its teeming millions and great undeveloped resources, is being turned against the United States.

3. Communism is growing stronger there every day.

I make these three statements with reluctance.

Despite the politeness and charm shown me by government leaders, and the friendly attitude of most Indians one encounters, I firmly believe them to be true.

A government which enjoys the luxury of neutralism, to the full, under the protection of America's atomic umbrella, is allowing a biased press to lead the Indian people to mistrust and misunderstand the United States.

While there does not appear to be any immediate likelihood of communism gaining

control of India, my visit convinced me that the country represents the greatest long-range political danger spot for the United States in Asia.

Huge, passive India, in effect, is awakening. That giant nation, with its 350 million inhabitants, is coming out of a slumber sedatively applied by British colonialism for centuries. It is stirring with nationalism aroused by its independence from the white man's colonial rule. Impatient for a better way of life.

WHICH WAY WILL MASSES TURN?

Its masses are becoming politically conscious. Even its illiterate peasants sense almost subconsciously that they need not suffer the miserable poverty, disease, and degradation that has been their loathesome lot for so many years.

The great question is which way they will eventually turn. Will they develop democratically and peacefully? Or, in their eagerness to get quick results, will they accept totalitarianism and join with Red China and Russia in a Communist combine that will put all Asia under the despotic denomination of a ruthless, regimented rule?

If the former should be the case, India can become a bulwark of freedom in Asia that will help preserve world peace and contain Chinese Communist imperialism.

If the latter happens, woe be it for the West. The days of the white man's supremacy as the dominant political force in the world will be numbered.

What I saw and heard in India was not too reassuring or promising. We may still be able to turn the tide, but if we cannot or do not, we will lose India, and eventually all Asia with it.

Here are some of the factors which I found so disturbing on my visit to India:

There is more anti-Americanism reflected in the Indian press at the present time than in the Russian press. The tendency on the part of all Indian newspapers is to emphasize news unfavorable to America and omit news unfavorable to Russia and vice versa.

During my stay in New Delhi, one Indian Communist newspaper was trying to convince the people that "American imperialism is plotting to destroy our freedom."

Even the son of the late Mahatma Gandhi, the "father' 'of Indian independence, told me that the Communist influences are strong in the newspaper of which he is the editor—the Hindustan Times. This paper claimed recently that "the climate of peace is being sustained by Russia."

Other reliable sources informed us that Communists are scattered throughout the entire press of India, many of them holding key posts in the editorial and makeup departments. They have cells in all the universities, and are said to almost control India's merchant marine.

PARALLEL WITH RUSSIAN POLICY

While government officials discount the danger of communism in India, recent municipal elections in various parts of the country have shown a strong Red trend.

We were told that Prime Minister Jawaharlal Nehru called off elections scheduled to be held currently in Calcutta because he knew that, if they were held, the Communists would win control of that city of 7 million people—second largest metropolis in the British commonwealth. In addition, he placed the Communist leaders in Bombay under "preventative detention."

These actions are indicative of how tough he treats the Communists at home when they threaten the political dominance of his own Congress Party. At the same time, he is complacent about international communism. (Shades of President Truman.)

In fact, his foreign policy runs parallel with that of Russia in many ways and thus tends to weaken the free world's resistance to the spread of communism.

He is opposed to the defensive alliances which we have developed to deter Soviet and Chinese Communist aggression. He would like us to agree with Russia to destroy our stockpiles of nuclear weapons and prohibit the production of new ones, although in our interview with him he showed clearly that he felt the H-bomb was the world's greatest instrument of peace.

NEHRU'S VIEWS CHANGED, TOO

He said the terribly destructive power of nuclear weapons rules out world war and makes it impossible for one side to impose its system on the other.

This, coupled with economic developments of the modern atomic age and the growing political consciousness of the people, would, he felt, lead to an end to the cold war through peaceful coexistence. The Soviet leaders were, in his opinion, changing their views on basic Marxist doctrine.

He, too, has changed his views because there was a time when he wrote that he shared the Lenin theory that permanent coexistence between the Communist and capitalist states was impossible.

In "Glimpses of World History," Nehru wrote that there was a fundamental incompatibility between the capitalist and Communist systems.

"Peace between the latter two," he added, "can only be temporary. It is but a truce."

Perhaps Nehru has changed his mind. He seemed to indicate he had in his talk with us. I certainly hope he has because in his autobiography we read:

"I had long been drawn to socialism and communism, and Russia appealed to me * * * the Communist philosophy of life gave me comfort and hope * * * much in Soviet Russia I disliked, but there was no lack of violence in the capitalist world."

ANGERED BY GANDHI'S FAITH

"It was the essential freedom from dogma and the scientific outlook of Marxism that appealed to me.

"The bolsheviks may blunder and even fail because of national and international reasons, and yet the Communist theory may be correct."

Even more disturbing was his criticism of Gandhi because of the latter's strong religious faith.

"I felt angry," Nehru wrote, "at his religious and sentimental approach to a political question, and his frequent references to God in connection with it. He even seemed to suggest that God had indicated the very date of the fast."

This man is acclaimed today, especially in Europe, as one of the great leaders of our time. He is certainly one of the most controversial and enigmatic political personalities.

He wields great personal influence over the Indian people. His friends hail him as a highly intelligent individual with a touch of genius. They credit him with holding together by the sheer force of his character a nation whose caste system, sects, religious superstitutions, and diversified languages tend to tear it apart.

Some say he is the most valuable living Asian to the West because he is keeping India from going Communist. Others say he is the most dangerous man in free Asia because he is paving the way for communism to take over India by measures short of war.

MAY BLOCK COMMUNIST RULE

His enemies accuse him of being an intellectual snob with an inferiority color complex which prejudices him against the western white man. His youngest sister, Krishna Hoti Singh, predicted not long ago that he would become the "undesirable dictator of future India."

It is conceivable, too, that his social-democratic political system could turn into Hindu fascism or communism. Socialism was, of course, the first step which led on the one hand to fascism in Germany and Italy and to communism in Czechoslovakia and Hungary.

Somehow I felt after talking with Nehru that as long as he remains in a position of leadership, the Communists won't gain control of India.

He is unquestionably a passionate patriot.

The independence which his country attained less than 10 years ago is precious to him. In the deep recesses of his mind I think he is aware that communism would mean subjugation to Soviet imperialism.

He enjoys personal power, and I think that one of the reasons why he plays the neutralism game is that he believes it enhances the prestige of his position.

He is a bigger fish in his own pond than he would be swimming around with the SEATO nations or collaborating with the collective leadership of the Kremlin.

He is astute enough to know that while all are theoretically equal in the Communist combine, some are more equal than others.

Whatever his faults, and he is one of the most complex leaders in the world today, one cannot talk with him as we did without being impressed by his personality.

There is a quiet charm about him. He speaks calmly, profoundly and with an easy, graceful flow of words which give the impression of sincerity. He has the fine bones and strong features of the high-caste Brahmins, who in the civilizations of India have always been the thinkers—and dreamers.

While he professes to believe in, and practices, political democracy, his economic policies are basically socialistic. He had the constitution amended recently to give him power to nationalize industries by ordinance. Under the terms of the amendment, parliament will determine the amount of compensation with no recourse to the courts.

He seems to feel a sense of moral superiority over western democracy and communism. He is confident that his policies can lead India to a "golden age."

If he is right, they may do so.

If he is wrong, India like trusting Czechoslovakia will be lost to communism or some other form of totalitarianism.

The gamble is great, and the stakes for the free world are high.

MOUNTBATTEN ENDING TOUR

While we were there, Adm. Lord Louis Mountbatten, the last British Viceroy in India, and his wife were just completing a swing through the country.

A curious note was the manner in which the pro-Communist press treated him.

One of the papers implied that Mountbatten shared Nehru's sympathy for Marxism, characterizing him as a "serious student of Marx" and describing him as "one of the torchbearers of the new world."

Stating that Mountbatten "shares with our own Prime Minister the novelty of approach to current problems," the newspaper Blitz eulogized him as "a man eminently qualified to dispel the ills which beset Great Britain."

Strange political bedfellows, this scion of British royalty and this Indian ex revolutionist.

But then India is loaded with contradictions.

In fact—India is a contradiction.

Warnings From Syngman Rhee and Chiang Kai-shek

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 10, 1956

Mr. MULTER. Mr. Speaker, the following is the third article by Mr. Hearst

in which he describes his visits with Syngman Rhee and Chiang Kai-shek:

DANGER AHEAD—ASIA: W. R. HEARST REVEALS FEARS OF UNITED STATES POLICY

(By William Randolph Hearst, Jr.)

Two old and proven friends of the United States in the Far East—Syngman Rhee and Chiang Kai-shek—are eyeing American policy in their area with a skepticism that is rapidly turning to disillusion.

It is clear to even the casual visitor that these two old pros of war and revolution in the Orient share the fear that we will never stand firm enough against the aggressive thrust of Communist power.

Both nourish dreams about the future of their respective countries.

To Syngman Rhee, the culmination of a lifetime's struggle would be the unification of North and South Korea under his presidential direction.

The one burning ambition coursing through Chiang is to return to the Chinese mainland from his island base of Formosa and resume the rule he lost to the Communists in 1949.

Chiang at 69 and Rhee at 81 are realists enough to know that time is running out on both of these dreams.

In fact, Chiang thinks the next 3 years will be crucial. In that period the Communists could consolidate their power, see their farm program through to completion, and finalize their grip on the minds of China's youth.

It is customary in some American circles to dismiss Rhee and Chiang as two anachronisms who brood over lost causes and yearn for the outbreak of war as the only solution to their difficulties.

But anyone who has spent hours with them discussing the problems of the world—as our party did on this trip—begins to see that their experience has given them a penetrating wisdom concerning the tactics and objectives of the Kremlin.

One State Department representative put it this way in analyzing the motives of Syngman Rhee.

"So far as I can see," he said, "Rhee has been as right as anyone about the Communist program out here. And even though I'm against his ideas about how we should handle it, I always have the feeling that he and not the State Department may be right again, after all."

Americans should always bear in mind that much of the discontent that spurs Rhee and Chiang to their warlike utterances stems from the knowledge that the United States—and not little Korea or Formosa—is the number one world target of the Kremlin.

TWENTY-TWO NEW AIRFIELDS IN NORTH KOREA

They wonder when the American people are going to realize this. Rightly or wrongly, they have the feeling that most Americans believe communism in Asia is only a distant threat that can be handled with trims and adjustments of allied policy.

While the Red Chinese and North Korean commands openly flout them, can you blame Syngman Rhee for thinking we're either stupid or spineless when he sees our continuing and precise observance of certain terms of the Korean armistice?

The North Koreans have built 22 new airfields capable of handling advanced jet models even though the armistice limits them to the construction of nonmilitary airfields.

They have blossomed forth with scores of new jet aircraft, although the armistice forbids any increase in armaments beyond those in Korea at the time it was signed in July 1953.

And there is a cunning arrongance to their explanation of how they justify this bold violation.

Didn't our aerial observers notice those hundreds of freight cars ranged along North Korean roadbeds in July 1953? Well, sir, those very cars contained the parts of jet aircraft which then were assembled into complete planes.

And this with a straight face.

The U. N. command, meanwhile, is scrupulously observing the truce terms with the result that American ground troops and aviators are using the obsolete equipment, July 1953 vintage.

TROOPS IN FINE MORALE SHAPE

We are forbidden to introduce new models into the theater. The latest jet planes, the newest tanks and up-to-date infantry weapons have no place in our Korean ordnance.

"If this keeps up we are going to have a museum-piece army out here," said one American commander. "The funny thing is, when we get new personnel out here we have to retrain them in the old weapons. They have to forget all they've learned about the latest weapons and start learning how to handle weapons the Army has long since discarded."

Despite these accepted handicaps, the American and South Korean troops are in fine morale shape, fully confident that they can cope with anything sent their way by the 700,000-strong enemy, dug in less than 3 miles from them across the demilitarized zone.

In Gen. Isaac Davis White, the last wartime commander of the famed Second Armored hell-on-wheels Division, the Allied command has a leader whose professional competence is deeply impressive.

General White has 43,000 American troops under his command, most of them in two divisions, the seventh and the 24th. The bulk of his battle-line consists, however, of 20 Republic of Korea (ROK) divisions and 10 more divisions in reserve, all totaling about 660,000 men.

These have been brought to a razor-sharp fighting skill under an efficient American military training program. No one doubts that they would give an excellent account of themselves in any showdown with the Communists.

PRIVILEGED SANCTUARY NO MORE

The reported introduction of atomic cannon into North Korea, first revealed some weeks ago by Kingsbury Smith in a dispatch from Seoul, would tilt the military balance in favor of the Communists if brought into play in a surprise attack.

American and Korean observers are agreed, however, that the status quo will undoubtedly prevail for the indefinite future in Korea. Use of atomic cannon, or any other kind of an all-out attack, would only be permitted by the Kremlin as part of a larger pattern of violence.

The Red Chinese are on notice that no longer will they be granted a privileged sanctuary in Manchuria, if they resume hostilities. Our commanders confidently expect to be given the green light for massive retaliation on Manchurian airfields, staging areas, and Yalu bridges should the ballon ever go up again.

The drama of Korea, with its memories of the heartbreak and of the treasure, and the blood left there by 33,000 American dead—the total American casualty list reached 140,000—is so absorbing that one is inclined to forget there are other phases of tremendous importance to the country's future.

The economic problem is shattering. A Nation which endured a $5 billion beating in 3 years of war received wounds that will take a long time in healing—and then the scar tissue will be vulnerable for decades to come.

INFANT MORTALITY DECREASED

Inflation is a constant nightmare and the economy is running at a huge deficit. Korea's intelligent, hard-working farmers extract an ample rice crop from the land each year, with a surplus that could be exported.

But even here the picture is not pretty. The population growth is now encroaching on the rice supply—because American insistence on our medical standards has decreased infant mortality and added an average of 7 years to the Korean's normal life standard.

Even those who admire Dr. Rhee most highly concede that he has little grasp of modern economics. This drives his American financial advisors to despair at times.

"Once we had him persuaded that he ought to increase certain taxes," said an American economist. "The old man agreed, the bill was passed into law, and he signed it. Next thing we knew, about a week later, he said the law wasn't going to be enforced."

What is the situation on Formosa, as Chiang Kai-shek and his gracious, American-educated wife wait hopefully for their hour to strike?

Much more impressive than it was 5 years ago, according to Frank Conniff, who spent some time on the island in 1951 on his way home from the Korean war.

"There's a stability evident now that was lacking then," he says. "The trouble between Chiang's forces and the native Taiwanese seems to have worked itself out. And the growth of Chiang's military potential also is striking.

ODDS HEAVY AGAINST CHIANG

"Before coming here on this visit, I thought Peiping's blasts at Chiang were mostly propaganda noises for home consumption. But after talking with our people here, I'm convinced that Mao must give Formosa a No. 1 priority rating. He must do something sooner or later to take it out."

Americans should engrave two little names on their minds right now, because they could eventually spell war or peace for the Formosa area, for the Far East, and even for the whole world.

They are: Quemoy and Matsu.

Small islands lying off the mainland, they are now garrisoned by some of Chiang's crack troops. He will fight there desperately—and wait for United States armed might to come to his aid.

It is breaching no confidence to say that high-ranking Americans in this area believe we must take every step—no matter what it entails in the way of land, sea, and air power—to insure that Chiang is not thrown off either Quemoy or Matsu.

"It's all over out here if we let him take a licking," runs the general consensus.

They further believe that a warning of our intentions would have a strong deterrent impact on Peiping. The feeling there is that Moscow is as unwilling as Washington to let general war erupt over the two Chinese islands.

However, they are willing to leave the ultimate decision up to President Eisenhower, where it now resides, in the belief that Ike will understand the psychological as well as the strategic importance of the islands.

ONE ENDURING GRIEVANCE

Lying a few miles off the ports of Amoy and Foochow, these islands are nicely placed to block the coastal flow of Chinese trade. The gates to Southeast Asia would be pried wide open if they fell into Communist hands.

On Formosa itself, Chiang and his administrators have embarked on a comprehensive program to make the bastion a "model province." Corruption has been largely eliminated, according to both pro- and anti-Chiang sources.

Can Chiang's army ever fight its way back to the mainland?

The odds are heavily against it, of course, but the dream of returning home sparks the morale and fires the imagination of officers and men alike.

Chiang has taken steps to reduce the average age of his troops by incorporating Tai-

wanese recruits into the ranks. An American management survey team found soldiers as old as 70 in the Nationalist ranks.

Weeding the oldsters out is quite a problem, because places must be found for them in private life. The Nationalists' high command denies that Chiang's army is "aging" and asserts that these new steps will bring its fighting competence to its highest pitch.

Tough and energetic as he nears three score and ten, Chiang looks eagerly into the future, although he is human enough to now and then mull over the mistakes of the past.

Like Syngman Rhee, he nurses one enduring grievance toward the United States that time cannot mellow: The conviction that he could have stopped the Communists had our policy not favored a soft approach toward the "agrarian reformers" of the late 1940's.

The white paper issued by the State Department in 1949 is a living, loathsome memory that corrodes his moments of reflection. In Chiang's defense, it must be said that the white paper has been exposed in the light of later knowledge as a tissue of distortions if not downright fabrications.

There they are: Two strong-willed, firm-convictioned anti-Communists Chiang Kai-shek and Syngman Rhee.

Good friends of America, if doubting ones. And good allies in a showdown.

The Philippines Need Our Support

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 11, 1956

Mr. MULTER. Mr. Speaker, in the following article, the fourth of a series, Mr. Hearst discusses his visit with President Ramon Magsaysay, of the Philippines.

DANGER AHEAD—ASIA: PHILIPPINES HAILED BY HEARST AS ALLY

(By William Randolph Hearst, Jr.)

America's most dependable and valuable ally in Asia today is the Philippines and its inspiring leader, President Ramon Magsaysay.

Our visit to Manila and our long talks with the 48-year-old chief executive of the Philippine Government were the most encouraging experiences of our entire trip.

Not only do the Philippines constitute the strategic backbone of our defensive system in the Pacific, but they represent a bright beacon of democracy whose rays can, if we give adequate help, show the dubious and even the lost nations of the Orient the way to freedom.

This man Magsaysay and his country could be the keys to the problem of how to save Asia from communism.

He was in many ways the most impressive personality we met on this fact-finding mission which took us literally around the world in our quest for information.

IDOLIZED FOR COURAGE AND HONESTY

A man idolized by his people for his courage, honesty and devotion to their welfare; a man who heroically led guerrilla forces on our side during the Japanese occupation; who crushed communism in the Philippines after the war, and who is dedicated to the western concept of democracy, President Magsaysay could provide the inspirational leadership that the free world needs in Asia today.

One of the greatest difficulties confronting us in the struggle with communism in the Far East is the tendency of the Asiatics to suspect our motives and associate us with Western colonialism. We are big and rich and white, and we hail from the West. All of which revives painful, even hateful, memories of exploitation and serflike inferior treatment by British, French and Dutch colonialism.

That we believe all men are born equal regardless of race, color or creed; that we believe in equality of opportunity for the individual and are not bent on imposing our will for the sake of exploitation are factors most of the Asiatics find difficult to comprehend. And, of course, Communist propaganda does its best to convince them we are not sincere; that what we are really trying to do is replace the British and French as exploiters.

Even the French think we are trying to take over Indochina from them. President Magsaysay told us of a conversation with a French officer from Vietnam who said he was convinced that was America's aim, and asked if the Philippines' leader was not concerned that the United States would use its military and economic aid program as an instrument to regain control of the country.

"I told him I was not at all concerned about any such thing happening. I told him I knew Americans and what they stood for. I told him, as I have told others, that I am pro-American and proud of it. America gave my country its independence, and has helped us develop our democracy."

The President also related an incident with an Indonesian dignitary who was visiting the Philippines.

"He, too, felt we were again becoming subject people because of the presence of American military forces in the islands," President Magsaysay added. "I took him to the training grounds where American and Filipino forces were holding combined exercises. He was astonished to see Filipino officers giving commands to American soldiers."

These are examples of the service that President Magsaysay can render in convincing his fellow Asians to trust America. If we help him improve the living conditions of his people and make the Philippines a prosperous and happy nation, he can, I am convinced, accomplish wonders for us in Asia.

He is the man who should be our spokesman out there. He can talk to the Asiatics as an Asian, and they will listen to him with much less skepticism than they listen to our Voice of America.

And fortunately for us he is eager to be our champion. He has, in fact, proved to be our best friend in Asia. Unlike some of the European leaders on whose countries we have spent so much of the taxpayers' money, President Magsaysay has no reservations nor hesitation about his support for American policy. He has faith in America and he wants to spread in Asia the gospel of our democratic way of life.

The United States should give him all possible help and encouragement to do so.

We should urge him to tour the free nations of the Far East, dispelling the disbeliefs; telling them the truth about us and about our conception of democracy; about how we gave the Philippines their independence and how we are helping them remain free. And also telling them the truth about communism, and why united action is necessary to resist it.

This man is the most important pro-American leader in Asia today and we should gratefully accept the services he is willing to render to us and to the free world.

GET REAL VALUE IN FRIENDSHIP

It is from him and his country that we get real value in terms of loyalty and friendship for our foreign-aid funds. We will not have to spend nearly $150,000 in the Philippines during the coming 12 months to discourage neutralism, as I noted with astonishment our Government feels we should spend in Britain for that purpose. Nor will we be confronted with the same wavering attitude that the present French Government is showing in respect to a united allied front against communism.

We should by all means divert some of the funds we give to ungrateful allies and unreliable neutrals and place it in the Philippines, where we know it will be appreciated and will help a loyal ally develop into a bastion of freedom in the Far East.

By helping President Magsaysay make his country prosperous and self-supporting, we should show that it pays to be a genuine friend of Uncle Sam. That would, I believe, encourage other Asian nations to become our friends, and few really are today.

President Magsaysay needs help, and needs it badly. In the face of strong opposition from the sugar bloc, themselves wealthy landowners, and other vested interests, he is carrying out a peaceful social revolution in the Philippines, designed to lift to a decent level living standards of the people, to educate them, and to suppress a system of exploitation that dates back to the feudal days of the Spanish conquest.

In answer to one of our questions, the President said:

"Our major economic problems are those of developing expanded production, and of diversifying that production to relieve us of dependence upon a few major crops which are at the mercy of world market competition.

"Since our living standards are somewhat higher than those of some competing producers, we need industrialization which will add to the value of our present product and enable us to compete more favorably in world trade.

"All this requires capital investment which is beyond our own means. At the same time, the longer we defer this expansion of our economy, the more difficult it becomes to maintain even our present low standards of living.

"All of our economic problems are related to each other. An accelerated village road program is one of the most important. Such roads not only open new areas to cultivation but give the farmer in those areas freer access to markets, thus stimulating his desire to increase production.

"At the same time, the products he needs from other areas reach him at lower cost. But most important, perhaps, is the fact that such extension of communications would permit us to bring the benefits of democratic government to vast numbers of our people who for too long have been isolated from those benefits."

SETBACKS IN ECONOMIC FIELD

"The United States has already been of considerable help to us in developing our economy. Unfortunately, however, setbacks beyond our control have kept adverse economic influences ahead of the improvements which have been registered.

"However, our problems are known to the United States Government and only they can determine the degree to which they wish to help us solve them."

That degree amounts to approximately $139 million for 1956, according to our officials in Manila. President Magsaysay said he needed $200 million. I am sure that any of my readers who visited the Philippines and talked to this man as we did, would agree with us that we ought to give him the additional $61 million and more to build those roads and expand those industries, and even if we have to deprive some of our doubtful allies or namby-pamby neutrals of a little of what they are trying to get out of us.

If we do not help President Magsaysay succeed in his efforts to improve the lot of his people, I am certain communism will raise its head in the Philippines and we may lose our strongest line of defense in the Far East. If we should lose the Philippines, our military experts say we would have to pull back our front line of defense in the Pacific to Australia, Alaska, and Hawaii. Asia, under such circumstances, would be lost to the free world.

During the few days we spent as the guests of the President and his beautiful and charming wife at Malacanan Palace, formerly the residence of the Spanish viceroys who ruled the Philippines for almost four centuries, he told us some fascinating stories of his fight against the Huk Communists movement and his efforts to wipe out corruption in the nation's bureaucracy.

I particularly remember one evening when we sat around a table on the terrace of the palace, my brother Randolph, Frank Conniff, my editorial assistant, and Kingsbury Smith, the general manager of International News Service, were also present.

The President, attired in white, sat with the upright bearing of a military man, and yet there was no stiffness nor formality about him. What impressed us deeply was the vitality of the man. He seemed to exude energy. It was reflected in the gesticulating movement of his hands and the twitching of his body when he was emphasizing a point.

He related how a Communist plot to assassinate him in 1950 failed because the triggerman's jeep broke down and the Huk commander in Manila became so impressed with his defense of democracy that he gave him the names of all the Red leaders.

"Shortly after I became national defense minister," he said, "I was informed that the Huk commander in Manila wanted a secret meeting with me. He sent word that I must come alone. My wife tried to dissuade me, but I decided to go.

"I was driven by my aide de camp to a house in an isolated district of Manila. He waited in the car while I went in. The Huk commander was alone. He started out by telling me the Communists were going to win, and urged me to join the movement. I told him why I was opposed to communism and why I believed in democracy. He seemed to be impressed and when we finally broke up, it was agreed that we would meet again. We did and eventually I won him over.

"I asked him to give me the names of the Huk politburo members in Manila. He told me that an old lady with a basket of vegetables on one arm and a basket of meat on the other would call at various houses in Manila. He told me where she lived and said if I had her followed I would discover the identity and the whereabouts of the Communist leaders. I did, and thanks to him, we rounded them all up.

"He later told me that he had been instructed to kill me the night of our first meeting, but the 'triggerman' who was to shoot me failed to turn up because his jeep broke down. It was that delay which led to our long talk."

The President's aide-de-camp, a handsome young major, told us that he was sitting at the wheel of the car with a submachine gun in his lap and had the triggerman arrived, he would have shot him.

President Magsaysay said he had succeeded in crushing the Huk movement not simply because of superior military force but because he had won the people away from them.

"I found out what the people needed, mostly lard and other food, and I provided it. I did everything I could to help them and I won their confidence. At first the peasants had refused to cooperate in revealing the whereabouts of the Communists. They gave them food and shelter, but when they realized that our cause was the right one, they ceased protecting the Huks.

"Now the people have faith in me, and I must keep faith with them, that is why I am determined to wipe out corruption. If the people think I am permitting it, they will lose confidence in me."

In the opinion of American observers in Manila, the President is making an honest effort to rid the country of corruption, which flourished in the past.

He spoke to us with bitterness and painful disappointment of the officials, even cabinet members, he has had to dismiss because they resorted to graft.

"On one occasion I was informed that a large quantity of rice had spoiled and must be sold to Japan at reduced prices.

"I was suspicious and refused to approve the order submitted to me. Instead, I went to the warehouse where the rice was stored and slit open sacks at random. The rice was perfectly good. Of course, I fired the official chiefly responsible. Since then, he has been assailing my administration. But people believe me, not him."

That is Magsaysay, a man of strong character and courage. A man of the people. He can be our most effective answer to the Communist-inspired suspicion that the United States has colonial aspirations in Asia.

Communist Threat in Japan

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1956

Mr. MULTER. Mr. Speaker, the following is the fifth article in the series by Mr. Hearst, in which he makes the following observations on Japan:

DANGER AHEAD—ASIA: HEARST CALLS JAPAN UNENTHUSIASTIC ALLY

(By William Randolph Hearst, Jr.)

A future clouded with uncertainties confronts the free world in Japan today.

That became clear to our party during the 5 days we spent in Tokyo in the course of our Asian trip.

The Japanese people are not enthusiastic allies of the United States, despite the lenient post-war treatment accorded them and the vast sums of money we have spent to revive and maintain the Japanese economy.

We have some loyal friends in high and influential positions in Japan and they seem genuinely dedicated to our concept of democracy. As individuals, the Japanese are traditionally gracious to visitors.

But there are some very disturbing aspects to this Japanese situation.

The spirit of neutralism and pacifism appears to be strong in Japan today and it is growing.

Of even more serious concern, the threat of communism has not, as Gen. Douglas MacArthur thought back in 1949, ceased to be a major issue in Japanese life.

While leftwing elements numerically are not strong in Japanese politics, leftist influence in intellectual and education fields is definite and active.

The leftist influence in labor is widespread although it is sometimes difficult to differentiate between homegrown leftist and Soviet-line Communists. Communists are active in labor.

The Japanese labor movement is heavily on the Socialist side. Sohyo, which is the most powerful union, has a political complexion ranging from Marxist-Socialist to Soviet-Communist; it includes more moderate elements but they are definitely in a minority.

Of Sohyo's 3 million members, approximately 2 million are civil servants and thus in what we could call "sensitive" positions to make trouble.

COMMUNISM REMAINS A DANGEROUS ASPECT

Furthermore, what we learned during our stay in Japan about the extent to which the Communists have infiltrated the educational system of the country convinced us that communism is at present an important, and for us, dangerous aspect of Japanese life.

The Japanese Teacher's Union, with a membership of 600,000 reaching every corner of Japan, is under strong Communist influence. Government officials concede that its membership includes 300 Communist Party members, the hard core of the militant leftists.

Some informed Japanese observers in Tokyo believe the JTU constitutes the backbone of the Communist movement in the country because it dominates the Parent-Teachers Association, with a membership of 30 million.

Not only parents but children have been assessed by these two organizations. There is no reliable information as to how the money collected was spent, but it is commonly believed that a good deal of it went to finance Japanese Communist Party activities.

The JTU provides the Communists with a golden opportunity to influence the minds of Japanese youth.

Schoolchildren are used by the JTU to spearhead demontrations (which have an anti-American implication) against military bases. The children on occasion have been incited to lie down in mass groups on airfields in order to obstruct the construction of runways required for our strategic bombers.

BASES IN JAPAN MAIN DETERRENTS

Since our bases in Japan are one of the main deterrents to Communist military aggression against the free world, this sort of thing is a matter of grave concern.

There is every reason to believe that the Japanese Communist Party, through various leftwing organizations under its influence, is making headway in its efforts to sway the minds of Japanese youth against the United States and toward Socialist-Communist ideologies.

A top official of the Government's public safety investigation board (Japan's FBI) said:

"There is no doubt the Communists are making strong efforts to indoctrinate Japanese youth, but it is diffiult to pin these efforts down aside from specific incidents that have been exposed."

He recalled the so-called school diary case in Yamaguchi Prefecture where leftwing teachers of an elementary school were found to have prepared a "pupil's diary" for classroom instruction in which incidents were fabricated to demonstrate the benefits of socialism and the evils of capitalism.

In another school the teachers instructed students to write essays with a hate-America theme.

Tamotsu Murayama, a member of the board of directors, National Council of the Boy Scouts of Japan and vice president of the Tokyo Boy Scout Council, said the JTU was organized originally during the early days of the occupation under Communist sponsorship, with the aim of revamping school textbooks toward a Socialist slant.

He further said that when Madame Li Tehchuan, president of the Communist Chinese Red Cross, visited Japan early this year, she carried a message to the JTU calling on them to engage in more militant tactics to indoctrinate Japanese youth in socialistic principles.

DIFFICULT FOR SCOUTS TO FIND FACILITIES

In an effort to undermine the Boy Scout movement in Japan because it is considered American influenced, the JTU makes it difficult for scout troops to obtain the use of school auditoriums, playgrounds, and classrooms for their meetings.

In addition to this Communist and left-wing influence in the elementary schools of Japan, the universities, we were told, are centers of Red infection. Long before the war, many university professors were fascinated by Marxism and while some of them have seen the light, far too many apparently remain affected by its doctrine.

Thus, the Communist foothold in Japan's educational system is a major reason why we should be deeply concerned over the neutralist and pacifist sentiments in that country.

Sweden and Switzerland pursue a policy of neutrality in world affairs, but there is no danger of them going Communist. The same could not be said for Japan if that country was left entirely on its own. I am not saying it would go Communist overnight, but the danger that it might eventually be brought under Communist domination is inherent in the present trend of events.

If Russia's resources and China's manpower could be integrated with Japan's industrial potential, the enormity of the threat to the free world would be staggering.

If Japan did not go Communist, it could go back to fascism.

JAPAN LENDS SELF TO TOTALITARIANISM

Japan has conserved a society which in some respects lends itself to totalitarianism of the right or left, and the future trend, I think, would be more likely left.

It is based on the theory that a superior or more powerful authority tells you what to do. Three centuries of regimentation before the end of the last war conditioned the Japanese people to discipline, hard work, and self-sacrifice—all good ingredients for communism or facism. Even the religion, Shintoism, involves a strong degree of reverence for the state.

The Western concept of democracy which we sought to impose on Japan during the occupation does not yet appear to have taken deep roots, though the Japanese women seem to enjoy the right to vote which we gave them. If political freedom lasts, they may nurse Japanese democracy into a strong and healthy state.

Neutralism, however, could mean the end of democracy in Japan.

We found several reasons for the neutralist sentiment. One, the reluctance of the Japanese to rearm, and especially to be an advance base for American airpower in the Orient. The Japanese fear that if there should be war between the United States and Russia, they would quickly be subjected to atomic bombing—this time by the Soviets. They are the only nation in the world to have had a taste of atomic bombs and they want no more of it.

TRADE WITH CHINA HOLDS ATTRACTION

Another reason is the attraction which the possibility of complete freedom to trade with Red China holds for Japanese business. China was one of Japan's biggest markets before the war and the offer of expanded trade that Peiping keeps dangling before the Japanese today is a powerful temptation, though some of our Far Eastern experts think it is a deceptive mirage.

Japan found lucrative markets in China before the war because that country was undeveloped. In fact, Japan owed its power and glory to the weakness of China. Today China is being industrialized and collectivized by the Chinese Communists, and Western economic observers believe that Chinese trade would hold no really important prospects for Japan, except as a minor palliative.

A further reason for the neutralist sentiment is that the Japanese intellectuals think Japan could act as a bridge betwen East and West. The French want to play the same role. So does India.

What I think we want from these nations that we have done so much to help is a united front with us in our resistance to the Communist threat. Unity is the firmest foundation for any bridge over which to deal with Communist China and Soviet Russia.

Suppose we said we wanted to be the bridge between Russia and the rest of the world. Stalin indicated on more than one occasion that he would have been prepared to make a deal with us at the expense of other countries. I don't doubt that his successors would be disposed to do likewise.

ONE WAY OF GETTING A UNITED GERMANY

We might even get a united Germany in Europe if we agreed to turn Japan over to the Communist world. How, I wonder, would the Japanese neutralists like that?

One cannot, of course, blame the Japanese people entirely for the neutralist and pacifist sentiment that seems to pervade the country. In the first place, we encouraged them at the end of the last war to think it was wicked to have anything to do with arms, even for defensive purposes. Under General MacArthur's guidance, the Japanese people renounced war forever and pledged themselves in their constitution never to maintain land, sea, or air forces.

A few years later we told them they must rearm to help defend themselves and protect the free world from the danger of Communist aggression.

The people can be excused for being somewhat confused. But the leadership of Japan cannot be excused for failing to see to it that the reasons for our policy are not made clearer to the people.

There is official grumbling about the presence of our military forces in Japan. There is grumbling because we do not let Japan have a free hand in trade with Red China. There is grumbling because we want Japan to maintain a strong, common front with us against communism.

They should stop and think for a moment how Japan would have treated the United States if the Japanese had won the war and then found themselves in the same type of struggle with international communism that confronts us.

WOULD THEY TOLERATE NEUTRALISM FOR US?

Would they have tolerated neutralism on our part? Would they have accepted grumbling over the bases they felt it necessary to maintain on our soil in order to protect us as well as themselves? Would they have poured billions of yen into our country to try to put us back on our feet economically? Would they, under the circumstances have even risked granting us sovereignty? I hope my Japanese friends will ponder those questions.

I told them in Tokyo that the American people genuinely want to be friends with the people of Japan. I believe that if the Japanese people were told the truth about our motives, they would want to remain friends with us and help us preserve their democracy and safeguard the free world.

The Japanese are a determined, courageous and hardworking race. They could, I think, be strong allies and good friends if what we stand for and what we are trying to do was fully and frequently explained to them. It is up to the leadership of Japan to do so. It is not being done today.

Japan depends on our aid to save it from economic chaos. It looks to us to help it become the industrial base for the economic development of southeast Asia. As long as Soviet and Chinese communism remains dedicated to the destruction of Western democracy, we need Japan as an ally.

ECONOMY OF COUNTRY APPALLINGLY UNSOUND

Under these circumstances, Japan is in no position to talk about neutralism. The Japanese should be helping us and we should be helping them.

The economy of the country is appallingly unsound. The war cost Japan 52 percent of her territory. In an area smaller than the State of Texas, there are approximately 90 million industrious people, and the population increases another million every year. Only 16 percent of her mountainous islands are arable.

To maintain its living standard, Japan needs more food and more industrial raw materials. She also needs to modernize her export industries and find new markets.

The logical area in the Far East for the expansion of Japanese trade is southeast Asia.

The free nations of southeast Asia are desperately in need of the goods and technical services Japan can render to help improve living standards for the people, and thus make them less vulnerable to communism. They can supply Japan with the raw materials and other commodities the Japanese must import.

Use of Japan as the industrial base for the economic development of southeast Asia should be part of a sound long-range program. It would require financing by the United States, either private or governmental, or a combination of both.

I think it would be in America's interests to back such a program, but in return for our assistance, we should have satisfactory assurances that the Governments of the countries concerned are going to stand firm with us against the Communist threat; are going to keep their people adequately informed as to why it is necessary to maintain a united free world front, and, above all, are going to see to it that their people are told the truth about our motives.

Under such a program, Japan could prosper, could be a good friend of the United States, and could constitute a bastion of freedom in the Far East.

South Vietnam and Pakistan Rely on Us

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1956

Mr. MULTER. Mr. Speaker, in the sixth article, which follows, Mr. Hearst describes the report on South Vietnam and Pakistan, made by the members of his fact-finding party, who toured these two countries.

DANGER AHEAD—ASIA: SOUTH VIETNAM AND PAKISTAN BOLDLY SUPPORT AMERICA, HEARST REPORTS—NEW DEMOCRACIES ACCEPT RISK THAT WE MEAN WHAT WE SAY

(By William Randolph Hearst, Jr.)

While Kingsury Smith, my wife, Austine, and I visited Bangkok for talks with Thailand leaders and American and British diplomatic representatives there, my brother Randolph and Frank Conniff veered off on an independent mission to South Vietnam and Pakistan.

Here, in essence, is their report of what they learned and observed.

South Vietnam and Pakistan are two rugged sentinels of hope projected against

the darkening panorama of Communist-haunted Asia.

While bigger and edgier countries seek protection behind the cloak of neutralism, these emerging democracies boldly proclaim their faith and confidence in the United States.

They are accepting the risk that America means what it says when it encourages smaller nations to reject communism and stand with the free world.

Their leaders have an invigorating contempt for the lofty stuffiness of Prime Minister Jawaharlal Nehru of India. They equip about our tendency to be impressed by Asian statesmen mouthing stale pacifist platitudes.

VIETNAM DOESN'T PLAN TO GIVE IN

Between the two, they may provide an impetus to freedom's cause in 1956 that will give the Kremlin more heartburn than developments in any other controversial area.

Originally scheduled to lie down and die next July under the rigged elections promulgated at Geneva 2 years ago, little Vietnam is not going to do anything of the sort.

Come July and the government of Ngo Dinh Diem will assume a posture of defiance against Communist Vietnam, Red China, Great Britain, France, and other signatories of the Geneva accords.

The Vietnamese will st"ke this pose despite the fact that the armies of Ho Chi Minth in the north, double theirs in size and equipment, could probably implement the Geneva agreements by force if precipitated into action with Kremlin permission.

But South Vietnam did not sign the accords and neither did the United States. Therein lies the bare framework of a mighty drama that may confront the Eisenhower administration with a real tough decision in this election-year summer.

VIETNAMESE COACHED CAREFULLY BY UNITED STATES

Not to mention the soul-testing question it could pose for the American people, somewhat complacent in an era of peace and prosperity.

America, be it remembered, showed very little urge to rush into Indochina with its manpower when French colonialism was breathing its last in the spring of 1954.

But the Vietnamese Republic today is a native government, cautiously coached by the United States, and slowly shedding the last remnants of French colonialism as it would a dirty, threadbare old coat.

The question they ask is, would America, which looked the other way as Dien Bien Phu went down, respond differently to a brave people defying unto death the superior forces of aggressive communism?

It's something for Americans to ponder. And the Kremlin, too. Because the enduring factor that could touch off a shooting war out here is the Communist tendency to miscalculate United States reaction.

Despite the ominous possibilities, the feeling is general that the crisis which is scheduled to come this summer will pass away as Ho Chi Minh's ambitions prove expendable to the Kremlin's grand design.

SOUTH VIETNAM MOLDED INTO VIABLE CONCERN

This leak in prestige—and it will definitely be a setback for Asian communism—may flow over into Laos, Cambodia, and other states in southeast Asia now inclined to quiver before Red expansion.

How did the miracle of South Vietnam happen?

How has a partitioned country written-off as lost to freedom as recently as one year ago bounced back to a position of virility?

The story is largely written in the ascetic personality of Ngo Dinh Diem, a man of stubborn convictions all dedicated to the proposition that South Vietnam will remain free.

He has molded his country into a viable concern, introduced constitutional government, whipped the religious sect armies, and defied the French relics who sought to sabotage and thwart him.

He is a blocky little bachelor of 55, an introvert who hopes to end his days communing with his God in a Catholic monastery.

He has checked his religious aspirations for the time being and turned the whole force of a remarkable intellect to the task of rebuilding Vietnam.

NATIVES DISPLAY CONTEMPT FOR FRENCH

The French hierarchs said, openly and loudly, that it couldn't be done. So did a few Americans, notably Gen. J. Lawton Collins, former Chief of Staff. The French made no secret—and the last handful maintain the attitude—that they are rooting for Diem's downfall.

In fact, the hatred between the French and Vietnamese reaches an intensity that makes the old English-Irish emotion a love idyll in comparison.

Connoisseurs should appreciate this instance of how the natives showed a massive contempt for their departing overlords: The signs on French-named streets in Saigon—Rue de Gaulle, Rue de Lattre, etc.—were promptly torn down and replaced with Vietnamese titles.

There was one bizarre switch: A street originally carrying a Vietnamese name was renamed Rue de Pasteur.

The meaning was plain. The Vietnamese were saying that at least one Frenchman had contributed something to humanity.

Can the Vietnam armed forces be built up to a combat efficiency capable of stemming a Communist assault?

Members of the United States military assistance group in Saigon are confident they can be, (1) if given enough time, and (2) if the United States Government will shed the agonizing timidity that keeps our training program under wraps.

TRAINING MISSION AT REDUCED STRENGTH

The Government's shyness manifests itself out here in a particularly craven form. We were not parties to the Geneva accords, although we did agree not to do anything to frustrate their operation.

Under this grudging consent to go along, we are keeping our training mission of men and officers at one-third the strength experts estimate is needed to really do a job.

This because the Geneva Pact stipulates that armed strength in either end of Vietnam cannot be increased beyond that present as of June 30, 1954.

So we are pouring hundreds of millions of dollars into South Vietnam to rehabilitate its economy and military establishment—and refusing to O. K. the use of several hundred more men that would make our training program really effective.

Hampered by this self-defeating caution, United States officers cannot possibly have the South Vietnamese Army in shape to halt a Communist lunge should it come in July.

But they have hopes that the 150,000-man army will be ready sometime before the year is out. Ho's army is estimated to be close to 300,000 in strength.

HANDICAP FACED BY DIEM'S ARMY

Schooling of Diem's army is also handicapped by the fact that the French left no trained command personnel behind. General Minh, who commanded a five-division effort against the Binh Xuyen sect, was only a captain in the French Army. He is 30 years old.

There are no trained cadres available on which to build larger formations. Burly, grayhaired Sam Williams, three-star general heading up the United States training mission, is not discouraged, however.

"Their morale is high, they're quick and intelligent," he said. "They're fighting for themselves now, not the French. Before we get through they'll be able to handle anything Ho sends at them."

The shortage of qualified personnel likewise complicates Diem's task in forming an efficient government. The French left no trained officials behind when they took leave of Indochina, as the British creditably did in India and Burma.

This has led to charges that Diem allocates the choice positions to his own immediate family. His brother Nu is his closest advisor; the latter's wife is a legislator and also influential; her father is Ambassador to Washington; Diem's brother Ganh is a political boss of central Vietnam; another brother, Thuc, is Catholic bishop of Vienh Long.

The road ahead for Diem is rugged and strewn with trouble. But if strength of character, determination, and devotion to democratic ideals mean anything, he may confound the world by establishing a permanent, pro-American government in South Vietnam.

PAKISTAN FACES FUTURE HAPPILY

Pakistan's problems differ somewhat from those of Vietnam, except that the path ahead is also uphill. Worldly and civilized, groomed by years of British training in the arts of government, leaders of the new Islamic republic of Pakistan face their bone-breaking job with cheerful good humor.

They ask only of American leaders and the American people that they see Pakistan's troubles with India in true perspective, knowing well that many influential Americans are fascinated by the personality of Nehru.

A nation of 76 million Moslems split in two parts—with 1,200 miles of Hindu-populated India separating East and West Pakistan—Pakistan fervidly believes it got the shabby end of the deal when the subcontinent broke free from English rule in 1947.

Lord Louis Mountbatten was Indian viceroy at the time zones were allocated to the Hindu and Moslem groups. It was considered significant in Karachi 2 weeks ago that Mountbatten was warmly received in New Delhi on his current world tour but didn't even bother to touch down in Pakistan.

"He might have been assassinated here," said an embittered Pakistani.

NEHRU WON'T DISCUSS KASHMIR PLEBISCITE

Right now the Kashmir dispute threatens to further electrify relations between the two nations. Pakistani officials trust that this is one problem where American vision will be able to discern the true facts despite our preoccupation with Nehru.

A U. N.-sponsored plebiscite was scheduled to be held 7 years ago to decide Kashmir's ultimate status. It has never been held and Pandit Nehru refuses to even discuss the issue.

Kashmir has 3 million residents, largely Moslem. Pakistanis charge that Nehru occupied the district by force and scorns a plebiscite because at least 90 percent of the inhabitants would vote for union with Pakistan.

Instead Nehru has launched a propaganda campaign charging the Pakistan Army with aggressive intentions. Border clashes of growing severity are a frequent event on the edgy frontier.

The accusation of planned aggression provides Pakistani leaders with their best platform for exposing what they term Nehru's hypocrisy.

We talked with responsible officials, Pakistani, British, and American, and they all agree that India has an overwhelming military advantage over Pakistan. The Indian armed forces number 500,000 in contrast to Pakistan's 150,000 and the discrepancy in modern equipment is even wider.

The best-informed American on the scene, in a position to know the real ramifications of Pakistan's and India's relative military strength, told us:

"The Pakistani Army wouldn't last 120 days against the Indians," he said. "Any officer in the world could figure that out. Pakistan has an indefensible border, and Nehru knows he's talking poppycock when he says its army might attack him."

Kashmir could be the point-of-no-return in Indian-Pakistani relations because 3 of the 6 rivers which drain through Pakistan have their origin there. The other three rise in India proper.

PAKISTAN SURVIVAL DEPENDS ON WATER

Water is vital if Pakistan is to survive. The most elaborate irrigation network in the world—another sign that England left something constructive behind—laces into the Indus River Valley.

Some 25 million people feed and live off this intricate mosaic of levees, water fields, and plantations, twice the number sustained by the Nile.

Americans who remember the old fights for water rights during the building of the West—and there are still a few arguments unsettled, notably between California and Arizona—can easily understand Pakistan's concern over India's control of its river sources.

Pakistan realizes it lags far behind India in getting its story across to the American people. But a nation strongly on our side in the cold war believes it deserves at least an even break in having its position understood by influential Americans who are now inclined to concentrate on Mr. Nehru.

Urbane, witty, and civilized Pakistan leaders like President Iskander Mirza and Prime Minister Chaudry Mohammed Ali discuss their country's problems with poise and detachment. One gets the impression that they derive a certain sardonic amusement from the current infatuation of so many ranking Americans with the inscrutable Mr. Nehru.

A small country has only modest choices in this hard world of the 20th century. It became apparent some years ago that Pakistan's "big friend" would have to be either the United States or Russia.

Pakistan chose to snuggle up to Uncle Sam.

Thailand's Importance to the United States—Hong Kong and British Far East Policy

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1956

Mr. MULTER. Mr. Speaker, in the following article, the seventh of the series, Mr. Hearst gives his impressions on the current position of Thailand and of Hong Kong in the Far East scene:

DANGER AHEAD—ASIA: HEARST CONSIDERS THAILAND AS VITAL UNITED STATES ALLY IN ASIA

(By William Randolph Hearst, Jr.)

One of America's most important allies in the Orient today is the little kingdom of Thailand.

This land of gentle people and Buddhist temples which became known to many Americans through the lyrics of "The King and I" and that charming book entitled "Anna and the King of Siam" is of great importance to the United States because:

1. It is situated in the heart of southeast Asia;

2. Its government is firmly anti-Communist;

3. Its military alliance with the SEATO (Southeast Asia Treaty Organization) powers serves as a strong deterrent to Communist aggression in a strategically vital area.

In fact, American military and naval experts with whom we talked during our Far Eastern trip felt the presence of Thailand in our Pacific defensive structure will probably help save neighboring southern Vietnam from the danger of attack this summer by the northern Communist forces of Ho Chi Minh.

POWERFUL BASE AGAINST REDS

Thailand provides a potentially powerful base of operations from which the United States and the other SEATO allies could operate on the mainland of Asia not only against Communist-held northern Vietnam, but against Red China itself.

However, my brief visit to Thailand with Kingsbury Smith, general manager of International News Service, and my wife Austine, convinced me that the continued secure adherence of that country to the Allied camp in Asia cannot be taken for granted.

There are elements of uncertainty in that Thai situation which warrant vigilance and a constant effort to strengthen the free world's position there.

Our unwillingness to risk war with Red China in order to save Northern Vietnam from Communist conquest or to achieve victory in Korea has caused the Thais to wonder whether we would really stand by them if they were confronted with a military showdown.

The diplomatic talks we have been conducting since last summer with the Chinese Communist representatives in Geneva have also caused the Thais concern.

Thailand has refused to recognize Communist China, against whom it maintains a strict trade embargo. At the same time it would not wish to be left out on a limb should the United States decide to compromise with the Chinese Communists and agree to their admission to the UN.

I hope I did some good by reminding them that our President is a man of honor. That he has promised the people of the United States that the United States will never agree to Red China's admission to the UN as long as they hold one American prisoner. That as long as he is President people like themselves and myself could rely implicitly on Ike's word.

I admitted, though, that in the unlikely event Ike should be superseded by some weak-spined, one world-minded candidate at the polls this fall, their fears would most certainly be justified.

Thailand, like other Asian nations, has a problem in respect to Chinese residents—the so-called overseas Chinese: 3 million of its estimated 20 million inhabitants are Chinese. Many of these are known to favor any government of China. They constitute a potentially dangerous fifth column.

CHINESE RESIDENTS ARE RESTRICTED

Like the Philippines, Thailand has maintained discriminatory restrictions on its Chinese residents in order to prevent them from gaining control of the country.

They cannot vote, buy land, or own business enterprises unless they become Thai citizens, which most of them refuse to do because of patriotic feelings for their native land. Despite the handicaps under which they operate, the Chinese control much of the nation's small business.

The Thais fear them and have, from time to time, treated them harshly. Because of this, China, even under the Nationalist government, nursed long time grievances against Thailand.

If Thailand thought it was ever going to be left alone to face up to Communist China, its ruling classes probably would start trying to come to terms with the Peiping regime just as they did with the Japanese during the last war.

ONCE RIVALS, NOW ENEMIES

In fact, one of the most interesting things we learned during our visit to Bangkok was the role played by two Thai leaders, once friendly rivals, now political enemies.

One of these men is the present Prime Minister, Field Marshal Pibul Songgram, who entertained us graciously at a state dinner. The other is Pridi Banomyong, who heads a Communist puppet movement in Red China.

Pibul is a conservative military man, Pridi an intellectual leftwinger. They cooperated together in 1932 to stage a bloodless revolution that took away the absolute power of the king and led to the establishment of a constitutional monarchy.

Pridi became regent, was intensely nationalistic, anti-Chinese and, at the time, anti-Communist. A political struggle developed between him as head of the civilian faction and Pibul as leader of the military faction.

ONCE AIDED UNITED STATES AGAINST JAPAN

In 1938, Pibul took over as prime minister. When Japan invaded southeast Asia, he quickly came to terms with the Japanese and in January 1942, declared war on the side of Japan against the United States and Britain.

Pridi, on the other hand, organized an underground movement, worked with American and British intelligence services and assumed control of the country when Japan's defeat doomed Pibul's government.

Pibul managed, apparently with Pridi's help, to escape trial as a collaborator. He seized control of the government in 1947 and Pridi fled into exile.

While Pibul threw in Thailand's lot with the free world, Pridi turned up in Communist China in 1954 as leader of an exile movement. Thus, if the Communists should ever gain control of southeast Asia, Pridi would be in a position to take over again in Thailand.

"Politics," it has been said, "make strange bedfellows."

"International allies," say I, "even stranger."

It seems a strange coincidence which places Thailand in a position where one of these two men can lead her on the winning side in the global struggles between the great powers.

PIBUL NEEDS UNITED STATES ENCOURAGEMENT

There are some in Bangkok who think Pibul might not hesitate to let Pridi take over once again if he thought Thailand was going to be subjected to the fate of Korea.

My own personal observation of Prime Minister Pibul led me to believe he will remain a loyal ally as long as he feels he can count on the United States to help him keep his country free. We should leave him and his nation in no doubt about our determination to do so.

He needs encouragement and support because there are elements in Bangkok who, while not pro-Communist, are attracted by neutralism.

They think that if Thailand was neutral it would not have to spend so much money on defense. They would also like to trade with Red China. They think big money could be made selling their surplus rice to the Chinese Communists, and Western observers in Thailand are inclined to agree with them.

MAKE SACRIFICE TO FIGHT REDS

In other words, Thailand is making an economic sacrifice in order to stand firm with the free world against communism.

Our diplomatic representatives in Bangkok are confident there is no danger whatsoever of Trailand deserting the allied camp to go neutralist as long as Pibul remains head of the government. In fact, they discount reports of a neutralist trend in the country.

The recent SEATO maneuvers in Thailand, in which American forces participated, apparently encouraged the people to feel they would be protected from Communist military aggression.

We were told the people were greatly impressed by the show of allied force, and especially by the fact that one of the American Army companies was commanded by a Negro captain.

PRIME MINISTER REALLY THE BOSS

In connection with reports that Tailand is ruled by a military triumvirate composed of Pibul, Army Chief Sarit, and Police Chief Phao, we were told that the Prime Minister is really the boss.

"The word oligarchy does not actually describe the situation here," one of our informants said. "Everyone is under Prime Minister Pibul."

We gathered the impression, however, that there seems to be some rivalry between the army chief and the police chief, both of whom maintain their own armed forces, including tanks, in the capital.

This was described by one Western envoy as a "typical oriental situation." Pibul is going to be urged to persuade the army and the police chiefs to move their tanks out of Bangkok into the countryside.

While the possibility is not entirely excluded that the political situation could blow up the Western observers with whom we talked generally seemed to feel the Prime Minister possesses the power to remain in control.

PRAISES HEARST ROLE FOR JUSTICE

Our own diplomatic people in Bangkok speak well of Pibul. They think he is truly our friend; that he is sincerely interested in improving living conditions for the people, wants long-term loans to build houses, schools, and roads.

The Prime Minister certainly spoke in a most friendly manner at the dinner he gave in our honor. He said he was familiar with my father's "determined struggle for the cause of justice and enlightenment," and he added:

"We are all well aware of the vital role played by the newspaper as a medium of public information both at the national and international levels.

"At this particular point in world history, when the world is divided into two camps—free democracy and communism—the newspaper assumes an importance hitherto unknown in history.

"We all realize the service the newspaper can render in combating the lies and half-truths, and evil insinuations emanting from enemy propaganda. If not properly handled, these falsehoods and unfounded allegations may endanger relationships between the free democratic countries."

We found that the Thai people are better off than most Asians. They do not enjoy a high standard of living, but they do seem to have enough to eat and we were told there is no serious unrest or class hatreds.

They come as close to being a happy people as we saw in Asia.

Now for a few words about Hong Kong.

That famous outpost of Britain's restless, disintegrating empire was the most picturesque place we saw during our entire trip around the rim of Asia.

The twain really meet there in a mixture of the colorful East and the modern West. Concrete office buildings and rickshas; oceangoing steamers, Chinese junks, and tiny sampans all bustling about the harbor. Chinese women in slit-skirts or bright silk pajamas hustling along streets crowded with Western tourists.

IMPORTANT FAR EAST TRADING CENTER

Over Hong Kong hangs the menace of Communist China. It tends to act as a veto on British policy in the Far East. It is one of the reasons why Britain pursues a "soft" policy toward the Chinese Communists.

With the best harbor along 1,000 miles of the east Asian coast and thus invaluable as an important trading center, Hong Kong is the largest British city in the Far East.

Still a Crown colony, it holds an afterglow of the power and the glory that was imperial Britain.

Yet its competent governor, Sir Alexander Grantham, knows that the Chinese Communists could turn it into a turmoil for him any time they wished to do so. Ninety-nine percent of the 2,500,000 inhabitants are Chinese; over a million are refugees who have fled from Red China.

The Communist fifth column is estimated to total at least 20,000. If Peiping wished to apply pressure, it could close down on food supplies, terrorize the inhabitants, bring Hong Kong's business to a virtual standstill.

USED AS OUTLET BY RED CHINA

But Red China prefers to use it as an outlet for trade with the West and a political lever on Britain.

Furthermore, China knows it is going to get Hong Kong back eventually. The city of Hong Kong is ceded territory, but it includes leased territories.

This land is on a 99-year lease which expires in 1997. Loss of these leased territories will mean that Hong Kong can no longer exist as a self-supporting free port.

Therefore, Peiping prefers to wait and utilize the British presence in Hong Kong as a restraining influence on American policy toward Red China. They believe, too, that it serves to weaken Anglo-American unity.

In some ways it does.

In others it strengthens our bonds as it enables us to see the situation through English eyes—as it were—and better understand England's problems in Asia.

A Positive American Policy Is Needed in Asia

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1956

Mr. MULTER. Mr. Speaker, in the following article, the eighth in his series on the Far East, Mr. Hearst sets forth some of the conclusions he has reached:

DANGER AHEAD—ASIA: CLEAR-CUT UNITED STATES POLICY CAN SAVE EAST, SAYS HEARST

(By William Randolph Hearst, Jr.)

Those of you who, through the preceding seven articles, have journeyed with me around the Far East will understand by now why we decided to title these pieces "Danger Ahead: Asia."

With the Communists consolidating their hold on a unified China; with India being turned against the United States, with such old allies as Chinese Nationalist President Chiang Kai-shek and President Syngman Rhee of South Korea losing hope for the future, with other allies like Thailand and South Vietnam wondering whether we intend to stand firm with them against Communist expansion, and with Japan an increasingly uncertain ally, there is indeed danger ahead in Asia.

But it would be wrong to believe that we have already lost all in Asia. In fact, I am optimistic enough to believe Asia can be saved for the free world. There are bright spots, like the Philippines, Pakistan, Thailand and South Vietnam. There are Asians who have faith in us; who are prepared to resist with their lives, if necessary, the Red tide of communism if we will help them. These are allies who will give us real value for our money; who will not take the billions Europe has taken from us and then waver in their attitude toward us.

This trip through the Orient convinced me that we are now doing too much for Europe and not enough for Asia. The time has come, in my opinion, to devote much greater attention and thought to the Asian situation.

Communism is making headway out there. Let there be no doubt about it. We heard on every side about the progress the Chinese Communists are making in the industrialization and agricultural collectivization of China, and in the indoctrination of the youth. And the Chinese peasants do not appear to be resisting collectivization as the Russian peasants did.

Not that there is no resistance to communism in China.

One high ranking Indian official in New Delhi told me he did not discount the report that since the Communists took over in China they have liquidated from 10 to 20 million people. Out of a population of 600 million, the Communists would probably think that was a small number to sacrifice to give them control of one of the most potentially powerful nations in the world.

It now looks as though nothing short of a major war with the United States will dislodge the Communists from China. Chiang Kai-shek believes he could do it if we would land him and his Formosan army on the mainland; give him air and naval support over the beachhead and keep him supplied with arms and munitions. But we could not do that without becoming involved in war with Red China, and I found no one in the Far East who thought we were deliberately going to do that.

President Eisenhower's policy has been to try to keep us out of new wars in Asia and he has succeeded. We had to sacrifice North Korea and Northern Vietnam as the price for peace, but the Communists found out we were not quite the paper tiger that their propaganda tries to make us out to be.

We have been pursuing a cautious policy in the Far East and I think we have convinced the Red Chinese we are not going to wage preventive war against them.

Now I think the time has come to pursue a more positive policy. Still peaceful, still unprovocative, but one which will help us win the cold war in Asia, which we certainly are not doing now.

We have been trying to be all things to all men in those parts of Asia not under complete Communist domination. We have been taking our friends for granted like the Filipinos, while we concentrated our attention on ex-enemies and neutralists. We have allowed ourselves, because of the European problem, to become so closely associated with the remnants of British and French Colonialism that some of the free Asians have become suspicious of our motives.

We have pursued a policy of giving aid to neutralist nations with few if any strings while insisting on conditions with our friends. I am not against strings on our aid. I think we have every right to insist on them, but we should apply them just as strongly to the neutrals, like India, as we do to our friendly allies. We should not allow anyone to talk us out of this policy.

The problems of Asia are, of course, so many and complex that no easy solutions present themselves to the touring newspaperman.

The area does not lend itself to an overall formula applicable to all places and under all circumstances.

Its component parts are moving in different directions at varying speeds, and a policy that sought to inflict the same goal and the same pace on each separate part would be self-defeating.

Asia is united only in the determination of its swarming millions to obtain a larger share of this world's goods and a greater human dignity, plus recognition by the West that the days of the white man's imperialism are ended forever.

In fact, the core of a successful American policy for Asia must be an acceptance of these plain and stubborn truths, unpalatable as they may be to our Western allies.

Great Britain and France are through in Asia. England clings to several toeholds, like Hong Kong and Malaya, but psychologically she has had it. It would be foolhardy to expect much support from the British Government in any political or military showdown.

But the luxury of further retreat in Asia is not open to the United States because of our exposed geographic position in the Pacific basin.

Therefore our Government must attempt to fashion a cohesive policy despite the enormous complexity of Asia's problems—and it must be a policy that the American people can understand in order to give it full support in a crisis.

In our 10-nation, 35,000-mile journey, the Hearst task force reached some conclusions that we hope may be pertinent to the problems confronting the United States along the whole Asian arc.

DISPEL THE UNCERTAINTY

1. It is imperative that we clear up the uncertainty in the minds of our Asian friends about the ultimate intentions of American policy.

With due respect to Secretary Dulles and the huge pressures centering on him, I do not think he has succeeded in making our policy understandable to many Asian leaders. He should repeat and reiterate our policies, goals, and aims until no one could be in doubt.

They are not completely convinced that we are determined to oppose further Communist aggression. The lessons of Korea are still vivid in their minds. The fear that we eventually intend to scuttle in Asia is deeper than I had previously realized.

2. We should help build up President Ramon Magsaysay of the Philippines as the inspirational leader of free Asia. This man, who is idolized by the great mass of the people of his country, who is a proven loyal friend of America, and a dynamic personality can be the most effective answer to the Communist-inspired propaganda that America has colonial aspirations in Asia.

He needs help, and he needs it badly. Powerful vested interests in the Philippines are working against him because he is carrying out a social revolution there to improve the living standards of the people.

His opponents cannot attack him on that issue so they are trying to undermine him as being too pro-American. And they are succeeding in creating a good deal of anti-American sentiment in the islands.

They take full advantage of some of our mistakes, especially in respect to such matters as the lands to which our military authorities claim title.

These lands were purchased by the American Government from private interests long before we granted independence to the Philippines. They were held for use as military and air bases. Some of the land is close to Manila.

The Filipinos contend that under the terms of the independence agreement title to these lands automatically passed to the State. United States Attorney General Brownell not long ago ruled that the lands are still American possessions.

This has developed into a highly emotional, nationalistic issue in the Philippines and is being used by the opponents of President Magasaysay to whip up anti-American sentiment.

The value of the land is estimated to be about $1 million. Brownell said the President was free to give the land back to the Philippines if he wished to do so, despite our legal claim to it.

I recomend that President Eisenhower invite President Magsaysay to Washington, and give him the land as a gift from the American people to the Filipino people.

Such a gesture on our part would have tremendous prestige value for us. It would greatly strengthen President Magsaysay's position and help to offset the growing anti-American sentiment in the Philippines.

When we stop to think of the billions we have poured into Europe, the value of this land would be a drop in the bucket, but the results in goodwill and the strengthening of our ties with our most dependable ally in the Pacific would be worth many times the $1 million.

President Magsaysay also needs more economic aid from us. He is trying to develop industries to help make the Phillipines self-supporting. He wants to build roads and schools. We should help him do so.

There is a growing feeling in the Phillipines that since President Magsaysay succeeded in crushing the Communist movement there, the United States is less interested in helping the country.

American aid to the Philippines for this year is earmarked at approximately $139 million. The President told us he badly needed $200 million. We ought to give him the additional amount, even if we have to deduct it from some of the funds we have allocated for our less dependable and less grateful allies.

We should help this remarkable man make his country prosperous and thoroughly pleased with its relations with America so that the other Asian nations will know that it pays to be a friend of Uncle Sam.

Nineteen Hundred and Fifty-six Is the Decisive Year in Asia

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1956

Mr. MULTER. Mr. Speaker, the following article concludes the report by Mr. William Randolph Hearst, Jr., on his recent 30-day tour of the Far East:

DANGER AHEAD—ASIA: SHAKE OFF KOREA TRUCE TIMIDITY, HEARST URGES

(By William Randolph Hearst, Jr.)

This final article in the series on my Far Eastern trip brings us to the problem of what to do about Korea.

As the third point in our list of recommendations on Asia, I would like to suggest that we shake off the timidity toward the Korean armistice which condones Communist violations but insists that our men scrupulously observe its provisions.

President Eisenhower, Secretary Dulles, and every other American in a position to know realizes that the Communists are brazenly flouting the truce terms and building up armed strength in North Korea.

Granted that we might not want to precipitate a shooting war over the issue of Communist violations, why do we still insist that our Korean forces adhere to provisions which could place them at a dangerous disadvantage in actual combat?

Technically, of course, it is a United Nations command in Korea. Fifteen other nations must be consulted about policy shifts, although American and South Korean troops compose practically the whole command.

But we have an obsolete army in South Korea with obsolete equipment. In a sudden scramble, it might not be possible to rush up-to-date arms into the theater in time to avert a catastrophe.

We should give the North Korean Communists 30 days' notice to respect the arms limitation and neutral supervision terms of the armistice or consider those provisions inoperative.

Similarly in South Vietnam we are abiding by the terms of an armistice that neither the United States nor South Vietnam ever signed.

Time is of the essence in South Vietnam. If we can take advantage of the present lull in the cold war to create a modern fighting force to support the Diem government, Communist Vietnam's opportunity may pass forever before 1956 is out.

But our training mission in South Vietnam is only one-third the estimated strength required—because lawyers in the State Department say we would be violating provisions of an armistice we didn't sign if we increased our training complement beyond present levels.

In both places, of course, we are taking the calculated risk that the Communists won't launch an armed attack. If they once more refuse to guide their actions by American blueprints, we could be in real trouble in Korea—and disaster would strike in South Vietnam.

4. We must work out an agreement with our major ally, Great Britain, that will enable us, at certain times and under certain conditions, to act unilaterally in Asia.

This, I realize, is the most controversial conclusion we reached on our trip, and the one most susceptible to misinterpretation.

I'm not recommending that we pull apart from our allies; I'm not suggesting that we do anything to upset the NATO machinery.

But I do suggest that it is only being practical to realize that there are potential situations in Asia that will require swift and determined moves on the part of the United States which our allies are likely to oppose.

Quemoy and Matsu, for instance. Defense of these 2 islands may be essential to America's position in Asia, but British public opinion is not prepared to support such American action.

Sir Anthony Eden has difficulty enough getting British support for our position toward Formosa. It is highly improbable that he can educate the British people to the importance of Quemoy and Matsu.

And, in all truth, there is little evidence that even the American public understands the importance of those 2 islands. But after hearing every high-ranking American in the area say we cannot allow them to fall into Red China's hands, I'm convinced that a better understanding is required.

If the defense of Quemoy and Matsu is a must, we should not allow our hands to be tied by an uninformed British public opinion, the same force that kept us from using our full resources in Korea.

It might be a wiser policy, and a stronger deterrent to Chinese Communist aggression, to state clearly and unequivocally that we do intend to defend those islands if they are attacked.

5. In regard to the "neutralism" of India, we must reconcile ourselves to the realization that we cannot buy or bribe Prime Minister Nehru over to our side.

FUNDS WON'T TAKE NEHRU FROM COURSE

Congress can appropriate funds for India till the sacred cows come home, and Mr. Nehru won't be swerved from his present path of "neutralism."

For India's long-range good or ill, rightly or wrongly, Mr. Nehru has placed his bets

squarely on the proposition that communism is changing, that it has lost its aggressive dynamism, and that Indian can survive alongside its neighboring giants, Communist Russia and Red China.

Future developments may rudely shatter Mr. Nehru's complacent dream about the benevolence of Khrushchev and company and of Mao Tze-tung.

But American money won't buy him over to the opposite belief. Because Mr. Nehru has taken this position and is attempting to enlist other Asian "neutrals" behind his banner, the United States should not become angry with India and attempt to lecture it away from its present "soft" attitude toward Russia.

But no more should we prostrate ourselves before Nehru and act is if appeasing this influential statesman represents a lofty aim of our Asian policy.

We should treat India with unemotional realism. Heaven only knows that is the way they treat us so they should recognize and understand the technique. Nehru wants economic aid from the United States but he wants no strings attached. We should tell him quite plainly that he is not going to get any aid without conditions, and one of the first conditions we should insist upon is that the Indian press stop turning the people against the United States.

We are treated far worse in the Indian press today than in the Russian press. Nehru may say he cannot do anything about the press because it is free but that just isn't so. We learned during our visit that Nehru is the boss in India and when he wants something done, it is done. He doesn't hesitate, when he feels it necessary, to mix a little autocracy with democracy.

For example, he found means of calling off scheduled elections in Calcutta because he knew that if they were held, the Communists would win them.

If he wants the American taxpayer to help develop India economically, he should raise his own voice in defense of the United States. A few speeches or public statements by him giving a fairer picture of American motives in world affairs would help to offset the anti-United States tendencies of the Indian press. There are many ways in which he could bring his persuasive powers to bear to see to it that the Indian people were not given a distorted and unfair impression of America.

UNITED STATES SHOULD LEAD PACIFIC PEACE ARMY

There is one form of aid I am in favor of offering India apart from Nehru, without any strings attached. That is a scholarship program to enable Indian youths to come to the United States to study. They could then learn the truth about America. They could go home qualified to assume positions of leadership in the economic, political, and social life of the Nation. This was what the English did in India; in fact it was the one of the best things they did do for the country. Most Indians who studied in this country would, I believe, remain good friends of America. We would get enduring value from that kind of aid to India.

6. Turning now to Japan, I think we should insist that the Japanese Government take stronger measures to counteract the anti-American sentiment that has been allowed to develop in that country. The Government should explain fully, frequently, and truthfully to the people what the United States is trying to do in the world today. Far too much leftist sentiment is being allowed to develop in Japan's educational and labor fields.

7. We should help to establish a Pacific peace army composed of units of the armed forces of all free Asian nations, including the Philippines, Japan, Nationalist China, South Korea, South Vietnam, Thailand, and Pakistan. We should help to equip and train such an army, but it should be composed of and commanded by Asians only. It would not have to be a big army, but it should be trained as a highly mobile force of fighters for freedom. The very existence of this army would, I believe, strengthen the unity of the free nations of Asia and serve as an effective deterrent to Communist military aggression.

8. There should be created an organization for the exchange of information between the free nations of Asia and it should be called the Freeinform. This organization could counteract the propaganda and subversive activities of the Cominform.

There are some of the measures by which I believe the free world can still win the cold war in Asia.

In closing this report on Asia, I would like to pay tribute to the role now being played by our airlines in the task of cementing our good relations with the rest of the world.

We traveled thousands of miles on this journey with Pan American, TWA, and Northwest Airlines and in every instance, we were impressed by the fact that our airline representatives have become unofficial ambassadors of American good will.

Their skill and efficiency, topped off by great personal courtesy toward the passengers, are bound to have a lasting impact.

Once again we have been able to visit many foreign countries with a speed that would have astounded previous generations because of the great operational know-how of these superb American air transport systems.

It Appears That United States Always in Crisis

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an editorial from the Saturday Evening Post, April 14 issue. This editorial raises the question as to whether or not it is possible for Uncle Sam to ignore at least one crisis. The editorial follows:

ISN'T THERE ONE CRISIS UNCLE SAM CAN IGNORE?

When the Nation's policymakers hold their next conclave on what the United States should do about practically everything, it might be a good idea to search the global horizon for one area, however small or insignificant, of which it could be safely stated that its internal affairs were none of our business.

There are so many places in whose affairs we are forced to be concerned—places like some of those recently visited by Secretary of State Dulles with important results—that it would be soothing to the public if an area could be found whose crises we could calmly ignore. Possibly Tristan da Cunha might serve as a pilot project to provide practice for our statesmen in this unaccustomed field. With diligence our diplomats might eventually find themselves actually resisting the impulse to stick their necks out in areas where our national interest is at best remote. Too often, the "For God's sake, do something" bloc favors places outside our orbit of interest rather than posts held by essential allies, like Formosa.

In view of the dismal consequences of many of our well-meaning efforts to settle things all over the world, this suggestion for some new restraints on our meddlesome-Mattie impulses may not be so impractical as the apostles of American world leadership think. As to Cyprus, we appear to have kindled the hopes of the Greeks while enraging the British, who, while feeling free to rebuke us for failing to see the virtues of Communist China, simply loathe being criticized themselves. And the pressure to involve the United States of America in a possible police action along the borders of Israel poses grim possibilities which should be well explored before we edge closer to that melee. In short, political realism seems to suggest a statement from high sources which might be summarized as, "We deplore tyranny, oppression and rioting. We are sorry that so many people are discontented and belligerent. But Uncle Sam has only two hands."

Such a policy would undoubtedly be condemned in certain quarters as a modified neutralism. Conceivably the description would be justified. However, even neutralism in matters beyond one's control or concern should not be condemned out of hand. Indeed, President Eisenhower, commenting on Cyprus, said that, while this country desired to contribute everything possible to a reasonable settlement, "the solution itself is going to have to be reached by the people most greatly concerned." Take the case of Nehru. The more neutral he becomes the more money he gets from us; and the more money he gets from us the more neutral he becomes, until finally, after a particularly vigorous denunciation of everything American, he is invited to come to Washington. The United States of America can hardly expect to duplicate Nehru's record, but we might venture "no comment" on at least one distant fracas.

Hon. Albert P. Morano

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. SCOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a feature article which appeared in the Bridgeport (Conn.) Sunday Herald on April 15, 1956. This article concerns my friend and colleague AL MORANO, and the tenor of the article expresses pretty well how we feel about AL here in Washington.

With the election campaigns coming up, the people of the State of Connecticut are indeed fortunate to have such a great personality, vote-getter, and conscientious and able gentleman as AL MORANO.

ASPIRANT FOR GOVERNOR KEEPS ONE FOOT SOLIDLY ON BASE—EX-MILKMAN AL MORANO IS PEOPLE'S CONGRESSMAN

ALBERT P. MORANO, the energetic Congressman from the Fourth District, Connecticut, listened intently to debate on the farm bill on the floor of the House. A page approached and handed him a note. MORANO left his seat quietly and headed for his office in the House Office Building.

"Your wife called and asked that you phone her immediately," an aide told him when he reached his office.

MORANO put in a call to his Greenwich home. His wife Millicent was distraught. She had just received word that her mother had died in Brooklyn.

A few hours later, MORANO alighted from a plane at International Airport to join his wife in Brooklyn.

Next morning he was back in Washington. It was important that he cast his vote on the controversial farm bill. He voted, rushed to the capital airport and was on his way back to Brooklyn for the funeral.

The criss-cross flights between Washington and Brooklyn provide an insight to the character of Congressman MORANO, a man who refuses to permit devotion to his job to dilute his devotion to his family and friends.

There is no conflict in these loyalties. MORANO applies his terrific energies to see that they are resolved.

It is this facet of the three-term Fairfield County Congressman's character that has given rise to speculation that MORANO could emerge as the Republican Party's nominee for Governor in 1958.

MORANO himself shrugs off the possibility of heading the GOP State ticket in the next gubernatorial campaign.

He has already announced his candidacy for a fourth term in Congress. Of the four Connecticut Republican incumbents in Congress, MORANO is considered the "safest" bet for reelection in the GOP panhandle stronghold.

Following John Lodge, who vacated the post to become Governor, MORANO entered Congress by defeating Danbury labor leader Dennis J. Carroll in 1950. His comfortable margin of 32,706 votes over Carroll was increased to 56,808 when he eliminated Democratic candidate Edward R. Fay of Stamford 2 years later to retain his seat.

Political analysts are taking MORANO's disavowal of gubernatorial aspirations lightly. The Governor's mansion is constructed of ethereal fabric for Republican hopefuls at this stage of the game. On the other hand, the Fourth District congressional chair is firmly rooted to the floor, barring an earthquake that will release it to the Democrats.

MORANO knows this. A master politician, he realizes the advantage of maintaining one foot on base while scouting his opportunity to scurry home to score in the gubernatorial ball game.

His security is reflected in the Fairfield County Democrats' dilemma as the congressional election approaches. With the runoff less than 6 months away, there hasn't been a whisper out of any possible Democratic challenger. The role of the sacrificial lamb is forming no queue.

Of Italian extraction, MORANO, like Gov. Abraham A. Ribicoff, regards his selection and reelection as a realization of the American dream. The shattering of the myth of the invincibility of sectarianism in Connecticut by Ribicoff must surely light the candle of hope for MORANO as he regards the next rung of the political ladder.

MORANO likes to be known as the "people's Congressman." By and large, he is. Reviewing his 5½-year record, neither extreme conservatives nor liberals have embraced him. For the most part, his conduct of office stamps him as an Eisenhower moderate.

His reputation as a "people's Congressman" stems largely from the excellent service he provides for constituents regardless of political affiliation through his Washintgon and Greenwich offices.

Hundreds of visitors from "back home" stream through MORANO's congressional office during the course of a week, seeking and getting help to arrange tours through the White House, the visitors' gallery of the House, the FBI building and other points of interest.

One of his closest associates says: "AL's faults, if they may be termed as such, are that he worries personally over the plight of the many distressing incidents daily brought to every Congressman's attention by his constituents.

"He is too generous of his time and finances, spreads himself out too thin in trying to please the hundreds of organizations and groups requesting him to address their meetings. His weekends in the district are spent in listening to people who visit him at his home or district office.

"Every day is a work day for Al Morano. When he goes to church there is usually a lineup of people waiting to see him when he comes out. If he does some shopping on a Saturday he ends up with a roast beef and a mess of notes written on butcher wrappings reminding him to check on 'Joe's' case."

Hardly a day passes, Morano's associates disclose that a letter doesn't arrive at the office referring to a problem that could be applied to any number of people and winding up with no further identification than a puzzling "Joe" or "Bill."

The trick is to wrack a laden memory to try to tie up the problem with one of hundreds of Joes or Bills who have been contacting the office. A huddle with his dedicated staff, confidants, executive secretary John P. Baxter of Bridgeport and Administrative assistant Sid Yudain of New Canaan, usually results in a process of elimination that turns up the right "Joe" or "Bill."

Morano's forte in affairs of state is in his preoccupation with his duties as a member of the highly important Foreign Affairs Committee.

In the 84th Congress, he turned his attention toward Latin-American affairs. As a one-man mission to study and pave the way for bolstering the economy of Cuba, he won the plaudits of both his colleagues in Congress and highly placed Cuban government officials.

Domestically, organized labor, which greeted his first candidacy with misgivings, came to rate him as one of the "better" Republican congressmen until he came a cropper on one of labor's pet peeves.

Labor dropped him in its rating a couple of months ago when he voted in favor of a bill which they describe as a natural gas "grab." President Eisenhower vetoed it.

While Morano has supported the bulk of Eisenhower's legislation program, he has not hesitated to differ with the President and Secretary of State John Foster Dulles on such foreign policy items as arms aid to Israel.

As one of the leaders of a Republican congressional delegation, Morano called at the White House to insist that arms be sent to Israel for defense to restore the balance in the Mideast, tipped by the sale of Communist arms to Arab countries.

The visit to the White House symbolizes the strides ahead Morano has made since his early youth when he worked variously as a pinboy, milkboy, cab driver, carnival worker, dancing waiter and insurance man.

His baptism in politics came as a member of the Chickahominy Town Meeting District in Greenwich, his home for the last quarter century.

Closely allied with the late Dr. Albert E. Austin, stepfather of United States Ambassador to Italy Clare Booth Luce, MORANO was the sparkplug of the drive that sent Austin to Congress in 1938. Austin rewarded him by naming him his congressional secretary.

When Dr. Austin died 4 years later, MORANO approached Greenwich intimates to suggest that Mrs. Luce be drafted to fill the House vacancy. What happened after that is history. Clare Booth Luce was elected the first woman to serve in Congress from the Fourth District.

The morning following her election, Clare phoned MORANO. "Good morning, Mr. Secretary," she greeted him.

Here began an association that resulted in mutual regard which catapulted both Clare Booth Luce and ALBERT P. MORANO to the heights of the political orbit.

As Mrs. Luce's executive secretary during the war years of 1942 through 1946, MORANO operated with zeal and knowhow. He was in a position to render service—some people call it favors—to the people of Fairfield County. MORANO does not consider requests for assistance as favors. It adds up to service to which his employer's constituents were entitled.

A former GI volunteers the story of his personal experience with MORANO. The GI was on a top-secret intelligence mission in Europe at the height of the war. His folks had received no correspondence from him for a month.

So secret was the GI's mission that not even his commanding officer knew his whereabouts. Yet, when the soldier's worried, parents pleaded with MORANO to trace why the letters home had stopped, MORANO was able to unwind Army redtape to reassure the family.

One day a British officer approached the intelligent agent in a CP near the front lines in Luxembourg. "Your Congressman's office wants you to write home as soon as your security restrictions on this mission are lifted," he said.

How MORANO accomplished this bird-dog feat remains a mystery. The fact is that accomplish it he did, winning the everlasting gratitude—and votes—of a large Fairfield County family.

MORANO's devotion to this type of personal service was equalled by his concern for the war-heavy duties of Government burdening Mrs. Luce. He worked far into the night to lighten the burden. It didn't go unnoticed. He was elected the "hardest working and best executive secretary" in Congress at the end of Clare's first term.

In 1946, Clare Boothe Luce stepped out of politics temporarily. It appeared that MORANO's political fortunes, tied to Clare's, had knotted. He stepped aside as John Lodge sewed up the nomination for the fourth district, later strengthened his political position with an assist from then Gov. Raymond E. Baldwin, who appointed Morano State unemployment compensation commissioner for Fairfield County.

His patient waiting paid off 4 years later. John Lodge became governor. Clare Boothe Luce emerged from political retirement long enough to designate her former secretary as the "people's candidate."

It was Clare Booth Luce who nominated MORANO at the congressional convention in Ridgefield in 1950. "When he is nominated," she said, "it will be the most wonderful sign for the party. They will have begun at last to give the people people's candidates."

MORANO breezed in.

Six years later, a Congresman of international stature, MORANO contemplates the past with the hope that history will repeat itself. The last man to hold MORANO's congresional seat went on to rise to governor and then ambassador.

The high regard MORANO holds for Clare Booth Luce was apparent at the baptism of his daughter in the family church in Greenwich 10 years ago. The child was christened Clare Anita.

MORANO's attractive wife, the former Millicent Greco, shuns the social whirl of the Nation's Capitol. She prefers to live quietly and graciously at the family home at Indian Harbor in Greenwich. AL joins his family every weekend and whenever other opportunities to return to Fairfield County during sessions of Congress occur.

A son, Anthony, 22, recently married, is an Air Force lieutenant working for his wings at Malden Air Force Base in Missouri. He is a university graduate—Amherst—an opportunity his father never had. A self-educated man, AL MORANO has lifted himself to his position of prestige by his bootstraps.

En route home for his weekend visits, MORANO delights in picking up little gifts for precocious Clare Anita. During his foreign travels on official business he invariably receives notes from her requesting specific souvenirs.

At home, the Congressman fancies himself a great cook—much to his wife's regret. Sometimes he imposes his culinary fetishes on waiters, describing in minute detail how he wants his food prepared.

Once, at Joe's C'est Bon Restaurant in Greenwich when he wasn't getting through to the waiter, he cancelled his gourmet order and said plaintively, "Bring me a can of Italian sardines, a fork and a key."

While other Congressmen have chosen the luxurious hotels and expensive Georgetown or Capitol Hill apartments for their Washington quarters MORANO still lives in a rooming house on East Capital Street, where his executive secretary, Baxter, also resides.

When MORANO is free of the onerous duty of attending official functions he hastens to join the family of Maria Perticcone, his landlady, for a good spaghetti dinner. He usually brings his own spaghetti—noncaloric—since he's guarding his waistline.

To insure his silhouette from burgeoning, the former amateur boxer-turned-Congressman gets in some exercise in the House gym every afternoon, schedule permitting. He walks to and from work, about 10 city blocks, to maintain his strict regimen.

Ordinarily courteous and quiet, MORANO occasionally shows fits of temper. He has been known to "burn" a few official ears on the telephone when he thought one of his constituents was getting a runaround, or when bureaucratic bumbling was delaying a project which he thought could be accomplished sooner.

One of MORANO's idiosyncracies stems from his intense loyalty to his home county with its hatting centers of Danbury and Norwalk. Every visitor to his office in Washington and his home or office in Greenwich is expected to wear a hat.

An abstainer from smoking, MORANO takes an occasional Scotch on the rocks or an ale with his food. He loves opera and proved it by introducing and guiding a bill through Congress to exempt nonprofit opera and symphonic organizations from admission taxes.

The expression "for the birds" has a special significance for the Congressman. Bird-watching is his principal hobby. Millicent's lunch or dinner plans are often disrupted when she finds her bread supply has been crumpled up for bird fodder.

John Baxter presented his boss with a book on bird identification last Christmas and AL can now spot and identify practically any bird indigenous to this part of the country—even visitors from other areas.

One Sunday a top politican came to MORANO's Indian Harbor home to discuss urgent political matters. MORANO started pointing out the birds in his backyard and describing their characteristics. The politician left an hour later, well versed in bird lore, but not a word of politics had been spoken.

The story of the birds and the politicians is not apocryphal. It actually happened. But there are doubters who insist that any time AL MORANO foregoes an opportunity to talk about or work at politics, it's "strictly for the birds."

Regional Water Laboratory

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 19, 1956

Mr. DIXON. Mr. Speaker, land utilization is affected by many economic, physical and social conditions. However, the main factors which determine the suitability of land for crop production are the extent of rainfall and the supply of water.

As Dr. H. H. Wooten pointed out in his excellent study Major Uses of Land for the United States, published by the USDA in October, 1953, as Technical Bulletin 1082:

> Several significant interrelationships exist between use of cropland and water. These include limits on lands used for crops in moisture-deficient areas; problems of excess water in wetland areas and those subject to overflow; condition of land in relation to general water; relationship of ground water to supplemental irrigation and domestic water; and drainage and soils in relation to salinity (p. 62).

Water is becoming a more scarce, and, at the same time, valuable resource. Competition for its control and use is becoming more intensified as the various demands for water—agricultural, municipal and industrial—multiply in number. In light of this intensive competition, it becomes exceedingly important that the most efficient use is made of this valuable but diminishing resource. For example, we need to know more about:

First. Water sources and their development, both surface and underground.

Second. Storage, control, measurement, and conveyance of water.

Third. Water requirements and uses.

Fourth. Application of water—alternative methods and their relative efficiencies.

Fifth. Removal of excess water from surface and sub-surface areas.

Mr. Speaker, as you know, the climate of the eastern part of the United States is generally characterized as humid or subhumid; while the western part, except the Pacific Northwest, is generally referred to as an arid or semiarid area. While the former area during parts of the year has an overabundance of water, giving rise to problems of drainage and flood protection; the latter is a moisture-deficient area, giving rise to the need for collecting and storaging of water during wet periods for use by irrigation during the dry seasons. It is evident, therefore, that the relationships between cropland and water I outlined a moment ago and the need for more basic information relative thereto are not sectional or regional, but rather national in both their nature and scope.

Although nearly 95 percent of our irrigated cropland is in the 17 .Western States, the expansion of irrigation in Eastern and Southern States has been rapid. For example, whereas in 1939 only 39,862 acres of cropland were irrigated in 28 States designated as either Northeastern, Corn Belt, Lake States, Appalachian, Southeastern; the number of irrigated acres increased to 61,902 by 1944; and 152,586 by 1949.

On the other hand, the number of acres in organized drainage enterprises declined during the decade 1940–50, by 119,000 acres in the Mountain and Pacific Coast States; whereas the number of acres in such enterprises in the North and Southeastern States increased by 15,840,000 acres. This is not to say that some western and Pacific-coast irrigation areas do not have drainage problems, they do, but the major concern of people in these areas is the acquisition and more efficient use of water.

Although we have regional laboratories which are studying basic soils and plant relationship and water hydraulics, and so forth, there are inadequate facilities in existence today whose basic concern is the more intelligent development and use of water. Because of these facts, Mr. Speaker, I send to the desk a bill to authorize and direct the Secretary of Agriculture to establish a regional water laboratory. The bill also authorizes an initial appropriation of $1 million for this purpose.

Big Bend Dam

EXTENSION OF REMARKS
OF
HON. HAROLD O. LOVRE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1956

Mr. LOVRE. Mr. Speaker, one of the most monumental flood-control programs ever attempted in the United States is currently underway in the Missouri River Basin. Involved are 10 States and a sixth of the land area of the United States. The program has been progressing on schedule and overall is about 60 percent completed.

The last major structure involved is the Big Bend Dam in central South Dakota. No funds were provided for this project in the budget. Recently I wrote to all members of the House Appropriations Committee, making a recommendation in regard to this dam. I would like to insert the letter I wrote in regard to this project as I believe it provides a feasible solution:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C.

Hon. CLARENCE CANNON,
Chairman, House Appropriations Committee, Washington, D. C.

DEAR COLLEAGUE: Reference is made to the development program in the Missouri River Basin, which was authorized in 1944, and which is made up of a series of large dams plus subsidiary structures to assist in controlling floods and to provide other benefits throughout a 10-State area. The program is getting along exceptionally well and has reached a high degree of completion with the exception of the last major structure; namely, Big Bend Dam.

In this regard I should like to call your attention to my testimony before the Public Works Subcommittee of your committee on March 28, relative to this dam. I was notified earlier this year that the Corps of Engineers has sufficient funds currently available to complete a structure known as the Gavins Point Dam. The budget request which was submitted to the Congress contains a provision for $1,700,000 for the Gavins Point Dam. The budget provided no funds for the Big Bend Dam, although it has been authorized. My suggestion to the subcommittee was that whatever funds are necessary for the preliminary engineering and survey work on Big Bend be allocated from the $1,700,000 budgeted for Gavins Point. Such action would in no way increase the budget request of the executive department

and would provide the first step in the last major phase of the river program.

Various estimates have been made as to what the initial engineering and surveying would cost, and the most recent figure available to me is $650,000. This would leave a balance of well over a million dollars in the budget, which could be used for other river purposes, such as surveys on some of the tributary streams and channel stabilization from Yankton, S. Dak., south. I think there is considerable merit to this suggestion, because (1) it would assist in bringing the Missouri River Basin development program into its final stages, (2) it would not increase the budget estimate, and (3) it would hasten the day that the interrelated structures on the Missouri River can work in conjunction with one another more efficiently than they can operate individually.

I would appreciate it very much if you would give this suggestion your consideration during your deliberations.

Thank you kindly.

Cordially,

HAROLD O. LOVRE.

Speech by John E. Rogers, National High School Oratorical Contest of the American Legion

EXTENSION OF REMARKS
OF
HON. FRANK IKARD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. IKARD. Mr. Speaker, recently I have had called to my attention a very fine speech made by John E. Rogers, the son of our colleague, WALTER ROGERS, at the 19th annual national high school oratorical contest of the national Americanism activities of the American Legion. John Rogers is a senior in St. John's College High School here in Washington and by this speech certainly demonstrates that he is an able son of his distinguished father. It would, in my judgment, be a fine thing if all Americans could read this speech and if we would all heed the lesson he teaches us there:

In 1883, near the Sable Islands, the French liner *La Bourgogne* collided with another ship and quickly sank to a watery grave taking with her the lives of 584 persons trapped within the iron coffin of her hull.

November 12, 1928, the steamship *Vestris* foundered off the Virginia Capes—113 persons perished.

1890, the British steamer *Utopia* collided near Gibraltar—540 of the passengers and crew died.

September 8, 1934—the night skies near Ocean City, N. J., were suddenly illuminated by flames from the steamship *Morro Castle* in one of the worst naval holocausts of our time. The ship was completely destroyed, along with the lives, hopes, and bodies of 137 of her passengers.

But as different the times, places, and circumstances of the destruction of each of these ships, they still had several things in common.

In all instances the ships were completely destroyed and an appalling number of persons died—and again in all instances there were only two possible reasons, a bad ship or a poor crew.

Nowhere else, as on a ship, is so complete cooperation demanded of men, nor does so great tragedy mark indolence.

And yet there are those who have shown such casual interest in the greatest ship afloat, that it is wondrous indeed that she is still able to carry the hopes and destinies of the American people.

It was 169 years ago that our country was launched on the stormy seas of state. Though she was built and launched in a shipyard called Independence Hall, her home port is the heart of every loyal American.

Her decks were hewn from the tree of freedom and her sails were cut from the robe of liberty—and as she embarked that September morn of 1787 her bow was not washed with champagne but with the blood of patriots.

And what of her crew?

They were not great sailors; they knew little of the running of a government, but they were honest men and they were determined; they had fought a long, hard war with the greatest power of the time to see this ship launched, and far better an inexperienced crew than a corrupt one.

As she set sail that morning, toward a horizon already obscured by the pessimism of the world, the wildest imagination could hardly have foretold of the coming events of her voyage: how she was to steer a straight course through as storm seas as ever threatened to engulf a Nation and seven decades later to face and defeat her most critical peril.

Within a period of only 40 years she was to become engaged in the two worst conflicts this world has ever seen. The first was fought at Belleau Wood, Verdun, and in the Argonne Forest. The second was fought on Guam, Midway, and in Normandy.

In both, our craft surmounted the greatest odds and the highest waves to plant the flag of freedom on the doorstep of tyranny.

Yes; throughout history our ship has shown herself to be not seaworthy—not very seaworthy—but the most seaworthy vessel existent on the choppy waters of shifting alliances and honeyed half-truths that we call international harmony.

It has been a long voyage, a hard voyage—and our trip has been safe only because we have had the finest ship and the best crew.

Our trip has been safe and pray God may it continue to be safe.

Our ship is still the finest and our crew is still the best but, as in all times of peace and prosperity, indolence and self-confidence have set in. They have not just set in, but have so established themselves that they have given birth to a hideous offspring—indifference. Indifference is not just a sentiment, however; it is the decay of ideals. It is the rot that eats at a ship; that eats at her crew. It is passive, but it is deadly. It is the rust that can destroy the mightiest metals. It is the malnutrition that can kill a Hercules. It is the disease that now threatens the life of our Nation.

Communism, sin, and depravity are easy to spot. You can point to suffering, to death, to slavery and there is your communism, your sin, your depravity.

But indifference is deceptive. It cannot be seen, it cannot be realized, we can only see what it has done.

We look at the skeleton of Poland and say, "Too bad." But it was indifference that murdered her.

We read in the paper that a small country has been engulfed by revolution and death. Again, we say, "Too bad," but it is indifference that bleeds her.

A thousand ships, a hundred nations, a billion lives have been ruined by indifference, but yet we do not recognize it. We do not recognize it and even now it is upon us. It is upon us and it is not hidden. It shows itself in many ways:

In low election returns.

When John Q. Citizen turns to the comics instead of the editorial page.

When junior citizen takes gym instead of civics.

When no one can find time to attend citizens' meetings.

It shows itself in all of these and many other similar ways and yet it is not recognized. It is not recognized because it is people, and people are harmless. They mean no harm, yet they do no good, and someone must carry their burden. Our ship has become heavy with their weight—they are as barnacles serving only to slow our vessel down and make her an easy prey for the pirate and slave ships of tyranny.

And yet the indifferent are not just barnacles—a barnacle cannot think; it does not seek to hurt, it cannot understand the necessity of good citizenship, of interest in world affairs, of the exercise of the vote. A barnacle is blameless.

But for an American citizen to sit back and allow the reins of government to slip from his grasp and become in grave danger of being taken over by the cruel claw of oppression—that is treason, lacking only motivation and intent.

How can a "good" American be called a traitor when he respects the flag and upholds the Government?

How does he respect that flag?

Does he actively seek to protect and defend her that "long may she wave on high" or does he merely tip his hat in passing?"

How does he uphold the Government?

Does he know there are some 280 front organizations devoted to destroying that Government: Does he know their names, their approach, what to do about them? Or does he say, "Someone in Washington will take care of it."

Someone in Washington can't do everything—can't show step by step all the pitfalls to each of the 160 million Americans.

America is not a nation of dullards who have to be waited on hand and foot, and spooned full of information; who must live in constant jeopardy of being poisoned by the sugar-coated pollution of communism.

If communism were to bang at our door at this minute, and flash bayonets and guns in our faces, Americans would rise as a man to smite down this foul invader of our free shores. But because it sneaks in, because it infiltrates, we say someone else will take care of it. Without a doubt what happened to Poland, to Yugoslavia, to Albania, to Latvia, to the Balkans, and to many, many others can happen here. In fact it has very nearly happened already. Just 15 years ago when World War II broke out and America began to gird and prepare herself for battle, detailed checks were made of all Government employees, workers, and anyone else in any way connected with the war effort. It was then that it became evident just how many beams in our ship were rotted and infested with the worms and termites of subversion, and by far the majority of these vermin were not Nazis or Fascists, but radical free thinkers, that is to say, Commies.

Commies, Reds, pinkos, fellow-travelers, leftists, progressives—many were rooted out and unmasked—many, but not all. Some burrowed deeper or took on new colors. These are the Hisses, Remingtons, and Coplons of our present day.

However, those that were uncovered were found out, not because we finally wised up, but because of wartime security, and the discovery of these Americans in name only did not do away with them entirely.

They have only changed their immediate objective. Though still penetrating the stronghold of free men, their main purpose now is to lull us into a false sense of security and well-being.

And it must not happen.

Are the ideals and hopes on which this Nation was founded to be washed over by a lukewarm ripple of Let George do it. Because George will do it. Georgi Malenkov, Georgi Ivankovitch, and all the other Georgies.

Are we to sit back and see our Nation slip inch by inch under the waves of apathy because there are none who would guide or save her.

For over a century and a half the Constitution has been the warden, guardian, procurer, and defender of the rights of the people but it has no life of its own; its purpose is attained only when it is used as an instrument of freedom by freemen, and freemen are you and I and the person next to you and 160 million others across the face of America. We are the ones who must protect our rights and only we. Democracy is too great a thing to entrust it to any but the elected representatives of the people; and these representatives must be elected, not appointed by the ignorant or the evil.

If America is to remain whole now is the time to act, not tomorrow or the day after that or as soon as you can find time. Now is the time to caulk up the joints of our ship and sheath her in the armor of alertness.

For if we do not, if we fail through neglect or carelessness, then tyranny and oppression will not be just ugly words in an oratorical contest.

Arabian Base Poses Knotty Problems to United States

EXTENSION OF REMARKS
OF
HON. CHARLES A. BOYLE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. BOYLE. Mr. Speaker, on June 18 the present agreement that the United States has with Saudi Arabia for use of the Dhahran Air Base will expire. It is my understanding that the Department of State is preparing to enter negotiations for a new 5-year lease for this base. Edwin A. Lahey, the Washington bureau chief of the Knight newspapers who is a very perceptive and thoughtful columnist and reporter, whose nimbleness of expression is appreciated by all of us from Chicago, calls attention in an article appearing on Monday, April 16, 1956, in the Chicago Daily News to discrimination which is permitted against our Jewish citizens in Saudi Arabia under the present agreement. It is to be hoped that our Secretary of State will not permit such discrimination to continue under the new agreement which he is preparing.

The article of Mr. Lahey follows:

ARABIAN BASE POSES KNOTTY PROBLEM TO UNITED STATES—PRESENT PACT UNDERWRITES MOSLEM HATE FOR ZIONISTS

WASHINGTON—The United States is about to open negotiations for renewing the lease on the Daharan Air Base in Saudi Arabia.

In the present agreement under which we operate this air base, the United States implicitly underwrites the violent antipathy of the Saudi Arabians for Jews.

One paragraph of this 1951 agreement says: "There must not be among members of the mission or among the other employees any individual who is objectionable to the Saudi Arabian Government."

A reporter who called at the Saudi Arabian embassy in Washington was told by a Mr. Shalfan, identified as the counselor, that the negotiations for renewing the Daharan Air Base agreement would be opened "within a matter of days" in Saudi Arabia.

"What Americans would be regarded as 'objectionable' in Saudi Arabia?" he asked.

"Communists," replied Shalfan.

"What about Jews?"

"We are not anti-Semitic," Shaffan replied. "Remember, the Saudi Arabians are Semites themselves.

"But we do not want Zionists at the air base.

"We are still technically at war with Israel. The base at Daharan is for Saudi Arabia, as well as for the United States.

"If Zionists were at the base, they would have access to military information that would be valuable to Israel."

Shalfan insisted that any feelings that the Saudi Arabians have about Jews dates only from the Arab-Israel war 8 years ago, and is kept alive by the fate of 1 million Arab refugees who were expelled from their homes in Israel.

The Saudi Arabian diplomat, who reminded the caller that his is a free country, said that his government imposes the same restrictions against "objectionable" people on the American oil interests that operate in the Arabian Peninsula.

There are some early indications that an election year issue might be made of the State Department's facility for adapting to local prejudices like those in Saudia Arabia.

It is a tossup, however, whose issue it is. The State Department of Dean Acheson made this agreement, whereas the State Department of John Foster Dulles must negotiate the renewal.

The American Jewish Congress only Saturday criticized the State Department for going along with such restrictive agreements.

The Jewish War Veterans the other day charged that United States Air Force personnel in Daharan are "not free United States citizens," because of our respect for the religious prejudices of the Saudi Arabians.

Senator HUMPHREY, Democrat, Minnesota, asked Secretary of State Dulles at a hearing in February about reports that "American personnel of Jewish faith" were not stationed at Daharan.

Dulles replied:

"It may be. I think that for many years there has been a prohibition on Jews in Saudi Arabia."

The Secretary told the Senator that while the United States must recognize the fact that Saudi Arabia is an ally, this does not mean that "we approve of all its practices."

Where Does Business Paper Journalism Stand Today?

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. BOLAND. Mr. Speaker, 50 years ago a group of men with high ideals and a devotion to achieving better practices in business papers established what is today the Associated Business Publications. The group's earliest efforts produced a "Code of Ethics" which established the current membership prerequisite for the 162 member-publications of the Associated Business Publications.

In 1956, as a half century earlier, the adult education of businessmen is being constantly extended through reading better grade business magazines. George Westinghouse found ideas in a business paper which helped him develop the air brake. Henry Ford read in a business magazine the first detailed description of the "Kane-Pennington Motor," a revolutionary new gasoline engine. The discovery helped Ford design the new engine for his automobile.

In one of this year's nationwide golden anniversary celebrations, the Associated Business Publications held its regular Washington editorial conference at the Shoreham Hotel on April 12–13. Awards for outstanding editorial achievement were presented to 21 deserving editors and the following address was made by Ralph H. Smith, vice president and editorial director, McGraw-Hill Publishing Co., a pioneer and leader in business paper publishing and a pioneer member of the association.

In this age of radio and television, Mr. Smith's talk on the responsibilities of a responsible business press is interesting to all who must "read and run." It is of even greater value to those who become tomorrow's leaders in business and industry, as well as to others who would like to know how editorial responsibility to the reader is conceived at or near the top. The wisdom of such editors is constantly reflected—monthly, weekly, and daily, in the product of their editorial competence.

Under unanimous consent, I insert this thought-provoking address in the CONGRESSIONAL RECORD:

WHERE DOES BUSINESS PAPER JOURNALISM STAND TODAY?

(Address by Ralph H. Smith, vice president and editorial director, McGraw-Hill Publishing Co.)

Mr. Chairman, honored guests, honored award winners, ladies, and gentlemen, the tentative program of our meeting told me that I was to deliver the principal address at this dinner session. The program was surely tentative. We can now see that the principal business of the session has been completed.

This was the business of honoring those of our group who, during the past year, have made outstanding contributions to our joint effort to serve our readers and to advance the world's work. All that is left for me is to voice, as well as I can, some group reflections that we must have made on the significance of such an occasion.

I am sure that those who have received awards tonight will have been the first to reflect that these honors recognize superb teamwork, as well as fine individual achievement. In the profession of business-publication editor it is particularly true that "no man is an island." They who enter the communications business become centers, as well as sources, of communication. If they are to succeed, they must leave behind the sharp individualism of the poet whose message is so personal that we have to enter into his personality before we can understand him.

I know that some, and I think that all, of tonight's stars are also planets that reflect and focus light from other sources. Such other sources include colleagues who have shared professional know-how. There is the community that starts with the editorial staff and goes on to encompass the whole field of plants, offices, laboratories, bureaus, and people that live by the light that the

business-paper editor turns back on it. The best modern business magazines are galaxies of teamwork.

To the winners, all honor—and the reflection that they honor us and many more than us.

John Donne's reflection that "no man is an island" is of the essence of anything that I could say tonight on where business-paper journalism stands today. There may have been a time when it stood in the pulpit or sat in the professional chair. I once worked for a business journal whose publisher literally built into an industrial structure the businesses for which he saw an opportunity to build a magazine. He almost single-handedly organized the people in these businesses into State, regional, and national associations—and was canny enough to organize their suppliers into matching associations. His publication became the monthly textbook of their technology, which was hardly a technology at all until he gave form and record to their experimental fumblings. He was the precursor of laboratories, of college engineering courses—and inevitably of publishing competition, first paid and then, just inevitably, free-distribution competition.

Sometimes our publishers of today are inclined to mourn the disappearance of that kind of great individualist-editor—for this man started as an editor, as did most of the publishers of his day. But they would have real occasion for mourning if we tried to live back in his day, to publish our magazines as periodical textbooks, to visualize their pages as bearing any resemblance to the archives in which an industry deposits its documented technology, to exercise the monopoly of the preacher's pulpit or the professor's chair. We have too much competition today to be able to afford such nostalgic exercises. The competition has long broken my old friend's monopoly.

The competition to which I refer is not what we usually mean when we talk so much—as we do talk so much—about competition for our readers' time. It is not the competition of television, of other recreational activities, of other forms of reading that are pursued for recreational purposes or that cater to a man's quasi-recreational interest in areas of citizenship that lie outside the world's work through which he makes his major contribution to the world's progress.

I should like to dispose of such intrusions on our readers' time by a reflection that we do not make nearly often enough. Today's readers of business publications are living in an economy that is constantly cutting down the hours of the day's work. It is constantly speeding up their travel between home and work (or, if they are Long Islanders or New Havenites, it is, at least, letting them use their travel-time as reading time). These people are increasingly cosseted at home by labor-saving and time-saving appliances. These prospects for our publications have more time, much more time, than ever men before them had to do anything that interests them.

So far as the competition of television and its equivalent temptations to a man's will are involved, our concern must be to interest him.

My own concern about the strength of such temptations is assuaged by another reflection. What a running head-start we have over all such competition. We deal with subject-matter that, of necessity, lies at the heart of every man's complex of interests. We forward his life's work, out of which come the means to all other satisfactions in life—from indulging in marriage when you are young to financing a hobby when you are old. And yet, my friends, the business press is still in need of, first, realization and, then, intelligent promotion of what this difference in responsibility from all other media should mean in its editorial costs and in advertising rates per thousand satisfied subscribers.

In potentiality the business press stands today in its relation to leisure-hour distractions just where it has always stood—as far ahead as a man's livelihood comes ahead of all his other interests. But that is just a fine ringing statement so long as we expect a reader to lay aside his sophistication when he submits to our demand for a share of his leisure hours. He has been taught by well-paid illusion-builders that he lives in a world of rapid change that makes radio news every hour on the hour. He reads—in The Exurbanites, for instance—that he is served, if not mastered, by experts in organizing words and pictures to get the story out in just the way that his mind will best take it in. He is under heavy persuasion to believe that what they give him has been measured according to its significance and weighed according to its consequences.

This reader of the communications-era will not be patient if we rest a case for dull, disorganized, pedestrian and cheaply financed presentation on the superior importance of our magazines' content and on the danger of oversimplifying it, as his entertainers oversimplify their content. In his own interest, we must avert that danger. In our interest, however, we cannot avert our minds from our need to combine, or to complement, fine engineering and industrial know-how with sheer journalistic know-how. The profession, after all, is editing—communication.

If, in the entertainment and edification world, communication occasionally comes ahead of having something worthwhile to communicate, our own purity must not blind us to the necessity of paying the price of communicating, as well as of finding. It may involve a higher wage-price for talents that are rarer than some business publishers yet realize, but perhaps they have competition that is also unrealized.

The competition that I should like to emphasize tonight may not have been sufficiently realized by any of us. It is not so easy to see as television and its equivalents. But it is far more serious, I believe.

This is the competition of other and new forms of job-education. Men start out in our industries better educated and more sophisticated than when these papers were published and edited by our predecessors. They go to school in their employing companies as never before. The average company investment in ever more elaborated training has immeasurably multiplied. Some of the larger companies conduct what amount to educational institutions, not only for beginners but for higher-ups. Many companies send promising and ambitious men—our best prospects—back to college for all kinds of technical and management courses. Most companies strongly encourage attendance at professional meetings and seminars and promote visits to other plants in their industries. Our advertisers sponsor customer-education programs. (Or sometimes, our free-distribution sisters provide the sponsorship.)

The colleges are now heels over head in our business of communicating work knowledge, not just prework knowledge. If a company takes a defense contract, our friends here in Washington place at its disposal the know-how of other contractors, the findings of Government laboratories, and the research data of such completely new and formidable institutions as the Rand Corp., which is under contract to the Air Force. Incidentally, the airplane, the speed of air travel, has simplified every educational effort made by our readers that takes the form of going and seeing.

Here is the competition that worries me. Our relative monopoly on adult job education has been broken to bits, and our function is changing before our eyes. This is something that we have really got to think about. You know, it sometimes seems that they could almost live without us.

However, there is opportunity here, as well as threat, if we can correctly reappraise the needs of our readers.

The more communication of this kind we have, the more expert reporting we must do for the benefit of those who do not participate in it, notably the men in the smaller companies.

The more technology communicated, the more need of our professional screening to save men throughout industry the time that they would otherwise give to the welder of words. What limit can you place on the demand for editorial competence to weed out the insignificant, to appraise the significant, field by field?

The more news that our man hears on the hour and the half-hour, and the more he is persuaded that he lives in a changing world that is reeking with news of change, the more need he has of an interposing editor whose discrimination between what is news and what is merely new can be completely trusted. But that editor had better know how to play his copy as news. The modern news-oriented timing-conscious reader is no longer interested in ponderous textbooks disguised as journals, or vice versa.

Finally, the more attention one of our readers has to pay to the multiplication of specialized information lying within his own narrow field, the more he must rely on our editorial sense of his need to prepare for the day when seizure of an opportunity for top-management responsibilities and pay will depend upon proof that he is not imprisoned in his specialty.

So I say that there is opportunity here if we are flexible enough.

I see it as opportunity for the business magazine that conceives its first function as one of alerting, rather than of teaching in the outworn, time-ignoring pattern of our days as periodical textbooks for adult education. I see it as opportunity for editors who stop each story with its basic alerting facts and their appraisable consequences. As opportunity for editors who prefer more stories—and more sharply pointed stories—in and around their readers' fields to more details in each story, knowing that a reader persuaded to action will, in any event, do more than read before taking action—and may delegate details to juniors.

I see opportunity for a publisher who really knows how to promote his readers' reliance on his paper to alert them when a new idea had better be looked into—and where; when somebody had better grab a plane, visit another plant, consult a supplier, watch Washington or Stuttgart or Bombay. Opportunity for a publisher to capitalize on his readers' confidence that they can safely skip developments that his pages have skipped. (Parenthetically I suggest to publishers some reflection on the possibility that a few of our free sisters may be luring success because they have the appearance of fast-reading alerting and screening magazines, though they lack the first essential of the substance—which is the independence to alert readers to what is significant and ignore what isn't.)

There is certainly opportunity today for the business magazine that is edited and financed on the theory that its customers are readers first and anything else after that—that what makes any kind of reading easier for any man who is working at reading makes reading easier for a man who, at other times, happens to work at engineering, or management, or selling. We can—and should—promote our enterprises as great service institutions, but what we sell are magazines—reading matter that must excite the reader's interest again each month or each week. Their field-coverage will determine their potential readership, but their

actual readership depends wholly on what each issue does to engage the attention of the reader who has become more sophisticated in this communications era than we sometimes realize. "More spoiled," our predecessors might call it.

I have spoken of what I "see." Perhaps I should more properly speak of what I hear. I hear what I have told you from our research reports and I hear it from our readers, including the rather distinguished ones who participated in that ABP panel in New York a couple of weeks ago and who spoke for a multitude.

If you do not altogether agree with me on this version of where business paper journalism stands today, I feel sure that I have, at least, voiced your conviction that it had better not stand at all. The Jesse H. Neal Awards of this year and of all future years are for those who know that he who runs will have the readers—and the advertisers.

A Courageous Veto Deserves Support

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. KEATING. Mr. Speaker, it has been extremely gratifying to note in the last few days the way in which the Nation's press has applauded the President's veto of the farm bill. The Rochester Democrat and Chronicle is a case in point. Under leave to extend my remarks, I am inserting a fine editorial printed in that paper on April 17, in which the shortcomings of the vetoed bill are pointed out and the integrity and stature of the President are clearly indicated:

A COURAGEOUS VETO DESERVES SUPPORT

The President's veto of the farm bill again demonstrates that he has courage. In his judgment, with which we concur, the bill passed by Congress was unsound, destructive and would further aggravate the economic ills of agriculture.

In such circumstances what other course could a man of integrity be expected to take?

Many who will admire the courage of the President may say, "Sure, he is an honest man, but is he absolutely right? Did he fully consider that some farmers' pocketbooks are thin?"

The President has pointed frequently to the inescapable fact that prices of wheat, cotton and other commodities are depressed by mounting surpluses. There is no chance of prices rising until the pattern is changed. The Government already has 15 billions invested in farm surpluses and reports are that three additional billions will be needed this year. The bill which the President vetoed would have made the surplus problem much worse.

The President wants to help farmers financially. In January he proposed to Congress a soil bank plan under which farmers would be paid for reducing production and surplus stocks. The plan was accepted by Congress. Then the pressure blocs got busy to load the bill with rigid high price supports and numerous other devices to offset any good that might result from the proposals of the President.

Cotton, wheat and other bloc politicians say that all these unsound schemes and raids upon the Public Treasury are necessary bids for the farm vote. It is noticeable that the American Farm Bureau Federation is against the bill. Don J. Wickham of Hector, president of the New York Farm Bureau, wired the President urging a veto. This means that in the main the bill appeals to selfish interests.

Mr. Eisenhower represents the entire country, not some subdivision as do Senators and Congressmen. The pull of local wishes and local greeds is not as strong upon him as it is in the case of the legislators. Still, he has been told that a veto might mean a GOP defeat this fall.

The President stands out as a giant figure against the men who let politics guide their vote on the farm bill. It is our feeling that Mr. Eisenhower's action will stir fresh admiration for him. His veto ratifies the belief of Americans that his integrity stands rock firm.

President's Latest Demonstration of His Interest in People as Whole Will Serve Him Well Next November

EXTENSION OF REMARKS
OF
HON. HOWARD H. BAKER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. BAKER. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include therein the very fine and timely editorial which appeared in the Knoxville Journal, Knoxville, Tenn., April 18, 1956, entitled "President's Latest Demonstration of His Interest in People as Whole Will Serve Him Well Next November":

The man has courage.

Friends and enemies alike will agree this sums up their opinion of President Dwight D. Eisenhower. Most of them held it before he vetoed the Democrat farm bill. More of them hold it now and those who did previously do so now in much greater degree.

"It is a bad bill" the President said with great firmness and then proceeded to describe it as one that would work to the injury of farmer and nonfarmer. He deplored the efforts to get him to sign it on the ground of political expediency and reminded the people that he represents all of them for the good of the Nation as a whole.

Undoubtedly the President's action caught some of the more ardent Democrat supporters of the measure by surprise. They did not believe he would have the courage to do what he did in an election year. But beyond that he put the opposition in a difficult position. He proposed immediate help for the farmer by raising price supports on five basic crops and he called upon Congress to enact as quickly as possible a soil bank measure under which farmers would be able to draw benefits up to $500 million this season.

The hot poker is now back in the hands of the Democrats.

It has been a part of the Democrat election year strategy to fashion in the farm bill a legislative creature which they could present to the farmer as a lure for votes which they had obtained against the wishes of the White House. They proposed to say to the farmer: "Here is something we have brought you at great risk and trouble. The President didn't want you to have it but we have overcome him and are happy to present it to you."

But that is not the picture now. The President not only vetoed the bill. He announced what the administration will do and he outlined a job for Congress to do, also. And any failure of Congress to do what he has asked must lie at the door of the Democrats since they are the majority party on the legislative side of Washington.

Thus, from the political side of the picture—and that is a side that can not be ignored during an election year—the Democrats have been placed on the defensive. And if they do what the President has asked the facts remain that it was at his suggestion. If they fail to act they are open to the charge of having sulked in their tents rather than carry out his recommendations simply because they did not want to implement the program of a Republican President.

The dilemma in which the Democrats find themselves at this time is further complicated—for them at least—by the difficulty of meeting the Republican chant of "peace and prosperity." They know that many farmers will reckon it a blessing if they have, in the face of reduced income, their sons safe at home instead of on Korean battlefields.

And millions of Americans are old enough to recall that under President Eisenhower the Nation is having, for the first time in two decades, 4 years of peace and prosperity. Such a condition has not existed since the late 1920's. It did not exist during the administrations of Franklin D. Roosevelt and Harry S. Truman. True, a wartime prosperity was achieved but the greatest prosperity this Nation, or any nation, has known in times of peace, is that which we are enjoying now.

This condition, plus the latest and most convincing instance the President has given that he places the welfare of the people of the United States above and beyond all political considerations, gives him a place in the hearts of his countrymen that will not be forgotten, certainly not at the ballot boxes next November.

Problems of the Family-Size Farm

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following letter dated April 9 which I have received from one of my farmer-constituents in regard to the current agricultural situation, especially as it applies to the family-size farm:

MORRICE, MICH., *April 9, 1956.*

DEAR SIR: The purpose of this letter is not for any favor but to give some personal views of one who seems to be of a vanishing group in our society of the human race in the United States. I am speaking of the family-type farm, or business. The disappearance is being forced upon us so fast that one wonders what is to become of the small individual who once was considered the backbone of the Nation and made it the greatest on earth.

According to the Constitution we are given freedom of religion, life, liberty, and the pursuit of happiness. I believe this gives us the right to work as an individual.

It seems to me that when the larger businesses merge and freeze out or absorb the little independent business, be it manufacturing, processing, mining, farming, bank-

ing, or even the public schools, that we the people, are losing our constitutional rights.

Our school systems are being forced to merge by State dictates for doubtful benefits. Greater concentration leads to gangs, cliques, and juvenile delinquency, for the ones who need individual guidance or understanding are lost in the mob or mass. It is much easier for the weak to follow the path of least resistance than to seek help which they sometimes need.

We know that improvement in the school system is greatly needed to better utilize the facilities for our ever-increasing population. We are told that the larger school systems and districts afford our youth more opportunities, but there is a question in my mind as to that. For example, most of our schools encourage athletics for the sportsmanship and character-building influence which is exerted on the youth. Most of the coaches and leaders are concerned with only the varsity teams, and so the larger the school the smaller the percentage who can become team members. So it would seem that the smaller schools would be able to give more pupils more opportunities to some extent. The same is true of many activities such as music, debating, and drama, etc. Even in the classroom of many, the individual who needs the extra help or attention is deprived of such.

A parallel could be drawn between the schools and our way of life today. Farming is becoming so complicated as is other business that we just can't begin over again. At the age of 40, man is too old to work, yet too young to retire. The factories and most other fields of employment don't want us unless there is a war contract to get out. The population has increased and life expectancy has raised, but social security (welfare) doesn't benefit one until the age of 65. Where and what will be done with those 25 years of the plain average man who still has lots of get up and go if only given the chance?

I could go on and on about this so-called progress of ignoring the litle man irrespective of political parties, for both are at fault. History repeats itself, for there is usually a rise to power, then leadership, then the downgrade of notions, companies, or great individuals as they at last ignore the little man completely. Oh, yes; there have been attempts to break monopolies, chains, cooperatives and unions but still they get larger and the smaller get weaker and are absorbed or extinguished.

This is happening in our government as the township or village offices are being absorbed by centralized county or managerial officers, and again the little fellow's voice is not heard. Is this progress? I wonder. Why is it that the politician or executive usually release for the press a boast that they came from the farm, small town, one-room school, or across the ocean as a penniless immigrant? Then they go on to say how they were helped by being one of the common little men. Then with the next breath these same people contrive to take these "old-fashioned ways" from us.

The other Sunday I heard and watched the debate between Mr. Hall of the Republican Party and Mr. Butler of the Democratic Party. Of course the whole thing was political but they were tossing the farm issue about as bait for our votes. They were bidding for the farm vote by claiming that their respective parties were really more concerned with the dear simple farmer than the other. Each mentioned parity, price support, and soil banks, but we simple people still call all of this "dole." We don't want to be on a public dole, we still have our pride. We are still individuals with an aim in life.

Being a farmer, I am interested in everything which concerns us, but was dismayed as I read what one writer had to say. "The small or family type farm is on the way out and the sooner they realize it the sooner this farm situation can be solved." He then stated several sound reasons why the trend was to larger farms and progress but he could not explain what was to become of the many so-called "strong back but weak-minded" farmers or their families.

I know that we are of a minority group, but we have a few wanted votes, they say 90 to 100 percent parity, the other a soil bank and payments. They are both expensive subsidies and a lot of us farmers of the family type are, I guess, old fashioned and it gets our ire aroused when the radio and press play it up about how much the farmer will be supported. It sounds too much like welfare or a dole system. Have we become parasites on this great country?

This "dole" does not nearly make up for his living and upkeep when his equipment must be replaced for efficient use and our crop rotations and fertility maintained.

For instance our family-type farm of 160 acres, of which 120 are now tillable and another 10 or 20 could be used if need be, has a 19-acre wheat allotment. It was cut from a 3-year average of 3 or more years ago of 33 acres. Our corn allotment is of 13 acres cut from a 30-acre average. We plant about 20 acres of oats for feed for our 6 to 8 milk cows, and our 35 head of sheep. The balance of the cropland is used for hay or pasture which due to our rotation and fertilizing and other good accepted farm practices have not only maintained the fertility but given us enough hay that we can sell it to make ends meet. We don't believe this a good policy to cut all our hay when the fertility is to be preserved. The clovers and some other hay crops store up nitrogen which the soil needs and so should not be destroyed every year.

If we keep more livestock we have to have more grain and the appeal board has refused this request because they had a figure of .702 for corn from our past crop history and so they cut our acreage. We wouldn't mind so much because we did maintain a good crop, hay, and animal balance during the war years and stayed home on the farm and did the best we knew how to get the most yield and still preserve our soil we are now penalized. For it seems that those who worked in the factories and farmed nights and weekends to put all of their land into cash crops with little or no livestock have helped create these present surpluses. Their acreage has been cut but still they have such high allotments that by sowing fertilizer and having an outside income they still do quite well on the Government "dole." They are the ones who will benefit in this area from the soil-bank plan. What benefit will we receive when more of our 52 acres of allotted cropland has been taken from tillage. Remember we have 120 acres of work land, but the Government says to work only 52 of it. We could convert to the raising of soy beans but that means new or different equipment which we can't afford and there is a rumor that acreage might be curtailed on them. We have not any recent crop history on beans of any kind so we could not be allowed to grow them.

We are in a squeeze and are also past 40. My father is 78 years old, but still active, he will soon receive social security. I am 48 years old. Outside labor is hard to find for an added income for employers want men under 40 years of age. We can't afford the $3,000 for new tractors or $2,000 for automobiles or combines to replace our old equipment. That's why I say the little smalltime family unit is going, being forced out by man's, not nature's, dictates.

We raise as good or better crops than the average because we have kept up with good farming practices by reading approved agricultural literature. This has meant the use of good quality seed, rotations and balanced livestock and crop production which is now so much out of balance that we wonder if this is progress we are paying for.

There are many of us, so we aren't alone as one individual. Our problems are complex, we don't know the answers, but perhaps this gives you an insight into them. So with a glimpse of some of the people you represent I hope you can better reach a fair judgement for the problems of all.

Thanks for your letter telling of your work in Congress and thanks for coming back to your district to see how these people you represent are affected by what you decide.

As ever,

FRANK W. MORTIMORE.

Wanted: A New Look at Foreign Policy

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, the editors of the Scripps-Howard newspapers urge that American foreign policy be thoroughly reexamined. I agree that it should be.

In the Washington Daily News of Wednesday, April 18, there appeared a most interesting article based upon a 2-day conference of 19 editors of Scripps-Howard newspapers at which the principal subject was our foreign policy.

Under leave to extend my remarks, I am including the article in question:

UNITED STATES FOREIGN POLICY IS IN URGENT NEED OF REEXAMINATION

Editors of 19 Scripps-Howard newspapers ended a 2-day conference last night with agreement that American foreign policy urgently needs a thorough reexamination.

Deeds not just words are also needed at home to boost American prestige abroad and to equip the country for the Bolshevik challenge.

The editors heard reports from Scripps-Howard Foreign Editors Ludwell Denny, now in Europe, William Philip Simms, retired foreign editor, and from members of the Washington Bureau of the Scripps-Howard newspapers. They also received from M. H. Trytten of the National Research Council a report on the serious problems in American education, especially the shortage of scientists and engineers.

The editors agreed with Mr. Denny and Mr. Simms that America is losing the cold war; that patching up old foreign policies leads only to new crises; that many of the crises are beyond our control, but are compounded, as Mr. Denny reported, "by putting luxury above security at home and by improvised, contradictory and naive policies abroad."

The consensus was that easy solutions are not in sight—that it will be a long, long haul where the strong and diligent will win over the weak and complacent.

But there was agreement that many problems at home, if tackled wisely and with determination, will better equip the country for that struggle both abroad and at home. Among such problems reported to the editors, were:

Education: Strenuous efforts should be made in local communities to raise the general level of the quality of education in primary and secondary schools if we are to compete with Soviet Russia.

Scientists and engineers: We are losing this race with the Soviets who are engaged in a

crash program. More American youngsters with ability must be stimulated and guided into these careers if we are not to run second best to the Soviets in the rapidly developing era of peaceful uses of atomic energy—especially power. We need more scientists and technicians for point 4 programs abroad.

Physical fitness: Alarming numbers of American youth are no table to pass examinations for military service. The Russians won the winter Olympic games and are the favorites with their professionals to win the summer games. If they do, it will be a cold war victory of immediate propaganda value.

Desegregation: Ability to cope with this problem, without resort to extremism in any direction, will be a major test of the United States in the eyes of many abroad.

Domestic politics: The degree which politicians can refrain from using foreign policy issues, such as the Arab-Israeli dispute, as vote catchers will be a measure of America's maturity as a world leader.

Propaganda: Boondoggling in our information services does the United States more harm than good abroad.

Foreign aid: Present programs, designed for long past situations, are out of date.

Mr. Simms urged a complete reappraisal of our foreign and defense policies. Of Secretary of State John Foster Dulles' recent statement that it is a healthy sign other nations criticize us, Mr. Simms said:

"I couldn't disagree more. To me, at least, it is a most ominous sign—a sign that our foreign affairs are mighty sick."

FAILING

Mr. Denny reported that the United States was failing to fulfill the great responsibilities it has inherited since the war—"not for lack of good intentions; rather, our failure is from misunderstanding the nature of the world crisis and misjudging its duration." A reappraised policy, he said, must be based on these obvious, if distasteful, facts:

"This global crisis cannot be cured by putting patches on the prewar world. New worlds are in the making.

"Any speedy cure is quackery. The American idea that we can cure everything with a few billion aid dollars, a few Madison Avenue advertising stunts, a few divisions, and bomber bases abroad—all without sacrific of luxury living at home—is insane.

"Our democracy is not exportable. Democracy is indigenous, or it is nothing. We can help others achieve it, but not by trying to make our brand fit divergent heritages and different conditions.

"We cannot buy allies. Military aid should be concentrated on genuine allies—those determined to fight for their own freedom. Except for charity and the minor nuisance value of subsidies, economic aid should be limited to point 4 technical assistance, and foreign financing should be left to the World Bank and the Export-Import Bank.

"The world is not to blame for communism but for chaos. A united Europe and a healthy Middle East could not be endangered by Soviet infiltration, or a strong Asia by Chinese expansion.

"Finally, in our long overdue reappraisal of United States foreign policy, let us remember the simplest fact of all: America is not God. There is a limit to our capacity and our responsibility. We cannot run the world. We cannot alone set it right.

"The best we can do is to preserve our own strength in a weak world, sharing where our kind of help is wanted, preserve our sanity in a mad world which may profit by our successful example, preserve our faith in human decency in a dark world which needs that more than all our money, munitions, and manifestos.

"We can defeat ourselves by our fallacy of easy solutions and quick victory, by the delusion that we have all the answers—or could make others accept them if we had.

"The world is in chaotic transition from an old western civilization to a new global nuclear age whose nature is unknown. We, in strength and in patience, must keep the faith and make the long, long fight."

The Hodgepodge Farm Bill

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. SCUDDER. Mr. Speaker, the city of Petaluma, Calif., is known as the Egg Basket of the World because of its prominence as a major poultry area of the United States.

This important agricultural commodity contributes largely to the economy of the First Congressional District, which it is my honor to represent.

Poultrymen are displeased. They have a right to be. They are caught in a squeeze which is not of their making and over which they have little or no control. They receive no supports of any kind but, on the other hand, are forced to pay prices for feed grains which are maintained at a high level under the system of rigid, high-level price supports on the basic crops.

I keep in close contact with this problem through meetings and correspondence with poultry raisers. They have expressed to me their opposition to the return to rigid price supports as contained in the farm bill vetoed by the President last Monday. I voted to recommit the bill, and voted against its passage. I also voted to sustain the President's veto because this hodgepodge bill is not a good one and most certainly clouds the attempts of the administration to develop a workable and feasible answer to the farm problem.

The Petaluma Argus-Courier carried a significant and apropos editorial on the farm bill in its issue of April 10, 1956. Entitled "Conference Farm Bill Is Worse Than None at All," it is an expression of opinion worthy of attention, and I desire to include it with my own remarks, as follows:

During the Easter recess the Senate-House conference committee on the controversial farm bill worked overtime, and finally came up with a farm bill that now goes to the two Houses for their approval or disapproval. In the meantime the President and his advisers are considering the hodgepodge bill that has resulted from an attempt to compromise the differences between the two bills as originally passed by the Senate and the House.

The farm bill seems to be more political than realistic, and it is a wonder that anyone considers it seriously. It contains just about every panacea that has been offered to settle the farm problem, including what the administration wants as well as what it doesn't want. It is not a serious attempt to resolve the farm question. It is frankly a plea for votes. Although it is difficult to see how any politician could consider that the farmers of the Nation would be pleased with the resulting bill and would therefore be inclined to vote for one party or the other in November.

The farm bill includes the administration-backed $1.2 billion "soil bank," but it also includes the administration-opposed 90-percent price supports for basic crops and mandatory rigid supports for feed grains. Rigid high supports would again encourage overproduction and simply aggravate our present situation. Temporarily, of course, they would mean higher income for the farmer, but at the expense of the general taxpayer.

The President wants a good farm bill, and he wants it promptly. He has even said that he might accept a bill with some poor provisions, if it has the good provisions he deems necessary. The question now is whether the bill contains enough of those good provisions to offset the admittedly bad provisions. And if the soil bank is not put into effect soon, it will be of no use this year—so there is one of the good provisions that soon may be useless.

That there is some farm dissatisfaction with the present administration is admitted. But whether this dissatisfaction will grow into a revolt remains to be seen. The farmer, himself, is about as confused as the rest of us on what should be done to solve the farm problem. And he probably is going to vote for the party that he feels is doing the best job possible on a solution. But he is not going to be influenced too much by an obvious political maneuver, which the present farm bill is. Nor is he going to vote necessarily with a farm bloc. The farmer is an individualisit and he is influenced by many factors other than his particular economic situation.

If the farm bill should be vetoed, then the farmer would continue to live and work under the present farm situation. And it might well be that the President would veto the bill on the ground that the bill is worse than none at all.

One for the Books

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. ASHLEY. Mr. Speaker, I should like to call the attention of every Member of the House to the excellent editorial in the Toledo Blade of April 11 which asks for passage of the library service bill. Today the Rules Committee granted a ruling for the library services bill, and I earnestly hope that when this measure comes before the House for a vote it will be acted upon favorably so that the important program it contains can be begun. Children from every area in the United States deserve the opportunity of borrowing from an adequately stock library.

The editorial follows:

ONE FOR THE BOOKS

Caught in the legislative jam of big, politicaly significant bills confronting the secon dsession of the 84th Congress is a small bill of fine purpose. If there's any politics connected with it, there oughtn't to be. If it's a giveaway, it's of something besides money.

We refer to the library services bill, backed by the American Library Association, and designed to help bring books within the reach of many Americans on farms and in small

towns not presently served by libraries or bookmobilies.

Intended as a helpful prod to neglectful States and localities which ought to do this job on their own, it limits the cost to $7.5 million annualy for 5 years, with funds to be matched by States on a rural population-per capital wealth formula. And so there can be no talk of sinister Federal controls over libraries, it provides that the States have complete jurisdiction over their individual programs.

Action on little bills helps make the legislative record of a Congress, too. Passage of this one won't win the farm vote for anyone; it will bestow a benefit on rural folk in one field—learning—which is unlikely to pile up an unmanageable surplus.

General Agreement on Tariffs and Trade

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mrs. KEE. Mr. Speaker, please permit me to insert in the RECORD the following two paragraphs from a news story dated Geneva, Switzerland, April 12:

The secret 26-nation negotiations to reduce tariffs, which began in January, now have entered a critical stage, it was learned today.

The 500 delegates are trying to finish the discussions by the end of this month. The negotiations are being carried out under auspices of GATT—the General Agreement on Tariffs and Trade.

Every Member of Congress should give serious thought to the implications contained in this report. I find it extremely disturbing that policies which can have a heavy impact upon the working people of our country are being made in secret session by a conference in which America has a very small voice. To me, what is taking place in Geneva should serve as a warning against this country's committing tariff and trade policies to the quicksand of an international pool capable of submerging entirely the interests of United States citizens. This warning comes at a most appropriate time, in view of the fact that H. R. 5550, the bill to provide for the inextricable involvement of this country in these important matters, is soon to be considered by the House.

I ask my colleagues to think back to the constitutionally delegated functions of this legislative body as regards foreign commerce. Under normal procedure, Congress decides how much of a foreign commodity is to be admitted into our markets, and what the assessed tariffs should be. These decisions are not made in secret meetings. The people of our land would not permit any such malpractice to take place in our Capitol. Our faithful corps of newspapermen assigned to relaying to the reading public news of what takes place in the House and Senate would justifiably assail any attempt of Members of Congress to conduct secret meetings on any such important issue.

How then, Mr. Speaker, are the actions of the GATT delegates to be explained? In view of the fact that what is taking place in Geneva is the outcome of the magnanimity—or should I say the neglect?—of Congress in permitting the executive department to assume powers that are not constitutionally assigned to it, Members of Congress should be vitally concerned about those secret meetings in Geneva. Who, may I ask, has consented to a program whereby tariff concession are to be effected to the exclusion of public information? What course does Congress assume if agreements inimical to the best interest of our country are negotiated at Geneva? So far as can be determined, Congress would be forced to take ex post facto action in an attempt to negate the effects of a pact made under the auspices of—presumably—an official body of the executive department.

In order to preclude the necessity for any such unpleasant duties—with their subsequent diplomatic complications—Congress must forbid those delegates, who travel around the world concocting unauthorized trade tables with those nations who are looking for a place to unload products manufactured by underpaid workers, from further participation in such conferences. The first step to bring about such an objective is to refuse to allow the United States to enter into the OTC. From there, Congress can and must prepare and enact suitable legislation to undo the damaging consequences of action already committed by the unauthorized agents of the executive department in foreign commerce.

Mr. Speaker, representatives of coal-producing areas are often accused of being concerned about the foreign trade situation because of its impact on the coal industry and its workers. We do not resent such accusation. I, for one, have seen and talked with members of scores of mining families whose very subsistence has been threatened by excessive imports of residual oil.

Residents of mining communities—though for the most part they may be many miles distant from ports of entry to this Nation's markets—are fully cognizant of the reasons for the many mine shutdowns that occurred in postwar years. They know full well that customers who had been buying the product of their efforts shifted to foreign oil because it could be obtaind on a comparatively cheaper basis than an American-produced fuel. When we protested this situation to responsible officials in Washington, members of the State Department, who now want to assume complete responsibility for trade negotiations through the medium of the OTC, were the first witnesses to appear before Congress in an effort to dispute the legitimate claims of our people. We do not wish to be subjected to the further whims of this group which has shown time after time that conditions in mining communities should not be taken into consideration when international trade pacts are being negotiated.

Yes, it is because of what might happen to my congressional district that I ask Congress today to turn down those lofty executive department appeals for United States membership in OTC. But, to you Members outside the coal-producing States, let me remind you once again of that news story from Switzerland. Arrangements to reduce tariffs are being made in secret session. Can any Member of Congress consent to this procedure?

Gary, Ind., Golden Jubilee

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. MADDEN. Mr. Speaker, 1956 marks the 50th anniversary of the establishment and incorporation of the city of Gary, Ind., and also the starting of the steel mills on the south shore of Lake Michigan by the United States Steel Corp.

A month ago the board of directors of the United States Steel Corp. were honored at a banquet in the city of Gary, commemorating the 50th anniversary of Gary, Ind., now a city of 160,000, the youngest, largest metropolitan city in the Nation.

Last evening in Gary, Ind., the golden jubilee committee entertained and honored the leaders and members of the United Steel Workers Union, and all the workers who have contributed to the phenomenal growth of the steel industry and the city of Gary.

The principal address at this gathering was delivered by David J. McDonald, president of the United Steel Workers of America. His address follows:

ADDRESS OF DAVID J. MCDONALD BEFORE GARY, IND., GOLDEN JUBILEE ORGANIZATION, APRIL 18, 1956

This is a truly inspiring occasion. The 50th anniversary of your miracle city is here. Tonight, the great pride and sense of accomplishment which is yours must have no bounds. And I am deeply grateful that you have asked me and my fellow officers to share this historic moment with you.

Only a half-century ago, your city was nothing more than a dream and a hope. The first surveyors came here to this sandy shore of Lake Michigan and began to plan your city. That was exactly 50 years from this day. Had a modern-day Rip Van Winkle gone to sleep at that time, what a tremendous reawakening he would have today. What a marvelous change would greet him.

Risen over the once barren wastes of sandy prairie, is a thriving metropolis of 155,000 men, women, and children. Its streets and boulevards are dotted with fine, substantial homes. Throughout the community are splendid churches of every denomination. Beautiful parks and recreational areas are at the service of the people. An extensive system of schools and other institutions of learning give indication of the many cultural opportunities that are available.

Here in your prosperous business community, the visitor finds a wonderland of shops and stores filled with a limitless array of goods the people need and want. And beyond that, just about every imaginable profession is represented in the many different types of services that are offered.

Not the least part of your great growth and development are the many factories and plants which not only breathe economic life into the community but also contribute so much to the wealth of our Nation.

Yes, yours is truly a miracle city. And we of the United Steelworkers of America salute you as you pause to observe this important milestone in your miraculous history.

Others are more qualified than I to extol the virtues of your city fathers who had the vision and foresight and the determination to build and expand the city of Gary. You should learn much of this as you proceed with the celebration of your community birthday.

There are those who can also speak with more authority than I about the civic contributions of your industrial, business and professional leaders. They certainly deserve full recognition for their part in making Gary what it is today.

STEELWORKERS' ECONOMY

What I would like to discuss with you tonight is something with which I am a little more familiar—the role that steelworkers play in the social and economic life of Gary and how they might possibly be of even greater service to you as your great community looks ahead toward a brighter future.

Thirty thousand steelworkers of all faiths, creeds, races and nationalities man those great stretches of busy, throbbing mills along your lake shore. By adding their labor, their skills and craftsmanship to the ingenious know-how of management, does it not seem reasonable that they too have helped make Gary become an outstanding steel center of the world? Are they and their families not an inetgral and useful segment of your city's greatest asset—its people?

I am sure you would answer with an emphatic "Yes" because the recognition you have accorded steelworkers at this magnificent affair is of itself an indication of their acceptance in your community. You have discovered that a union can be a valuable ally in elevating community standards. With admirable insight, you have swept away antiquated prejudices and welcomed with open arms the support and cooperation that labor might give.

You are the richer for it and I am sure that other communities, other groups, will profit by your example. If they but look to Gary, they will find impressive evidence that teamwork between labor, management, and Government does pay big dividends.

STEELWORKERS' UNION

The steelworkers' union was organized in Gary about 20 years ago for some very fundamental reasons. There was great need to raise the pitifully low wages and to improve the conditions of work. This need was apparent to more than just the steelworkers who bore the brunt of these injustices. Many of the townspeople, businessmen, and clergymen, were also sympathetic to the idea. They knew that happy, well-paid workers make for a prosperous and economically healthy community.

How well has our union succeeded in this respect? Please examine the record. Prior to 1936, when the steelworkers' organizing committee was just an idea, the common labor rate in the mills was 47 cents an hour. Today the rate is $1.74½ per hour. Before the union came, average hourly earnings were only 66 cents. Now they are about $2.45 per hour.

The high wages which our union has successfully negotiated for Gary steelworkers have done more than raise the social level of the individual. His increased income has helped sustain the churches and the schools and pay the taxes for the maintenance of the Government. This helps the community generally and is of direct benefit to numerous business and cultural institutions, as well as the workers.

A living wage, which our union has consistently sought, is the lifeblood of the community. But the union does more than pump new consumer purchasing power into the economy; it has brought about many new benefits that are real and meaningful to the entire populace.

STEELWORKERS' WELFARE

A sick or injured steelworker was once a charge against the community. So was the steelworker who had given his best years to industry and then found himself too old to work. These fellow citizens were once serious liabilities who often depended on public charities for help and sustenance.

The steelworker and his family are today protected with life, accident, health, medical, surgical, and hospital insurance which is guaranteed in the union contract. When he gets too old to work, a decent pension is waiting for him. He is not a drain on the resources of the community and can maintain his self-respect without becoming a public charge.

There are other equally valid instances of how improved conditions of work have redounded to the benefit of the community. Clean, modern, safe, and healthy places of work; grievance procedures which minimize disputes and establish stability; systems of evaluating job rates to assure every worker equitable earnings; paid vacations and holidays to give steelworkers more leisure time. These and many more in a very real sense provide an infinitely better way of life that enriches the whole community.

But perhaps most important of all is the human dignity that the union has won for the steelworker. He has achieved recognition and status. At last he is a full-fledged citizen in the industrial order that determines the economic well being of not only himself but his family. Now, he has a rightful place in the community and can exercise his citizenship along with other important segments of the population. He is not merely a clock number, but a human being whose role in society is fully accepted.

The Gary members of our union have a high regard for the success and welfare of their community because they feel deeply they are an important factor in its destiny. They are sensibly aware of their rights, but also conscious of the responsibilities that go with those rights.

STEELWORKERS' COMMUNITY LIFE

Consequently, Gary steelworkers are most anxious to be of service to their friends and neighbors in the community. They have championed the cause of the common man in all walks of life. They have sought to improve conditions at all levels and stand ready and willing to cooperate in all city-wide efforts to make Gary a better place in which to live and raise children.

A shining example of the new responsibility undertaken by steelworkers can be found in the annual Community Chest campaigns. In 1954, over 86 percent of the steelworkers contributed financially to the chest drive. Their total donations amounted to almost half the sum raised by the entire Gary community. During the 1955 drive, steelworkers participated even more generously and the chest's goal of $498,924 has been exceeded by nearly $50 thousand.

Justifiable pride is due Gary steelworkers for the national recognition they achieved in cooperating with management and others in the chest campaigns. You have conferred a signal honor on a steelworker when you chose Orval Kincaid, subdistrict director of our organization, as the president of the Gary Community Chest for the past 2 years. Every union official in Gary, year after year, has plunged into the important task of raising funds for the chest. This is as it should be.

I was happy to learn more recently that members of our union were instrumental in still another great forward step that Gary is taking—the creation of a united fund. Your city is among the first in the Midwest to consolidate its fund-raising activities so that the generosity of its citizens can be expressed in a single, all-out effort that will meet the entire needs of the community. This is highly commendable.

Since 1948 the Gary Community Services Committee has operated as an important arm of the United Steelworkers. It has been of tremendous help in acquainting union members and their families with health and welfare services and other civic agencies in the community. Through their knowledge and understanding, the members of this committee have been able to help hundreds of persons with all sorts of unfortunate problems.

STEELWORKER CIVIC LIFE

Under our democratic system, everyone recognizes the importance of exercising the right of franchise. In this area the Gary steelworkers have done much to encourage increased interest in local, State, and national affairs. The percentage of registered voters has been much higher, thanks to major efforts in this direction. We firmly believe that good citizenship demands full participation in all elections and I am sure that everyone here agrees with that objective.

Far and beyond these group programs, the steelworkers have been of help to the community in still another area. They have responded admirably when called upon to assume responsibility in many civic endeavors. Members of the United Steelworkers serve on many public agencies, on many different boards, and on civic committees of various kinds. They serve gladly and willingly with but one thought in mind; to help the community.

Now, what about the days ahead of us. What challenges are there in store for a young and vigorous community such as yours?

ST. LAWRENCE SEAWAY

We, of the United Steelworkers of America, see only the brightest of futures for Gary. You are already one of the great steel centers of the world. The proposed expansion of steel facilities, added to your tremendous natural resources, is indication enough that you will not only retain this position, but strengthen it considerably.

Within the next few years, the deep-sea channel of the St. Lawrence Seaway will have been completed, opening up the way for great inland harbors which will serve the world. Gary should become an important stopping point in this vast new system of international trade. You must look ahead to even greater expansion of your industrial facilities and provide for the many new opportunities you will have in serving more foreign markets.

You will readily see the need for more housing, more schools, better recreational facilities, bigger hospitals, and wider community and business facilities of all kinds to accommodate a growing population. This is one of your great challenges.

As you prepare to meet this challenge you will find members of the United Steelworkers of America at your side, working with you, in the common objective of building an ever greater city. We know that what is good for the community is also good for labor and we recognize that our interests are identical with the interests of others.

The people of Gary, want progress and welcome it. I am sure, however, that you are not interested in progress at the expense of the people. And it is in this respect that I think we, as a union, can be of tremendous service.

Insofar as steelworkers are concerned, we intend to see that their labor is rewarded to the degree that they can continue being a happy, industrious, religious and cultural group that you know them to be. This calls for an improvement in their living standards and a fair share of the good things in life.

STEELWORKERS INCREASED PAY

We expect to get substantial increases in pay. And, as I pointed out earlier, this will benefit more than the individual who takes it home in his pay envelope. The businessmen at this gathering I am sure can quickly understand and appreciate what this additional purchasing power can mean to the community.

We have high hopes of securing for Gary steelworkers and other employees in the steel industry what we call supplemental unemployment benefits. Nothing can more quickly upset the economy of a growing community than a few hundred unemployed workers. A jobless worker must still eat, pay rent and utility bills. His kids must continue their lives at home, in school or at play. Unemployment insurance checks in Indiana, as in all other States, hardly begin to meet the ordinary living expense of the man thrown out of a job. It is our plan to negotiate agreements under which this limited jobless aid will be supplemented by additional payments from a fund created for that purpose. You will readily see how this will do much to stabilize employment and strengthen your local economy.

STEELWORKERS WORK HOURS

Another injustice which we soon hope to correct also concerns the community. As you know, steelworkers in many cases have had to forego community activities, church services and many other aspects of a normal life because of required work on Saturdays and Sundays. We think the time has come to establish a regular 5-day work week. Monday through Friday, such as is enjoyed by the vast majority of other Americans. We are confident that industry can adjust these work schedules to give more steelworkers the privilege of spending their weekends with their families, their friends, their neighbors and their God.

We see room for improving the insurance benefits of steelworkers so that these citizens in your midst, together with their families, can enjoy an even healthier and happier life.

These are merely some of the things we are thinking about. In the attainment of these goals, I submit that we deserve the sympathetic cooperation of all citizens as a matter of enlightened self-interest. So we welcome your interest and your support.

In closing, I want to assure you of our great ambition and determination to do all in our power to secure Gary's future. We stand ready to help because we know that your success will be shared by every steelworker and his family.

It is going to take much pooling of all your community resources to make the next 50 years even better. This calls for the joint collaboration of many hands and minds in the common task. Business, management, government, and labor must work together. Each has an important stake in Gary's future.

I wish you well in your dramatic effort to build a city second to none. Because of your compassion for the people, whose well-being you put above all else, you are doing God's work. You must succeed. You will succeed.

Thank you.

Piercing the Iron Curtain by Rule of Law

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 19, 1956

Mr. HAYS of Arkansas. Mr. Speaker, the International Commission of Jurists has been formed to defend the basic tenets of law upon which the civilized world is based. This organization is also designed to investigate and denounce the wholesale destruction of these principles. We feel the need to pierce the Iron Curtain through emphasis on the rule of law. There is some reason for hope that, should the forms of law be followed in Sovietized regimes, the humanitarian foundation of law would gradually become a powerful force against totalitarianism. We of the free world must look to this principal beacon of the ideal of individual dignity and worth, regardless of the political system under which people reside. A very important meeting of the International Congress of Jurists was convened by the international commission in June of 1955 at Athens, Greece. At this meeting, the enslavement of the law in Communist lands was unanimously condemned, and the Congress also formulated a brief, simple jurists' creed as follows:

ACT OF ATHENS

We, free jurists from 48 countries, assembled in Athens at the invitation of the International Commission of Jurists, being devoted to the rule of law which springs from the rights of the individual developed through history in the age-old struggle of mankind for freedom; which rights include freedom of speech, press, worship, assembly and association, and the right to free elections to the end that laws are enacted by the duly elected representatives of the people and afford equal protection to all.

Being concerned by the disregard of the rule of law in various parts of the world, and being convinced that the maintenance of the fundamental principles of justice is essential to a lasting peace throughout the world, do solemnly declare that:

1. The state is subject to the law.

2. Governments should respect the rights of the individual under the rule of law and provide effective means for their enforcement.

3. Judges should be guided by the rule of law, protect and enforce it without fear or favor and resist any encroachments by governments or political parties on their independence as judges.

4. Lawyers of the world should preserve the independence of their profession, assert the rights of the individual under the rule of law and insist that every accused is accorded a fair trial.

And we call upon all judges and lawyers to observe these principles and request the International Commission of Jurists to dedicate itself to the universal acceptance of these principles and expose and denounce all violations of the rule of law.

Socialism Via Radio Free Europe

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 11, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, Mr. John B. Crane is an outstanding foreign news correspondent. In an article which appeared in the Kenosha (Wis.) Evening News on April 4 he called attention to the fact that while we are fighting communism in the Iron Curtain countries, Radio Free Europe advocates state socialism in opposition to the free-enterprise system. Our American economy is based upon individual initiative. The people behind Radio Free Europe are ignoring this basic principle as they oppose communism abroad. It is well to remember that soicalism is communism with a slow-burning fuse, and if our system is to be preserved we must resist communism in any form in which it appears. The article in question follows:

SOCIALISM VIA RADIO FREE EUROPE

(By Dr. John B. Crane)

In fighting communism in the Iron Curtain countries of Europe, Radio Free Europe preaches socialism and never says a word in favor of free private enterprise and the American system of individual initiative.

This is only one of several serious charges leveled against Radio Free Europe (RFE) by Jiri Brada, prominent Czechoslovakian refugee journalist. RFE, a quasi-private psychological warfare outfit, broadcasts its propaganda by radio to Iron Curtain countries 18 hours a day from its studios in Frankfurt and Munich, Germany.

Brada's charges are printed in detail, with much substantiating evidence, in three long articles which have just appeared in the January, February, and March issues of Facts Forum News.

Not only does RFE follow a definitely leftist line in its radio broadcasts, but many of its personnel, especially those employed in the Czechoslovakian division, are either Communists or pro-Communists, Brada maintains, and he proceeds to name names and cite cases.

Within the past year no less than eight Czech employees of RFE have redefected to their homeland and are actively cooperating with the Communists in Prague, private Czechoslovakian sources have just informed me. Among the eight are Antonin Kucera, Karel Foltys, and Mrs. Marie Dvorakova.

When I made a tour of RFE's facilities in Munich some time ago and inspected their plant and conferred with their director and other leaders, I was informed that all personnel were carefully screened and was assured there were no Communists working for RFE.

Since I had been privately informed that some of their Czechoslovakian staff were Communists in disguise, I asked specifically about their Czech personnel. There were absolutely no Reds among them, they declared confidently. Now it appears there were several, if Brada is to be believed.

Regardless of how communistic RFE may be, the evidence compiled by Brada is conclusive that RFE follows a general socialistic line and one that is far removed from the political philosophy of conservative American Republicans and Democrats.

In its broadcasts to Cezchslovakia RFE has referred to outstanding Republicans as reactionaries and has likened Adlai Stevenson to Abraham Lincoln. Certainly in its comments on political events in the United States, RFE broadcasts to Iron Curtain countries should refrain from taking sides and should be strictly nonpartisan.

But this they do not do, but follow a New Deal line and often express sentiments which are definitely socialistic. This is not surprising since the chief of the Czecho-Slovak desk for RFE, Ferdinand Peroutka, is a former National Socialist and Communist collaborator from Prague. He has never renounced his faith in socialism.

In the same issues in which Brada outlines his case against Radio Free Europe appear two articles describing RFE's activities and accomplishments as revealed in official documents published by RFE or its parent organization, the Free Europe Committee.

In these two articles the constructive work performed by Radio Free Europe vis-a-vis

the Reds in Poland and Hungary is clearly set forth.

A sharp controversy has been going on for some time as to whether Radio Free Europe is really effective in fighting communism behind the Iron Curtain, whether its espousal of socialism is the best method for fighting communism, and whether it wouldn't be better to shut it down entirely and form a brandnew organization devoted to fighting communism by advocating a system of free private enterprise and individual initiative.

It is ironical, to say the least, that the money which finances Radio Free Europe in its socialistic program is largely put up by wealthy American private industrialists and businessmen who are dedicated to the promotion and preservation in the world of the American system of free private enterprise.

Israel's Vital Importance to America and the Free World

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. DONOHUE. Mr. Speaker, 8 years ago, it was my privilege here to be among the first to applaud the United States recognition of the new State of Israel and extend, with a great majority of fellow Americans, my prayers for her continuing peace, progress, and prosperity.

I believe that most Americans were heartfully glad about the initiation of this new State by courageous people because they realized the fundamental bond of democratic principles and aspirations connecting our two countries even in a certain similarity of birth conditions.

Because we here offered the first and strongest encouragement to Israel, and because of the related cultures of our two democratic peoples, we had at their origin and should maintain now a very particular interest in her survival and advancement as the democratic bulwark against Communist intrusion and control of the Middle East.

In the midst of the present tension surrounding her, I think we should try to more clearly and more forcefully understand that Israel has only one desire, and that is to live peacefully among her neighbors. Israel's record of progress during the past 8 years is ample evidence of her objective for a peaceful existence to carry on her programs of modern agricultural and industrial improvements. In this short time, this new state has become perhaps the most progressive and energetic state in the Middle East. In the last 8 years, more than 400 new agricultural settlements have been created in a small area, compared to less than 300 in the 70 years prior to Israel's birth. Every type of industry has developed. Transportation and housing have greatly progressed, but beyond this mere material success, Israel is today the symbol of courage for the rest of the free world, sharply reminding us of the hardships and trials and challenges surrounding the beginning years of our own Nation.

It is fitting, then, that on this occasion we earnestly beseech this administration, particularly the State Department, to intensify their efforts to promote the cause of peace in the Middle East, while at the same time taking appropriate steps to insure the survival of this courageous State of Israel by granting them at least sufficient assistance to adequately protect themselves by maintaining a balance of arms, during negotiations for peace. Such a course might well serve to eliminate much of the tension now threatening war erruption in that whole area and would tend to permit Israel and her neighbors to concentrate their attention and energies to the peaceful needs of their peoples. In any case, so long as the threatening situation remains as it is, this Nation can hardly consider any other course than a forceful policy to prevent the destruction of this democratic state and the loss of a vital and reliable ally, where needed most, to the free world.

Let us, then, continue our prayers while we reemphasize our appeals to the State Department to perseveringly work for the preservation of Israel and the establishment of peace in the Middle East for the security of ourselves and the rest of the free world.

"For Where Your Treasure Is, There Will Your Heart Be Also"

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. HOFFMAN of Michigan. Mr. Speaker, those who would disregard the old just because it is old are reminded that the thought expressed in the above quotation from the Sermon on the Mount is still with us.

That pressure groups are still thinking in terms of temporary, material self-interest, rather than the permanent welfare of all, is demonstrated every time Congress is called upon to enact major legislation carrying appropriations.

Every thinking individual knows that paying a Government subsidy which increases a price for the production of anything, whether it be automobiles or farm products, above that fixed by supply and demand, will result in the creation of a surplus.

Because of farm subsidies which came to us with the war and which were then necessary, we now have on hand billions of dollars worth of agricultural products, the mere possession of which is costing us a million dollars a day. The fair, useful disposal of that surplus appears to be an unsolvable problem. We know that a continuation of the payment of subsidies will but increase our dilemma. The approximate overall cost value, as of April 4, 1956, of surplus commodities in storage was $5,165,395,000.

What I am trying to express is the idea that some of those who insist upon the continuation of a high, rigid farm subsidy, who object to the President's veto of the farm bill, have a personal financial interest in that type of legislation.

Justifiably, they say that, having been enticed by the Government into overproduction, and having assumed obligations which they otherwise would not have incurred, supports should not be suddenly, wholly kicked out from under them. With that I can agree.

While a continuation of subsidies at a high level will but make our farm problem worse, the shock of a total, sudden withdrawal of benefit payments should be tempered by a gradual but ever-continuing lessening of such payments.

CHASING THE DOLLAR

But in seeking and applying the remedy, we should not forget that some of those who insist upon a rigid 90 percent of parity policy are personally financially interested. The Farmers' Union, ostensibly in behalf of the little fellow, has been putting the heat on Congressmen, but has not publicized the fact that some of its members are financially interested in and control the Farmers' Union Grain Terminal Association. That outfit, during the year ending December 22, 1955, in the Minneapolis area alone, collected fees for storing surplus wheat, corn, barley, oats, rye, flax, and soybeans, amounting to the not insignificant sum of $1,604,069.

The Farmers' Union has the right to establish for financial gain storage facilities. But when they write me stressing the need of the small farmer and his family, who profit but little if any from subsidy payments, I wish they would also advise whether the big boys of the Farmers' Union who are in the storage business are sharing their storage profits with the small farmer. How many small farmers have received a dividend check from the storage organizations of the Farmers' Union?

Why not, instead of laying up treasure for a few, enact legislation for the long-time, overall welfare of all the people?

Uniform Code of Military Justice

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks, I present the following statement of Judge George W. Latimer, of the United States Court of Military Appeals, before the House Armed Services Committee on H. R. 6583, a bill to amend the Uniform Code of Military Justice:

STATEMENT OF JUDGE GEORGE W. LATIMER, OF THE UNITED STATES COURT OF MILITARY APPEALS, BEFORE THE HOUSE ARMED SERVICES COMMITTEE ON THE BILL, H. R. 6583, TO AMEND THE UNIFORM CODE OF MILITARY JUSTICE

Mr. Chairman and members of the Armed Services Committee, I am particularly pleased

to be afforded an opportunity to present to the members of the House Armed Services Committee my views on the amendments to the Uniform Code of Military Justice. In a sense both the chief judge and I appear here in a dual capacity. First, as judges of the United States Court of Military Appeals, we represent the judicial arm of the Government to hear the appeals of cases originating in the armed services. We must, therefore, be concerned with the enactment of good military law, but in that capacity we are not primarily interested in becoming advocates for or against proposed changes to the code which may have to do with certain policy considerations. However, Congress charged us with an additional responsibility by making us members of a code committee—which I will identify as the article 67 committee—to advise the Members of the House and Senate on desired improvements to the code. There our scope broadens, and it is in the latter character that I prefer to appear this morning. I believe that my views can be better presented if my judicial robes are cast aside and I become a supporter for the recommendations which better the code and an advocate against those which, without good cause, undercut some of its beneficent purposes. However, regardless of the capacity in which I appear, I fail in my assigned task unless I aid members of the committee in selecting properly those proposals which will improve military law without impinging on any substantial rights or privileges now granted an accused person.

In order to evaluate properly the effect of the code since its enactment, I have, in addition to my review of records, considered it necessary to seek the advice of both line and staff officers in all the services, particularly those with combat experience. The chief judge has enumerated many of our sources of information, but, in addition to those, I mention one other. I had the privilege of consulting with Admiral Stump and addressing a group of his senior commanders and their legal officers in Honolulu. Many of them had commanded fighting organizations in the Far East during the Korean war. From all of my contacts, I have ascertained that the uniform code has worked under combat conditions; it is now working, and most of the alleged deficiencies are more imaginary than real.

In my presentation today I do not seek an argument with the services, or with their representatives on the article 67 committee, but this thought I most certainly hope to leave with the committee members: When the criticisms of the code are scrutinized closely they simply cannot be sustained. In my humble judgment, the code was a splendid piece of legislation which, in its present form, can be defended from any street corner in America. I stress that statement particularly, because I do not want members of this committee to gain the impression that, because the judges have not waged a vocal and public campaign to meet the charges made against the code, their conduct smacks of a confession that it is vulnerable to attack. On the contrary, I believe our experience over the last 5 years establishes its soundness and the wisdom of Congress in its enactment. Furthermore, I believe the chief judge, our departed associate, Judge Brosman, and I all concurred in the belief that the place for us to reply, if necessary, was in the Halls of Congress, and I am prepared, now or at any other time, to prove to the members of the original committee who fostered and made possible the passage of the code, that it has measured up to your expectations. Certainly, the law is not perfect, and some minor adjustments can be made which will expedite the processing of cases and save some time and expense. However, major changes and modifications which seek to disturb the present balance between justice and discipline, or between the civilian court and the military services, are uncalled for. In my judgment, it would be better for Congress not to pass any of the proposed amendments than to enact provisions which in the end would be a retreat from the present advancement of the law.

Finally, I believe it worthwhile to suggest that the code went into operation during an armed conflict. It was tested while troops were fighting and dying in Korea and a tremendous volume of business was transacted. Growing pains were encountered, but justice was administered. Now military justice, as spelled out in the code, has found its place in the judicial system of America, and in the minds and hearts of those civilians who are familiar with its history and development. By and large, military personnel do not disagree with that contention and they, in good conscience, cannot support the assertion that it has impaired discipline and morale. We are now approaching the end of the first 5-year phase, and the developments during that period have given to the country a solid body of military law which I believe has kept discipline and justice in balance. I would hate to see it thrown out of adjustment by some of the proposed amendments. I know that a number of witnesses will appear, and each will have his own patent remedy to cure the ills of the code. The only difficulty with that is, the code is not ill. To those of us who have labored with it for 5 years, it is a virile and growing infant in the judicial sphere, and, like any young judicial system, it should continue to grow. Congress set up a statutory body to aid in its development and I believe that when all service members of the code committee become fully convinced that the code and the United States Court of Military Appeals are here to stay, then Congress will have a screening board which will unite on, and recommend, beneficial changes only.

Eighth Anniversary of the State of Israel

SPEECH
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. RODINO. Mr. Speaker, this is a historic day for the people of Israel, for it was 8 years ago that the dynamic democracy now known as the State of Israel was established. Once merely a dream and an idea in the minds and hearts of many who now call it their homeland it is now a reality. The courage and the fortitude displayed by these people in their great struggle brought about this gallant little nation which is now a matter of history. Their spirit of freedom and their desire for peace, their determination to live as a truly democratic nation among the family of free nations, is worthy of their great heritage.

Today, as I have done before, I salute the State of Israel and its proud people. Theirs is a record of achievement and accomplishment during 8 short years of existence.

But today this bulwark of democracy in the Middle East is threatened. It is threatened by the shadow of international communism which has been reaching out over the Middle East fomenting hostilities and creating tensions. We know that this is a threat not alone to the security and peace of Israel—the Middle East—but to the whole free world. For pulling the strings behind the whole Arab-Israeli conflict are the Soviet agents who by their offer of arms and economic aid to the Arabs seek to establish themselves in the Middle East.

We must not permit this nation to fall at the hands of the Communist conspirators. The United States should take immediate steps to maintain the balance of power in the Middle East by providing Israel with defensive arms. We must in justice to the name of democracy, in the interest of world peace and freedom, help to preserve the integrity of Israel as a nation. The people of Israel look to us—as the champions of democracy—we cannot and must not turn our backs on them. Let us help to maintain this fortress of freedom.

Our Insecure Social Security

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, a most interesting editorial on social security appeared in the Janesville (Wis.) Daily Gazette of April 7, 1956. Under leave to extend my remarks, I am inserting the editorial as it expresses a point of view which every person covered by social security should fully understand.

In view of the extensive coverage under social security today I find that there is a general misunderstanding among recipients of social security as to just what are the objectives of this program. It is my view that the editorial clarifies some of these points.

Mr. Speaker, the important point for Congress to remember is that the system must be placed on a sound basis. There is only one source of income to support social security and that is by taxes, either directly upon those covered or by taxing the Federal Treasury.

I respectfully call this editorial to the attention of every Member of Congress and I am sure they will find it extremely interesting:

OUR INSECURE SOCIAL SECURITY

With excellent reason, an increasing number of citizens are calling for a clarification of the purposes and scope of the Federal social-security system. The constant extensions in coverage and benefits are a cause of substantial concern. There is no less concern on the other side of the question—the manner in which the obligations which are being incurred are going to be paid.

It is quite plain that the system must have more money in the years to come if the promises now made or under consideration can be kept. These can be provided in either of two ways—higher social-security taxes or appropriations from general Federal funds, with resulting increases in United States taxes, or additional Federal debts. Whichever of these alternatives is chosen, the effects are bad. They are especially bad

for young persons who must do the paying for a lifetime.

Already the taxes—those paid by employees and employers or by the self-employed—are sufficient to finance a modest retirement program through available private agencies and without the uncertainty of politics and the whim of elected officials.

Great changes were made in the system in 1954. The overall effect appears as a sizable increase in the tax take, but an even greater boost in new obligations to millions of persons.

Now there are a half dozen new proposals in Congress, some of which would result in tremendous additional costs. Chief among these are the plans to reduce the eligible age for women to receive benefits from 65 years to 62 years. Aside from the purely political arguments, it is difficult to see why women should be treated differently from men in this respect. In the pattern of the past, it is almost certain that when 3 years is cut off the eligible age for women it will be found necessary to make the same concession for men. Thereafter the age for women can be cut back to 60 years, with men following in order.

This has been the pattern of social security amendments ever since it was passed—constant erosion of the basic provisions, always in the direction of more liberal treatment. At the same time the constantly increasing schedule of rates originally proposed to finance the obligations has been repeatedly cut back, so that we are not even now paying the rates which were provided when the first act went into effect in the 1930's. When the full load of obligations settles upon the fund in the years just ahead a suddenly desperate situation is bound to arise. By that time the security in social security will be mighty insecure.

Among the other changes now contemplated is that to provide pensions for anyone over 50 years of age who may be disabled. This is a good example of the "new look" which is being imparted to the program.

Originally the idea of social security was to provide a sort of floor under living standards of older citizens, providing for them a minimum living standard in the event that all else failed. Since then we have been changing this view so as to provide substantial income, well above subsistence levels, and to take care of all sorts of dependents and family situations. The belief that social security should support disabled persons is just another step in that direction.

It would seem that we have been drifting long enough so that the direction of drift is apparent to everyone. The time is here for an honest decision by the public as to what it wants. Is it a Government guaranty of a minimum old-age pension so that the unlucky in life can avoid the poorhouse? Or do we want the Government to seize an important part of earnings in return for the promise to support us in the style to which we have become accustomed? The issue is particularly important to young wage earners and to those who will soon be turning in their first social-security dollars to Uncle Sam. They are the ones who will carry the burden for the coming 40 years, more or less. At the rate we are going that burden may easily become too great to endure.

Representative Harry Coltun

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Chelsea Record, Chelsea, Mass., Monday, April 16, 1956.

The honor bestowed on Representative Harry Coltun was richly deserved, since he is one of those great Americans whose contribution to our strength, to our culture, and to our enlightened concept of human values will be more clearly recognized and appreciated as we travel along on the pathway of human progress.

The editorial follows:

A TRIBUTE RICHLY DESERVED

Hundreds of our prominent citizens, and a good representation of city and State officials, as well as leaders of philanthropic movements, turned out at the local temple yesterday to honor Representative Harry Coltun, "Brotherhood Man of the Year."

The tribute was richly deserved. We know of no single individual who has contributed more to benefit the community in the last 10 or 12 years than the distinguished guest of honor.

In politics, Coltun has been an inspirational leader first as a member of the Chelsea Board of Aldermen, and then as a member of the State legislature, where he is completing a second term. In both legislative bodies, he has conducted himself on a high level, and has been the author of many constructive measures which has benefitted the community.

In philanthropic endeavors, Representative Coltun has also stamped himself as a leader during numerous, worthy drives, the most recent last year when he successful chairmanned the combined Jewish appeal campaign in this city.

Despite numerous pressures, including his law business, Representative Coltun has made time to serve as president of the YMHA community center, which is now enjoying one of the busiest and most successful years in its history under his regime, and he has also served Temple Emmanuel as its brotherhood leader.

This outstanding young man has more than carried out the responsibilities entrusted to him. His life, yet to reach its prime, has been an example for our young men to follow. His future promises to even outshine his past.

We join, a bit belatedly in the tribute to the "Brotherhood Man of the Year" and reiterate that it is richly deserved.

War-Risk Insurance for Aircraft

EXTENSION OF REMARKS
OF
HON. J. PERCY PRIEST
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. PRIEST. Mr. Speaker, I have today introduced a bill to extend for 5 years the authority of the Department of Commerce to provide war-risk insurance for aircraft.

The usual commercial insurance policy does not cover aircraft against war risk in the event of outbreak of hostilities. Air carriers are, therefore, reluctant to permit their aircraft to venture into potential danger areas.

Lack of adequate insurance protection would jeopardize mobilization of the country's air-transport facilities in case of an emergency. For these reasons, in 1951 the Congress enacted title XIII of the Civil Aeronautics Act to authorize the Department of Commerce to issue binders insuring United States aircraft against war risk in the event of an outbreak of hostilities. This authority will expire on June 14, 1956. The Department has informed me that, if legislation extending this authority for 5 years is approved, binder fees will more than cover expenses chargeable to the war-risk-insurance fund under peacetime operations. If the program should go into operation in time of war, it is anticipated that premiums would keep the insurance fund self-sustaining.

Enactment of the legislation therefore would insure our civil air fleet against loss from war risks with little likelihood of any need for significant appropriations to the war-risk-insurance fund. The Department of Commerce urges early enactment of this legislation to keep the civil air fleet covered by war-risk insurance without danger of lapse.

Rowland R. Hughes

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. REED of New York. Mr. Speaker, on April 1 of this year, Rowland R. Hughes resigned as director of the Bureau of the budget to return to private life. In his resignation, the United States Government and the American people as a whole lost the services of one of the finest and most capable men that it has ever been my privilege to know.

Mr. Hughes took office as director of the Bureau of the Budget on April 16, 1954. Prior to his appointment to this post by the President, he served as Deputy Director of the Bureau for 8 months and as Assistant director for 3 months. Thus, for a period of almost 3 years he was in a position of critical responsibility in the vital task of bringing Federal spending and the Federal budget under control. How well he met this challenge is demonstrated by the fact that today the Federal Government has achieved a balanced budget. For his splendid contribution to this achievement, the American people owe a debt of gratitude to Rowland Hughes.

Before coming to the Bureau of the Budget, Mr. Hughes was a vice president of the National City Bank of New York, an institution with which he had been associated since 1916. He had been a senior official of the bank since 1934, when he was appointed comptroller, an office which he held until 1951. He was assistant comptroller from 1929 to 1934, and inspector of foreign branches in Europe in 1928 and 1929. From 1916 until 1927, when he returned to the head office, he served in the bank's foreign branches in London, Shanghai, Bombay, and Japan.

Long active in tax work, he has been chairman of the committee on the excess profits tax of the American Bankers' Association, chairman of the Federal taxation committee of the Comptrollers' Institute of America, a member of the

Committee on Federal Tax Policy, and a member of the tax committees of the Foreign Trade Council and the Council of State Chambers of Commerce. He has served as consultant to various congressional committees. As chairman of the Committee on Ways and Means during the 83d Congress, I appointed Mr. Hughes to serve as a member of a Special Advisory Committee on Revision of the Internal Revenue Code. He made especial contributions in the field of foreign-tax problems. In addition, as chairman of the Joint Committe on Internal Revenue Taxation, I appointed Mr. Hughes to the advisory group on the Bureau of Internal Revenue.

He was born in Oakhurst, N. J., March 28, 1896. He was graduated from Brown University in 1917, and has been a university trustee since 1943. In February 1955 he received the Susan Colver Rosenberger Medal, highest honor awarded by the Brown University faculty. It is given in recognition of specially notable and beneficial achievement in scholarship or public life. In June 1955 the university awarded Mr. Hughes the honorary degree of doctor of laws.

Mr. Speaker, Rowland Hughes is a close personal friend of mine, and over the years I have developed the highest respect for his splendid character and capability. With his resignation, we have lost a public servant who represents the very finest in every respect. His dedication to the principles of sound government and fiscal integrity will be sorely missed. In this year's balanced budget and the prospect for a continued balanced budget next year, he is leaving a monument of which he can well be proud. I can only hope that, in returning to private life, he will continue to make available to the Congress as well as to the executive branch his wise counsel and great experience.

Women's Congress on Housing

EXTENSION OF REMARKS
OF

HON. RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 19, 1956

Mr. SIMPSON of Pennsylvania. Mr. Speaker, it has recently come to my attention that an unusually petty attack has been made on the very worthwhile effort of the Housing and Home Finance Agency to obtain the opinions and ideas of American women to determine what kinds of homes are most needed and wanted by the American people.

This attack has taken the form of an attempt to belittle the forthcoming Women's Congress on Housing, to be convened in Washington, D. C., on April 23, 1956. Our former colleague, Albert M. Cole, Administrator of the Housing and Home Finance Agency, has announced that a representative cross-section of homemakers will meet with Government and private industry experts to discuss the future course of housing design.

I deplore the attempt to discredit this project and regret that it was obviously motivated by partisan considerations. I am confident that the American people will agree that the Woman's Congress is a major contribution to continued progress in the housing field.

Housing is the Nation's second largest industry, employing many millions of people. It is essential that those in Government charged with maintaining the stability of this most important segment of our economy be aware of the needs and desires of the buying public. The plans announced by Mr. Cole represent an important forward step in that direction.

In the interests of presenting the full and correct story to the American people, I place in the RECORD herewith various statements issued recently relative to the Women's Congress on Housing:

The housewives of America were asked today to help the Federal Government to solve one of its most vexing problems—how to design a typical modern home that will keep pace with the rapidly changing mode of contemporary living.

Albert M. Cole, Administrator of the Housing and Home Finance Agency, suggested that a representative cross-section of homemakers meet with Government and private industry experts in Washington to discuss the future course in housing design. He also urged all housewives to write to his agency immediately, giving their ideas on how the modern home can be improved.

"Home builders, manufacturers, realtors, laborers, and the Government cannot go forward on the basis of well-meaning opinions and untested theories," he said. "They need hard facts. A woman's congress on housing may help provide these facts," he added. The 10 million houses built since World War II represent an investment in excess of $100 billion. In the decade ahead, the American people will invest at least another $100 billion in new homes. "The Government does not propose to be a partner to a $100 billion mistake," Cole asserted.

The housing industry is undergoing a revolution, he pointed out. Men and women from all walks of life, with more leisure time than ever before, are tired of giving unrewarding hours of service to the house. "They want the house to give service to them," he said.

"New homes must be fitted more and more to the new patterns for living," the Housing Administrator said. "Every new house that does not take these new patterns into account will be obsolete long before it is old or even middle aged—a dubious investment alike for builder, buyer, and banker."

"The Federal Government, which insures or guarantees millions of dollars worth of mortgage loans, must do everything in its power to safeguard this huge investment," he stated.

Wary of the "temporary lure" in some new housing designs, Cole said that the housewife needs the type of home that best meets her practical needs.

"We must separate the superficial from the fundamental," he said. "We must know whether families really get more service out of single-story houses, out of split-level houses, or open-design houses."

Information is also being sought on family rooms, game rooms, TV rooms, rumpus rooms, unwalled carports, centrally located kitchens, movable partitions, rolled-back roofs, and picture windows, and scores of other innovations in home design.

"The Government not only wants to find the answer to these and other questions, but has to have them," Cole emphasized.

"Private industry has the responsibility and capacity to carry out the future program," he added. The function of the Government is "to provide counsel, to encourage, and to give assistance."

"I shall welcome letters and comments from the housewives of America," Cole concluded. "I hope that my mail will shortly reveal an active demand for a women's congress on housing."

Nearly 1,500 housewives have responded enthusiastically in the first 10 days to Housing and Home Finance Administrator Albert M. Cole's invitation for them to write him their views on what the modern home should be like. Letters to the Housing Administrator continue to come in at the rate of about 200 a day.

"The housewives are most enthusiastic in their response," Mr. Cole said. "All of them say they are grateful for an opportunity to express their views on a subject that is very close to their hearts. One of the writers, for example, said this was the best thing that has happened since the Boston Tea Party."

Mr. Cole also announced that the Woman's Congress on Housing, at which the suggestions made in the letters will be discussed by about 100 women from all parts of the country, will be held on April 23, 24, and 25, at the Washington Hotel in Washington, D. C.

Mr. Cole said that the bulk of the letters received reflect serious and practical thinking on the home as a place for modern family life.

"While the women have many kinds of ideas on how the home can be better tailored to family needs, they in general seem to like most of the basic trends in modern design that accent fuller family living and few of them are critical of the present-day building industry."

STATEMENT BY NORMAN P. MASON, COMMISSIONER OF THE FEDERAL HOUSING ADMINISTRATION, ON THE WOMEN'S CONGRESS ON HOUSING, APRIL 23, 24, 25

FHA officials plan to attend all of the sessions of the Women's Congress on Housing.

We will study carefully all the recommendations suggested by the group. Naturally we will welcome anything which will result in practical improvements.

We feel sure that such a group will give us some such suggestions. That has been our experience with all the many advisory groups we have consulted during the 2 years I have been head of FHA.

The FHA is interested in the Women's Congress for several reasons. Our principal responsibility, of course, is to provide an adequate financing system to facilitate homebuying, and this entails the application of construction and architectural standards. We currently have a special advisory committee of expert architects, engineers, and builders at work reviewing our minimum standards with a view to simplifying them and bringing them up to date.

It seems to me that the views of the ultimate consumer, the housewives and homemakers, are a proper part of this picture. We ought to know what they are thinking; in fact, we owe it to ourselves as authorities in the housing field as well as to the general public.

Mrs. Theodore S. Chapman, of Jerseyville, Ill., president of the General Federation of Women's Clubs, has joined the forces supporting a recent proposal of Housing and Home Finance Administrator, Albert M. Cole, that a Woman's Congress on Housing be held in Washington to enable the Nation's homemakers to make known ways by which the modern home can be improved. "The majority of the women in this country are homemakers," Mrs. Chapman said, "and they know that poor housing is frequently the result of poor design.

"Most of the social improvements that have come about in this country in the past

65 years, such as the penny-lunch programs for children in the schools, the book-mobiles which have brought culture into isolated homes, the marshaling of public opinion against child labor, prison reforms, the Pure Food and Drug Act are a result of women's views being brought to the attention of the lawmakers and the public.

"I cannot agree with Congressman QUIGLEY, of Pennsylvania, who is quoted as having said, 'Why housing authorities would be interested in learning what the women of this country want in a house is beyond my comprehension.'

"I believe the Members of the Congress should know what women feel are basic reforms in Federal, State, and local housing projects. Who knows better than the housewife how to utilize workspace in the home, and the kinds of storage space needed, about lighting and air and conveniences generally? I believe that if women have the opportunity to make known their time and step-saving ideas, as well as other observations as to safety and efficiency, that all America would benefit by housing that produces more for the money, and meets today's housing needs more adequately.

"I hope the Federal Government will give women a chance to suggest positive improvements to better and more comfortable housing.

"I enthusiastically approve Mr. Cole's plan as the only really sensible and practical way to set standards for adequate housing."

Tribute to Helen Delich

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. GARMATZ. Mr. Speaker, it is gratifying when deserved recognition is given to an individual whose intelligent and earnest efforts are directed to the enlightenment of the American people on a matter vital to our national security and to our commercial pursuits. Such an event has just taken place in my congressional district where Miss Helen Delich, marine editor of the Baltimore Sun, has been honored by the Advertising Club of Baltimore. Miss Delich has been outstanding in her widespread publication of articles relating not only to the great port of Baltimore but also in regard to present-day challenges to the maintenance of an adequate merchant marine. In order that our citizens can better understand this important subject matter, I ask unanimous consent that the article in the Baltimore Sun relating to the Helen Delich testimonial be inserted in the Appendix of the RECORD.

The article follows:

TRIBUTE PAID HELEN DELICH—MARITIME EDITOR HONORED AS WOMAN OF THE YEAR

Miss Helen Delich, maritime editor of the Sun, yesterday was honored as "woman of the year" by the Advertising Club and the Women's Advertising Club of Baltimore.

The reporter, who was introduced as the woman who has publicized the port of Baltimore, was guest of honor at a joint luncheon attended by 215 persons in the Emerson Hotel.

Miss Delich joined the Sun staff in 1945 and assumed her present post as maritime editor 3 years ago. She also conducts a weekly television program on the port.

Accepting the tribute, Miss Delich noted the personal significance the honor had for her, because "my parents * * * immigrated through the port of Baltimore across the Locust Point piers from Yugoslavia 50 years ago this month."

NATIONAL AWARDS

In 1950 and 1951, Miss Delich won national awards for excellence in maritime reporting. The awards, granted by the Propeller Club of the United States, had never before been given twice to one newspaperwoman.

Miss Delich is a native of Ruth, Nev. She studied at the State university in Nevada, attended George Washington University, and was graduated first in her class at the University of Missouri School of Journalism.

Subsequently, she was manager of the United Press bureau in Fort Wayne, Ind., and later was telegraph editor of the Lewiston (Idaho) Tribune before joining the Sun.

In 1947, Miss Delich became the first woman reporter to cover a national convention of the American Federation of Labor, reporting that event for the Sun from San Francisco.

In a speech before the advertising clubs yesterday, Miss Delich called for more public relations efforts on the part of shippers in the port of Baltimore.

"The maritime industry," she declared, "with no exception has the worst advertising and promotion program on the whole of any industry."

NATURAL SALES APPEAL

"And yet it is one industry that could work out an interesting, long-range program with little difficulty because it has such a natural sales appeal. Everybody loves the sea. Everybody loves ships * * * and everybody needs and is very dependent upon world trade."

Miss Delich cited publicity programs that have been effective in New Orleans, New York, Philadelphia, and several southern cities.

Segregation and Integration in the Public Schools

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. ABBITT. Mr. Speaker, we have constantly before us today the almost overpowering problem of segregation and integration in the public schools as a result of the horrible decision made by the Supreme Court of the United States of America on black Monday, May 17, 1954.

The problem created by this illegal and unfounded decision based on the political philosophy and theory of the Supreme Court Justices has done more to disrupt and damage race relations in the South than we realized at the time of the decision. It is heartening, however, to see that gradually there is an awakening on the part of a large part of the American people and particularly the editors to the awareness of our problem in the South and the necessity for combating, overriding, and changing the dreadful decision referred to heretofore. It was not based on law and legal precedent.

The people of my area are not willing to integrate the public schools. They are not going to integrate them. Now is the time when our people, if we are to preserve our way of life, must remain firm and meet the issue head on. This is no time to vacillate or temporize or to retreat. Certain people in our State profess to be great believers in States rights as well as strong segregationists but at one and the same time appear to be willing to and are advocating that the Commonwealth of Virginia take steps toward integration and a recognition of the validity of the decision of the Supreme Court. They attempt to justify their actions by expressing great sympathy for the people of Prince Edward County as well as an effort to assist the county in its present court fight by permitting integration in the State.

The people of Prince Edward County have stood firm and unflinching in the face of all of the pressure that has been exerted by the integrationists and those who would change our very way of life. But for the will and determination of these fine people the fight for States rights, segregation and the sovereignty of the people of this great Nation would have been lost before now. The men and women of this great county deserve the everlasting gratitude of all of the people of the Commonwealth of Virginia.

The editor of the Farmville Herald, J. B. Wall, has been one of the leaders in this fight on the part of the people of Prince Edward County. His paper has had a large part in guiding and directing in the proper channels the action that has been taken to preserve our heritage. On Tuesday, April 17, 1956, there appeared in the Farmville Herald an editorial entitled "Prince Edward Under the Gun," which sums up the position of the people of Prince Edward County. It leaves no doubt that they are willing to fight for the principles they know to be right. They are not going to compromise the issue nor are they going to take a middle-of-the-road stand. They are going to operate the schools of Prince Edward County in the future as they have in the past. They hope the Federal court will not deprive the youth of Prince Edward County of a public education. If the court in its desire and effort to mongrelize the races of our Nation is willing to go so far as to prohibit the Negro children of Prince Edward County from receiving an education that is something we should know now and we can only find it out by meeting the issue head on. The issue cannot be resolved otherwise unless our leaders are willing to give up the fight and integrate a little at a time. This I do not believe the people of the Commonwealth of Virginia desire or will stand for.

Under leave to extend my remarks, I desire to include herewith the above-mentioned editorial:

PRINCE EDWARD UNDER THE GUN

NAACP attorneys have expressed in the press an intention to file additional suits for racial integration of public schools in Norfolk and Charlottesville in the near future and will petition the Federal district court this week for a progress report on Prince Edward County. So, this county will prob-

ably be in the foreground of the public eye and the public press again, and under compulsion of the NAACP.

In all honesty and good conscience there is but one answer to be given to the court; namely, that Prince Edward has made no progress toward integrating its schools. Prince Edward has no plans for integrating its schools. Prince Edward will abandon public schools in preference to attempting to operate integrated schools. If this determination forces the closing of public schools in the county it will not be of our choosing nor according to the desires of the vast majority of the people of Prince Edward County, both white and Negro. There is nothing new in the statement of these facts. The issue was determined last June, when a vast meeting of patrons determined this policy and set up the Prince Edward Educational Corp. The Prince Edward Educational Corp. has stood by all of this year, ready to provide education for the white children of the county. There is no doubt that it will continue to stand ready.

In assuming and maintaining this position the people of Prince Edward County do not adopt an arbitrary position, on the contrary, they stand upon rights retained by the States under the 10th amendment of the United States Constitution, and section 140 of the Virginia Constitution. In addition, by virtue of a resolution of interposition, passed almost unanimously by the Virginia General Assembly in 1956, the Commonwealth of Virginia, disputes the power of the United States Supreme Court to control or regulate the public schools under the State's jurisdiction. Unless or until the Constitution of the United States is amended, or the disputed power of the United States Supreme Court has been resolved, Prince Edward in good conscience and honest could not do otherwise.

It has been indicated in the daily press that Governor Stanley is being urged to call a special session of the general assembly to enact new laws relating to the public schools. It is said that counsel for the Prince Edward school board wish to allude to such a step as evidence of progress toward integration. In honesty and good conscience we cannot agree with this suggestion so far as this county is concerned. The people of Prince Edward are not interested in "buying time" with the attendent loss of the most cherished principles of self-government and State sovereignty.

It seems to this editor that the Commonwealth of Virginia through its resolution of interposition has set its course and until this dispute of jurisdiction is determined no further action need be taken. Certainly not by using Prince Edward as a reason for any laws at any time leading to integration of races in its public schools.

It Will Cost $50,000 To Move the Old Enginehouse—Step Held Wholly Unnecessary

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, a solution of the dilemma faced by the International Monetary Fund, arising from the proposal to move the Old Union Enginehouse occupied by the Association of Oldest Inhabitants, can be reached by leaving the historic old structure where it is. This is the considered opinion of Homer Joseph Dodge, a distinguished member of the Association of Oldest Inhabitants, as he outlined it in the Evening Star of April 18, 1956.

Mr. Dodge points out in his important statement that—

> The plans for the addition to the IMF Building provide for a spacious parked entrance on the Old Enginehouse site. It is wholly unnecessary to remove the firehouse from this park.

Fifty-eight countries contribute to the International Monetary Fund. The United States quota, which is 31.43 percent of the total fund, amounts to $8,750,000,000. If my figures are correct it will cost the United States $15,715 to move the Old Union Enginehouse, a move which is wholly unnecessary, according to Mr. Dodge. This would seem to me to be a matter of interest to the many associations of taxpayers throughout the country. Conceivably it may be of interest to the members of the Joint Committee on Reduction of Nonessential Federal Expenditures.

My own interest in this matter springs from a bill, H. R. 9719, I have introduced—"to amend the act of March 2, 1891, as amended, to insure that the Association of Oldest Inhabitants of the District of Columbia will continue to have the exclusive right to occupy and use the Old Union Engine House in the District of Columbia."

At a meeting of the Judiciary Subcommittee of the House District Committee on March 5, 1956, the members of the subcommittee determined that a hearing would be held on H. R. 9719 at an early date. In the meantime the Board of Commissioners of the District of Columbia have been officially requested that any order to the Association of Oldest Inhabitants to vacate the premises of the old Union Engine House be withheld until such time as the members of the District of Columbia Committee of the House of Representatives have had an opportunity to hold hearings on my measure.

I would like to take this occasion to commend Mr. Dodge for his fine statement regarding the old Union Engine House. I was particularly moved by that part of his statement in which he says:

> Just as Trinity Church stands in the shadow of towering structures in New York's financial district as a symbol of grace and antiquity, so should the Old Engine House remain against the background of the wholly commonplace and undistinguished IMF Building.

A number of years ago when the new General Accounting Office at Fifth and G Streets NW., Washington, D. C., was being planned, the Federal Government proposed to buy the land on which St. Mary's Church is located. The issues that confronted the congregation of this fine church and its doughty pastor at that time, were remarkably similar to the problems faced by the Association of Oldest Inhabitants. I am very pleased to be able to say that St. Mary's Church was not destroyed, nor was it moved. It continues to serve its historic and important mission, and, I should add, the General Accounting Office is unquestionably better off for that mission. Certainly the thousands of Federal employees who work in the General Accounting Office and the other Federal buildings in the area feel safer because of the church and the beneficent influence it exerts in what is surely one of the less desirable neighborhoods in the District of Columbia.

I include here for the information of my colleagues the splendid statement by Homer Joseph Dodge, in the Washington Evening Star, of April 18, 1956:

OLD ENGINE HOUSE

A solution of the dilemma faced by the International Monetary Fund, arising from the location of the Old Engine House occupied by the Association of Oldest Inhabitants, can be reached by leaving the old building where it is. The plans for the addition to the IMF Building provide for a spacious parked entrance on the Old Engine House site. It is wholly unnecessary to remove the firehouse from this park.

The National Capital, more than most cities, has a special interest in historic structures. The present IMF Building, with the planned addition, constitutes a structural mass similar to a thousand, yes, 10,000, other office buildings. The Old Engine House is well-nigh unique.

Just as Trinity Church stands in the shadow of towering structures in New York's financial district as a symbol of grace and antiquity, so should the Old Engine House remain against the background of the wholly commonplace and undistinguished IMF Building. This is especially compelling as the life expectancy of the Association of Oldest Inhabitants is far greater than that of the International Monetary Fund. The purpose of the fund is to stabilize currencies of civilizations built upon our economic system. The fund has an unexampled opportunity to achieve its stabilizing function by preserving the Old Engine House where it is.

HOMER JOSEPH DODGE.

Eighth Anniversary of Independence of the State of Israel

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. ROOSEVELT. Mr. Speaker, this week the eyes of the world are focused on the State of Israel because the people in that nation are celebrating the eighth anniversary of their declaration of independence. One of the outstanding publishers in my district, Mr. Al S. Waxman, has written an editorial in which he likens the courage and stamina of the Israelis to that of the courageous Americans who declared their independence in 1776. Mr. Waxman's editorial appeared this week in his five newspapers: The Los Angeles Reporter, the Beverly Hills Reporter, the Pico Reporter, the Park LaBrea Reporter, and the Wilshire Reporter.

The people in my district have called my attention to previous editorials in the Waxman publications, but this one, because of its timeliness and depth of un-

derstanding, is one which I feel will be much appreciated by many others who have the opportunity to see and read it.

THE EDITOR'S COLUMN

(By Al S. Waxman)

April 18, 1956.

AN INDEPENDENCE DAY

In 1776 a comparatively small group of people, consisting of men, women and children, banded together the arms, strength and will of their 13 colonies and adopted the Declaration of Independence. They were from many different lands, however, mostly British. With this Declaration they became good Americans.

Other nations eyed them inquisitively, but sat by to see what would happen next. France, on the other hand, decided in 1778 that the United States of America was here to stay and recognized the new Nation by treaty. Seven years later the British Empire conceded the status of American independence and gave official recognition to the small new Nation.

Freedom did not come easily to these hard-fighting, God-fearing people. They received internal and external help from people and nations who admired their fight for freedom.

Thousands of miles away from here, this week, another small nation celebrated an Independence Day. It was their eighth anniversary and the eyes of the world are upon them today. Their enemies are not reconciled to the fact that the people of the State of Israel have declared their independence and, after having made that declaration, have fought and are prepared to continue fighting, if necessary, to maintain it.

On the day U. N. Secretary General Dag Hammarskjold arrived in the Middle East to survey the Arab-Israeli conflict, an editorial appeared in one of the official publications of the Arab league in which he was informed that "the success of Hammarskjold's mission depends upon the elimination of the State of Israel."

In other words the enemies of Israel refuse to recognize the sovereign rights of the state.

A tiny state in both miles of land and population, Israel is surrounded by several Arab nations. It is outnumbered 20 to 1 in population and 300 to 1 in acres of land. Even though outnumbered by such odds, they were able to wrest their freedom and independence. What they lacked in weapons and manpower, they made up in determination and courage. They were fighting for the promised land.

Today the state of Israel looks behind as it celebrates the eighth anniversary of its declaration of independence and looks ahead as it sees dark clouds overhead. The big nations of the world are fighting for power. In the center of their orbit stands this little nation. The cold war, the war of nerves, is being fought in and around this new nation.

The enemies of the Western world are supplying Israel's enemies with warfare weapons, yet Israel's friends stand by and speculate about the future. They concede that Israel can be used as a stumbling block to the spread of communism in the Middle East and Israel is willing to be used as this barrier. Yet while the Communist satellites deliver war weapons to the Arab states and prepare them for a possible war, which could wipe out the state of Israel, the Western powers have adopted a wait-and-see policy.

Waiting may prevent seeing. If Israel is not sold the arms necessary to protect herself against the enemies who surround her on all sides, the Western powers will find that they have lost their last democratic trench in the Middle East. Israel represents a tiny football in the international political game. It is being used by the East and West as well as by the Arabs in their internal squabbles.

There are American hands which are dirty and slimy with oil. The oil which they have taken out of the Middle East is sold at great profits to Europe and to American descendants of that band of hearty people, who in 1776 went through the process of declaring independence. Is our war for freedom so far behind us that we have already forgotten?

The United States and its western allies have already sold weapons and military materiel to dozens of other nations throughout the world. This has been done from the standpoint of giving our friends the necessary implements with which to defend themselves. Why don't we do the same for Israel? They are prepared to give up their daily bread so that they may buy self-defending weapons.

The State of Israel emphatically declares that it is not asking for our soldiers or our physical help. They are asking only that we sell them weapons so that they may be prepared if and when their enemies attack. The people of Israel are prepared to do their own fighting. They know their cause and they are prepared to stand and defend themselves. Theirs is so much like our spirit of 1776 that they could well be the Americans of the Middle East.

An American said, "Give me liberty or give me death." And Israelis are prepared to stand up and fight along that line. An American said, "I regret I have but one life to give my country." And Israeli boys and girls are serving in the armed forces there. An American said, "I'll be back." And the Israelis have come back to their promised land.

The most welcome news that the State of Israel could get on this, their eighth anniversary, would be an announcement from the United States that we are prepared to sell them the weapons they need for their self-defense and preservation. Not give but sell. Delivery of such materiel would mean the insurance that Israel is here to stay, to grow, to aid the Western Powers, to stop the flood of communism into the Middle East.

To help Israel today is to help ourselves.

The Farm Bill

EXTENSION OF REMARKS

OF

HON. JOHN E. HENDERSON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1956

Mr. HENDERSON. Mr. Speaker, last week we debated one of the most important legislative proposals to come before the House in this session of Congress. The omnibus farm bill which was presented at that time was a genuine disappointment to me in view of the urgency with which I regard the problems of American agriculture today. It was my hope that the conference committee would present to the House a bill embodying the far-reaching and constructive recommendations which the President and his administration formulated in a sincere effort to assist the American farmer. My strongest disappointment sprang from the insistence that rigid price supports be reinstated on basic crops even for the 1-year period provided in the bill.

The appalling consequences of the rigid price support plan are felt by every farmer in the Nation today who is experiencing lower prices for his commodities because of the fantastic surpluses which have been created through 10 years of rigid price supports. I have opposed the further extension of rigid price supports in the past and my opposition has not diminished. I believe that any thinking individual who is sincere in his concern for American farm prices must conclude that we must abolish these surpluses and with them the rigid price support program which has fostered and stimulated them.

It is my belief that American agriculture must continue to be based upon the production of the small family farmer. While rigid price supports have offered only inconsequential direct benefits to this type of farm operation, the program has greatly benefited the large commercial type farm. This has stimulated these large commercial operators to grow more and more of the crops already in surplus. The result has been the piling up of more surpluses which have, in turn, depressed market prices and created a serious economic hardship for the small farmer in southeastern Ohio and throughout this country.

Last week when this bill came to a vote in the House, I hoped that it could be returned to the conference committee to remove the objectionable and somewhat contradictory provisions it contained. I favored the motion to recommit the bill for the purpose of removing those provisions. That motion failed. Returning to the conference report, I recognized the value of placing the soil bank proposal in operation this year so that American farmers could have its benefits without delay.

The bill also contained a provision whereby farmers might exercise greater freedom from acreage restrictions with respect to wheat grown and used on their farms. This provision is of particular importance to hundreds of small farmers in my congressional district who have experienced difficulty under past restrictions.

My bill, H. R. 4570, would allow farmers freedom from such controls and, although a similar measure has been passed by the Senate, there seems little or no likelihood that the House Committee on Agriculture will take affirmative action this year on my proposal and similar bills introduced by a number of my colleagues.

With these provisions in mind, I reluctantly supported the conference report when it was brought to a vote on the floor of the House a week ago. Admittedly, it was a difficult decision. The balance seemed nearly even.

Assuredly, it was a difficult decision for President Eisenhower when the bill came to his desk for study. He weighed those same factors in the balance and, based upon his information, the bad outweighed the good. Furthermore, he has shown a determination to fight this thing through. He has indicated that the forces of his administration will be employed in wresting a workable farm bill from a reluctant Democrat majority in the Congress.

The President's veto of this bill and his reasons for the action he has taken are, in my opinion, cogent and sound. They are based upon a concern for the problems of the American farmer which transcends any immediate partisan gain

which his approval of the bill might have obtained. I support his action.

In his veto message, the President has urged the Congress to enact legislation authorizing the establishment of the soil bank proposal. In this I heartily concur and wish to express my conviction that the Congress, if it is motivated by an honest concern for the American farmer, will act quickly on this measure. There are no acceptable reasons, in my opinion, why this cannot be done and done now without any more verbiage. Political intransigence will be understood by our people when they evaluate any failure of the Congress to enact the soil bank legislation. Election year politics is no substitute for positive and constructive action by the Congress this year.

I recognize that the soil bank proposal may not, in itself, bring great direct benefits to many small farmers. Its benefits, however, will be appreciable and real when we consider that this program will reduce the surpluses and cause a general rise in the price of farm commodities. The decline in farm income is our problem today. Since the soil bank proposal will contribute to the solution of this problem, its benefits will be felt by all farmers in the prices they receive for basic crops. We must meet this challenge by formulating our solutions directly and honestly.

I wish to urge that the Congress enact a soil bank proposal bill immediately.

Military Justice Under Consideration

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, the House Armed Services Committee is now holding hearings on H. R. 6583, a bill to amend the Uniform Code of Military Justice. Under leave to extend my remarks, I wish to include the statement of Chief Judge Robert E. Quinn, of the United States Court of Military Appeals, on this bill before the committee:

STATEMENT OF CHIEF JUDGE ROBERT E. QUINN, OF THE UNITED STATES COURT OF MILITARY APPEALS, BEFORE THE HOUSE ARMED SERVICES COMMITTEE ON THE BILL, H. R. 6583, TO AMEND THE UNIFORM CODE OF MILITARY JUSTICE

Mr. Chairman and members of the Armed Services Committee, article 67 (g) of the Uniform Code of Military Justice directs the Judges of the United States Court of Military Appeals and the Judge Advocate General of the Armed Forces to meet annually and submit to the Armed Services Committees of the Senate and House of Representatives recommendations relating to the Uniform Code of Military Justice. The Committee has over the 5-year period of its existence, complied with that direction and in the report for the period ending December 31, 1953, 17 recommendations for changes in the law were made to the Congress. Those recommendations were endorsed by all members of the committee at that time and presently they represent the views of the court. The present bill goes beyond these recommendations. It contains provisions which cannot be justified by experience, reason or logic.

Judge Paul W. Brosman was present and participated in all committee meetings held during the years 1951 to 1955, inclusive. Because of his untimely death, only Associate Judge Latimer joins with me in this statement and the comments and criticisms which I present to you have his endorsement. However, every proposed change was considered by all three judges and the views expressed represent the collective judgment of the court. In addition, they are supported by 4½ years of experience on the court and a review of some 8,000 cases; by innumerable appearances before service schools, but association meetings and veterans organizations; and by repeated discussions with military commanders and military and civilian lawyers. While there have been some fair criticisms of certain procedural deficiencies in the Uniform Code of Military Justice, I need not defend its basic and beneficent provisions, for by any unbiased appraisal, it has proven that Congress was wise indeed in extending to members of the armed services the additional rights and privileges granted by that law.

In regard to the proposed amendments contained in bill H. R. 6583 now under consideration by your committee, I believe that to place the provisions in their proper perspective, a short reference to their historical development will be useful. Since its creation, the Code Committee has considered questions concerning, and problems involving, almost the entire field of military law. Immediately after the court organized, ideas for improvements were continually suggested. Some had merit; others were without value. On August 20, 1953, The Judge Advocate General of the Army, Navy, and Air Force, and the General Counsel of the Treasury, submitted a report incorporating a number submitted a report incorporating a number of recommendations which they thought would imporve the administration of military justice. Those recommendations may be found in exhibit D, page 30, Annual Report of the Code Committee for the period ending December 31, 1953. Most of the suggested changes had been the subject of discussion at meetings of the Code Committee but unanimity had not been reached on some of the proposals.

On February 15, 1953, the court appointed a civilian committee of outstanding lawyears consisting of Whitney North Seymour, chairman, Ralph G. Boyd, Henry T. Dorrance, Felix E. Larkin, Joseph A. McClain, Jr., George A. Spiegelberg, Arthur E. Sutherland, and Donald L. Deming. The committee was set up by the court because the judges were of the opinion that sounder recommendations could be submitted to Congress if all suggested changes were studied and evaluated by both civilian and military lawyers. Considering that The Judge Advocate General of the Services and the General Counsel of the Treasury represented the service community and the court committee members represented the civilian viewpoint, it is obvious that the court was thoroughly apprised of the military and civilian views. After receipt of the recommendations of the Judge Advocates General, referred to above, the proposed amendments were referred to the civilian committee for consideration and comment. That committee met with The Judge Advocates General of the Services, and was, therefore, fully aware of the service contentions. It is of interest to note that 17 recommendations are the only changes of the many considered which have the unanimous endorsement of The Judge Advocates General, the General Counsel of the Treasury, and the judges of the United States Court of Military Appeals.

Since the proposed changes were first submitted to Congress, there may have been a change in position by some of the Judge Advocates General because the present Defense Department bill contains some proposed amendments which were either rejected by the court members of the committee or were not presented to the committee for consideration. I, of course, do not quarrel with the right of a member of a committee to change his mind, but I respectfully suggest that any amendment to the code should not, at this time, go beyond the recommendations unanimously agreed upon by the code committee.

I start with the premise that unanimous recommendations submitted to Congress are sound and desirable and, in my opinion, they should be enacted into law. They will expedite the administration of military justice without denying the accused any right, privilege or benefit granted to him by Congress. Generally speaking, I oppose the other recommendations for the reason that almost every suggested change restricts a right conferred by Congress upon members of the military services. I consider it unnecessary to take up the time of the committee in discussing those provisions about which there is no controversy.

Appended hereto is a comparison chart of the proposed changes, setting out the present law, the proposed change and the code committee recommendation, if any. Also appended hereto is an analysis of changes contained in the bill, which have not been either considered by, or approved by the code committee.

If the committee desires a detailed explanation of the items in the bill not specifically recommended by the court, Judge Latimer will be glad to discuss these matters at length.

I would like to talk about one matter which is outside the provisions of the present bill, but which is of importance to military justice. When the Uniform Code of Military Justice was passed by the House of Representatives, article 67 provided that the members of the United States Court of Military Appeals—should hold office during good behavior and should receive the compensation, allowances, perquisites, and retirement benefits of judges of the United States Courts of Appeals. Subsequently, that section was amended by the Senate and the present term of 15 years was substituted. Several bills have been introduced in the House and Senate to reincorporate that provision. Apparently, no committee action has been taken on any of these bills.

The principle of life tenure has been approved by the Department of Defense; by the American Bar Association; by many other distinguished legal scholars; and life tenure for the judges was provided in the bill as originally reported from this committee and as approved by the House of Representatives.

Title 28, section 451, of the United States Code defines a court of the United States as "any court created by act of Congress the judges of which are entitled to hold office during good behavior." A similar definition of a judge of the United States is contained in this legislation. It can be argued, therefore, that a judge of the Court of Military Appeals is not a judge of the United States, and that the tribunal itself is not a court of the United States. Many reasons can be advanced in favor of eliminating the present uncertainty and granting the court full judicial stature. Undoubtedly, the members of the committee are familiar with the reasons for life tenure, but, if not, I am certain the author of the bill will supply any member with the complete information on this subject. I rsepectfully request the committee to put this court on the same level with other Federal courts. It can be done now without any political implications because the next regular vacancy does not occur until May 31, 1961.

Finally, by reason of the present term provision, the court has been held subject to the rules and regulations of civil service. In my opinion, Congress did not intend to make this court subservient to that agency, and if I am correct in my belief, then some remedial action should be taken. This court should have the same tenure, independence, standing, and dignity as other Federal courts. It should be permitted to conduct its own affairs without supervision by the Civil Service Commission.

In Answer to Pettiness

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. DEROUNIAN. Mr. Speaker, almost daily the people of the United States are subjected to petty criticism of any relaxation of our great President. The following mature and penetrating article by David Lawrence, which appeared in the Washington Evening Star of April 18, 1956, looks at the whole subject in proper perspective and I commend its reading to the American people:

A PRESIDENT IS ALWAYS ON DUTY—CRITICS OF EISENHOWER TRIPS FORGET UNITED STATES IS JUST HOURS WIDE BY PLANE

(By David Lawrence)

The horse-and-buggy days have long since gone but, judging from some recent comments criticizing President Eisenhower for not staying in Washington during a flare-up in the Middle East, it might be supposed that some people do not know that the airplane and the telegraph and the telephone make it unnecessary for any Chief Executive to remain in the National Capital all the time.

As a matter of fact, those who wanted President Eisenhower to cancel his recent trip to Augusta, Ga., didn't realize that such a step would in itself have set off an alarm around the world. Stock markets would have been affected, and nervousness about a new call-up of the draft would have ensued.

Actually, nowadays a President of the United States can be anywhere in this country and take care of an international crisis so far as military or diplomatic messages or instructions are concerned.

For some years now it has been well known in Washington that only one man—the President—has the authority to order use of the atomic bomb in case of sudden attack. Naturally, if a President goes from city to city, as he has to do occasionally during his term of office, arrangements have to be made for instantaneous communication with him. These have always been carefully planned to meet any emergency operation.

Wherever the President goes there are telephone or radio contacts, and he can even be reached aboard a plane and hold a conversation with his subordinates while traveling in the air. When Mr. Eisenhower goes to Augusta, he has the same setup on a communications basis that President Truman had at Key West, Fla., during the Korean war—and there were some acute phases in that war.

The telephone and telegraph lines are private. They are for the use only of the President and they connect continuously with the White House telephone switchboard and with the telegraph room there. The same preparations are made many weeks in advance whenever the President is planning a visit to Denver or to any other place across the country where he makes a stop. The communications equipment at the President's farm at Gettysburg has been established for several months and can be put into operation at a moment's notice. Conferences by telephone nowadays can be held with 3 or 5 or more persons at the same time, and 2-way conversations are possible among all the participants.

There are folks who think that when an international situation gets in the headlines the President should station himself in his office and wring his hands while the photographers take pictures of him "meeting the crisis." The truth is that a President needs time to read the constant flow of messages that come to him from all parts of the world, and he can do a better job of concentration and can think things through with far more objectivity when he is detached from Washington's pressures. Any officials needed for a personal conference can always be summoned in a few hours' flying time.

When Mr. Truman went to Key West a few years ago, this correspondent wrote somewhat the same exposition of the presidential communications system and defended Mr. Truman from similar criticisms. Unfortunately, there seems to be a tendency to criticize Presidents when they try to get some exercise or rest. They never really take vacations except for a few hours at a time.

The theory that a Chief Executive can do a good job only in the midst of Washintgon's whirl is a fallacy. A President deserves all the time he can possibly take for golf or any other recreation. Past Presidents have had their hobbies, and the Nation never begrudged the vacations of Grover Cleveland or of Herbert Hoover, both of whom liked to go fishing.

One thing is rarely publicized. It's that a President often works long into the night and on weekends. The time he spends reading important messages from all over the world and memoranda from his associates is unknown to the public generally—but, whether it's at Augusta or Gettysburg or Denver, the time spent by the President on the golf course is reported. Also, if he tosses out the first ball at the opening of the baseball season, it's widely covered—and, of course, if he doesn't go to the initial game, it offends the fans. Yet the time he spends at this desk during the day or in his bedroom at night reading official papers never gets into the newspapers. It often means a 50-hour week for him.

It is the pettiest kind of partisanship and narrowmindedness to criticize any President for taking a vacation or trips away from Washington. It would be better for America if all Presidents spent more time traveling around the country rather than tie themselves down to the White House continuously for 12 months a year.

Pan American Airways

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. KLEIN. Mr. Speaker, there have been many speeches before this body recently concerning the proposed certification of this or that air carrier for a new air route between the New England States, New York, and Florida. That this service must be necessary is manifested by the fact that the Civil Aeronautics Board has been holding proceedings for a considerable length of time and that the CAB examiner in the case emphasized the need for a new carrier on this highly important and highly traveled route. The matter is presently before the CAB.

The Commerce and Industry Association of New York has, for the first time, expressed an opinion regarding the selection of a particular air carrier by the CAB. While reluctant to depart from past policy the board of directors of that association, after most careful consideration and deliberation, is convinced that of all the applicants in this proceeding, certification by the CAB of Pan American as the third carrier would be in the best interest of New York and, therefore, in the best interest of the public.

Actually, the Commerce and Industry Association does not have a local perspective on this additional service to Florida nor is it motivated by local political consideration. Of its membership of 3,500 firms representing a cross-section of business and industry, some 2,000 of these firms are directly engaged in international commerce. As this association points out it is greatly concerned with any new service which will facilitate the movement by air of passengers and cargo to and from Latin America and between Europe and Latin America via New York.

Of all the applicants competing for this route only Pan American, in the opinion of the association, can do the complete job well enough to satisfy the demands of international commerce.

Mr. Speaker on April 16, Mr. Joseph A. Sinclair, secretary of the association, wrote to Mr. James R. Durfee, Chairman of the Civil Aeronautics Board, urging certification of Pan American on the New York-Florida route.

Under leave to revise and extend my remarks, I ask unanimous consent that Mr. Sinclair's letter be included in the RECORD.

The letter follows:

COMMERCE AND INDUSTRY
ASSOCIATION OF NEW YORK, INC.,
New York, N. Y., April 16, 1956.

Subject: New York-Florida Proceeding
Docket No. 3051, et al.

Mr. JAMES R. DURFEE,
Chairman, Civil Aeronautics Board,
Department of Commerce Building,
Washington, D. C.

DEAR MR. DURFEE: The Commerce and Industry Association of New York wishes to express to you and the members of the Civil Aeronautics Board its views with respect to the initial decision of the examiner in this proceeding. This association, which is the recognized service chamber of commerce in the New York metropolitan area, has a membership of some 3,500 firms representing a cross-section of business and industry in the New York area, including some 2,000 firms directly engaged in international commerce as well as a number of the airlines which serve New York.

Our primary interest in this proceeding is the economic importance to New York of adequate service both for passengers and cargo to Miami and intermediate points, and also, in view of New York City's importance as the international trade center of the country, the movement by air of passengers and cargo to and from Latin America and between Europe and Latin America via New York.

We agree with the examiner's views as to the need for a third carrier on this route. The selection of that third carrier by CAB is of outstanding importance to New York and, since this area is the largest source for both passengers and cargo, we urge that the economic interests of New York be given proportionate weight in arriving at the Board's decision.

We feel strongly that the selection of a third carrier by you and the other members of the Board should be made on the basis of service to the communities involved rather than giving first consideration to the possible effect on one of the present operators. Therefore, the strongest available competition should be selected in the public interest as being more productive of adequate and efficient service.

This association has never in the past expressed an opinion with regard to the selection of air carriers by CAB and we have never taken a position favoring one applicant in any parallel transportation situation. However, while reluctant to depart from past policy, our board of directors, after most careful consideration and deliberation, is convinced that of all the applicants in this proceeding, certification by CAB of Pan American World Airways as the third carrier will be in the best interests of New York and, therefore, in the best interests of the public.

Study of the initial decision of the examiner only strengthens our view that Pan American Airways is the logical choice of applicants. Many of the points made in the examiner's report point to that conclusion; the immediate availability of suitable equipment; the early use of jet aircraft now on order; the reverse seasonality of Pan American's present operations as compared with the east coast route; the examiner's acceptance of Pan American't estimates of the traffic it would carry both passengers and freight and the consequent reduction or elimination of several million dollars of Government subsidy; and the high percentage of passenger and cargo traffic which originates in or is detined for Latin America or Europe.

The examiner makes no comment on the present competitive disadvantages of Pan American relative to foreign airlines. It would seem unlikely that loss of business to foreign carriers can be overcome through any interchange arrangement. Such loss of traffic means, of course, that thousands of passengers who might come to New York on a through plane service will not be providing business to our hotels, retail shops and other business establishments.

We take exception to the examiner's statement (p. 109): "It seems clear that there is now sufficient service available or potentially available, to provide for freight needs and that certification of Pan American between Miami and the Northeast to provide all cargo service is unnecessary and not required by the public convenience and necessity." As stated previously, some 2,000 firms of this association are engaged in international trade operations. Many do business with Latin America and must ship goods by air to satisfy the needs of their overseas customers and to meet European competition. Without exception shippers have expressed dissatisfaction with present cargo service via Miami, an opinion which was fully confirmed by them at the hearings in this proceeding. The number of complaints with regard to the inadequacy of air cargo service to Latin America due to the present hiatus between New York and Miami has been increasing in proportion to the increased use of international air freight service. It is difficult to understand the basis on which the examiner arrived at the above-quoted conclusion in view of the large percentage of that traffic which moves between the Northeast and Miami by rail and truck. The amazing feature is that with the resultant loss of time under the present setup, the volume of international air freight from the Northeast via Miami continues to increase so strongly.

Neither of the two present carriers have shown an interest in cargo service or any indication that they expect to do so. We do not find anywhere in the examiner's report that Delta contemplates any all-cargo service if certificated for this route. In contrast, Pan American has stated that they will schedule two cargo planes a day and that the freight rate will be lower than the present combined rail and air rate to Latin America.

Although the examiner expresses the opinion that through plane service can be provided under interchange arrangements, such arrangements can only be considered as temporary expediences which can hardly be expected to result in the same efficiency of service as single carrier operations. This is particularly true in connection with cargo service when one party to the interchange agreement shows so little interest in developing freight business.

The Examiner makes the point that "with additional carriers in the market, there will be increased traffic solicitation, promotion and development which will necessarily generate new traffic * * *." In this regard also, Pan American is certainly the outstanding choice for a third carrier. Not only does Pan American have a solicitation and promotion organization throughout this country, but their overseas offices likewise would be in a position to develop new business over the East Coast route. The fact that almost 20 percent of the present traffic to Miami is destined to or from Latin America indicates the effectiveness of Pan American's promotion activities and the contacts which they have for developing new business.

Likewise, because such changes will benefit air service from New York, we urge elimination of the provision that Eastern Airlines may serve Boston only on flights originating or terminating south of Richmond, Va., or west of Charleston, and of the present compulsory stop at Atlanta on Eastern's New York-Tampa service.

Also, because of the effective competition and improved service which should result, we urge the Board's approval of Trans-World Airline's application for extension of its service from New York to Boston, Philadelphia and Washington, without the restrictions suggested by the examiner.

We believe also that approval of United Airlines application to engage in nonstop operations from New York to Philadelphia, Baltimore, and Washington, without restriction as to the origin of flights will result in improved service to the traveling public and will fill a need for better service between those cities.

We request your favorable consideration of the views expressed above.

Sincerely,

JOSEPH A. SINCLAIR,
Secretary.

President Remains Strong With Independent Voters

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. SPRINGER. Mr. Speaker, the recent Gallup poll on the strength of President Eisenhower as against Adlai Stevenson or ESTES KEFAUVER has been released in this morning's Washington Post.

It demonstrates again the tremendous strength which President Eisenhower has among independent voters only. As a rule of thumb, we say that there are approximately one-third of all voters in the country who vote independently, or what we call a split ticket.

Among the independent voters, President Eisenhower maintains a margin over Mr. Stevenson of 71 percent as against 23 percent. The President maintains a lead among independents of 66 percent as against 26 percent for Senator KEFAUVER.

This is indeed a tribute to President Eisenhower, because as a rule these independent voters do not vote consistently with any one party. In a Presidential election, the year generally termed by political experts to hold the balance of power.

Other Gallup polls taken during the last 3 years indicate that the President has stood very high on each poll with the independent voters.

Appended herewith is the complete poll as released by the American Institute of Public Opinion, April 18, 1956:

PRINCETON, N. J., April 18.—Which of the two leading Democratic candidates, Adlai Stevenson or ESTES KEFAUVER, runs the strongest race against President Eisenhower as of now?

When the 1952 contenders are matched in an institute trial-heat race, voters questioned in a survey throughout the country say they would vote as follows:

Ike versus Stevenson

	Percent
Eisenhower	61
Stevenson	37
Undecided	2

Eliminating the 2 percent who say they are undecided today, the above figures become: Eisenhower 62 percent, Stevenson 38 percent.

Running against President Eisenhower, Senator KEFAUVER polled the following vote, as reported previously:

Ike versus Kefauver

	Percent
Eisenhower	59
Kefauver	38
Undecided	3

Excluding the undecided vote, the figures were: Eisenhower 61 percent, KEFAUVER 39 percent.

In the 1952 presidential election, Eisenhower polled 55.4 percent of the major party vote compared to Stevenson's 44.6 percent.

One interesting sign of political cross-currents at work shows up in an analysis of the two trial heats.

While on a nationwide basis KEFAUVER and Stevenson run about even against Eisenhower, it is interesting to note that of the two Democratic candidates, excluding the undecided vote, Stevenson does better against Eisenhower in the South than KEFAUVER does.

Here is the vote today of Independents in the Eisenhower versus Stevenson race:

Independents only

	Percent
Eisenhower	71
Stevenson	23
Undecided	6

By way of comparison, here is how Independents divided on Eisenhower versus KEFAUVER:

Independents only

	Percent
Eisenhower	66
KEFAUVER	26
Undecided	8

Following is a comparison of the results of the two surveys in the South:

South only

	Percent
Eisenhower	50
Stevenson	47
Undecided	3

South only

	Percent
Eisenhower	53
KEFAUVER	44
Undecided	3

In 1952, President Eisenhower polled 49.1 percent of the major party vote in the South compared to Stevenson's 50.9 percent.

Persons who classify themselves as Republicans in today's survey overwhelmingly prefer Eisenhower to Stevenson, as follows:

Republicans only

	Percent
Eisenhower	98
Stevenson	2
Undecided	(1)

[1] Less than ½ of 1 percent.

This closely matches the vote among Republicans in the Eisenhower versus Kefauver trial heat, which found 97 percent preferring Eisenhower, 2 percent Kefauver, and 1 percent undecided.

Among persons who classify themselves as Democrats, both Stevenson and Kefauver outpoll Eisenhower by a margin of better than 2 to 1, as follows:

Democrats only

	Percent
Stevenson	69
Eisenhower	29
Undecided	2

Against Eisenhower, KEFAUVER got 70 percent of the Democratic vote, Eisenhower 26 percent with 4 percent undecided.

Cross-section surveys, such as those conducted by the institute, are not to be confused with ballot-in-the-paper, post card and other similar polls, in which no attempt is made to see that each segment of the voting population is represented in its true proportion.

An accurate cross section must include the proper proportions of young and old, rich and poor, city dwellers and country folk, grade school, high school, and college educated, labor union members, and non-members, men and women, and so on.

Farm Bill Veto

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 19, 1956

Mr. HOPE. Mr. Speaker, the Washington Post of today carries an article by Walter Lippmann in which he discusses the farm bill veto. This article in my opinion accurately and effectively expresses the issues and differences of viewpoint which existed between the President and Congress in connection with the consideration and disposition of this legislation.

As Mr. Lippmann well points out, these differences are not differences of principle, rather there is a substantial agreement upon principle, but a difference in the degree and extent to which relief should be afforded.

I feel that this article should be read and considered by every Member of Congress. The veto of the President and the administrative action which has been taken to increase support prices does not by any manner or means settle the issue nor would it have been settled if the bill had been allowed to become law by the President. However, as is well known, I believe that the bill passed by Congress more adequately met the present situation.

In my opinion the passage of the soil bank bill introduced by a number of the Members of the House and Senate on yesterday would be of further assistance at this time.

The article follows:

TODAY AND TOMORROW

(By Walter Lippmann)

THE FARM BILL VETO

The President had no choice but to veto the farm bill that Congress sent him. Had he signed it, he would have had to repudiate not only his own public statements but the whole record of his Secretary of Agriculture and the actions of the two Republican leaders in Congress, Senator KNOWLAND and Representative MARTIN. Does it follow that the original program which he sent to Congress in January was adequate and satisfying and that all would be well if only Congress had accepted it?

It does not follow. The President's own actions when he vetoed the bill recognize that the basic complaint of the congressional opposition to his original program was about halfway justified. Where the bill would have subsidized farm prices to the tune of aboue $1 billion, the President is going by administrative action to subsidize farm prices to the tune of about $500 million. He has vetoed the very high and rigid price supports. He is going to put into effect high but not quite so high theoretically flexible supports.

The issue between the President and the congressional opposition is not really one of principle. It is whether farm income shall be subsidized at the congressional rate or at the administration rate.

The farm bill is in its details a very complicated business. But what has happened since the President's special message in January comes down, I think, essentially to this. In the administration's mind the crucial and fundamental "problem is," as the President said in his veto message, "price-depressing surpluses," caused by "wartime incentives too long continued." From this it follows that the basic principle of a sound farm policy is to reduce production in order to reduce the surpluses.

The opposition in Congress, consisting of the Democrats and most of the Republicans from the farm States, is primarily concerned with the decline of the incomes of the farming population. Their total income from farm and nonfarm sources has declined 26 percent since 1947, while the total national income has increased by 36 percent. The congressional opposition recognizes that there is a problem of surpluses. It does not accept the view that it is the only or the paramount problem. The paramount problem is the decline of incomes which may be due not only to the wartime supports, but to the technological revolution which has increased so enormously the productivity of agriculture.

The administration, its eyes fixed on the surpluses, has been interested primarily in the soil bank, which is a device for reducing production. The opposition, its eyes fixed on the fall in the income of farming population. wrote a bill which used every available gadget for pumping out larger subsidies to the farmers.

The President, though he has vetoed the bill, has tried to go about half way as far as the bill.

In the long run it may well be that the character of the President's veto marks the acceptance of the principle that in the great transition through which agriculture is passing, it is a national obligation to cushion the effects on the farmers. There is a stern theory that prices should be set in the market and that in this price structure the more efficient farmers should survive and the less efficient farmers be forced out of farming. But no public man could or would think of acting on this theory, no matter how many times he has made speeches about free enterprise. The hazards of farming during the technological revolution now in progress have become a social obligation, in principle akin to the social-security system which deals with unemployment and old age.

The day will come, let us hope, when we shall have a farm policy based candidly on this principle of social security. The enormous increase of agricultural productivity in this generation, even more than the high parity supports, is producing the great price-destroying surpluses. To eliminate these surpluses millions of acres now in wheat, corn, and cotton will have to be taken out of production. This will mean that several million farmers will have to go off the farms. It is to slow up, to soften, to alleviate this painful human readjustment that the social-security principle will have to be applied to farming.

When it is applied, then it will no longer be necessary to maintain artificially high farm prices. For the artificial prices are only an indirect and cumbersome way of subsidizing farm incomes. It will be better to support the incomes of the farmers, as we do those of the industrial population, on the principle of social security, and to let prices become genuine as determined by the markets.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

REPRESENTATIVES WITH RESIDENCES IN WASHINGTON

Appendix

Address by Rudolph G. Pesata, National Commander of the AMVETS

EXTENSION OF REMARKS
OF
HON. EVERETT M. DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Monday, April 23, 1956

Mr. DIRKSEN. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an address by Rudolph G. Pesata, national commander of the AMVETS, delivered before the Cook County Council on April 14, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TEXT OF SPEECH BY RUDOLPH G. PESATA, NATIONAL COMMANDER, AMERICAN VETERANS OF WORLD WAR II, BEFORE THE COOK COUNTY COUNCIL, AMVETS, NATIONAL COMMANDER'S BANQUET, APRIL 14, 1956

Normally I do not resort to a prepared text. You folks who have known me know that I like to speak extemporaneously. However, tonight I hesitated to speak so informally, perhaps because I wanted to put my best foot forward among such close friends, or perhaps because I wanted to carefully express a thought which is dear to my heart.

I know that you will agree that I am not the kind of a guy who is frequently at a loss for words. Yet the very warm welcome you have given me has put some hesitancy into my speaking. One difficulty seems to be that I feel more at home out there with you folks than up here at the headtable. I know that I certainly found it easier to help work out seating charts for this table than to occupy one of the chairs.

In all seriousness, it's wonderful to be home in Cook County. While I have had an opportunity to visit our great State of Illinois several times since assuming office, tonight I feel is the highlight of my term as commander.

I know how hard AMVETS in Cook County have worked in the past to make this annual banquet a real tribute to AMVET Commanders. And because I know of the tremendous amount of effort and coordination which goes into this affair, I am perhaps more grateful than my predecessors for the fine reception which so many of you have given me this evening.

In all humility I stand before you to thank each and every one of you for making it possible for me to attend this banquet as the honored guest. Had it not been for the untiring efforts and devotion of so many of you in the days prior to our last national convention and the seemingly unending days and nights in Philadelphia, I would not now have the joy and the inspiration of serving as national commander of the greatest veterans organization in America.

Many men from Illinois have served AMVETS in top leadership roles since the inception of our organization. Many more have been the nucleus for the local growth and expansion which has seen our State lead all the rest year after year. Even more have worked on the hundreds and hundreds of resolutions and policy statements which have become the mandates of AMVETS and have gained for us the reputation of a thinking group of young veterans.

It's quite a challenge to follow in the footsteps of devoted men such as these. And whatever small success I may have had in equalling their performance has been due in large measure to the fact that once again Illinois has come through with membership gains. Once again your advice and suggestions are helping to formulate policies which are meeting the commendation of the Congress. Once again Cook County AMVETS are showing the Nation what our organization believes about Americanism * * * about service to veterans * * * about all of those matters which affect the veteran and nonveteran alike * * * and which confront us as leaders in the veterans' field.

With this support to draw upon, I am proud of the record we are establishing for AMVETS this year. The enhancing of our reputation on Capitol Hill, with the Defense Department, with the State Department * * * our sizable membership increase * * * all clearly prove to me that the wonderful cooperation that I have received from you—my close friends in AMVETS—made this record possible.

Here in the midwest where we are justifiably proud of our prestige on the gridiron * * * and where many of our football heroes have been named to the all-star teams throughout the country * * * may I say that each and every AMVET in the Department of Illinois should be named to the All-American team of AMVETS. You are real team workers and I'm glad you're playing on my side.

The great midwest holds a tremendous attraction for people from all across the Nation. In the Halls of Congress, our elected representatives play a major role in the guidance of our Nation on both a domestic and an international level * * * and it's a successful leadership role. Our States are looked upon as exemplifying all that is good in America. Here one can truly say is America. And because you are such an integral part of our country, the message I want to leave with you tonight is about America.

In my travels as your National Commander, I have had the opportunity to view at first hand a situation which disturbs me. Where I have not seen it with my own eyes, I have learned it from discussions with the many individuals I meet.

We seem to have become a nation of extremes as opposed to the simple premises on which we were founded. We have gone through a fear complex stage which posed dire threats to our constitutional liberties for which we fought to preserve.

We have gone through the other extreme of not being sufficiently aware of * * * and alert against * * * the insidious dangers of communism within our borders.

And the disturbing thing is that we seem to find it almost impossible to grasp the clear-cut picture of Americanism which is in front of our eyes * * * and at our fingertips * * * and in the back of our memories.

Going back to my school days, I can remember beginning each day with a recitation of the Pledge of Allegiance to the Flag. I can also recall that at least several mornings of the week, we sang a lusty * * * if not musical * * * rendition of the Star Spangled Banner. And it seemed to me then that the Salute to the Flag and the singing of our national anthem had a revered and deep meaning which sobered even the most precocious of us and set us to thinking for a while.

Yet today I have discovered educators who feel that it is not necessary to take time to recite the Pledge of Allegiance in our classrooms. They feel it is not necessary for our children to know and understand the meaning of those words.

There are among us today those who do not believe it is necessary to display the flag in classrooms and on public buildings. They say: "Oh, everyone knows what the flag stands for."

There are others who feel that the teaching of the fundamentals of civics and government need not be a major part of our educational standards. They would have you believe that youngsters today learn enough of the basics of democracy from their everyday life without making civics and history mandatory subjects in our schools.

I take exception to all of these critics.

And I say to you that we, and our children, not only do not understand the Pledge of Allegiance—but we don't even know it. I say to you that only a few of us can accurately state what the colors and the stars and the stripes of our flag stand for * * * and even a smaller percentage of our children are learning these symbols of our heritage in classroom, USA, 1956.

In 1776 the American flag with its 13 stars and 13 stripes was the focal point around which Americans rallied in their first struggle for liberty. The desolate winter at Valley Forge had taken a grave toll in men and supplies from General Washington's small army. But those 13 stars and those 13 stripes were the new born hopes of men, and those hopes sustained that small army and carried it on to victory.

In the War of 1812, the mere sight of the American flag * * * now with 15 stars * * * caused Francis Scott Key * * *captive on a British ship off of Fort McHenry * * * to pen the immortal stanzas of the Star-Spangled Banner.

And in our own war, the dramatic triumph which showed in every strained muscle of the men who participated in the raising of the 48-star flag on Mount Suribachi became a buoyant spirit of victory in the minds of Americans.

Our flag has led us through countless military victories. But what is amazing to me is that it seems that only in crisis * * * only when our precious freedoms are physically threatened * * * do we become so sharply aware of it * * * and what it represents in our heritage.

Instead of an acceptance of * * * and a belief in * * * the symbols of our flag, we more frequently hear that such a display of patriotism is flag-waving and old-fashion. If that is true, then I plead guilty to both charges. Perhaps it can be flag-waving and old-fashion * * * but where the best interests of my country are concerned, I take pride in being accused of believing in my Nation.

Frankly, the most conclusive evidence that we have that there is a lack of understanding of Americanism being taught in our homes and in our schools can be obtained from the files of the Defense Department.

The shooting war that was the Korean conflict is over. But how many of you will soon forget that many of our men were taken prisoners by the Communist hordes. And how many of you will forget that some Americans in uniform knew so little about the values of the American way of life that they were unable to dispute the lies with which the Reds confronted them.

The records show that many of our young men were unable to withstand those falsehoods and became victims of what is commonly called brainwashing.

I do not mean this to be an indictment of our youth because our young people will grow as they are led. But history does prove that we do need to understand our American heritage not only to properly prepare us for the normal responsibilities of citizenship but for emergency ammunition in meeting those forces which would destroy our freedoms.

The Advertising Council of America is reviewing a nationwide campaign on phases of this subject and with the talents readily available to the council, a booklet has been prepared with a title so simple that it is almost all-encompassing. It's called: "The Miracle of America—the Better You Know America, the Better the Future Looks."

How can anyone say that this simple truth is old fashioned? How can they say that belief in the principles of what our flag stands for is what they sneeringly call flag waving?

Look around the four corners of the world today. Conflict and near conflict is the rule rather than the exception. And it would seem to me that in such an atmosphere of cold war, we have the responsibility of making very certain that the liberties which our ancestors established for us and which we have helped to preserve are living symbols to every man, woman, and child who holds a share in the future of our Nation.

And if we don't assume that responsibility we may eventually have to assume the blame for a repeat of the defections which were seen among our troops in Korea.

We in AMVETS are cognizant of the need for a positive Americanism program. We have our own goals for reaching the 48 States with instruction programs which will remind adults of the forgotten struggles to form this still young country of ours. The pilot seminar will be held here in Chicago next month.

We sponsor a community flag program aimed at more widespread use of our national banner in our daily lives.

And we are encouraging our school officials to renew the daily pledge of allegiance among our youngsters. Let those who are too young to fully understand the meaning and significance of our majestic flag, learn to explore the reasons for that pledge.

And we're going further than that in the field of youth. We're taking active roles in the guidance of our local boys clubs. We're sponsoring Boy Scout troops and Girl Scout troops. Especially in Illinois, we're working with Worchids and in other ways are lending guidance to the youth who will be our leaders of the future.

I would entreat AMVETS to try to do all in our power to make these efforts successful. We, who have been in battle, who know what it means to take arms, and to undergo the trials and tribulations of war, should have an even greater interest in the return of American thinking to the principles of justice, government of the people, and personal liberties which our flag symbolizes.

It's our job to remind the 160 million citizens who share in the future of America that their's is a future to be proud of, to be cherished, and the responsibilities which go with that future should be willingly and enthusiastically accepted by all.

When next you hear or speak the words of the pledge of allegiance, listen carefully, or speak them thoughtfully:

"I pledge allegiance to the flag of the United States of America, and to the Republic for which it stands, one nation under God, indivisible, with liberty and justice for all."

Simple words which say so much. And back of them lies the American's creed which sets forth distinctly, concisely, emphatically what we mean when we say "and to the Republic for which it stands." Written by William Tyler Page and formally adopted by the Congress of the United States, the creed should be the promise of every American:

"I believe in the United States of America as a government of the people, by the people, for the people; whose just powers are derived from the consent of the governed, a democracy in a republic, a sovereign nation of many sovereign states; a perfect union one and inseparable; established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes. I therefore believe it is my duty to my country to love it, to support its Constitution, to obey its laws, to respect its flag, and to defend it against all enemies."

This is not old fashioned. It's new as tomorrow. It is not flag waving. It is the devotion which you and I owe to this land of many opportunities for ourselves and our children. And it's the simple definition of Americanism which will stand up against all of the foreign ideologies which are woven into governments for governments, rather than governments for peoples.

This is American patriotism—a renewed challenge in a restless world.

Proposed Extensions of Northeast Airlines

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, April 23, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Northeast Air Line 'Knows the Answers,'" which appeared in the Manchester Union Leader, Manchester, N. H., on Friday, April 20, 1956. This editorial comments on a recent CAB examiner's decision which is adverse to New England interests.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NORTHEAST AIRLINE KNOWS THE ANSWERS

If not among some Federal bureaucrats, Northeast Airlines certainly has champions and advocates in nongovernmental circles. For instance, the New Bedford Standard-Times declares editorially that "the spontaneous expressions of support for Northeast Airlines by the people of New England during the last 2 weeks should give the Civil Aeronautics Board some idea of the high esteem earned by the airline. The endorsements for Northeast were in protest of the report submitted April 3 by CAB Examiner Thomas L. Wrenn, who suggested that Delta Airlines be named as the third scheduled passenger carrier to operate between New York and Florida."

And, curiously, although Wrenn has somehow failed to endorse Northeast, another representative of the CAB, V. Rock Grundman, counsel for the CAB's Bureau of Air Operations, has approved the line's application for the New York–Florida franchise.

As the Standard-Times remembers, all 12 of New England's Senators have protested the Wrenn opinion. In the House, Democratic Majority Leader MCCORMACK, of Massachusetts, has spoken in favor of the airline's application, urging the CAB to "Ignore the examiner's absurd findings. * * * The ringing praise which has arisen for Northeast from all over New England leaves no doubt that Northeast knows the answers, operates an outstandingly good airline and is capable of giving excellent service."

In the face of the record, how can the CAB do otherwise than renounce the Wrenn finding? How can the CAB do otherwise than grant Northeast Airlines its New York–Florida franchise?

Certainly it is good to know that the determination for fair play is growing throughout New England. Here in New Hampshire, as local cases in point, six influential State groups have now protested Wrenn's discriminatory viewpoint. If the CAB heeds public opinion, injustice to Northeast will not prevail.

American Foreign Policy

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, April 23, 1956

Mr. LEHMAN. Mr. President, last week, on April 12, Governor Averell Harriman addressed the annual convention of the American Jewish Congress. His address was on the subject of foreign policy, with detailed reference to American policy in the Middle East. His speech was an incisive one, reflecting Governor Harriman's broad background of experience in foreign affairs.

I hope his address will be widely read and will be given the attention it deserves by the Department of State.

I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TEXT OF ADDRESS BY GOV. AVERELL HARRIMAN AT THE CONVENTION OF THE AMERICAN JEWISH CONGRESS AT THE HOTEL BILTMORE, NEW YORK CITY, ON APRIL 12, 1956

I am delighted and honored to participate with you in your National Biennial Convention particularly because you have dedicated it to the memory of a great American and a great Jew—Justice Louis D. Brandeis—on the 100th anniversary of his birth.

Brandeis truly exemplified the American tradition which recognizes no artificially created boundaries to man's aspirations. We can recall the outcry of the bigots when he was named to the United States Supreme Court. Yet he served on that bench with luminous distinction and left a heritage which will never be forgotten. He helped to strengthen the faith of the American people in one of its integral institutions, the Supreme Court, and I say that those who seek to weaken this arm of Governemnt do injury to the cause of American freedom.

In past months, there has been great speculation about the so-called changes in the Soviet Union.

The new Soviet leaders are trying to dissociate themselves from the years of horror under Joseph Stalin. This they began almost the day after his death. They are claiming

they have supplanted the tyranny of one-man rule with collective leadership.

For my part, I cannot help but remember that all this has happened before. It's like seeing the remake of an old movie—same plot, new cast. The slogan "collective leadership" was heard a quarter of a century ago, when it consisted of Stalin, Zinoviev, and Kamenev. But that collective leadership didn't last and it became Stalin, Rykov, and Bukharin. Then came the nightmarish purge trials and the executions of Zinoviev, Kamenev, Rykov, and Bukharin—and only Stalin remained.

With Stalin's death, we heard about collective leadership again—this time Malenkov, Molotov, and Beria. Within a week, Malenkov had been pushed out as head of the Soviet Community Party and Khrushchev took his place. A few months later, Beria was executed, Malenkov resigned as Premier, Molotov admitted that he didn't know what socialism was; Bulganin appeared on the scene. This is the new collective leadership we hear about now. You can't tell the players without a scorecard.

The truth is that collective leadership is just a slogan designed to trap the unwary—and nothing more. But its very nature, communism is a dictatorship. The Soviet system cannot work without a final voice of authority.

Certainly the Kremlin walls have revealed cracks behind its mythical monolithic facade—but that is a tribute to the hundreds of millions of human beings behind the Iron Curtain. It is because among these Russians, Ukrainians, Poles, Czechs, Balts, Hungarians, Rumanians, there is still a spark of resistance, a small but inextinguishable flame of hope. It is because of this that the Khruschchevs are busy trying to explain away the degrading, inhuman history of the last 30 years, a history which they helped to make, a history which is written in the blood of many millions of people for whose deaths they, as well as Stalin, are responsible.

Khrushchev himself, after all, was the instrument of Stalin's policy in making the Ukrainians bow to the tyranny.

In the words of the Prophet Isaiah, we can say to Khrushchev, "For your hands are defiled with blood, and your fingers with iniquity; your lips have spoken lies, your tongue hath muttered perverseness. None calleth for justice, nor any pleadeth for truth; they trust in vanity, and speak lies; they conceive mischief, and bring forth iniquity."

Stalin was not a pathological case. I knew him. He was ruthless, cruel, and unscrupulous—but he wasn't crazy. He was determined to gain his objectives, and to him the end justified the means regardless of cost or human values. But in achieving these ends he was a man of great capacity. During the war, he dominated every phase of Soviet military operations and civilian life.

Then why is Khrushchev telling the Soviet people that Stalin was a lunatic? In order to persuade the that the ghastly years of the Stalin regime had nothing to do with communism; that with Stalin dead, they claim Soviet communism represents safe and healthy progress.

These so-called changes in the Soviet Union are intended not only to strengthen the dictatorship at home but to increase neutralism abroad. They are aimed at the psychological disarmament of free peoples. Soviet aims of world conquest are part of the Stalin master plan of Lenin and Stalin which Khrushchev has not and will not repudiate.

A quarter of a century ago, a Soviet spokesman of high rank, Dmitri Manuilsky, stated before the Lenin School of Political Warfare in Moscow:

"War to the hilt between communism and capitalism is inevitable. Today, of course, we are not strong enough to attack. Our time will come in 20 or 30 years. To win we shall need the element of surprise. The bourgeoisie will have to be put to sleep. So we shall begin by launching the most spectacular concessions. The capitalist countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we shall smash them with our clenched fists."

You can see this very thing happening now. And if you read carefully what was said at the 20th Communist Party Congress in Moscow, you will find no change of any consequence in their revolutionary doctrine.

They told us then their aim was to destroy the North Atlantic Treaty, drive American troops and arms out of Western Europe, reshape Germany according to Soviet design, probe for weakness wherever it exists in the free world, and win country after country by conspiracy and subversion through popular fronts or otherwise.

Unhappily, the administration is not acting as though it understood fully all these dangers. Running through the Eisenhower administration is a streak of naivete on this central issue of international communism.

We saw this last summer, at the Geneva conference. There President Eisenhower, sitting in the center of the spotlight of world publicity, publicly credited the new Soviet rulers with a desire for peace no less earnest than that of the West.

Nothing could have served the purposes of Khrushchev more than that. Neutralist and pro-Communist elements were strengthened throughout the world. Free nations relaxed their efforts to build strength against communism. The Soviets scored a psychological breakthrough that they have been exploiting ever since with economic and political penetration of the Middle East, South Asia, and the Far East.

Yet after all this, last week, on April 3, Secretary Dulles was saying:

"The fact that the Soviet rulers now denounce much of the past gives cause for hope, because it demonstrates that liberalizing influences from within and without can bring about peaceful change."

And remember how he told a Senate committee that the Soviet Union was changing because of internal weaknesses and the failure of its policies.

There have been changes—but hardly brought about by true liberalizing influences—in the Soviet Union. Khrushchev is leading not from weakness but from strength—military, economic, industrial. And his policies, unhappily, are not failing. Throughout the world, Soviet economic and political penetration is moving forward while from Washington comes word everything is under control.

I will begin to believe in Mr. Dulles' liberalizing influences within the Soviet Union when something better appears than exonerating murdered comrades—when the right of opposition is recognized for the living and not just for the dead. We need to see real moves toward:

1. Free elections, under U. N. supervision, in Soviet satellites, as well as in Korea and Germany, so that the peoples of those countries can choose their own governments.

2. Abolition of slave-labor camps in the Soviet Union and its satellites and freedom for political prisoners.

3. Peaceful coexistence of other political parties in the Soviet Union with a free press and access to other means of communication, and the organization of free trade unions.

4. Cessation of subversive activities through the Cominform and its agencies.

Some may say that such changes are inconceivable. Khrushchev says such changes will come when a shrimp learns to whistle. The conscience of mankind cannot accept the Soviet professions of change so long as this bondage endures. And our own freedom will not be secure until the freedom of all people is secure.

I have said consistently that I have faith that changes can develop behind the Iron Curtain. Certainly while the Soviets are expanding, their system will not be weakened. But if the unity and strength of the free world are developed so that Soviet penetration is checked and thrown back, I have confidence that the strains and pressures behind the Iron Curtain will grow and can lead to an eventual undermining of the Kremlin itself.

The present Communist drive comes at a time when the credit we have had among free peoples, accumulated during the previous administration, is becoming exhausted and overextended. The signs of bankruptcy in American foreign policy are multiplying with perilous speed, while the faith of our friends and allies is sorely shaken. Yet we are the nation that gave inspiration and leadership to the whole world through the Truman doctrine, the Marshall plan, and point 4. We know that there are still great opportunities, and immense need, for economic growth throughout the free world, for assisting newly independent countries to achieve freedom from economic colonialism and to progress. What is needed is new inspiration and new vision.

Nowhere, perhaps, is our diplomacy more barren in dealing with the Soviet menace than in the Middle East.

Up until 1953, the United States had a policy which produced stability and progress. In the Tripartite Declaration of 1950, we had made it perfectly clear, with Britain and France, that Israel was here to stay and that any aggression by either side would be met with instant defense.

But in the past 3 years, even before the Communist arms deal with Egypt last fall, events had been permitted to dim the force of that declaration and raise doubts as to whether we meant what we had said. This had encouraged the aggressive elements in the Arab States and it had bred fear in Israel, and these had given rise to violence and retaliation and counter-retaliation.

Then came the Communist arms deal with Egypt. Anyone who has dealt with the Kremlin knows that when the Soviets embark on a new adventure, the way to meet it is directly and at once. When the Soviets intervened in the Middle East with their sale of arms to Egypt, we should have met it by immediately honoring Israel's request for defensive arms. Instead, there has been agonizing indecision. Finally, the administration has devised a straddle—of which nobody can be proud—this country will not sell arms itself but we will not object if our allies do. Is that the kind of leadership in a crisis that one should expect from our great country?

This week, the President expressed himself on guaranties. But instead of clarification, there was more ambiguity. The words of the statement he approved were so unclear that they had to be officially explained later, and they were explained to mean that the statement was limited to commitments under the United Nations Charter—no mention of the 1950 pledges, where action was promised "within and outside" the United Nations.

There is so much to be done in the Middle East—so much that can be done, if peace and stability can be restored. Then we can help with economic development, in Israel and the Arab States alike—with the resettlement of Arab refugees, with development of the Jordan River and with other water projects in the Arab countries.

Finally, we must never forget that our fight for peace and freedom is twofold—at home as well as abroad. To give meaning in the free world to our belief in the worth and dignity of the individual, regardless of race or color, requires more than ever before, that we live by that belief at home.

I am proud of the progress we are making in the battle against discrimination here in New York State. We have put new life into our State commission against discrimination, and we have extended its scope to include discrimination in the field of housing—not only publicly assisted housing but homes built with FHA and VA mortgage guaranties. We are taking steps to make private mortgage credit available to minority groups where it has not been available heretofore. Through these means, we are striking at a particularly injurious form of discrimination—which affects the ability of a man and his family to find a decent place to live and which breeds congestion and slums.

Equal rights to employment, to education, to public accommodations, to housing—these are the pillars of a program to assure equal opportunity to all Americans. And how steadfastly we protect these rights will determine not only how well we live with our own consciences here in America but how great will be our prestige and effectiveness in our struggles for peace and freedom all over the globe.

Tonight is the 11th anniversary of the passing of a great American—Franklin Delano Roosevelt. He set us on the course that we must still follow—to strive for more freedom, more justice, and more democracy—not only for all of the people of America but for all the world.

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following excerpts from the testimony of the Committee on Foreign Trade Education, Inc., of 104 East 52d Street, New York 22, N. Y., in regard to H. R. 5550:

H. R. 5550 has a simple purpose, simply stated. The bill would authorize the President to "accept membership for the United States in the Organization for Trade Cooperation." In addition, H. R. 5550 would authorize appropriations to finance this country's share in OTC's expenses and to maintain a United States delegation with OTC. Secretary Dulles indicates that the United States share of OTC expenses would not exceed $120,000 a year.

OTC, itself, is equally clear cut. According to article 3 of the Agreement on the Organization for Trade Cooperation, OTC will administer the general agreement on tariffs and trade and in so doing, facilitate "intergovernmental consultations on questions relating to international trade; * * * sponsor international trade negotiations; * * * study questions of international trade and commercial policy and, where appropriate, make recommendations thereon; * * * (and) collect, analyze and publish information and statistical data relating to international trade and commercial policy."

The administrative function which OTC will undertake is of high importance. GATT, to which the United States is a contracting party for the purpose of accomplishing the aims of the Reciprocal Trade Act, has had no administrative arm. The negotiations of the contracting parties have been principally confined to rather sporadic sessions, the only attempts at achieving continuity being through the means of various improvisations. Although GATT has been very beneficial to the United States, as we will, in part, note below, its efficiency has for obvious reasons been impaired by the lack of continuing administrative machinery. OTC will fulfill the need.

OTC will carry out its function by the creation of an Assembly, an Executive Committee (on which the United States will have a permanent seat), and a Secretariat.

The Agreement on the Organization for Trade Cooperation, also, provides the means for the waiver of certain contracted obligatoins (art. 13) and procedure by which, in the instance of the withdrawal of a trade concession, compensation can be instituted (art. 14). These features identify, with principles of our own reciprocal trade agreements. They have, also, been part of GATT. And, in passing, we recall the high value that the waiver facility in GATT has had for the United States.

* * * * *

Both Secretary Weeks and Secretary McKay have, also, pointed out the degree to which concessions won from Germany and Belgium through GATT have aided in the notable improvement the coal industry experienced in 1955. Incontestably, GATT has been a significant aid to our national economy. For that reason alone, OTC, which will perfect GATT, should be, without fail, enacted during the session of the Congress.

The long delay of the enactment of H. R. 5550, or its defeat, will produce truly grave consequences. In terms of its delay, which is freely predicted in some quarters, we ask if the United States can afford waiting another 12 months, during which the Russians will, in effect, be able to say "We are doing the job, while the United States just talks and talks and talks."

The possible defeat of OTC would obviously be even more dangerous. And it would produce a somewhat paradoxical situation, which, we believe, should be given serious consideration. The defeat of OTC would not take the United States out of GATT. Instead, the defeat of OTC would only confuse and depress the international trade situation and compromise United States world leadership. The defeat of OTC, we suggest, to those who have opposed the general progress of United States foreign economic policy during the last several years, would not be turning the car in the opposite direction, but rather, would be like slashing the tires and watering the gas.

The new Russian regime has proved themselves to be pragmatic and tough. The outstanding authority on Russian politics, the New York Times' former Moscow correspondent, Harrison E. Salisbury, has observed that the Soviet bosses, by throwing out a lot of dialectic scrap, have emerged possessing a new and menacing flexibility.

Can the United States match that flexibility in its fight for survival as long as it is tempted to yield to forlorn, out-of-date high tariff longings?

The Alaska Mental Health Bill, H. R. 6376

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mrs. GREEN of Oregon. Mr. Speaker, under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD a letter from the American Medical Association addressed to Senator MURRAY, chairman of the Senate Committee on Interior and Insular Affairs. In view of the fantastic and scurrilous charges that are being made concerning the Alaska mental health bill, H. R. 6376, a bill passed by the House unanimously and now pending in the Senate, I think the facts should be on the RECORD. In the light of the facts these wild rumors are exposed as the absurdities they indeed are. Some of the most important of these facts are contained in this statement presented by the American Medical Association in support of this bill:

AMERICAN MEDICAL ASSOCIATION,
Chicago, Ill., April 17, 1956.

Hon. JAMES E. MURRAY,
Chairman, Committee on Interior and Insular Affairs, United States Senate, Washington, D. C.

DEAR MR. CHAIRMAN: I am writing in further reference to your recent request for the views of the American Medical Association on H. R. 6376, 84th Congress, a bill to provide for the hospitalization and care of the mentally ill of Alaska. Our committee on legislation has now considered this measure, and the executive committee of the board of trustees has adopted a position on the bill.

With the reservations hereinafter discussed, the American Medical Association supports and recommends the enactment of H. R. 6376, 84th Congress.

Three studies of the situation of the mentally ill in Alaska have been made in recent years. The earliest of these, in 1948, was conducted by the American Medical Association. The report of the group of physicians which visited Alaska in the course of this investigation was critical of the existing commitment procedures and the lack of facilities in Alaska for the care and treatment of mental patients. It recommended the establishment of a centrally located hospital to provide for the needs of the Territory. Accordingly, the American Medical Association supports H. R. 6376 insofar as that bill modernizes existing archaic commitment procedures and provides for the establishment of adequate local facilities for the care and treatment of the mentally ill of Alaska.

With respect to commitment procedures, I should point out that a very difficult medicolegal problem is involved in the enactment and administration of any commitment procedure. From a medical point of view, it is desirable to institute a course of therapy as early as possible and with the least possible disturbance to the patient. From a legal point of view, it is essential that the civil rights of persons alleged to be mentally incompetent be fully protected. This variation in approach to the problem must be considered in connection with the pending bill as in all commitment acts, but in our opinion, the procedures set forth in H. R. 6376 are on a par with the better procedures adopted by the several States, and are superior to those presently followed in Alaska. However, since the American Medical Association does not presume to speak with authority on the legal aspects of commitment, it may be desirable for your committee to obtain and consider the recommendations of a legal organization, such as the American Bar Association.

It is apparent that a widespread misconception of the purpose and effect of section 119 of the measure exists. As we understand its provisions, this section is an authorization for the transfer of residents of Alaska or of other jurisdictions back to their jurisdiction of residence for treatment when they are adjudged mentally incompetent elsewhere. Such a provision, of course, is common between the several States today. Section 119 (c), providing for the reciprocal assumption of expenses for the care and treatment of the mentally ill in those cases

where transfer to their jurisdiction of residence is not accomplished, seems to have been widely misunderstood. In view of this fact, we recommend the insertion of clarifying language.

It is our understanding that the original bill contained a section providing for criminal penalties for willfully causing, or conspiring with, or assisting another to cause the unwarranted hospitalization of any individual, or for the denial to any individual of any rights granted him under the provisions of the measure. While we recognize that the existence of such a penal provision might impede the discovery and hospitalization of some persons who are mentally ill, we feel, in balance, that it is a desirable safeguard in a measure of this nature. Accordingly, we recommend that a similar safeguard be incorporated in the measure by your committee.

I am pleased to have had the opportunity of presenting the views of the American Medical Association on this measure. If we may be of any further assistance to the committee, it is our sincere desire to do so.

Respectfully yours,

GEORGE F. LULL,
Secretary and General Manager.

Results of the Questionnaire Mailed to Northern Virginia

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. BROYHILL. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the RECORD a tabulation of the votes I have received from the 10th Congressional District of Virginia in response to a questionnaire.

During February and March of this year I mailed 107,200 questionnaires to all legal residents of my district distributed as follows: Alexandria, 25,000; Arlington, 40,000; Fairfax, 40,000; Falls Church, 2,200.

The following letter accompanied the questionnaire:

DEAR NEIGHBOR: In accordance with my established policy, I am again consulting with you on major legislative proposals which may be considered by Congress in this session. Your advice through past questionnaires has proven extremely valuable to me as your Representative and I would be grateful if you would again take the time to let me have the benefit of your views on the 10 questions listed on the reverse of this letter.

As you well know, there are far more than 10 major issues to be decided upon by Congress. However, these are important ones on which I would particularly like to have your opinion. I believe these are questions which vitally affect us as individuals, as citizens or northern Virginia, and as citizens of the United States.

With knowledge of your thinking on these questions, I am confident I will be better able to represent you not only on these issues but also on the many other decisions which will be made in the House of Representatives.

Please indicate your vote by checking the proper space on the opposite side and return it to me at Post Office Box 1300, House of Representatives, Washington 25, D. C., at your earliest convenience. Your cooperation and assistance in this matter will be greatly appreciated.

Approximately 15,000 replies have been received and I am very grateful at this fine indication of the interest taken by the residents of northern Virginia in their Government. I have congratulated them on their unusual awareness of the acute problems facing the Nation and their community. The low percentage of "no opinion" ballots and the high percentage of total returned are both tributes to the civil responsibility and participation of citizens in this area.

In addition, thousands of those who responded took the additional time and effort to enlarge on their views by letter and comment written on the questionnaire blank. These have indeed been of value to me as their Representative and are being considered along with the tabulations.

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

	Favor	Oppose	No opinion
1. A reduction in Federal taxes this year even though it might mean an operating deficit and an increase in the National debt	16.6	79.5	3.9
2. Continued foreign economic aid	57.2	33.2	9.6
3. Federal financial assistance to the States for school construction	65.2	27.9	6.9
4. President Eisenhower's Soil Bank Program and continuation of flexible farm price supports, in an effort to reduce the $8 billion surplus and increase farm income, rather than the high rigid support program	76.7	9.6	13.7
5. Proposed Federal super interstate highway construction program	76.9	13.9	9.2
6. Federal Government participation in a nationwide health insurance program	42.0	45.7	12.3
7. Liberalization of the McCarran-Walter Immigration Act	31.9	45.9	22.2
8. Postal rate increase as recommended by President Eisenhower to assist in cutting down postal deficit (now over $1 million per day) and improve the service and facilities	77.7	17.0	5.3
9. Creation of a Metropolitan Washington Authority to operate and improve transportation, airport, and harbor facilities in this area	72.3	12.5	15.3

The following question applies only to Federal employees:

10. There are two principal proposals to increase annuities of Federal employees. These are listed briefly below. Please check the one you prefer:
   (a) Inclusion of old age and survivors insurance (social security) coverage with the civil service retirement plan as proposed in the Kaplan report 17.0
   (b) Change the method of computation within the framework of the present civil service retirement system in order to increase the benefits 83.0

Government Assistance To Meet the Nation's Health Needs—Excerpts From Address by Gov. Adlai Stevenson

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, April 23, 1956

Mr. LEHMAN. Mr. President, in the course of his current campaign tour in Florida, Gov. Adlai Stevenson spoke, on April 12, on the subject of Government assistance to meet the Nation's health needs. It was an important and constructive speech, on a subject which during the last 2 years has received all too little attention both in Congress and from public platforms.

I ask unanimous consent that excerpts from his very instructive address be printed in the Appendix of the RECORD.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

EXTRACTS FROM ADDRESS OF ADLAI E. STEVENSON, MIAMI, FLA., APRIL 12, 1956

Eleven years ago today a very great man died at Warm Springs, Ga. He had given greatly to this country, to this century, yes, to civilization. I wonder sometimes what America would be like today if it hadn't been for Franklin Delano Roosevelt.

President Roosevelt was at Warm Springs as he had been so many times before because of the cross he had to carry through the last 24 years of his life. For he was a victim of crippling infantile paralysis.

And today on this anniversary I want to pay my respects to the memory of this beloved man by talking with you for a few minutes about this matter of disease and sickness, of our war as a people against the killers who strike inside our bodies, of what we are and should be doing on this human battlefront.

We have within the past 2 years made dramatic and almost unbelievable advance against the particular enemy that attacked Franklin Roosevelt. But the plain facts are that we are doing pitifully, inexcusably little about finding answers to the other cruel mysteries which cause human misery and untimely death.

With 10 million American men and women suffering from heart disease, we spent last year only $16 million on research in this field or $1.60 for each person presently afflicted.

One of every seven of us, as things are, will die of cancer. Yet we spent last year on cancer research only $25 million—15 cents apiece per person.

With mental illness costing incalculable suffering and almost $1½ billion a year, we are spending $11 million, less than 1 percent of that cost to combat it.

Last year we invested about a penny a person for research on arthritis and rheumatic diseases, cripplers of 10 million Americans.

The pennywise policies of the present administration so far as medical research is concerned are a shameful cost of what they call a businessman's government. A man wrote me this in a letter the other day: "Where cancer and heart disease alone killed more Americans under the age of 65 last year than were killed in the Armed Forces of this Nation during the Second World War and the Korean war together, it would seem that we should spend substantially more than we are to stop this toll upon life." I agree.

I am here asking your support in my candidacy for the Presidency of this Nation. I have refused in my campaign to make promises as a candidate I couldn't keep as President. I say to you that if I am elected to this office I propose to use the powers and resources of this Nation to cut down killing and crippling disease with all the vigor we

use to stop the killing and crippling which comes from war. A healthier Nation is after all a stronger Nation.

There are other things which must concern us if we are to fight back effectively against sickness and disease.

Roughly, a million American families will have to spend over half their income this year for medical care. In over 500,000 cases catastrophic accident or illness will consume the entire family income. And today there are 8 million American families in debt for medical care with much of this borrowing being at high interest rates from personal finance companies. In too many American homes a parent at some time or other looks down at a sick child, knows that something should be done and that there just isn't the money. It is high time that we advise a positive program to enable everyone who wants to have protection against the sudden and devastating costs of illness.

I have never proposed to socialize medicine and I am not in favor of national health insurance. There are other alternatives which are workable and in my opinion preferable.

Three out of every five people in this country are now enrolled in voluntary private prepayment insurance programs which cover health. Yet studies show that this membership includes mostly middle and high income families and all too few of the low income families who need it most.

I believe that these private insurance programs can be developed further so they will be attractive and within the reach of an eevn greater percentage of our people. And I urge further consideration of governmental programs to provide long-term low interest rate loans to groups which are organizing prepayment insurance plans and perhaps other forms of financial assistance to help to cover the initial costs of setting up such plans.

And surely the social-security program should be revised to provide that its benefits shall be paid in cases where covered employees become completely and totally disabled before reaching the usual retirement age. These are the cases of catastrophic illness in which the cost burden falls most heavily and often on those least able to carry it.

It is time, too, that we really do something about the shortage of doctors, particularly in some of the rural areas. There are today fewer doctors in proportion to the population than three were a hundred years ago. And there are fewer medical-school graduates today than there were half a century ago.

We ought to take immediate steps to expand assistance to medical, dental, and nursing schools so that enrollments can be increased and standards still maintained. Legislation is now before the Congress providing for Federal aid for the construction and expansion of medical schools. The present administration opposed it last year. Now, in election year, the administration has seen the light of day and has come out for a program of Federal aid for medical training. But its program is wholly inadequate to meet the critical shortage of medical personnel. There is ample basis in immediate need to support the Democratic proposals now before Congress which call for the appropriation of $340 million over a 5-year period to assist in the construction of medical schools and for more adequate teaching and research facilities.

We must also speed up our hospital-construction program, with particular emphasis on building more hospitals for mental patients.

I know the complaints of the businessman's government now in Washington. This all costs too much, they say, adding that it isn't really the Government's business, anyway.

Well, I say to you that the one thing this great Nation can't afford is to let people die or suffer when it could be prevented.

And as for whose business it is, I say it is ours and that the Government is our servant.

It was Ralph Waldo Emerson who said that "humanity asks the Government shall not be ashamed to be tender and paternal." And it was Woodrow Wilson who added that "you will notice that whenever the United States forgets its ardor for mankind it is necessary that a Democrat should be elected President."

The Alaskan Mental-Health Bill

EXTENSION OF REMARKS
OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, April 23, 1956

Mr. DIRKSEN. Mr. President, a tremendous interest has developed in the so-called Alaskan mental-health bill, which bears the number H. R. 6376. I have heretofore inserted in the RECORD some material on this measure which has come to my attention. I ask unanimous consent to have printed in the Appendix of the RECORD additional articles which have been published in the Tablet, the official organ of the diocese of Brooklyn, N. Y. These were forwarded to me by Mr. Patrick F. Scanlan, the managing editor; and I include them for the information of the Members of the Senate.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

SENATORS STUDY ALASKA PROJECT FOR UNITED STATES SIBERIA—RESOLUTION FOR HOSPITAL FOR MENTALLY ILL ALSO PROVIDES FOR POLITICAL DISSENTERS—HOUSE PASSES THE BILL—UNDER TERMS ADMINISTRATION OFFICIALS CAN RAILROAD ITS CRITICS TO NORTHERN EXILE

(By Francis Carroll)

WASHINGTON.—Those who enjoy an excursion into the land of fantasy will like this story.

But it is not fantasy. It is about House Resolution 6376, which was passed by a voice vote in the House of Representatives on January 18 of this year and which is now before the United States Senate.

House Resolution 6376 would provide 1 million acres of United States territory in Alaska for a hospital for the mentally ill—an insane asylum.

On July 1, 1956 $6,500,000 of American taxpayers' money would be handed over to the Territory of Alaska to begin work on this insane asylum. Another $6 million would be given over a period of 10 years.

NOT FOR ALASKANS ALONE

Now Alaska, according to a proponent of the resolution, Representative WILLIAM A. DAWSON, of Utah, has approximately 350 mental cases.

The acreage to be appropriated is half again the size of the State of Rhode Island.

But this insane asylum is not for Alaskans alone, or even for Americans resident in Alaska. It could be for any one of us, for House Resolution 6376 provides (section 119 (c)) that the "Governor (of Alaska) is hereby further authorized to enter into a reciprocal agreement with any State providing for the care and treatment of mentally ill residents of Alaska by such State, and for the care and treatment of mentally ill residents of such State by Alaska."

A "mentally ill individual," according to House Resolution 6376, is defined (section 101 (i)) in extremely elastic terms: "An individual having a psychiatric or other disease which substantially impairs his mental health or an individual who is mentally defective or mentally retarded."

Who of us could not be put away under such a definition?

WORDING IS UNEQUIVOCAL

And who could put us away? An "interested party" or "interested parties," which are defined in the resolution (section 101 (g)) "the legal guardian, spouse, parent or parents, adult children, other close adult relatives, or an interested, responsible adult friend of a mentally ill individual or a patient."

The wording of the resolution is blunt and unequivocal. Section 103 (b) reads:

"Any individual may be admitted for care and treatment in a hospital upon written application by an interested party, by a health or welfare officer, by the Governor, or by the head of any institution in which the individual may be, if the application is accompanied by a certificate of a licensed physician that, on the basis of an examination held not more than 15 days prior to the individual's admission, such individual in his opinion is mentally ill and because of his illness, either (1) is likely to injure himself or others if allowed to remain at liberty, or (2) being in need of care or treatment in a hospital, lacks sufficient insight or capacity to make responsible application in his own behalf."

You or the writer or anyone else who might incur the displeasure of the administration in power would have little to say from this point on, for section 104 (a) and (b) provide:

"(a) If the certificate by a licensed physician under section 103 (b) states a belief that the individual is likely to injure himself or others if allowed to remain at liberty, any health, welfare, or police officer or any person deputized by a United States commissioner, shall have authority, upon endorsement of the certificate for such purpose by the Governor or by a United States commissioner, to take the individual into custody, apply to a designated hospital for his admission, and transport him thereto.

"(b) Any health, welfare, or police officer who has reason to believe that an individual is mentally ill and, because of his illness, is likely to injure himself or others if not immediately restrained pending examination or certification by a licensed physician or pending endorsement of such certification as provided in subsection (a) of this section, may take the individual into custody, apply to a designated hospital for his admission and transport him thereto. The application for admission shall state the circumstances under which the individual was taken into custody and the reason for the officer's belief."

CAN ORDER EXAMINATION

Further, any "interested party" or any health officer may apply for the hospitalization of someone by court order. All is needed is "a written statement by the applicant that the individual has refused to submit to examination by a licensed physician."

Upon receipt of the application, the United States commissioner does not even have to notify the victim if he "has reason to believe that notice would be likely to be injurious to the proposed patient."

The United States Commissioner then may appoint an examiner to examine the proposed patient. Should the examiner report back that "the proposed patient refuses to submit to an examination, the United States Commissioner shall give notice

to the proposed patient and order him to submit to such examination."

Before the commitment, a hearing is to be held, but the "proposed patient shall not be required to be present, and the United States Commissioner is authorized to exclude all persons not necessary for the conduct of the proceeding."

The Commissioner can bar, at his discretion, friends of the victim from testifying in his behalf.

That the 1-million acre lunatic asylum would be available for "patients" from "the States, the District of Columbia, the Territories and possessions of the United States, and the Commonwealth of Puerto Rico" is made specific in the bill (sec. 101 (m)).

The resolution presented to the House was amended in two significant instances with no debate. As a matter of fact there was no debate at all. Representative LEO W. O'BRIEN, of Albany, was the leader in lauding the resolution and 14 other Congressmen and the delegate from Alaska joined only to commend the bill and Representative O'BRIEN's presentation of it.

One amendment killed section 123, which would have punished anyone "who wilfully causes or conspires with or assists another to cause (a) the unwarranted hospitalization of any individual * * * or (b) the denial to any individual of any rights granted to him under the provisions of this title * * *"

Why this clause was objectionable to the sponsors of the resolution can only be surmised.

The other amendment raised the acreage from 500,000 to a million acres.

The Senate Committee on Interior and Insular Affairs held hearings on H. R. 6376 February 20 and 21.

On the first day, the Senators heard Representative EDITH GREEN, of Oregon, and 5 administration officials in approval and 1, Mrs. S. Williams, of Burbank, Calif., in opposition.

On February 25, Senator Richard L. Neuberger, of Oregon, Representative James B. Utt, of California, Mrs. Paul A. Hartz, of the General Federation of Women's Clubs, and Alaska Delegate E. L. Bartlett favored the resolution.

Dr. George L. Snyder, of Los Angeles; Robert H. Williams, of Santa Ana, Calif.; Mrs. Ernest Howard of the 30th Women's Patriotic Conference on National Defense; John Kaspar, of Camden, N. J.; Mrs. Lee Birkland, of Van Nuys, Calif., and George C. and Charles P. Finn of Hollywood, Calif., opposed it.

Hearings were then recessed subject to call.

STATES ABETTING BILL IN CONGRESS ON MENTALLY ILL—NEW YORK STATE NOW HAS LAW LEGALIZING DEPORTATIONS OF CITIZENS TO ALASKA—OTHER STATES ALSO ACT—PUBLIC ALERTNESS SEEN ONLY POSSIBLE WAY TO PREVENT SENATE PASSAGE OF BILL

(By Francis Carroll)

Four weeks ago, we wrote an article on legislation, passed by a voice vote in the House of Representatives, to allot 1 million acres of land and $12,500,000 ostensibly for an insane asylum to care for approximately 350 mentally ill people in Alaska. The article opened:

"Those who enjoy an excursion into the land of fantasy will like this story. But it is not fantasy. It is about H. R. 6376. * * *"

To those who perused the article and still withheld judgment because of the seeming incredibility of the facts presented, the recommendation is offered that they obtain a copy of H. R. 6376 and that they scrutinize particularly section 119 (c), which reads:

"The Governor (of Alaska) is hereby further authorized to enter into a reciprocal agreement with any State (of the United States) providing for the care and treatment of mentally ill residents of Alaska by such State, and for the care and treatment of mentally ill residents of such State by Alaska."

STATES ENACTING LAWS

But, it may be objected, a State cannot legally send an alleged mentally ill person out of the State to Alaska. Of course not, but let us suppose the State Legislatures legalize such a proceeding. What then?

But no State Legislature would enact such a law. No? Well, let residents of New York State obtain a copy of chapter 30, New York State Laws, 1956, titled "An act to amend the mental hygiene law in relation to enacting into law and making this State party to the interstate compact on mental health and providing for matters relating thereto." Their assemblymen and State senators who passed the legislation may also be interested in reading the bill now that the sessions in Albany are concluded and they have more time. Governor Averell Harriman approved the legislation February 27.

The same has been proposed before the other State legislatures and passed by some. In Connecticut the bill, known as Public Act 76, is law. It was, we understand, attached as a rider to the flood-relief bill. Pennsylvanians may inquire about House Bill 1990. Residents of other States may check with their own legislators.

Like H. R. 6376, the bill in the State legislatures is based upon a Draft Act Governing the Hospitalization of the Mentally Ill, published (at taxpayers' expense) by the Public Health Service of the Federal Security Agency in 1952 and written by George S. Stevenson, M. D., medical director of the National Association for Mental Health and former treasurer of the World Federation for Mental Health.

POLITICIANS IN CONTROL

The bill before or passed by the State legislatures, like H. R. 6376, makes it possible for the administration in power to have a political nuisance transported to the 1-million-acre Alaska insane asylum.

It legislates that "duly accredited officers of any State party to this compact, upon the establishment of their authority and the identity of the patient, shall be permitted to transport any patient being moved pursuant to this compact through any and all States party to this compact without interference."

State is defined in the legislation as any State, Territory, or possession of the United States. the District of Columbia, and the Commonwealth of Puerto Rico.

Political appointees of the administration in power have complete control over the disposition of individuals who may be harassing the administration. Article X reads:

"(a) Each party State shall appoint a compact administrator who, on behalf of his State, shall act as general coordinator of activities under the compact in his State and who shall receive copies of all reports, correspondence and other documents relating to any patient processed under the compact by his State either in the capacity of sending or receiving State.

"The compact administrator or his duly designated representative shall be the official with whom other party States shall deal in any matter relating to the compact or any pateint processed thereunder.

"(b) The compact administrators of the respective party States shall have power to promulgate reasonable rules and regulations to carry out more effectively the terms and provisions of this compact."

PROMOTERS CONFIDENT

In the light of the foregoing, this passage from article XIV may be of interest:

"Pursuant to said compact, the Governor is hereby authorized and empowered to designate an officer who shall be the compact administrator and who, acting jointly with like officers of other party States, shall have power to promulgate rules and regulations to carry out more effectively the terms of this compact.

"Said compact administrator shall serve subject to the pleasure of the Governor."

The promoters of what has been described as a potential American Siberia are quite confident. They expect an unsuspecting United States Senate to pass H. R. 6376 without undue comment or fuss as the House did. The act, if voted upon favorably and signed by President Eisenhower, will become effective July 1 of this year.

Meanwhile, State legislatures will have concurred in implementing section 119 (c), thereby facilitating the transportation to Alaska of any individual the administration may feel is interfering with its political program.

This shall be law unless the American public alerts itself without delay. The representatives of the American people in Congress are too busy to study 43 pages of legislation which, upon a glance, seem to pertain only to mentally ill Alaskans.

Members of the various State legislatures cannot take the time, with hundreds of bills before them, to peruse carefully a bill authorizing and directing the Governor "to execute an interstate compact concerning mental health."

Unless the Members of the Congress and the State legislatures are alerted by their constituents, any administration in power will be able legally to send its opponents and dissidents to a Siberia in Alaska.

From the above it is, or should be, obvious that this movement is not a clearly humanitarian project devised solely in the interests of mentally ill Alaskans any more than the movement to fluoridate the water of communities in the United States is necessarily due to a concern for healthy teeth in our children's mouths.

In our earlier articles we have analyzed the sections, paragraphs, and sentences of H. R. 6376, but we omitted one pertinent aspect of the legislation that has been expressed succinctly by Dr. George A. Snyder of Hollywood, Calif., in a recent open letter:

"President Eisenhower was sent south to a warm climate to get well—any doctor knows a warm climate is best. Sending sick people to Alaska as per Alaska bill H. R. 6376 is a medical atrocity. * * * To relate this to a health system is as dishonest as sending President Eisenhower to the cold climate of Alaska to recuperate would have been."

Dr. Snyder continued:

"I ask you, Mr. President, if you belong to an elite that is sent south at public expense and in return allow a bill to pass without comment that sends the same public, when sick, north to Alaska into secrecy, without trial, without proper representation, or even without knowing they have had a trial."

OPPOSITION RISES AGAINST H. R. 6376—ALASKA INSANE ASYLUM PROJECT IS DEFENDED BY CABINET HEAD

(By Francis Carroll)

WASHINGTON.—Two weeks ago this writer pointed out what appeared, and still appears, to be dangerous potentialities in House Resolution 6376, which was passed in the House of Representatives by a voice vote on January 18 and is now in the Senate Committee on Interior and Insular Affairs.

The resolution would provide a million acres of land in Alaska and a total of $12,500,000 for an insane asylum.

There was no debate, as such, in the House. Most of the talking was on the desperate plight of the mentally ill in Alaska, a problem every American would like to see solved. A few questions were asked and the replies of Representative LEO W. O'BRIEN of Albany, N. Y., were acknowledged with polite grati-

tude. There was no opposition to the resolution.

SMALL TYPE IGNORED

The resolution took up 14½ columns of small type in the CONGRESSIONAL RECORD. In the printed form it carries over on to page 43. After studying the text and perusing once more the contributions to the "debate," the impression is inevitable that the Congresmen could not have read the resolution.

Their concern was only with the admitted lack of facilities for the mentally ill—estimated at about 350—in Alaska. They indicated no suspicion of any disturbing implications in the wording, which should have been obvious to anyone who had scrutinized the bill.

The article in The Tablet of March 3 summarized the frightening—the term fantastic was used—possibilities in the bill. Each statement was documented with quotations, in context, from the resolution.

Readers of the article wrote to their Congressmen and Senators and copies of the replies forwarded to the Tablet indicate clearly that Members of the Congress have not read the text of the resolution.

A number of them sent their constituents a copy of a statement issued by the Secretary of the Interior which was inserted in the CONGRESSIONAL RECORD by Representative JAMES B. UTT, of California, on February 14. It neither disproves nor meets the issues raised in the Tablet article of March 3. One-third of the statement is on the present plight of the mentally ill in Alaska, a problem, as has been observed, which has not been questioned or denied.

The Secretary of the Interior does refer to the appropriation of a million acres—half again as much as the acreage of Rhode Island. He said the land "will not be set aside as a hospital site, but it is the purpose of the legislation that the revenues and income from the sale or lease of the lands will be used to help the Territory of Alaska meet the costs of caring for its mentally ill."

Perhaps the Department of the Interior has an advance tip on a real estate boom on the million acres. If it has, it should make the fact known, for there has been no rush for the property heretofore.

Undoubtedly, the Territory does contain minerals which could be of great value to the United States if men could be obtained to mine it, but the Secretary does not mention this possibility.

A House amendment is H. R. 6376 killed section 128, which provided punishment for those who would cause "the unwarranted hospitalization" of an individual. The Department of the Interior "feels that this provision should be retained and has recommended to the Senate that it be restored." He did not say who killed that particular section alone or why.

DOES NOT DENY CHARGE

The Secretary did note, however, section 119 (c) which authorizes the Governor of Alaska "to enter into a reciprocal agreement with any State providing * * * for the care and treatment of mentally ill residents of such State by Alaska."

The Tablet article of March 3 observed, with reference to section 119 (c), that "this insame asylum is not for Alaskans alone, or even for American residents in Alaska. It could be for any one of us * * *." The statement of the Secretary of the Interior does not question this, but merely says:

"This provision was included so as to authorize treatment at Alaska's expense (or that of the State concerned) in instances where repatriation would not be in the best interest of the patient. This provision must be read in connection with subsection (d) which states that 'due consideration shall be given to the relationship of the patient to his family, legal guardian or friends, so as to maintain relationships and encourage visits beneficial to the patient.'"

A study of the wording of the resolution seems to justify the conclusion that you or I, if we are deemed political nuisances to the authorities in power, can be, according to this and other provisions of H. R. 6376, judged mentally ill and transported by the United States Government to the site in Alaska.

Yet Senator JAMES E. MURRAY, of Montana, chairman of the Senate Committee on Interior and Insular Affairs, in a statement on the subject sent to those opposing H. R. 6376, declares:

"In no case and under no circumstances could a resident of New York or any other State be shipped up to Alaska against his will. A resident of any State would have to be in Alaska at the time he became mentally ill in order to be treated in Alaska, and even then he would have the right under the bill to return to his home State, or his family or next friend could assert this right for him."

FAILED TO QUOTE BILL

Senator MURRAY should have supported this guaranty by quoting from the bill itself and by giving an explanation of section 119 (c). If the resolution is adopted, the legislation will be carried out according to the wording, not according to Senator MURRAY's personal interpretation.

(Editor's note: As the Tablet goes to press, a letter has been received from Senator MURRAY in which he says:

("Let me assure you that no resident of New York, or any other State, possibly could be shipped to Alaska as a mentally ill person. If he were in Alaska at the time he became mentally ill, he could be treated in Alaska, if he or his next best friend wished, provided there was a reciprocity agreement with New York whereby a resident of Alaska who became mentally ill while in New York could be treated in New York.")

The Secretary's statement assures that "the bill does not authorize star chamber proceedings. Notice is required (sec. 108 (f)) to be given at least to the legal representatives, friends, and other interested parties and the patient, his guardian, and other interested parties are afforded an opportunity to appear, testify, and to present and cross-examine witnesses."

The statement does not go to the end of section 108 (f). The subsection at greater length follows:

"The proposed patient, the applicant, the legal guardian, and other interested parties as determined by the (United States) Commissioner shall be given notice and afforded an opportunity to appear at the hearing, to testify, and to present and cross-examine witnesses, and the United States Commissioner may, in his discretion, receive the testimony of any other person. The proposed patient shall not be required to be present, and the United States Commissioner is authorized to exclude all persons not necessary for the conduct of the proceedings."

This sentence is also in the same subsection: "The United States Commissioner shall receive and maintain a record of all relevant and material evidence which may be offered concerning the mental condition and the residence of the proposed patient and shall not be bound by the rules of evidence."

Early in February an editorial was sent to editors of all Scripps-Howard papers in support of H. R. 6376. It was titled "Poison Penwomen" and accused fanatics of attempting through scurrilous literature to hold back the progress of Alaska, our great and vital northern Territory."

The editorial accused the poison penwomen with deluging newspapers and public officials with a crude circular denouncing H. R. 6376. It, too, bemoaned the plight of mentally ill cases in Alaska and emphasized that the bill is supported by the Eisenhower administration and by leaders of both parties in Congress, as well as by virtually every organization which is concerned with Alaska's progress.

EXECUTIVE BRANCH HELPED

Last Saturday the New York World-Telegram and Sun carried a portion of the editorial and also an article on H. R. 6376.

The article attributed to Representative O'BRIEN the charges that protests against H. R. 6376 are based on a distortion of the purposes of the bill, and that those protesting employed such bitter phrases as "treasonable proposal" and "you ought to be shot by a firing squad." It labeled the protests "condemnatory missives."

The article quotes Representative O'BRIEN as saying, "If the lunatic-fringe elements opposing this bill succeed in getting it killed, my faith in democratic government will come close to being destroyed."

The article contributes one fact that may, or may not, have some significance, namely, that although the bill was introduced by Representative EDITH GREEN of Oregon, it actually was the outgrowth of an administrative proposal worked out by no fewer than three executive departments—Justice, Interior, and Health, Education and Welfare.

The World-Telegram and Sun seemed to ignore section 119 (c) in telling its readers the section applied only to Alaskans or the Alaska residents of the States.

The provisions of H. R. 6376 need to be clarified and frankly presented to the American public. Those who have studied the 43-page legislation appear to be on sound ground in opposing it in its present form.

Nor are they satisfied with Senator MURRAY's assurance that "our Senate committee had 2 more days of hearings, at which everyone who made timely request was heard in full."

The speciousness of that lies in the fact that only a few Americans knew the bill had been passed by a voice vote in the House and sent to Senator MURRAY's committee. The press did not alert the people and even those who read the CONGRESSIONAL RECORD, after perusing the seemingly innocuous discourses during the debate on the resolution, would hardly have taken the time to study the 14½ columns of fine print that followed.

No committee hearings were held in the House of Representatives. The resolution was in the House Committee on Interior and Insular Affairs but was brought to the floor of the House by Representative WILLIAM M. COLMER, of Mississippi, by a special resolution. The debate was not to exceed 2 hours.

Congressman O'BRIEN, Senator MURRAY, and other supporters of H. R. 6376 are men of many responsible tasks and it is surprising that they express indignation and not welcome upon receiving the counsel and suggestions of American citizens who have studied the resolution.

The Situation in the Middle East—Excerpts From Address by Thomas K. Finletter

---

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, April 23, 1956

Mr. LEHMAN. Mr. President, there is an organization, of which I was pleased to be one of the founding members, called the America-Israel Society, whose

purpose it is to promote cultural relations between the United States and the Republic of Israel.

At its annual dinner on April 17 one of the principal speakers of the evening was my good friend, the Honorable Thomas K. Finletter, former Secretary of the Air Force. Mr. Finletter delivered a most penetrating and thought-provoking analysis of the present Middle Eastern situation, and submitted a series of proposals for action which commend themselves to me, at least, as some of the most comprehensive and constructive I have heard. Mr. Finletter's analysis of the military situation is certainly an authoritative one, and worthy of our most earnest attention. Mr. Finletter urged, as I have on numerous occasions, that arms be furnished to Israel.

I ask unanimous consent that excerpts from this arresting address be printed in the Appendix of the RECORD.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

ADDRESS BY THOMAS K. FINLETTER AT AMERICA-ISRAEL SOCIETY, WASHINGTON, D. C., APRIL 17, 1956

Governor McKeldin, honored guests, ladies and gentlemen, I am glad to be here tonight, in this week which marks the eighth anniversary of the establishment of the Republic of Israel, in these days of tension and danger for the Republic. I welcome the opportunity of paying tribute to the creative, courageous people of Israel.

Many of you have visited Israel and know at first hand what has been accomplished there. But even those who have not trod the ground itself know that in the short time of 8 years a State has been created; three-quarters of a million immigrants have been received and settled; a system of representative government as free as any in the world has been set up; a vigorous economy is developing, and educational and religious institutions are growing stronger as the months pass.

All this would be amazing under any circumstances. What makes it almost incredible is that it has been accomplished in an atmosphere of hostility and under the constant threat of war.

We Americans have a moral identification with Israel. We have a stake in the well-being and safety of this sister democracy.

* * * * *

The best way for us, this evening, to pay tribute to the creative spirit of the people of Israel is to consider what can be done to release that spirit from the worries and dangers which beset it so that it may be free to fulfill itself in all its full power.

Peace is what Israel needs, just as the whole world needs peace. Israel's need for peace is immediate and critical.

But Israel needs help if she is to have peace, because Israel is at the focal point of battle in the current Russian offensive against the Free World. The Russians have moved their attack, for the moment, away from Korea, the Strait of Formosa, and the Vietnam, and are driving hard in the Near East. Israel is their tactical target. Israel is in danger on behalf of all the Free World.

What are we, the United States, going to do about it?

* * * * *

Well, we have, immediately pressing us, a dangerous emergency, and then later, if we all survive, the longer-term problem of a general Near Eastern settlement.

We will do well to talk first about the emergency or there won't be anything to settle in the settlement.

You all know what has happened. The Russians, taking advantage of the jealousies among certain states of the Near East caused by American and British support of Iraq in the Northern Tier or Baghdad Alliance, jumped over the Northern Tier and injected themselves into the affairs of the Near East. They invaded, that is, the home territory of the Free World.

The device the Russians used for this invasion was to make a deal with Egypt to sell her, in exchange for Egyptian cotton, a considerable number of Russian MIG–15 jet fighters and Russian IL–28 twin-engine jet bombers, both superb modern aircraft, as well as other war materiel.

With these modern jet aircraft Egypt will dominate the skies over Israel and will be able to destroy the urban life of Israel in a matter of hours—unless Israel gets the necessary high-class defensive aircraft which can handle these Russian fighters and bombers.

The Government of Israel is asking us, I understand, for some of our surplus F–86, Sabre jets, which have shown in Korea that they can handle the Russian MIG–15s.

The Israelis must have these aircraft. They must have whatever is necessary to enable them to defend themselves against annihilation by the Soviet airplanes. If they need them the Israelis must have not only these obsolescing F–86 day fighters, but the finest and newest all-weather defensive fighters in the possession of the United States.

The Israelis must have also whatever other war equipment is needed to enable them to defend themselves against the weapons the Russians have given to the neighbors of Israel—whether this be antitank guns to defend against the Russian tanks, or subchasers to operate against Russian-made submarines; or whatever.

* * * * *

Let us understand clearly the reason for arming the Israel forces. It would not be alone our sympathy, our identification with, this courageous, free people facing huge numerical odds and, now, superior modern war equipment furnished to Israel's neighbors by Communist Russia. It also would be that to give defensive arms to Israel would be the most effective way of deterring the outbreak of war in the Near East.

Other measures, of course, will have to be taken and I shall mention some of them in a moment. But the most practical immediate step to prevent shooting in the Near East is to give the Israeli forces the means with which to defend their country against these Russian airplanes, tanks, and submarines which the Russians are giving to the neighbors of Israel.

Let us not worry about starting an arms race. The race is already on, with Russia well ahead. Let us get Israel in a position to defend herself and then, when there is a balance, let us demand from the Russians that we all embargo the sending of further arms to any State of the Near East.

Let us not worry either that the Israelis cannot win an arms race becaues they are but 1,700,000 in number against fifty-odd million others in the Near East. The spirit counts; and the Israelis showed 8 or so years ago that if they have the arms they are quite capable of defending themselves.

Nor do I see any point in letting our British, French, and Canadian friends do the job of equipping the Israeli forces, while we pretend not to take notice of this invasion of the Near East by Russia. Let us do openly, ourselves, what is right.

There is only one power which will profit by the destruction of Israel. That is Russia. No country yet has helped itself by taking favors from the Russians. Favors from Russia are the prelude to slavery. I suggest that we do our part to block this Russian scheme for enslaving the peoples of the Near East.

* * * * *

There is something else we have to do to handle the present emergency. It is that the United States reaffirm unconditionally the Tri-Partite Declaration of May 25, 1950. I speak of reaffirmation by the United States because there is no doubt about the two other parties to the declaration, Great Britain and France, standing by their commitments. But there have been some statements recently by the United States Government which may be taken to throw doubt on our position.

Under this declaration, you will remember, the three powers, Great Britain, France, and the United States, in effect guaranteed the armistice boundaries between Israel and her neighbors against any violation by force in either direction.

This is a solemn undertaking by the United States Government on behalf of the people of the United States. I cannot believe that this country ever will default on its given word. I cannot believe that if there is an attack on Israel this country will do otherwise than honor its signature.

I add that by making it indubitably clear to Egypt and to Israel and everyone else that the United States will not allow a breach of the peace in the Near East, the United States will thereby reduce, I believe, to the vanishing point, the likelihood of anyone starting a war in that part of the world. I add too that the converse is true: To allow any doubt to arise as to what the United States will do if anyone violates the boundaries of Israel will add greatly and dangerously to the likelihood that someone will start such a war.

There is, though, no use putting our heads in the sand about the fact that some of the recent statements of United States officials may give the impression that we may stand by inertly if an attack is made against Israel or, equally bad, that we will not move until after an aggression has taken place and then only to mediate a settlement betwen the rival parties.

Thus, a recent statement by the White House press secretary, said to be made "with the full approval of the President," states that United States policy in the Near East crisis is to consist of three points: (1) support of the Hammarskjold mission; (2) the observing by the United States, within its constitutional means, of its commitments under the charter of the United Nations to oppose any aggression in the area; and (3) to "support and assist," whatever that may mean, any nation which may be subjected to aggression.

All this, you will note, contains no reference to the 1950 declaration. Is this intentional? Is the 1950 declaration repudiated by exclusion?

Then too, various recent official statements of United States officials give the impression that it would be better practice that a commitment such as the 1950 declaration be submitted to Congress for ratification in accordance with the precedent established by the resolution on the Formosa Strait. Is this another doubt cast upon the binding effect of the obligations of the United States under the declaration of May 1950?

I deeply hope not. Such doubts would only encourage those men who think they can get away with violence, those men who may rely on the slowness to act of the free democracies. Doubts of this kind about the 1950 declaration can only increase greatly the likelihood of war, a war which in all probability would bring in, too late, the United States and perhaps all the rest of the world on both sides of the Iron Curtain.

Meanwhile, until all shadows of doubt upon the 1950 declaration are removed, we can only watch and pray, and read the daily dispatches from Tel Aviv and Cairo and Beirut and Amman, fearing each day to read of that fatal spark which will light the tinderbox of the Near East and set the world aflame.

Let us not allow this to happen. Now is the time for the United States to act on high principle. Now is the time for the

clearest kind of official statement by the Government of our country that we will not tolerate a breach of the peace in the Near East. In the name of our passion for peace, in the name of right and our own self-respect, let us make it indubitably clear that the United States intends to stick to its word and that we will not allow war to happen.

* * * * *

You may ask: Why should we pinpoint our policy on the 1950 declaration which in essence operates outside the United Nations; why should not the threats to the peace in the Near East be handled entirely by the United Nations?

There is, I think, good reason for not changing our policy of relying on the 1950 declaration.

Of course, the U. N. must be supported and made a world vehicle for peace. Unless we all back the U. N. and give it more and more power there will be no lasting peace. We must support the work of the present Hammarskjold mission and all future efforts of the U. N. to help avoid war.

But we should not now cast on the world organization the main responsibility for the problems of the Near East. We will be doing harm to the U. N. if we ask it to handle matters for which it is not prepared. To ask the U. N. to bring about a solution of the problems of the Near East at the present time is to ask it to mediate between the great powers; and the U. N. is not ready to take on this, the most difficult of tasks. We will serve the U. N. better if the free world settles its own problems in the Near East and establishes stability in the area. We cannot, I believe, deal with Russia in the Security Council until this stability has been established.

* * * * *

With determined action of this kind we may retrieve a dangerous situation. Then will come the time for the long-term program.

It seems fruitless to talk of long-term projects now, when the house is afire. I shall suggest only some broad lines of the long-term solution.

The first and most important thing to do is to get a definitive peace treaty signed between Israel and Israel's neighbors.

As long as there is no peace treaty the emergency will continue, the threat of war will be with us, and we cannot think of long-term solutions.

The boundaries in the peace treaty should be the armistice lines which were guaranteed by the 1950 declaration, with only minor mutually agreed upon adjustments.

The peace treaty must solve the refugee problem. The United States must be prepared to help financially in this solution, and so must Israel within her capabilities.

The responsibility for the Arab refugees is wider though than this. The reestablishment of the refugees in Israel is completely inconsistent with the continuation of the State of Israel. The Arab refugees are world responsibility, just as the plight of the Jews in Europe and north Africa was and is a world responsibility. The Arabs should now join the United States and Israel and the rest of the free peoples by accepting a special share of the responsibility for the reestablishment of those who have been displaced.

I think too that the peace treaty should call for a substantial measure of disarmament among all the states of the area. The present armaments of the Near Eastern countries are enough to enable them to fight each other but are not enough to enable them to defend themselves against an invasion from without by Russia.

Once the peace treaty is signed the conditions for peaceful progress will exist. Then we can set up a great cooperative effort for the development of the economy of the area for the benefit of all the peoples who live there.

There is, I think, no point in discussing the form such an arrangement might take. It is sufficient to say that there must first be the willingness of the peoples of the area to work for their common good, and that it is for those outside the area who are able, such as the United States, Great Britain, France, and I hope India, to contribute to the peoples of the Near East whatever material help these people may wish, all to be given, I may add, without strings and without any attempt whatsoever to gain influence by the aid which is given.

But none of these things will be possible until the conditions of peace are established. The definitive peace treaty is therefore the critical point which will establish whether we can or cannot go forward to develop the Near East for the benefit of all the people who live there, and thereby to solidify the cause of freedom in that part of the world.

All of this is for the longer run. The immediate steps must be the arming of Israel and the firming up of the stand of the United States on a policy of seeing to it that there shall be no violence by anyone in the Near East.

With these two policies firmly carried out by our country I believe that we may look forward to many more celebrations in honor of the courageous, pioneering spirit of the people of Israel.

Americanism: Its Positive Aspects

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, April 23, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address entitled "Americanism: Its Positive Aspects," delivered by Judge Irving R. Kaufman at the dinner concluding the annual Americanism seminar of the American Legion Department of Minnesota, at St. Paul, Minn., on April 14, 1956.

This is an outstanding address by a distinguished jurist and a great American. I feel that it is worthy of the attention of the Members of the Congress and the general public.

The Public Printer has advised me that the cost of this insertion will be $240.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICANISM: ITS POSITIVE ASPECTS

(Address by Judge Irving R. Kaufman at the dinner concluding the Annual Americanism Seminar of the American Legion, Department of Minnesota at St. Paul, Minn., April 14, 1956)

Man's liberties never appear so precious to him as when he is in danger of losing them. Thus it is, that in times of our Nation's greatest crises, we as a people have become acutely aware of our heritage of freedom.

All of us here tonight have lived through at least two terrible wars, many of us can remember a third. As former servicemen, you each have your own most vivid memories of those harrowing years, but all of us share in common the vivid memory of those first agonizing months after Pearl Harbor when all we loved stood endangered. There is not one among us who did not pause at that time to take stock of the wonderful way of life that was ours.

Today, we are again engaged in a mortal struggle which has been thrust upon us. In this dread struggle, often called the cold war, our weapons are political, economic and ideological. This means that in the present conflict, even more so than in former ones, it is vitally necessary that we fully understand this heritage that is America, so that we can make it understandable to those whose trust, friendship and support is vital to our survival. The importance of our awareness of the meaning of our heritage and the necessity that we all have an understanding of our constitutional system can best be demonstrated by a consideration of the problems we face in this all-out struggle we call the cold war.

In a conventional war, the problems of the combatants are relatively simple. We know the enemy and the goal is to destroy him. But with the advent of hydrogen bombs and intercontinental ballistic missiles, it has become increasingly apparent, even to the Russians, that neither side can win another hot war. It is clear that a third world war probably would lead to annihilation of both sides, and destruction of civilization as we know it. The fantasies of science fiction writers who describe the ruins of a post-atomic world are becoming less fantastic day by day, as word is revealed to the public of the invention of more and more destructive and ultimate weapons against which there is no defense, leaving us only to guess at the scope of the implements of destruction still shrouded in a veil of secrecy, created either by us or by the masters of the Kremlin.

This is not to say that the Russians have completely abandoned all thoughts of another hot war; a nation which has not hesitated to liquidate millions of its own citizens cannot be expected to shrink from the thought of destroying lives elsewhere. But, if we maintain our constant military vigil, Russia will undoubtedly continue to keep our struggle at the political and economic level.

Indeed, the recent new line emerging from Moscow indicates quite clearly that the new Communist line is to co-exist capitalism to death. At the recent 20th Communist Party Congress, Nikita Khrushchev admitted that "coexistence is only a means to an end—the world transforming * * * complete triumph of communism."

Speaking of the 900 million members of the Communist conspiracy throughout the world, he proclaimed that they were "in a position to capture a stable majority in Parliament and to transform the latter from an organ of bourgeois democracy into a genuine instrument of the people's will." If Russia plans to convert the world to communism by so-called parliamentary methods, this clearly means that Russia will aim a barrage of Communist propaganda and espionage at freedom-loving countries, the like of which we have never seen.

That these tactics have been successful in the past was clearly pointed out last year by the able Gen. David A. Sarnoff, chairman of the board of RCA, and now Chairman of the National Security Training Commission by appointment of the President. He said:

"Moscow has brought one-third of the human race under its iron control by means short of a hot war—by shrewd diplomacy, deception, propaganda, the blackmail of threats, fifth-column subversion, guerrilla forces, and, where expedient, localized shooting wars. These political and psychological methods—the cold war—have paid off, at smaller risk and infinitely lower cost than a hot war would entail.

"Accordingly they are being applied without stint to the conquest of the rest of man-

kind. For world communism, with its high command in the Kremlin in Moscow, the cold war is not a temporary or holding operation, nor a prelude to a hot war. It is the main bout, the decisive offensive, conducted on an unlimited scale, with total victory as its goal."

The question is, therefore, how can we beat the Russians at their own game and with this main bout. Beat them, we can, for most assuredly, our way of life if properly and honestly portrayed has infinitely more appeal than that found in the countires behind the Iron and Bamboo Curtains. Basically, all people the world over want a decent home and a decent job—a chance to live free of fear and free from want, and an opportunity to exercise their religious beliefs freely. These are the ends which our way of life has been providing for Americans—and it is essential that the whole world know our success story.

Since, unlike our Communist opponents, we do not rewrite history or suppress news of the mistakes we make and the problems we cannot resolve, these men and women whose understanding and friendship we seek have constant access to the stories of our failures, stories which are always grist for the Communist propaganda mill with its branches throughout the world. Every time these people hear of the isolated race riot, or of some overzealous police officer running rampant over the rights of an accused, or of a trial conducted in an atmosphere of prejudice, our counteroffensive suffers a serious setback, as the Communists jubilantly point out that we Americans don't practice the liberty we preach. Working to insure a climate of social and political opinion where these failures cannot occur is my idea of a program of positive Americanism, the results of which will be felt throughout the world.

Essential to any such program of positive Americanism is an understanding of just what that term implies—a reevaluation of our American heritage. That you and I are in agreement as to the need for such constant reevaluation is shown by your gathering here tonight—and I am privileged to have the opportunity to discuss such a program with this fine group, for you who are veterans of the wars we have waged to retain our freedom have demonstrated your dedication to the American way of life on bloody battlefields throughout the world.

Further, when you returned to your peacetime pursuits, you were among those who realized that the fight to preserve decency and democracy was not yet over—and indeed would never be over—and as sober responsible citizens who understood full well that the duties of citizenship mean much more than a periodic trip to the polls, you joined the American Legion and assumed an obligation under the preamble of its constitution "to inculcate a sense of individual obligation to the community, State and Nation" and "to foster and perpetuate a 100 percent Americanism."

Since then, as veterans, legionnaires, and responsible citizens you have constantly been attempting to evaluate just what "100 percent Americanism" is because, unlike other isms, Americanism has no one narrow creed, no one comprehensive solution to all the world's ills.

America's heritage is diversity, and the breath of her life is constant progress—new ideas and new horizons. As members of a veterans' group whose sole yardstick for membership is war-tested citizenship without regard to differences in rank, race, creed, color or birth, you are aware of the wide variety of cultural and ethnic patterns from which our Nation has sprung—and from your work through your national organization, you have become aware of the differences in viewpoint between Americans of different walks of life who live in settings as dissimilar from each other as the crowded sidewalks and subways of New York City and the rolling pasturelands and sparkling lakes of this fair State.

Yet, through all these differences, you have perceived a sense of unity, a common set of goals, ideals and aspirations that link the city dweller to the farmer, and the northerner to the southerner in ties that bind so closely that their other local differences cannot pull them apart.

At this day-long seminar, you have been attempting to probe into this sense of oneness that is America, and to evaluate its credo in terms of Americanism, and in terms of a philosophy of everyday life. This awareness of our country's diversity and faith in its unity is a basic necessity to any program of positive Americanism. Tonight, I would like to go further into this program of evaluation of our American heritage and of our living by the Constitution.

The basic feature of our constitutional system is that the rules by which we live have been written down so that no ruler or government can ever say that certain rights are not ours. This idea of a written embodiment of rights can be traced to the 13th century—to the Magna Carta—when the British barons forced King John to grant them certain rights—and they put these rights in writing, under his sign and seal, so he could never renege on his promise.

When our own young country was formed, not only was its basic governmental document set forth in writing; but, despite the fact that the Federal Government was to be one of strictly limited powers, the First Congress insisted upon 10 amendments to the Constitution which set forth certain basic liberties of the people with which the Government was forbidden to tamper. Thus, the slogan of the wise businessman, "Put It in Writing," has in a sense been the slogan of our country's political heritage—"Put It in Writing"—so that all men may know their rights and know the rules by which they live.

In considering the importance of understanding these rules by which we live, I am reminded of the story of the boy of very tender years who presented something of a problem to his troubled parents. Although they had tried every known inducement, they simply could not get him to eat. After a number of meals at which the boy sat indifferently fingering his tableware, the concerned father used as a last resort the promise that the boy could have anything he wanted to eat. After thinking a bit, the boy said he wanted a worm for dinner. After the initial shock had subsided, the father left the table fuming, and said that if that's what the boy wanted he would have it. He thereupon went to the garden, dug up the fattest worm he could find, and dashed back to the house with it. Slapping the worm on the boy's empty plate, the father told him that there it was and now he was to eat it. The boy set up an immediate howl and said he would not eat it unless it were fried. At that, the father jumped up from the table and flung the worm into a frying pan with a piece of butter. When it was done to a crispy brown, the worm was put back on the empty plate with the admonition "Now, eat it." But again the boy howled. The father indignantly demanded that the boy eat the fried worm, as that was what he had asked for; but the boy refused, protesting that he wouldn't eat until has father first ate half.

With purplish countenance and shaking hands, the father grabbed a fork, whacked the worm in two and gulped half. Now, with victory at hand, the father lifted the plate with the uneaten half on it, held it under the boy's nose, and demanded that he eat. The boy burst into a rage of tears and refused. Seizing him by the shoulders the father roared to know why after his every demand had been met, he now refused to eat the worm. "Because," the boy triumphantly smiled through his tears, "you ate the half I wanted."

Homely anecdotes often yield powerful themes—and to me this story is a classic reminder that it is a good idea to check the rulebook before getting into the game. Similarly, when we attempt to formulate a program of positive Americanism, it is wise to look to the constitutional rulebook.

A reading of the provisions of the Consitution which comprise a comprehensive scheme of governmental checks and balances, and of the Bill of Rights with its safeguards for freedom of the individual and the individual's right to speak—and a knowledge of the way that, from its inception, this constitutional blueprint has been effectuated by a system of opposing political parties—make it apparent that a basic rule of our form of democratic government is the agreement that there is a right to disagree.

Our Constitution provides a framework within which all men are free to express their opinions and to advocate their acceptance in the free market place of ideas. So long as the dissenter, the dreamer, or the dissident is content to purvey his ideas in this free market place, not attempting to stifle others, but to answer them, and so long as he does not attempt to destroy this constitutional framework by force and subversion, but rather is content to work within that framework and seek changes through the ballot box, we have a duty to let him be heard.

And when we do not perform that duty, when we fail to speak up for the rights of what I will term the honest dissenter, we not only fail to live up to that heritage of freedom which our ancestors have fought to preserve, but we lose another round in the battle of words and ideals we are waging with Moscow. As I mentioned earlier, we are, in a sense, attempting to sell democracy to the world, and the best way to sell democracy is to show that it works—to show that unlike the masters of the Kremlin who also utter high-sounding phrases about freedom, we here in America actually practice what we preach.

When the Russians speak of their country as democratic, we call them hypocrites, because under their system, no man is free to disagree with the regime. When the party line changes, all too often those officials whose views are no longer considered orthodox lose their lives as well as their jobs. But when we stifle honest criticism and when we ostracize the well-meaning dissenter, we are not practicing democracy either, but are adding fuel to the Communist fire. We must never forget that it is the underlying belief of our democracy that in a free and open encounter of opinions, truth will ultimately prevail over falsehood. And it is a second basic concept of our democracy that it is only when the people are given free access to all the different competing viewpoints that they can recognize the truth and thus choose wisely.

The phenomenal advance of our country in its relatively short history is due in large part to the fact that to our shores have come men of vision, men with new ideas—social, economic, political, and scientific—who felt stifled in the Old World, and came to this land of youth and opportunity to make their dreams a reality. And as our young country grappled with the many problems that arose over the years—the question of slavery, the rise of industry, the threat of monopoly and the struggle of labor and farmers for better conditions—there were always many voices urging different solutions—pointing out evils and suggesting remedies. Had their voices been stifled—our country could not have grown, as time and again our history has shown that the starry-eyed dreamer of today is the conservative of tomorrow. You here

in Minnesota need little reminder of the Farmers Alliance, the Grangers, and finally the Populist Party which in 1892 campaigned in the national elections with a platform far too radical to be adopted by either major party. Among measures urged in their program were Government loans to farmers at low-interest rates, a graduated income tax, tariff reduction, postal savings banks, shorter working hours, laws protecting labor unions, and popular election of Senators. Today the most conservative members of all political parties would never dream of advocating the abolition of any of these once progressive ideas.

It is because our Constitution contemplates these continual variations in political and social opinion, and provides for peaceful elections to carry out the ever-changing mandate of the people, that we have no need for, and cannot permit groups to organize who advocate violent changes in our form of government. For those who advocate the overthrow of our Government by force must admit that their program does not have popular appeal, and cannot win out in the free and open exchange of ideas—were their ideas capable of such a victory, violence would be unnecessary.

We are all well aware of the fact that the Communists are such a group. This fact was forthrightly recognized by the late Justice Jackson of the United States Supreme Court in 1950. Concurring in the decision which upheld the requirement of the Taft-Hartley Act, that union leaders file non-Communist affidavits, he said:

"The goal of the Communist Party is to seize powers of government by and for a minority rather than to acquire power through the vote of a free electorate."

He added: "The American Communists have imported the totalitarian organization's disciplines and techniques, notwithstanding the fact that this country offers them and other discontented elements a way to peaceful revolution by ballot."

Because of the resort by Communists to violence, treachery, and intrigue as the means to their ends, he maintained, Congress has rightly decided that they should not be permitted to occupy key posts in the labor movement—from which positions they could attempt to paralyze the country economically.

Similarly, measures have been taken to prevent Communists from serving in sensitive positions in government and in our public schools, and the Supreme Court has approved these measures. Further, by security checks, Communists are prevented from obtaining positions in industrial plants vital to our Nation's defense. These decisions and security measures are sound, and we must constantly maintain our vigilance against those who seek to destroy our heritage—but we must always remember that basic to these decisions is the fact that the Communists would use violence in their attempt to make us accept a regime which they know will never gain acceptance by constitutional means.

In urging that while you maintain your vigil against Communist subversion you maintain equal vigil to insure that not all who disagree with the majority, politically or economically, are blindly labeled Communists, I realize that I make no simple request. It is complicated by the fact that while on the one hand, Communists often parade in false dress as advocates of liberal causes, on the other hand, we cannot permit a worthy movement to be defeated merely because a few Communists are attempting to infiltrate it. We cannot let certain worthwhile causes become Communist property—and yet we are in danger of doing so. The Communists, who we know have abolished all civil rights in the countries under their yoke, will often be heard hypocritically in defense of certain of our precious liberties—but these liberties do not become any the less precious because the Communists have temporarily decided to pay them lip service. Yet, all too often, others who then speak out in favor of those same vital rights are branded as Communists, or fellow travelers, for some believe in the old saying that: "Where there is smoke there is fire." I urge you, the next time you hear that familiar theme, don't rush blindly with an ax at the smoke thus created—you may chop at a firefighter instead of at the fire. When we strike blindly at all who espouse an honest and decent cause merely because the Communists are also paying it lip service, we play right into the hands of the Communists both here and abroad.

All the Communists need to do is take refuge behind the very civil rights which we know they are pledged to destroy, and then others fearful of being labeled subversive, will shun the term "civil rights" as a Communist label.

A specific case in point is the fifth amendment. If our Founding Fathers had been told that there would come a time in American history when many would urge the repeal of the privilege against self-incrimination, they would have been numbed with disbelief that we could so easily suggest relinquishing a right that was won by a slow and costly process in the fight against tyranny and torture. The idea that a man should not be compelled to bear witness against himself has been fundamental to our idea of justice in the courts, to our belief in man's inherent dignity, and to our tradition that a man is innocent until proven guilty. But the consistency with which Communists have been invoking this privilege in recent years has led some peoeple, in their justifiable frustration, summarily to condemn the whole doctrine, to urge its abolition, and to label as Communists many who speak out in favor of retaining the privilege. And when we react in this manner, we fall into the Communist trap by endangering the very liberties which they seek to destroy. As farmers, many of you know that if a borer attempts to eat into your prize apple tree—you eliminate the borer—you don't chop down the tree.

This need for not letting worthy causes fall into Communist hands by default, and the necessity for perceiving the difference between Communist dogma and solid American ideals being perverted by the Communists, and the importance of differentiating between Communists and honest liberals in our fight against communism was pointed out by that very able and dedicated American, J. Edgar Hoover, Director of the Federal Bureau of Investigation in an article published in Newsweek magazine as far back as June 1947. He opened by saying:

"Our best defense in the United States against the menace of communism is our American way of life."

He continued: "We can successfully defeat the Communist attempt to capture the United States by fighting it with truth and justice implemented with a few 'don'ts.'"

He then proceeded to list 10 "don'ts."

"Don't label anyone as a Communist unless you have the facts.

"Don't confuse liberals and progressives with Communists.

"Don't take the law into your own hands. If Communists violate the law, report such facts to your law enforcement agency.

"Don't be a party to the violation of the civil rights of anyone. When this is done you are playing directly into the hands of the Communists.

"Don't let up on the fight against real Fascists, the KKK, and other dangerous groups.

"Don't let Communists in your organization or labor union outwork, outvote, or outnumber you."

On this last point, I might add, that Mr. Hoover's advice means that if a few Communists try to infiltrate your local organizations—don't abandon ship and hand them the organization as a gift. Fight back and clear them from your group. But in order for people to be able to follow this advice, it means that all of us must distinguish between the Communist dominated group, and the group which a few Communists are trying to infiltrate. To the members of the latter group, who are trying to combat this infiltration, we must lend our wholehearted support, and be careful of where we pin the Communist label. And yet we must do this while following Mr. Hoover's other "don'ts."

"Don't be hoodwinked by Communist propaganda that says one thing but means destruction of the American way of life. Expose it with the truth.

"Don't give aid and comfort to the Communist cause by joining front organizations, contributing to their campaign chests or by championing their cause in any way, shape, or form.

"Don't let Communists infiltrate into our schools, churches, and moulders of public opinion, the press, radio, and screen."

As I mentioned earlier, we are living today through one of the free world's most trying periods; the intense global nature of the Communist conspiracy confronts us with threats within and without our border. We must not grow weary and frustrated at the continuing high cost imposed upon us in defending ourselves against this threat. Too often as these frustrations mount, we hear seductive voices from within ourselves, as well as from our fellow men. These voices call upon us to take short cuts, to invoke expedients, strike for what seem to be quick and easy solutions. When these seductive voices tell us, "Deal with the enemy or suspected enemy within our midst the way he would deal with us, and strip him of his rights the way he would have stripped us"—these voices are actually spreading Communist doctrine.

We must never become so completely consumed with this ever-present Communist threat that our thinking is motivated by what we hate rather than by our love of the American way. Unfortunately, some of us have begun to hate each other—particularly when we are in disagreement over some fundamental issue. It was this condition which led a contemporary philosopher to warn that, "If we permit our hatred of Russia to replace our love of the American dream as the motivation of our lives, we will have accorded communism the greatest tribute to which any dogma may aspire, the power to dictate the thinking of its enemies."

It is interesting to note, that Mr. Hoover, who has been in this fight against communism longer than most Americans concluded his list of the 10 ways to fight communism with the following admonition:

"Don't fail to make democracy work with equal opportunity and the fullest enjoyment of every American's right to life, liberty, and the pursuit of happiness."

This necessity for faith in our democratic processes and for constant vigilance against both extremes which Mr. Hoover expressed so ably, keeps us engaged in a difficult and trying process. Over 100 years ago, an old American political leader, Fisher Ames, described democracy with pardonable vulgarity. He said "Democracy is like a raft. You never sink but damn it, your feet are always in the water." And I believe, and I am sure you do too, that our democratic system is well worth the discomfort of constant wet feet.

Striving to create a better America would be sufficient end in itself were there no Communist menace, but such actions take on new importance in the context of the cold war. Every time a group of Americans take positive action to prevent some miscarriage of justice, that means there is one less incident for the Communists to seize upon in their current propaganda offensive—and it

also means that there is one more incident that an alert American press can seize upon to aid us in our cold war offensive.

And on this point, I might add that I believe we should reorient our thinking toward the part our press should play in our national and international life. We should recognize that it not only reports news to Americans, who, as citizens, are anxious to learn of mistakes which have been made that need correction, and who usually take it for granted that no news on any issue means good news. Rather, our press today also serves as source material for foreign news services, and this latter role means that equal emphasis and equal space should be devoted to reporting accomplishments in our country which we here take for granted, and to relating the numerous small instances of Americanism in action which occur throughout the Nation. I urge this because if our news reports lay more stress on our occasional miscarriages of justice than they do on the good we practice daily, there will be conveyed to the world a distorted picture of American life.

In this regard, I am reminded of a heartwarming incident which was related by Dr. Mordecai Johnson, president of Howard University in Washington. It seems that, while Dr. Johnson was on a train trip in the South, not too long ago, he noticed a fellow passenger, a young Negro boy, who seemed very upset and ill at ease. When Dr. Johnson asked what was troubling him, he replied: "I am the first Negro to be admitted to the University of Arkansas and I don't want to enter. I feel that I will have a most unpleasant experience, but all my relatives and friends insist that it is my duty to go there." The boy's anxiety increased as the train drew closer to Fayetteville, Ark., where the school was located, and he became deeply concerned when, looking out the train window as he pulled into the station, he saw 35 white boys waiting on the platform. He was sure that the only motivation which could have brought that group to the station was to give him a hostile reception—a confirmation of his worst fears. However, his concern quickly turned to relief when, as he stepped from the train, one of the boys approached him, extended his hand, and said: "Last night a group of us were talking about you and how you would feel on coming to the university, and we decided to come here and offer you our friendship." Those students were practicing positive Americanism in its best and truest sense. They were not antisegregation crusaders, but southerners born and bred who had been brought up to believe that segregation was proper. But now that its end was decreed, they had come as fellow human beings and fellow Americans to offer their friendship to one whose struggle to adjust to the new way of life seemed to be just that much more difficult than their own.

It is a story like this that makes one proud to be an American, and I believe that it is vital in this cold war that we give a fair measure of publicity to these heartwarming incidents which occur day by day in all our communities, and in all types of situations, and which make our American tradition so wonderful.

Perhaps one way to summarize the thoughts that I have attempted to convey to you tonight is to briefly delve back into history. During the 16th century, an Italian named Machiavelli wrote a handbook for despots, called The Prince. In telling rulers how to obtain absolute power and then retain it, he advised them to be guided by the principle that the ends always justify the means. Ever since that time, tyrant after tyrant has resorted to Machiavelli's theme. In those earlier days, these absolute rulers made no pretense about the fact that they wanted power for power's sake; modern libertarians, however, have made it impossible for dictators to confess that their ends are self-seeking. Instead, in recent years we have seen the rise of several totalitarian movements, nazism in Germany, fascism in Italy, and communism in Russia. All three groups have professed that their purpose was to better the lot of their citizens.

In particular, the Communists made claim to being the representatives of the downtrodden—their revolution was to herald a brighter day, a classless society.

But then, they urged, since their ends were so glorious, all means conducive to them should be employed. Thus began an era of horror while the Russians collectivized their farm citizens, shooting rebellious kulaks and herding thousands of others off to Siberia. Similarly, they purged many of the middle class intelligentsia who challenged their actions. Dissent was stifled, and many of the men who had suffered so long for the sake of the revolution were shot as traitors by the heirs of that revolution—all as I say, in the name of progress and what the Russians called democracy—all on the theory that the ends justify the means.

Conversely, our Anglo-Saxon heritage has always been one of insistence on proper procedures. Our police cannot make arrests without warrants—unless of course they actually come upon a crime being committed. Our criminal defendants are given every procedural aid, and are deemed innocent until proven guilty beyond a reasonable doubt. Men of all shades of political opinion are free to express their opinions verbally and in writing. Because we have a truly representative Government, and our Congressmen represent diverse views from all over the country, our legislative processes move slowly—and we don't all agree with every law. Our courts impose rigid checks to make sure that no man is deprived of life, liberty or property without due process of law—which means without proper procedures safeguarding his interests.

If this insistence on proper procedure sometimes seems cumbersome, if we cannot make decisions with the lightning rapidity of totalitarian governments—we have always felt that this was a small price to pay for liberty. And this is something we should never forget.

When, with our eyes fixed on a wonderful goal, we insist on short cuts in the name of expediency—when we stifle honest dissent while we preach safeguarding freedom—we are taking a page from Machiavelli's handbook. Democracy can only be preserved by democratic methods—slow and plodding though they be—for democracy is based on a calculated risk—it is based on a belief that free men exercising a free choice out of various competing ideas will exercise the wisest choice possible, and our country's history over the past 175 years has justified continued faith in that belief.

Marshall Field National Awards for Contributions to Childlife

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, April 23, 1956

Mr. LEHMAN. Mr. President, Mr. Marshall Field, who is one of our great philanthropists and civic leaders, has established a program of national awards for contributions to childlife. This is another demonstration of Mr. Field's outstanding public service. I congratulate him very heartily on making possible this fine program, which I am certain will be very effective in bringing the needed manpower and money into the field of furthering the well-being of children.

I ask unanimous consent that a statement outlining the establishment of the awards be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

MARSHALL FIELD ESTABLISHES NATIONAL AWARDS FOR CONTRIBUTIONS TO CHILDLIFE

Marshall Field announced today the formation of Marshall Field Awards, Inc., a nonprofit organization, "to recognize and reward fundamental and imaginative contributions to the well-being of children."

Six to nine awards will be made annually to individuals, organizations, and communities in the fields of education, physical and mental development, social welfare, and communications. Each award will consist of $2,000, a scroll, and a statuette. The winners will be selected by a board of directors which is composed of recognized authorities in child life. The first awards will be made this year.

In announcing the awards program, Mr. Field stressed the considerations that led to its establishment: "Although few would quarrel with the controlling importance of children to America's future, I believe we have not done all we can or should to assure for our young people the opportunity for their fullest physical, mental, and social development. I think the reasons for this deficiency are: first, that we have not devoted a large enough portion of our national resources in manpower and money to the professional fields which serve children, and, second, that we have not made those professional fields sufficiently high in prestige or reward to attract adequate numbers of top-notch personnel needed to make new and important contributions to the well-being of children.

"Our awards are designed to help meet these deficiencies. It is our hope that they will focus public attention on children's needs and on the areas in which improved services are urgently required. The awards will call attention to constructive programs which set an example for others to follow. We hope, too, that the granting of these awards will, in some measure, raise the status of the professions devoted to children and will stimulate the making of additional significant contributions to the betterment of childlife."

Mr. Field has long been active in work devoted to children both through the Field Foundation, which he established in 1940, and, as president, since 1951, of the Child Welfare League of America.

Nominations for possible award winners will be solicited by the new organization on a nationwide basis. All nominations will be screened and final selections will be made by the board of directors. International awards may also be granted at the discretion of the directors.

The following criteria will be used in judging work nominated for awards:

1. Does it directly help children?
2. Does it benefit a large or significant group of children?
3. Can it be applied or adapted for use by others?
4. Is it consistent with professional standards in the field?
5. Does it represent an original or extraordinary service?
6. Will it promote sound development of children?
7. Will it stimulate public interest in the needs of children?

8. Does it open new dimensions in the lives of children?

9. Is it being recognized nationally for the first time?

10. Are those who did the actual work being rewarded?

The members of the board of directors in addition to Mr. Field are: Leona Baumgartner, M. D., Commissioner of Health, New York City; Mrs. Richard J. Bernhard, president, Arthur Lehman Counseling Service, New York City; Sarah Gibson Blanding president, Vassar College, Poughkeepsie, N. Y.; James Brown IV, executive director, the Chicago Community Trust, Chicago, Ill.; Hon. Ralph J. Bunche, Undersecretary Without Department, United Nations, New York City; Martha M. Eliot, M. D., Chief United States Children's Bureau, Washington, D. C.; Ruth Pruyn Field, New York City; Leonard H. Goldenson, president, American Broadcasting-Paramount Theaters, Inc., New York City; John Gunther, writer, New York City; Herold C. Hunt, the Under Secretary of Health, Education, and Welfare, Washington, D. C.; Charles A. Janeway, M. D., Professor of Pediatrics, Harvard University Medical School, Boston, Mass.; Clark Kerr, chancellor, University of California, Berkeley, Calif.; Mrs. David M. Levy, president, the Citizens' Committee for Children of New York City, Inc., New York City; Ernest K. Lindley, director, Washington Bureau, Newsweek, Washington, D. C.; Leonard W. Mayo, director, Association for the Aid of Crippled Children, New York City; William C. Menninger, M. D., the Menninger Foundation, Topeka, Kans.; Hon. Justine Wise Polier, judge, Children's Court, New York City; Mrs. Anna M. Rosenberg, Public and Industrial Relations Consultant, New York City; Howard A. Rusk, M. D., associate editor, the New York Times, chairman, Department of Physical Medicine and Rehabilitation, New York University, Bellevue Medical Center, New York City.

The areas in which awards will be made cover a broad range of activities related to children: Education, programs and services associated with formal and informal schooling; physical and mental development, health, medical care, nutrition, recreation, rehabilitation; social welfare, private and public programs in adoption, foster care, delinquency, institutional and day care, maintaining family income; communications—publications, advertising, movies and films, radio and television.

Under the program, children are defined as those who have not yet reached legal majority.

Offices for the new organization have been opened at 598 Madison Avenue, New York City. The deadline for nominations for the first awards is October 1, 1956.

GOALS

Marshall Field Awards, Inc., has been established by Marshall Field to recognize and reward fundamental and imaginative contributions to the well-being of children.

These awards will help focus public attention on children's needs and on the areas in which improved services are required. It is hoped that they will raise the status of the professions devoted to children and stimulate the making of significant contributions to the betterment of childlife.

AREAS

Awards will be given to individuals and organizations in four general areas:

Education: Programs and services associated with formal and informal schooling.

Physical and mental development: Health, medical care, nutrition, rehabilitation.

Social welfare: Private and public programs in adoption, foster care, delinquency, institutional and day care, maintaining family income.

Communications: Publications, advertising, movies and films, radio and television.

Children are defined as those who have not yet reached legal majority.

ADMINISTRATION

The program is directed by a national committee of eminent leaders in the fields serving children and young people. Working with the national committee are 4 committees—1 in each of the 4 award areas. Any individual or organization may submit nominations. The committees will screen all nominations and will recommend to the national committee a selection of possible award winners.

THE AWARDS

Each award will consist of $2,000, a scroll and a statuette. A minimum of six will be available for each calendar year. The annual distribution of the awards among the various areas is at the discretion of the national committee. Awards will be on a nationwide basis. International awards may also be granted at the discretion of the committee.

The committee recognizes that many excellent ideas and activities take considerable time to develop and show results. Therefore, eligibility for an award will not be restricted to work begun and completed during a single calendar year.

CRITERIA

The committee will judge work nominated for awards on this basis:

1. Does it directly help children?
2. Does it benefit a large or significant group of children?
3. Can it be applied or adapted for use by others?
4. Is it consistent with accepted standards in the field?
5. Does it represent an original, extraordinary service?
6. Will it promote sound emotional development of children?
7. Will it stimulate public interest in the needs of children?
8. Does it open new dimensions in the lives of children?
9. Is it being recognized nationally for the first time?
10. Are those who did the actual work being rewarded?

TIMING

The first awards will be made in December of 1956. Nominations and supporting materials for this year must be submitted by October 1.

Address nominations and requests for further information to: Miss Elma Phillipson, executive secretary, Marshall Field Awards, Inc., 598 Madison Avenue, New York, N. Y.

NATIONAL COMMITTEE MEMBERS AS OF MARCH 1, 1956

Leona Baumgartner, M. D., commissioner, Health Department, New York City; Mrs. Richard J. Bernhard, president, Arthur Lehman Counseling Service, New York City; Sarah Blanding, president, Vassar College, Poughkeepsie, N. Y.; James Brown IV, executive director, the Chicago Community Trust, Chicago, Ill.; Martha Eliot, M. D., Chief, United States Children's Bureau, Washington, D. C.; Marshall Field, New York City; Ruth Pruyn Field, New York City; Clark Kerr, chancellor, University of California, Berkeley, Calif.; Leonard W. Mayo, director, Association for the Aid of Crippled Children, New York City; William C. Menninger, M. D., The Menninger Foundation, Topeka, Kans.; Hon. Justine Wise Polier, judge, Domestic Relations Court, New York City; Mrs. Anna M. Rosenberg, public and industrial relations consultant, New York City; Howard Rusk, M. D., professor and chairman, department of physical medicine and rehabilitation, New York University, College of Medicine, New York City.

MARSHALL FIELD AWARDS, INC., 598 MADISON AVENUE, NEW YORK, N. Y.

Nomination blanks, 1956, for fundamental and imaginative contributions to the well-being of children

Nominee: Name of individual or organization being nominated.

I nominate for a 1956 Marshall Field award:

Name _____

Address _____ City _____

Telephone _____

Field of endeavor: Area in which work nominated was performed. Check one.

—— Education.
—— Social welfare.
—— Communications.
—— Physical and mental development.

Contribution: Brief description of the work done to merit an award.

Supporting evidence: Please enclose materials which, in your opinion, will aid the committee in reaching a decision.

Nominator: Person or organization submitting nomination:

Name _____

Address _____ City _____

Telephone _____

Related organizational affiliation, if any: _____

Date _____

Signed _____

Marshall Field Awards, Inc., reserves the right to make such use of materials submitted in support of nominations as in the judgment of the national committee will further the purpose of the program. Manuscripts and personal documents will be returned upon request. Nominees must consent to their names being submitted.

ELMA PHILLIPSON,
Executive Secretary.

Death of Six Marines at Parris Island

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, April 23, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Parris Island Tragedy," which appeared in the New York Times on April 12, 1956.

This editorial points out the danger of making preliminary judgment with regard to the tragic incident resulting in the death of six marines, and it warrants the attention of all Americans.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PARRIS ISLAND TRAGEDY

The death of a young fighting man in peacetime seems somehow to wrench the heart more violently than in war. So the whole Nation is shocked, grieved and angry over the tragedy at Parris Island, S. C., in which six young Marine Corps recruits marched to their death in a tidal stream in after-dark training exercises last Sunday.

General Pate, the Corps commandant, asks that "premature opinions" be withheld, pending the court of inquiry's decision. But nothing that this court delivers will assuage the sorrow in the homes of these lost boys, all under 21, or diminish the sympathy that the public feels for the families bereaved. None said better what we all now feel than the sergeant who led his men into this fatal maneuver: "I can't find words to express my grief."

This sergeant, Matthew C. McKeon, was only 31 years old, but he had begun his military service at the age of 16, in the Navy, and was a veteran of the Korean war. His zeal seems to have exceeded his judgment, for he acknowledged that he had not been in the area before and had not been familiar

with the tides. Thus he had committed a basic military error; he had not familiarized himself, to the fullest extent possible, with the terrain into which he planned to lead his troops. He had not reduced chance to the irreducible minimum. It was a mistake from which heroism—his own included—could not make a recovery.

The Marines take pride in the "toughness" of their training and its product, for which the Nation has good reason to feel deep gratitude for services performed on many a beachhead. It would be a serious mistake of judgment if the deep feelings stirred by this Parris Island incident were allowed, through pressures created, to soften unduly the basic training, in any of the services, that equips a man to survive. After all, the services are preparing young men for war, if the need comes. Nor should one failure, disturbing as this one was, be allowed to discredit a general policy of dispersal down through the ranks of authority to take command and initiative.

This was a sad, a ghastly error. But no service to our fighting men will be performed by drawing wrong lessons from it, merely to make a showing of drastic, responsive action.

The Merchant Marine

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, April 23, 1956

Mr. BUTLER. Mr. President, the marked improvement in the state of health of the American merchant marine during the last 4 years has been truly outstanding. Of course, much remains to be done. A splendid editorial dealing with recent improvements appeared in the Baltimore News-Post of April 12, 1956. I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IKE REVIVING MERCHANT MARINE

(By E. F. Tompkins)

The Eisenhower administration has started an unprecedented resurrection of the American merchant marine on a sound economic basis.

This country entered World War I under an immense difficulty—lack of an adequate merchant fleet as part of the national defense. At a cost of billions of dollars, a wartime merchant marine was improvised, and we found ourselves in 1921 with 17,026,000 tons of civilian shipping. Then the fleet was allowed to deteriorate, even though Congress passed the Merchant Marine Act of 1936. In 1939 we had only 1,379 commercial vessels, totaling 8,125,756 tons.

IMMENSE DIFFICULTY

Consequently, we entered World War II under an immense difficulty—lack of an adequate merchant fleet. Again a wartime merchant marine was expensively improvised, and the return of peace found us as late as 1953 with 3,439 ships aggregating 25,835,000 tons. But that fleet has been two-thirds abandoned.

We have 2,000 cargo-carrying Liberty ships rusting in idleness, or used only to store surplus grain accumulated under the Federal farm-subsidy system. So we might enter world war III, should it occur, under an immense difficulty—lack of an adequate merchant marine—and be compelled a third time to improvise at prodigal cost.

Taught by tedious repetition, Congress and the Maritime Administration are taking corrective measures in cooperation with the shipping industry.

SHIPBUILDERS GET UNITED STATES AID

Large passenger and freight liners are being constructed, with Federal aid, for private operation under the Merchant Marine Act. New oil tankers are coming off the ways. And the Government has instituted another program—modernization of the Government-owned Liberty ships for operation by American companies on our overseas trade routes.

This refurbishing of the Liberty ships, giving them increased speeds and improved mercantile usefulness, has several merits:

Protracted time and large capital investment are required to build and launch an ocean-going vessel. Relatively little time and much smaller capital, besides a saving in materials, are involved in improving an existing Liberty ship and restoring it to the sea-lanes, where it belongs.

HELP NULLIFY OBSTACLE

Because of our high wage levels, foreign-laid ships are much cheaper to build than American vessels. This is a competitive disadvantage that has seemed to doom an American merchant marine. Rehabilitation of Liberty ships serves to nullify the obstacle.

The entire program will keep our shipyards intact.

The necessary merchant marine auxiliary to the Armed Forces will be provided, in being and almost automatically, as a heritage from the Second World War.

Restoral to service of 2,000 Liberty ships not only salvages a huge wartime expenditure; it is also a magnificent contribution to our foreign trade and national security.

An Honest Veto

EXTENSION OF REMARKS
OF
HON. FREDERICK G. PAYNE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Monday, April 23, 1956

Mr. PAYNE. Mr. President, I ask unanimous consent that an excellent editorial entitled "An Honest Veto," which appeared in the Houlton Pioneer Times, one of Maine's outstanding weekly newspapers, on April 19, 1956, may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN HONEST VETO

The President of the United States has again shown that he is not to be persuaded by political expediency into doing something that, in his judgment, is contrary to the best interests of any segment or segments of the Nation's economy.

There may be those who will observe that it took courage for President Eisenhower to veto the controversial farm bill. We do not take that viewpoint. In our judgment the measure met with Presidential rejection solely on the basis of its lack of merit adequately to do the job for which it was intended.

We cannot believe that the farmers of this country are so abjectly in need of governmental aid that they will urge legislation to divert millons of dollars into their own pockets and out of the general funds. Especially do we not believe that any such fantastic reasoning is true when the full truth of the matter is the farmers themselves are largely responsible for the situation the politicians now want the Government to correct by direct appropriation.

It is also our considered opinion that the threats of reprisal at the hands of the electorate, which are being tossed about rather recklessly by some headline hunters, will not materialize when the chips are down. We just cannot believe that farmers will react that way.

As a political issue, it is probable that ammunition has been furnished gratuitously to those who shall stoop to use it. But we cannot find fault with the sincerity of the President, so fearlessly motivated by a determination to do what is right, according to his own honest convictions, regardless of political pressures.

It doesn't seem to us this country can go very far wrong with that kind of leadership; nor does it seem that honest and right thinking Americans can find it in their heart to vote against that kind of statesmanship.

We are perfectly certain that the farmers of Aroostook County are in accord with the thinking of those who have branded this measure as unsound and a bad bill for the farmers themselves as well as consumers, and we believe the majority will wholeheartedly applaud the forthright action of the President.

Regardless of the political capital the opposition is certain to try to make out of this action, we firmly believe that nothing but praise can, in the long run, result from such an honest and bipartisan veto as this particular definitely is.

The first reaction to be noted was, of course, the prompt mobilization of the President's potential opposition next November. As was to be expected Estes and Adlai moved in immediately with vigorous denunciations of the veto and attempts to portray Eisenhower as "the enemy of the farmer."

The goal of making political capital out of a probable opponent's high integrity and devotion to a principle may have its advantages but, in this instance, the possible gains seem attainable only at the expense of personal honesty.

The way is now clear, it seems to us, to work out this vexing but vitally important farm problem in a sane manner that will be for the best interests of the majority of the populace as against the advantages of a selected group. Now that the debris has been swept from the congressional doorstep, perhaps the legislators can coordinate their efforts in terms of national rather than sectional or personal benefit.

Visit to England of Bulganin and Khrushchev

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, April 23, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Two Clever Guys," from the Manchester Union Leader, Manchester, N. H., dated April 21, 1956. I believe this editorial is right to the point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TWO CLEVER GUYS

Bulganin and Khrushchev now on a visit to England have once more revealed their astuteness. Before they reached London, they put out a notice designed to sweeten the atmosphere. They announced that the Cominform—set up in 1947 to fight the Marshall plan—has been dissovled. And then they called on Israel and the Arab nations to refrain from any action that might lead to war.

This was a particularly clever gesture designed to destroy any hostility that might exist in England. But it is generally recognized that the announcement of the dissolution of the Cominform doesn't have much practical meaning. Soviet domination in the satellite countries can be expected to go on just the same, with Soviet promotion of espionage and subversion. It makes no different by what name the process is called.

So far as the Middle East statement goes, it simply indicates that the Soviets are in the Middle East to stay. Otherwise, they would not offer to join in keeping peace. One of the basic elements in British and American policy in the Middle East for years has been to keep Soviet Russia out. But the Soviets now consider themselves in.

They have maneuvered their way around the Baghdad pact and other attempts to erect barriers against them, and by giving arms to Egypt, and now to Sudan, they have got there feet firmly planted in the area. They can now afford to call on the Arabs and Israel to keep the peace and thus assert their influence in that area.

That has been their objective, and now having won it, nothing will be lost in using it. This simply means that the Western Powers, that have directed affairs in the Middle East for a long time, have lost tremendously, and if the Soviets have their way they will lost a lot more. By shifting their support from the Arab side to an apparently impartial position in the Arab-Israeli conflict, they hope to strengthen their stand more than by simply giving arms to the Arabs.

The Recent Trip to Brazil by the Vice President

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Monday, April 23, 1956

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Mr. Gabriel Luiz Ferreira Filho, one of the most prominent businessmen of Brazil, to Mr. Vance Brand, a director of the Export-Import Bank of Washington, containing an appraisal of the trip made by Vice President NIXON to Rio de Janeiro.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

RIO, *February 20, 1956.*

Mr. VANCE BRAND,
Export-Import Bank of Washington,
Washington, D. C.

DEAR MR. BRAND: The day we met at the American Embassy in Rio you asked me to inform you of the reaction of the responsible people in this country to Mr. NIXON'S mission. As I told you at that moment no impressions would be then valuable because the best way to determine people's opinion is the press and our press was still under censorship at that time.

Now I am in a position to inform you that Mr. NIXON, as well as the other members of the American delegation, did an excellent job in clarifying the position of your country at this particular moment of our political and economic situation. The reaction of the responsible people in this country has been entirely favorable.

The Government officials acknowledge that the United States is well aware of their responsibility toward the hemisphere and of their willingness to help our economic development. But the important thing in my opinion is the reaction of business circles. For the last few years our businessmen were becoming more and more skeptical about American willingness to help our effort toward industrialization. The gap was quickly filled by Germany, France, and Japan. The withdrawal of the United States was far more important than one might be led to think. I give you an example: No communistic propaganda has been able up to now to deny the fact that if we have a steel industry we owe it to American help, right from the beginning, when Volta Redonda was nothing but a big risk. Everybody realizes that, down to the most illiterate man. Now, suppose that you had refused or delayed the last loan to expand Volta Redonda and we would be forced to go to Germany for that loan. The Germans were only waiting for it, for strictly business reasons, but Moscow was also waiting for entirely different reasons. Mr. NIXON hit the jackpot with announcement made at Volta Redonda.

This is the kind of weapon we need in this country to fight communism. Not that this is enough. A lot of things we have to do ourselves to increase the standard of living of our people. But it is a lot more easy for our Government to concentrate in the work for the general welfare backed up by our traditional friends of the hemisphere than to have the additional trouble to extripate the anti-American feeling that was just beginning to spread among us. Of all the countries in the world perhaps Brazil is the one where anti-American feeling is less spread. An American can leave in this country without that uncomfortable sensation of being watched like the rich member of the family. Americans are not envied nor hated by Brazilians, as they are in certain countries for whom you have done a lot more than for us. I was nearly killed once in a street riot in Europe just because I was driving an American car, and my license plate was black and yellow. Here it is altogether different because the Brazilians are conscious of the potential possibilities of their country. We do not have to choose between being grateful or ungrateful. We feel stimulated by your achievements and we know that one day we will make this country as big and as powerful as yours. We feel like partners in a big adventure. You started first and we want to learn from you as the younger brother learns from the older one.

This is what is in the back of the mind of most Brazilians. But as an inner feeling it can be overcome by more apparent ones. You cannot give your friendship indefinitely to anyone who ignores you. You would rather accept help from a stranger than starve.

Up to now our Government and our leaders didn't have any trouble to enroll our people on your side. Things won't be that easy in the future. As an American himself views the situation:

"Today inside the City of the Poor the issues of war and class are underscored by the universal demand for rapid economic progress. Its achievement has become essential to political stability. Thus a worldwide assault on this aspect of the problem of class is now an integral part of the solution of the problem of war.

"At Bandung we saw that on this subject every government in Asia, Africa, and South America today is on trial. In the next few years these governments must demonstrate to their people that they can provide not only progress toward political freedom for each individual, but also steady and even spectacular economic growth. Those which fail this test, however honest and anti-Communist, may eventually go under." (Chester Bowles, The New Dimensions of Peace.)

This quotation describes very exactly the drama of our present government. I have talked to many officials recently appointed and each one of them is conscious of that fact.

Among the businessmen, as I said before, a new faith was born with Mr. NIXON'S statements. As a corporation lawyer, I can watch it from inside at board meetings and business conferences. Not less than three different projects of basic industries requiring foreign finance have been submitted to our office for consideration and legal advice, since you left.

The press in Rio, reflecting the people's concern, is watching the Government very closely. Even the friendly papers cannot disguise their anxiety. Strange as it may seem the newspapers antagonistic to the Government do not criticize it for its large plans of economic expansion. Everybody seems to agree on that. The more they say is that they doubt the flow of foreign capital will come in at the speed required by Mr. Kubitschek's plans.

I believe there is no exaggeration to state that this comfortable sensation we experience today that something will be done at last, is largely due to Mr. NIXON'S encouraging words. I suppose this answers your question. If there is any further information you want from me please let me know.

With best regards to Mrs. Brand and yourself, I am

Sincerely yours,

GABRIEL FERREIRA.

Alaska Mental Health Bill

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mrs. GREEN of Oregon. Mr. Speaker, under unanimous consent, I insert into the Appendix of the RECORD the following letter which is an excellent example of what happens when the plain, simple facts about the Alaska mental-health bill, H. R. 6376, are studied. The District Federation of Women's Clubs has made a careful inquiry into the facts and the results speak for themselves in this letter:

DISTRICT OF COLUMBIA
FEDERATION OF WOMEN'S CLUBS.

DEAR MRS. GREEN: A special meeting of the District of Columbia Federation of Women's Clubs was held on April 19.

The purpose of this meeting was to reconsider our previous action taken on the Alaskan mental-health bill, H. R. 6376.

At this meeting 32 to 8 voted in favor of this bill.

I am happy to make this report.

Very sincerely,

EDNA DAVIS
Mrs. Arthur G. Davis,
President, District of Columbia
Federation of Women's Clubs.

Schoolchildren Being Let Down

EXTENSION OF REMARKS
OF
HON. FREDERICK G. PAYNE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Monday, April 23, 1956

Mr. PAYNE. Mr. President, I ask unanimous consent that an excellent column entitled "Schoolchildren Being Let Down," by May Craig, which appeared in the Portland Press Herald on April 17, 1956, may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INSIDE IN WASHINGTON—SCHOOLCHILDREN BEING LET DOWN

(By May Craig)

WASHINGTON, April 16.—It is incredible that the United States, the first to turn to mass production, to mechanization that can give people so much comfort, so much leisure, so much health, so much security—does not see that we are keeping our children in little red one-room schoolhouse era. And that this can be fatal to us and our type of civilization. The more we mechanize, the more highly educated our people must be. To swing an ax, to follow a horse-drawn plow, to build a log cabin, to chip a canoe out of a log—these things take hardly more than a strong arm and a little commonsense.

But to operate the machine, the electronic age, the age that has split the atom, that aspires to rockets to the moon—this requires education, a great deal of education, widespread, advanced. We do not have it. There is no sign that we will have it. Yet our enemy, the Communists, are specializing on education for this kind of a world today. Every child either has now, or soon will have, free education to the limit of his or her ability to learn. Bright ones are helped and pushed. Jobs that will use special gifts await them when they come out of school. Scientists, teachers, engineers are the aristocracy of the Soviet world. They get good pay, honors, respect. They are turning out 3 or 4 times as many a year as we are, and increasing this lead. Surely, they get education from the state, it is an education within the limits of Communist doctrine. But it is education. The Russians are turning out so many technicians, scientists, engineers, that they not only can staff their own industry, defense, laboratory, but can lend them to other countries. With Soviet offers of money, machinery, war planes, go the trained men—and they are evangelists for communism, spies, propagandists.

In the United States the shortage of teachers is so acute that if we started today on a new school building program, tripled the pay, we could not give our children the education they should have. All over this country there are children in antiquated schools, many drop out in high school, the teachers are so scarce that they can do no more than keep some kind of order, with little time to teach.

We value teachers so little that they are leaving the profession which many of them deeply love—but they have to live in an expensive world; they owe something to their families. If they received the honored place that teachers should have, and the consideration, they might put up with the low pay—but we pay doll-faced teen-age movie stars more than we do the President of the United States, not to speak of teachers—and doctors.

When do we wake up to what is happening because of our own stupid apathy? Our armed forces say they get fewer and fewer qualified young men and women in the services—because this advanced scientific defense requires education. Even the bodies of our youngsters are not up to par. More and more are turned down by the draft. We are a Nation of spectators and the strong bodies to house trained and disciplined minds are not being produced, for all our medical science that prevents disease. We need discipline that will send children to school, keep them there, see that they take the "hard subjects" that underlie the ability to function in the mechanized, electronic age.

What are we doing about it? We have talked for years about Federal aid to education. We said we could not have Federal control of the minds of our children. We are afraid of a Hitler. So we did nothing about Federal aid for schools, including teachers. We did think maybe we could have Federal aid to build school buildings; that would not involve what was taught in the schools. There should be no idea that we get Federal aid for nothing. The Government has no money except what it takes away from you and me in taxes. The advantage of Federal aid is that it would be spread evenly, that it would be taxed away from people who maybe would not choose to put it into schools locally, who might prefer cars or chewing gum or yachts, to schools.

This Congress has a school construction bill before it. There was a good chance that it would be enacted and we could get started on it. The President recommended school construction legislation. It looked like a beginning—small compared to the program, but a beginning.

But it is blocked by the determination of Negro Representative POWELL, of New York, to tack on a rider saying there shall be no segregation in such buildings. The South refuses to agree to any such rider. So—no bill, so far. Perhaps not at all.

Meantime, in the rest of the world, they get on with education. In Latin America they are getting on with it. I asked, "Are they not afraid of thought control?" They looked at me in surprise. "But the purpose is to get our children educated," they said. The rest was detail and they considered themselves able to handle that. Education in many Latin American countries is free through college. Is the United States to let the world go by? Are we so stupid, so cowardly that we cannot devise a way to educate our children without losing freedom? Are we willing to become a "backward nation" because our children are not getting the education necessary in this new world of science and machines?

Proposed Extension of Northeast Airlines to Florida

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, April 23, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Rightful Protest," which appeared in the Concord Daily Monitor, Concord, N. H., on Friday, April 20, 1956. This editorial deals with the adverse decision of the CAB examiner on an application of Northeast Airlines. The decision is a blow to New England.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RIGHTFUL PROTEST

The recommendations of a Civil Aeronautics Board examiner that Northeast airlines be denied an extension of its lines to Florida is being vigorously protested by the New England delegation in the Congress, and by various other groups in New England, and rightfully so.

Northeast was the pioneer airline in serving much of New England, with connections to Quebec and the Maritime Provinces. But it remains primarily a local operation, though CAB has permitted transcontinental lines to run into Boston, thus tapping the principal source of revenues available to Northeast, the Boston-New York run.

Northeast needs a long line connection, and such an extension to Florida is a natural because much of the traffic in and out of Florida is from the northeast.

Northeast began with Boston as the hub of its lines. Flying habits of passengers are such that today the real hub of its operations is New York, from which its lines fan out over New England. But there is no handle to the fan. Traffic originating in New England which is carried into New York feeds the transcontinental lines, but they in turn don't feed Northeast to the same extent because some of them extend into New England.

Airline passengers don't like to change planes en route to their destinations if that can be avoided. Making connections is precarious and time consuming and people travel by plane because of the speed.

Airlines need reasonably long runs to balance out the short hauls, which are more expensive operationwise. Northeast has only relatively short hauls, with frequent expensive stops.

This pioneer New England airline has a remarkable safety record considering the terrain it serves, and it has developed local service within New England to about its maximum. It has used often inadequate airports to do so, and much of its traffic is obviously of the fringe type which costs more to serve than it yields. This has to be balanced by traffic which is profitable, or, over a period of time, Northeast will be compelled to reduce the local service it gives this region.

The Constitutionality of American Participation in the Proposed Organization for Trade Cooperation (OTC) and in the General Agreement on Tariffs and Trade (GATT)

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include an enlightening and useful report prepared by the Committee on International Law, and approved by the executive committee, of the Association of the Bar of the city of New York.

The report follows:

THE ASSOCIATION OF THE BAR OF THE CITY OF NEW YORK—THE CONSTITUTIONALITY OF AMERICAN PARTICIPATION IN THE PROPOSED ORGANIZATION FOR TRADE COOPERATION (OTC) AND IN THE GENERAL AGREEMENT ON TARIFFS AND TRADE (GATT)—A REPORT BY THE COMMITTEE ON INTERNATIONAL LAW

STATEMENT OF FACTS

The General Agreement on Tariffs and Trade (GATT) is a multilateral trade agreement which was negotiated in 1947. The United States and 34 other countries are now parties. It consists of (1) tariff concessions granted by the participating countries to one another, (2) a set of general trade rules, and (3) certain administrative provisions.

Participation in GATT was effected by the President of the United States under the powers delegated to him by the Reciprocal Trade Agreements Act of 1934. GATT was never presented to the Congress for its approval. It was originally expected that the trade rules and administrative provisions of GATT would be superseded by the provisions of an International Trade Organization (ITO). The ITO was also to deal with subjects not included in GATT and not strictly within the field of commercial policy—full employment, foreign investment, restrictive business practices, and international commodity agreements, ITO was presented to Congress for its approval. Congress took no action, however, and the ITO never came into existence.

In the absence of the ITO, there was no organization to administer the tariff concessions and trade rules of GATT. The administrative articles of GATT provided for periodic meetings of the contracting parties, but made no provision for the administration of the GATT between these meetings. There was no adequate machinery to cope with a host of continuing problems. Moreover, the absence of congressional approval of GATT left doubt about the extent to which Congress considered itself bound by either the trade rules of GATT or its administrative determinations.

On March 30, 1954, President Eisenhower, following the recommendations of his Special Commission on Foreign Economic Policy (the Randall Commission), informed Congress that the administrative provisions of GATT would be severed from the rest of the agreement and submitted to the Congress for its approval. In the winter of 1954–55 GATT was renegotiated by the contracting parties to carry out this objective and also to make certain adjustments in the trade rules which experience had proved necessary. The main administrative provisions of GATT, supplemented by new administrative machinery, were grouped together in an agreemnet on an Organization for Trade Cooperation (OTC).

At the last sesison of Congress a bill, H. R. 5550, was introduced authorizing United States membership in the Organization for Trade Cooperation. In requesting its approval, President Eisenhower stated:

"I believe the reasons for United States membership in the proposed organization are overwhelming. * * * Such action would serve the enlightened self-interest of the United States. * * * Failure to assume membership in the Organization for Trade Cooperation would * * * strike a severe blow at the development of cooperaive arrangements in defense of the free world."

Congress did not act on OTC during its 1955 session. In his state of the Union message on January 5, 1956, President Eisenhower repeated his appeal to Congress for speedy approval of American participation in the Organization:

"I most earnestly request that the Congress approve our membership in the Organization for Trade Cooperation, which would assist the carrying out of the General Agreement on Tariffs and Trade to which we have been a party since 1948. Our membership in the OTC will provide the most effective and expeditious means for removing discriminations and restrictions against American exports and in making our trade agreements truly reciprocal. United States membership in the Organization will evidence our continuing desire to cooperate in promoting an expanded trade among the free nations. Thus the Organization, as proposed, is admirably suited to our own interests and to those of like-minded nations in working for steady expansion of trade and closer economic cooperation. Being strictly an administrative entity, the Organization for Trade Cooperation cannot, of course, alter the control by Congress of the tariff, import, and customs policies of the United States."

At its meeting in Philadelphia in August 1955 the American Bar Association approved the following resolution:

"V. *Resolved*, That the bill, H. R. 5550, authorizing the President to accept membership in the Organization for Trade Cooperation is hereby disapproved on the grounds (a) that the Reciprocal Trade Agreements Act of 1934 (Tariff Act of 1930, sec. 350) confers no such power on the President, and (b) that neither the President, nor Congress has the legal authority under the Constitution, to delegate the regulation of our commerce with foreign nations to a foreign controlled group, and the committee on customs law is hereby authorized on behalf of the American Bar Association to present these views to the Congress and that the president of the American Bar Association be authorized to select a representative or representatives to appear before the proper congressional committees."

On March 26, 1956, after 2 weeks of hearings, the House Ways and Means Committee recommended passage of H. R. 5550. A central issue in the hearings was the constitutionality of United States participation in GATT and OTC.

The present report is the result of a detailed study of this question. It concludes that there is no doubt about the constitutionality of American participation in the General Agreement on Tariffs and Trade or about the constitutionality of H. R. 5550 authorizing American participation in the Organization for Trade Cooperation.

It should be emphasized that this report deals only with the question of constitutional power. It does not attempt to pass upon the desirability of American participation in GATT and OTC on policy grounds.

The constitutional position which emerges from the research upon which this report is based, and which is more fully elaborated in the following pages, may be summarized as follows:

I. The President had the necessary authority to agree to United States adherence to and participation in GATT under the authority delegated to him in the Reciprocal Trade Agreements Act.

A. The Reciprocal Trade Agreements Act, which authorizes the President to alter American tariff rates and other import restrictions by making for trade agreements, is a constitutional delegation of congressional power.

B. The Reciprocal Trade Agreements Act provides authority for United States participation in GATT.

1. The act authorizes the President to enter into multilateral as well as bilateral agreements.

2. The act provides authority for the general trade rules in GATT as well as the individual tariff concessions.

3. The act provides authority for the administrative provisions in GATT.

II. Congress may constitutionally authorize United States participation in OTC by H. R. 5550.

A. American participation in OTC would violate no provision of the Constitution.

1. Neither GATT nor the OTC agreement gives to international bodies or foreign nations any of the constitutional power of Congress "to regulate commerce with foreign nations" or any other power of Congress.

2. The powers given OTC and the contracting parties of GATT have ample precedent in international organizations already entered into by the United States and are less extensive than many of the powers possessed by some of these organizations.

B. There is ample precedent for congressional authorization of United States participation in an international organization by majority vote of both Houses.

ARGUMENT

Point I

The President Had the Necessary Authority To Agree to United States Adherence to Any Participation in GATT Under the Authority Delegated to Him in the Reciprocal Trade Agreements Act

H. R. 5550 is a bill authorizing American participation in the Organization for Trade Cooperation. While it makes reference to GATT, it contains no language purporting to authorize United States participation therein. It might be thought, therefore, that constitutional questions about H. R. 5550 could be completely resolved by consideration of the OTC agreement alone. While this may be technically correct, a thorough study of the constitutional problem must be wider in scope. The primary function of OTC is to administer GATT. It would make no sense for Congress to authorize American participation in OTC if GATT itself were not a valid international obligation of the United States. An inquiry into the constitutionality of present American adherence to GATT is, therefore, a prerequisite to considering the constitutional authority of Congress to approve OTC.

American adherence to and participation in GATT was effected by the Executive Department of the United States Government without specific congressional approval. This has been described by some critics as an unconstitutional usurpation of congressional power. They point to the fact that the Constitution gives to Congress the power "To lay and collect taxes, duties, imposts, and excises" (including tariffs) and "To regulate commerce with foreign nations." In reply to charges of unconstitutionality the executive department maintains that Congress, in the Reciprocal Trade Agreements Act of 1934, made a delegation to the executive of its power to make tariffs and to regulate commerce with foreign nations and that this delegation provided ample authority for the executive to undertake American participation in GATT.

A. The Reciprocal Trade Agreements Act is a constitutional delegation of congressional power: The first question to be decided is whether the Reciprocal Trade Agreements Act is a constitutional delegation of congressional power. No court has yet had an opportunity to pass directly upon this question. Nevertheless, the constitutionality of the act rests on a solid foundation of judicial authority.

It is well established that Congress may delegate its constitutional powers to the Executive when it lays down an "intelligible principle" to guide the Executive in the exercise of such powers. In the domestic field, Congress has made numerous delegations to administrative agencies of its power to regulate interstate commerce. The courts have upheld the constitutionality of such delegations even where the administrative agencies were left free to operate within principles as broad and indefinite as "public interest" and "public convenience, interest, or necessity."

In the tariff and foreign trade field, two leading cases establish the constitutional validity of delegations of congressional power. In *Field* v. *Clark*, the Supreme Court upheld a section of the Tariff Act of 1890 which

authorized the President to suspend the duty-free status of certain foreign products whenever he found that the countries exporting those products maintained "reciprocally unequal and unreasonable" duties on American products. In *Hampton & Company* v. *United States*, the Supreme Court upheld a section of the Tariff Act of 1922 which authorized the President to vary American tariff rates in order to "equalize the differences in the costs of production" of domestic and foreign articles. In both these cases the quoted statutory provisions were held to set standards definite enough to constitute a valid delegation of congressional power.

The Reciprocal Trade Agreements Act authorizes the President to enter into "foreign trade agreements with foreign governments" and to proclaim modifications of existing United States tariffs and other import restrictions in accordance with those agreements. In exercising his authority under this legislation, the President must find—

(1) that "existing duties or other import restrictions of the United States or any foreign country are unduly burdening and restricting the foreign trade of the United States" and

(2) that the exercise of his authority will promote the purpose of the legislation, i. e., that of "expanding foreign markets for the products of the United States."

The principle laid down here is certainly no less intelligible than the principles upheld in the Field and Hampton decisions. As Senator GEORGE declared during the original congressional debates on the Reciprocal Trade Agreements Act: "No fair-minded person can say that the principle of bargaining to open the lanes of distribution and markets of consumption by the Chief Executive in aid of the domestic producer is not as intelligible and practicable a principle within the rule announced in the Hampton case as that of equalizing the costs of production the world over as compared with prevailing costs in the United States."

The constitutionality of the Reciprocal Trade Agreements Act becomes particularly clear when attention is focused on the area of the governmental activity that is here involved. We have already noted that the courts have upheld extremely broad delegations by Congress of its constitutional power in the domestic field. They have been even more willing to sanction such delegations when the legislative powers overlapped—as they do here—existing executive powers in the field of foreign affairs. As the Supreme Court declared in *United States* v. *Curtiss-Wright Export Corporation:*

"It is important to bear in mind that we are here dealing not alone with an authority vested in the President by an exertion of legislative power, but with such an authority plus the very delicate, plenary, and exclusive power of the President as the sole organ of the Federal Government in the field of international relations—a power which does not require as a basis for its existence an act of Congress, but which, of course, like every other governmental power, must be exercised in subordination to the applicable provisions of the Constitution. It is quite apparent that if, in the maintenance of our international relations, embarrassment—perhaps serious embarrassment—is to be avoided and success for our aims achieved, congressional legislation which is to be made effective through negotiation and inquiry within the international field must often accord to the President a degree of discretion and freedom from statutory restriction which would not be admissible were domestic affairs alone involved."

The constitutionality of the delegation of congressional power contained in the Reciprocal Trade Agreements Act was fully and carefully considered by the Congress itself when the act was first enacted. The House Ways and Means Committee gave "particular attention to questions of constitutionality presented by the proposed bill." It concluded that "the proposed bill goes no further than many previous enactments of the Congress; in fact, it follows a current of legislation enacted from the earliest days of our history." The same committee in later years supported not only a renewal but a broadening of the delegated powers and reaffirmed its conclusion that "the Trade Agreements Act involves no improper delegation of legislative power." Representative Fred Vinson, later Chief Justice of the United States, was particularly vehement in asserting that the constitutionality of the act was beyond question:

"For the life of me, I cannot understand how this defense would be set up at this time. * * * The matter is really not debatable. The placing of this discretion in the Chief Executive of the United States is not an unconstitutional delegation of power."

As a concluding point, it should be noted that Congress has extended the authority delegated to the President by the Reciprocal Trade Agreements Act 10 times since the act was first passed in 1934. There could scarcely be more impressive evidence that Congress regards the act as a constitutional delegation of its own power.

B. The Reciprocal Trade Agreements Act provides authority for United States participation in GATT. The case against the constitutionality of American participation in GATT is not based solely on the charge that the Reciprocal Trade Agreements Act is unconstitutional. It rests also on the alternative charge that the Reciprocal Trade Agreements Act, even if constitutional, does not provide authority for American participation in GATT. Three arguments have been advanced to support this latter assertion:

1. The act authorizes the President to make bilateral trade agreements, but not a multilateral trade agreement like GATT;

2. The act authorizes the President to make agreements embodying tariff concessions but not embodying the general trade rules in GATT; and

3. The act does not authorize the President to make agreements embodying the administrative provisions contained in GATT.

Each of these arguments must be examined in turn.

1. The Reciprocal Trade Agreements Act authorizes the President to conclude multilateral as well as bilateral agreements. The Reciprocal Trade Agreements Act authorizes the President to enter into "foreign trade agreements" with other governments for the purpose of "expanding foreign markets for the products of the United States." Special note should be made of the phrase "foreign trade agreements." The legislation does not specify bilateral agreements only. There is no evidence in the legislative history of the act to indicate that the Congress wished to confine the executive in this way. It must be considered, therefore, that the Congress wished to leave the executive free to conclude either bilateral or multilateral agreements, whichever would best promote in the given circumstances, the purposes for which the act was passed.

That the purposes of the Reciprocal Trade Agreements Act would be promoted by multilateral rather than bilateral agreements was clearly demonstrated in the first decade of the act's history. In that period the President exercised his authority by negotiating bilateral agreements with 29 countries. Under these agreements the United States made reductions in its tariffs in return for reductions in the tariffs of its various trading partners. The agreements also provided limitations on the use of trade restrictions other than tariffs (such as quantitative restrictions and internal taxes) which might be used to nullify the effect of the tariff reductions.

This system of bilateral trade agreements revealed serious limitations. The agreements naturally provided for unconditional most-favored-nation treatment—a principle of commercial policy adopted by the United States and most other countries as a necessary basis for nondiscriminatory and friendly trade relations. This provision meant that the concessions made by the parties to each agreement were granted generally to the trade of other countries. In the system of bilateral agreements, the most-favored-nation clause produced a certain amount of difficulty. Parties to a particular bilateral agreement were inhibited in granting tariff concessions to one another by the fear that countries not parties to the agreement would obtain benefits from those concessions without giving any concessions of their own in return. Parties to a bilateral agreement were also reluctant to agree to general trade obligations in the absence of assurance that other countries would assume the same obligations themselves.

Accordingly, in planning for international trade cooperation after the Second World War, it was decided to abandon the bilateral method of tariff bargaining in favor of a multilateral approach. Under the new system the world's trading nations would all meet simultaneously to conclude their various sets of tariff bargains. They would thus be able to make substantial concessions with the assurance of knowing just what would be the sum total of concessions afforded by all the other nations in return. They would also be able to agree upon a common set of trade rules to protect and supplement those tariff concessions.

The General Agreement on Tariffs and Trade was nothing more than the name for the agreement which embodied this new approach. Considering both the unqualified authorization of the Reciprocal Trade Agreements Act to make "foreign trade agreements" and the proven shortcomings of the bilateral approach as a means of achieving the act's objective, it is only reasonable to conclude that the authorization included the making of a multilateral agreement.

2. The Reciprocal Trade Agreements Act provides authority for GATT's general trade rules. GATT contains a number of general trade rules as well as individual tariff concessions. These rules cover such subjects as unconditional most-favored-nation treatment, internal taxation, customs administration, and quantitative restrictions. There can be no doubt but that the President had the authority to conclude a trade agreement embodying such rules. The Reciprocal Trade Agreements Act provides the general authorization to the Executive to enter into foreign trade agreements for the purpose of expanding foreign markets for the products of the United States. The purpose of the act could not be achieved unless the President were empowered to deal in his negotiations with the whole range of restrictions which effectively impede American exports. This factor was specifically recognized in the act when it authorized the President to proclaim modifications of other import restrictions as well as tariffs.

On numerous occasions before the passage of the Reciprocal Trade Agreements Act in 1934 the President—in some cases even without congressional authority to make agreements on tariff matters—entered into trade agreements embodying general rules of trade policy.

The Committee on Ways and Means of the House of Representatives took special notice of these agreements when it reported in 1934 on the bill which became the original Reciprocal Trade Agreements Act. The committee referred to these agreements as precedents for the validity of the agree-

ments about to be authorized by the Trade Agreements Act, and clearly indicated that it considered general trade rules a proper part of the trade agreements to be entered into under the legislation.

During hearings before this committee Secretary of State Cordell Hull made a point of asking for the delegation of "full authority, otherwise, in respect of the things that are declared in purpose and effect and intended as a substitute for the ordinary name and function of tariffs, we would not get anywhere." After hearing testimony such as this, the committee emphasized that authority was being given the President to proclaim changes in other import restrictions as well as tariffs and that this authority was "designed to cover the various types of measures for the retardation of trade with which the President will be expected to deal in his negotiations with other countries."

Following this clear declaration of congressional intent general trade rules were incorporated in bilateral agreements concluded by the President under the authority of the Reciprocal Trade Agreements Act. In renewals of the act committees of Congress referred with approval, to the inclusion of such trade rules.[86]

3. The Reciprocal Trade Agreements Act authorizes the administrative provisions of GATT: We have now seen that the Reciprocal Trade Agreements Act provided authority for the President to participate in a multilateral tariff agreement and also to adhere to GATT's general rules of trade policy. The only other provisions in GATT (except for the statement of objectives) are those of an administrative character. Some critics have suggested that by participation in an international agreement containing these provisions the Executive has made an unconstitutional delegation to an international body of the power of Congress "to regulate commerce with foreign nations." Since Congress delegated to the Executive the power to enter into foreign trade agreements and to proclaim changes in tariffs and other import restrictions, the question is really whether the Executive has redelegated to GATT any powers of Congress, and, if so, whether such redelegation was constitutionally proper.

It is difficult to see how the administrative provisions of GATT involve any redelegation by the Executive of congressional power. The Constitution gives to Congress the power "to regulate commerce with foreign nations." The contracting parties to GATT, operating under the administrative provisions, cannot impinge upon this power. They have no authorty to make commercial policy for the United States. They cannot change a single American tariff rate, nor any other American law relating to the import or export of goods.

With the exceptions to be discussed below, the administrative provisions of GATT are purely mechanical arrangements defining the obligations of the agreement and the rights of the contracting parties inter se. These have not been the object of serious challenge.

The charge that the administrative provisions of GATT delegate to the contracting parties the power of Congress "To regulate commerce with foreign nations" is probably inspired by certain powers of interpretation and waiver given the contracting parties in the two administrative articles not yet dealt with.

These articles (with a summary of their most important provisions) are the following:

Article XX—Nullification or impairment.

This article authorizes the contracting parties as a group to investigate controversies between particular contracting parties and to make recommendations and rulings thereon. It empowers them, in serious circumstances, to authorize one contracting party to withdraw concessions from another contracting party or parties to the extent that the group deems appropriate. The contracting party from which concessions are withdrawn is free to withdraw entirely from the agreement upon 60 days' notice in writing.

(These provisions are transferred by the revision of GATT to the OTC agreement.)

Article XXV—Joint action by the contracting parties.

This article provides for meetings of the contracting parties and lays down procedures for such meetings. It also provides that in exceptional circumstances the contracting parties can grant one another waivers of their GATT obligations by two-thirds vote.

(These provisions are transferred by the revision of GATT to the OTC agreement.)

It will be seen that the above articles give to the contracting parties as a group certain powers to interpret GATT and to authorize particular contracting parties to withdraw from their obligations. In the 1954–55 revision, the powers of interpretation and waiver were removed from these articles and transferred to the OTC agreement. In their amended form, the articles are simply the same kind of mechanical arrangements as the other administrative provisions of GATT discussed earlier and are not open to serious question. Whether Congress can constitutionally approve American participation in the OTC which has now been given these powers of interpretation and waiver has still, of course, to be decided.

Consideration of the constitutional implications of these powers of interpretation and waiver might therefore be entirely deferred until discussion of the OTC itself. Two reasons, however, militate against such a procedure. First, the President agreed to United States adherence to and participation in a GATT which, in its original form, contained these provisions of interpretation and waiver. It could be conceivably argued that, if the inclusion of these provisions violated some constitutional provision, American participation in GATT as a whole was invalid. Second, until OTC is approved by the United States Congress, the contracting parties to GATT will continue to exercise the powers of interpretation and waiver. For these reasons it is appropriate to consider what authority the executive has to participate in an executive agreement containing such provisions.

The attack on the legality of the provisions for interpretation and waiver appears to take the following lines. With respect to interpretation, it is contended that the contracting parties, by majority vote, can interpret the obligations of the United States under the agreement and thus, in effect, deprive the Congress of its constitutional power to make American trade policy. With respect to waiver, it is contended that the contracting parties, by their power to pass upon American requests to be released from GATT obligations, and by their power to release other countries from the obligations which those countries have undertaken vis-a-vis the United States, can usurp the constitutional power of Congress "to regulate commerce with foreign nations."

All these contentions are devoid of merit. The power of the contracting parties to interpret the obligations of the United States and other countries under the agreement impinges upon no power of Congress. The contracting parties have no power under the agreement to increase the obligations of the United States. They canont force the United States to alter a single tariff rate or other item of legislation. In short, they cannot force the United States to act in accord with their interpretations. At most they can, in extreme cases, when the United States refuses to accept their interpretation of its obligations, authorize other countries to withdraw concessions from the United States. Whether this involves some unconsitutional usurpation of congressional power will be presently discussed. But it is clear that the act of interpreting does not itself involve the exercise of congressional power.

We are brought, therefore, to the charge that the power of the contracting parties to authorize other countries to withdraw concessions granted to the United States involves an exercise of the constitutional power of Congress "To regulate commerce with foreign nations." This charge involves an obvious fallacy. The power to regulate commerce between the United States and foreign countries by tariffs and other restrictions imposed by such foreign countries on imports to and exports from their own territories is a power which exists in those countries alone. It is not a power of the American Congress. The Constitution of the United States cannot and does not vest in Congress such authority. To hold otherwise would be to assert that the American Congress can legislate for the entire world. One cannot attribute such absurdity to the framers of our Constitution. The axiom that the powers of Congress do not include the making of legislation for other countries has been repeatedly recognized by our courts. It follows that the power of the contracting parties to authorize waiver of the obligations of other countries vis-a-vis the United States involves no delegation of congressional power.

The same is true of the power of the contracting parties to grant waivers to the United States. We have already seen that the Reciprocal Trade Agreements Act was a constitutional delegation to the President of the power to make foreign trade agreements. By such foreign trade agreements the United States, as in all international agreements, voluntarily assumes the obligations to do or not to do certain things in return for corresponding obligations assumed by other countries. The power of the contracting parties to relieve the United States from its obligations gives the United States more rather than less freedom than it would otherwise have. Without GATT's administrative provisions the United States would be inflexibly bound by the obligations it had contracted. With them, it has an opportunity of escape. This opportunity of escape obviously involves no usurpation of congressional power "to regulate commerce with foreign nations."

In short, therefore, the administrative provisions of GATT for interpretation and waiver involve no power of the American Congress and, therefore, no redelegation of such power by the President. They involve rather a systematization by mutual agreement of a power over commerce between the United States and foreign nations which is not a power of the American Congress or of any branch of the United States Government.
